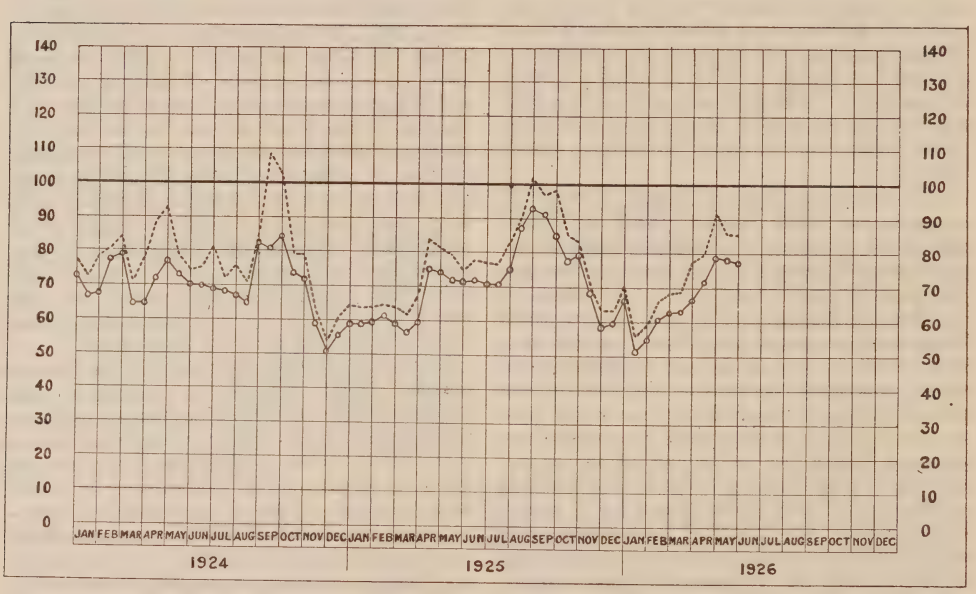
NOVA SCOTIA

During May there was a decline of nearly five per cent in the number of orders received at employment offices in Nova Scotia when compared with the preceding month, and of nearly one per cent in comparison with the corresponding month last year, but placements were nearly 23 per cent higher than in April, and over 9 per cent higher than in May, 1925. The only noteworthy decline in placements from last year was in the logging industry, which was more than offset by gains in the manufacturing industries, mining and transportation. Industrial divisions in which most of the placements were effected during the month included manufacturing, 105; mining, 75; transportation, 49; services, 364 and trade 71. Placements in regular employment during the month numbered 256 of men and 84 of women.

NEW BRUNSWICK

Orders listed at New Brunswick offices during May were nearly 50 per cent higher than in April and nearly 35 per cent above May last year. Placements were nearly 49 per cent above April and over 36 per cent in excess of May, 1925. Increased demand for railway construction labourers accounted for most of the gains in vacancies and placements under both comparisons. Placements by industries included transportation, 46; services, 632; and construction and maintenance, 245, of which 201 were railway. During the month regular employment was secured for 356 men and 93 women.

QUEBEC



Quebec offices were notified of over 40 per cent more vacancies during May than in the preceding month, and over 52 per cent more than in the corresponding month last year. Placements were over 55 per cent higher than in April, and over 22 per cent than in May 1925. All industrial divisions except services participated in the gains over last year, those in manufacturing and construction and maintenance being the most pronounced. Industrial divisions in which most of the placements were effected during the month included manufacturing, 243; logging, 171; farming, 70; construction and maintenance, 1,197 and services, 555. During May, 1,914 men and 417 women were placed in regular employment.

ONTARIO

Employment opportunities as indicated by orders listed at employment offices in Ontario were nearly 32 per cent better during May than in the preceding month, and nearly 18 per cent better than in May last year. Place-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - - - - - - - - - - Placements o—o—o—o—o—o

ments also showed much improvement under both comparisons, there being an increase of more than 33 per cent over April and more than 14 per cent over May 1925. The most noteworthy increases in placements over the corresponding month last year occurred in the manufacturing industries, construction and maintenance and services. Placements by industrial groups were manufacturing, 1,689; logging, 797; farming, 844; mining, 100; transportation, 694; construction and maintenance, 3,822; services, 5,225 and trade 310. During the month 7,313 men and 1,153 women were placed in regular employment.

MANITOBA

During May there was a reduction of nearly 2 per cent in employment offered through the offices in Manitoba when compared with the preceding month, but a gain of nearly 31 per cent when compared with the corresponding month last year. Placements were 2 per cent less than in April, but over 33 per cent higher than in May, 1925. The most noteworthy increases in placements over May of last year occurred under manufacturing, farming, construction and maintenance and services. Industrial divisions in which most of the placements were effected during the month were manufacturing, 191; logging, 95; farming, 721; construction and maintenance, 313; services, 2,558, of which 1,820 were of household workers and trade 186. Regular employment was secured for 1,153 men and 630 women during the month.

SASKATCHEWAN

Saskatchewan offices received orders for over 40 per cent less workers during May than in April, but nearly 32 per cent more than in May last year. Placements declined over 29 per cent from April, but were nearly 27 per cent higher than during May, 1925. The gains over the corresponding month last year were general increases, being recorded in all industrial divisions. Placements by industrial groups included manufacturing, 118; farming, 1,454; construction and maintenance, 913 and services, 987. During May 2,407 men and 310 women were placed in regular employment.

ALBERTA

Opportunities for employment as indicated by orders listed at Alberta offices during May were over 21 per cent less favourable than in April, but over 4 per cent better than in May 1926. During May over 14 per cent fewer placements were effected than in April, but there was a gain of 9 per cent over May last year. Increased placements over the corresponding month last year were effected in all industrial divisions except communication and services, the reductions in the former being nominal only. Industrial divisions in which most of the placements were effected during the month were manufacturing, 371; logging, 100; farming, 2,116; construction and maintenance, 738; services, 816 and trade, 92. Regular employment was secured for 3,300 men and 350 women during the month.

BRITISH COLUMBIA

British Columbia offices during May received orders for 5 per cent less workers than in the preceding month, but nearly 16 per cent more than during the corresponding month last year. Placements declined over 12 per cent from April, but were nearly 15 per cent higher than in May 1925. Placements effected during the month under review were higher than in May last year in all industrial groups except logging and services and in these the reductions were small. Industrial divisions in which most of the placements were effected during the month included manufacturing, 589; logging, 375; farming, 324; mining, 101; transportation, 208; construction and maintenances, 1,100; services, 987 and trade, 105. Placements in regular employment numbered 1,774 of men and 367 of women.

Movement of Labour

During May, 1926, the offices of the Employment Service of Canada made 21,877 placements in regular employment, of which 12,161 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,133 were granted the Employment Service reduced transportation rate, 749 going to points within the same province as the despatching office, and 384 to other provinces. The reduced transportation rate, which is 2.7 cents per mile, with a minimum fare of $4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices issued 105 certificates, 46 of which were provincial and 59 interprovincial. The provincial ones were all issued by the Montreal office to persons transferred within its own zone, and included 23 sawmill labourers, 15 bushmen, 7 river drivers, and one camp cook. Of the interprovincial certificates, Hull issued 57 to bushmen going to North Bay, and Montreal one to a gardener and one to a bushman travelling to Sault Ste. Marie. In Ontario 210 persons were granted reduced transportation 195 of whom were sent to employment within the province and 15 to outside points. Provincially Chatham

*70 Placements effected by offices since closed.

transferred one hammersmith to Kingston, Cobalt 8 station workers to Timmins, Fort William 10 bushmen, 7 cooks, one farm hand, one tool sharpener and 10 rock gaugers within its own zone, Hamilton one metal polisher to Sarnia, Kitchener one boiler maker to Kingston, North Bay one miner and 1 mill worker to Cobalt, one machinist to Kingston and 9 construction men to Timmins. Ottawa sent 9 mill men and 20 river men to Sudbury, Port Arthur 3 carpenters, 2 cooks, one farm hand and 56 loggers to points within its own zone, Timmins sent one farm hand to Guelph, Sudbury one stationary engineer and one fire ranger to Sault Ste, Marie, and 2 cooks, 22 river drivers and one mill hand within its own zone. From Toronto one coremaker travelled to Kingston, 17 bushmen and one teamster to North Bay, one machinist to Sudbury, and one rockman, one carpenter, one blacksmith, and one cement finisher to Port Arthur. Of those going outside the province, Pembroke despatched 5 bushmen, 3 labourers, one mill man and one clerk to Hull, while Fort William sent 4 farm hands, and Sudbury one farm hand to the Winnipeg zone. The Manitoba offices transferred 366 workers at the special rate, 165 of whom were going to points within the province, and 201 to other provinces. Of the latter, Winnipeg transferred one baker, 7 bushmen, one carpenter, 2 engine men, one teamster, one pulp loader, one porter, 7 cooks, 4 maids, 6 waitresses, one night watchman, 69 mill labourers, 12 river drivers, and 25 mine labourers to Port Arthur, one cook, one carpenter and one pile driver to North Battleford, 15 carpenters and 2 waitresses to Saskatoon, one cook to Swift Current, 10 carpenters to Regina, 6 teamsters to Moose Jaw, and one mill labourer to Prince Albert. The balance included 2 farm labourers going to Alberta, and 21 farm labourers and 2 farm domestics to points in Saskatchewan. Provincially, one bushman and one logger travelled from Dauphin to points within its own zone, and from Winnipeg 15 carpenters, one cook, 4 waitresses, 4 maids and one labourer went to Brandon, one cook, one hotel clerk, 2 maids and 4 waitresses to Dauphin, and 6 farm hands, 3 farm domestics, 7 bushmen and 2 cooks within the Winnipeg zone. The remainder were farm hands and farm domestics for various points throughout the province. The Saskatchewan offices granted 128 certificates, only 5 of which were for points outside the province. These were farm hands travelling to Edmonton, one from Regina and 4 from Saskatoon respectively. Of the 123 provincial transfers, 85 were farm hands and 2 farm domestics. In addition, Regina sent 3 housekeepers and 3 teamsters to Moose Jaw, one waiter to North Battleford, one blacksmith to Swift Current, and 2 hotel porters and 5 teamsters to Weyburn. Prince Albert shipped 15 mill labourers to employment within its own zone, and Saskatoon 2 teamsters and one camp cook to North Battleford, one carpenter to Regina, one mill hand to Prince Albert, and one blacksmith within its own zone. Alberta certificates numbered 184, of which 134 were provincial and 50 interprovincial. From Calgary the provincial movement included 2 labourers and 3 teamsters going to Drumheller, and one blacksmith, one setter and 2 iron workers to Lethbridge. From Edmonton one blacksmith, 8 miners, 8 labourers, 10 trackmen, one well driller's helper, 3 tie makers, one carpenter, one pipefitter, 2 firemen, 2 clerks, 2 engine men and 13 hotel and household workers travelled to points within the Edmonton zone, and from Lethbridge one sheep herder was sent to Medicine Hat. The remainder of the provincial movement was made up of 70 farm hands and 2 farm domestics despatched to employment at various points in the province. Of the interprovincial transfers, 49 were farm hands going to Saskatchewan, and one a cook sent from Calgary to Revelstoke. British Columbia offices issued 140 certificates, 86 for provincial points and 54 for other provinces. Of the provincial transfers, Vancouver dispatched 3 miners, 7 lumber pilers, one teamster, one loader, one dish washer, one mill hand, 14 labourers, 3 powder men, one setter, one sawyer, and one farm hand to Penticton, 2 bolt cutters, 2 farm hands, one orderly, 2 miners, one engineer, one steel sharpener, one saw filer, and one housekeeper to Kamloops, one farm hand to Vernon, one setter to Cranbrook, 4 electricians to Nelson, 4 miners to Revelstoke, and 10 miners, one farm hand and one blacksmith within the Vancouver zone. Nelson sent one logger to Penticton, one cook to Revelstoke, and one logger to the Nelson zone. Victoria transferred 2 firemen to Nelson, Prince George 3 millmen, 3 teamsters, 4 pole cutters and one cook to points within its own zone, and Prince Rupert 2 miners and Penticton one farm hand within their respective zones. The interprovincial transfers included 16 farm hands for Saskatchewan points, and 24 for Alberta. In addition, Regina received one housekeeper, 8 carpenters and 3 bricklayers, Weyburn one housekeeper, and Edmonton one housekeeper, all from the Vancouver office.

Of the 1,133 workers who benefited by the Employment Service reduced transportation rate, 625 were carried by the Canadian National Railways, 484 by the Canadian Pacific Railway, 10 by the Pacific Great Eastern Railway, 13 by the Temiskaming and Northern Ontario Railway, and one by the Kettle Valley Railway.

BUILDING PERMITS ISSUED IN CANADA DURING MAY, 1926

ACCORDING to returns from 60 cities, the value of the building permits issued during May amounted to $18,513,422, as compared with $18,988,755 in the preceding month and $15,500,165 in May, 1925. This was a slight decrease of $475,333 or 2.5 per cent from last month's total, but in the more significant comparison with May of last year there was an increase of $3,013,257 or 15.9 per cent. The total for the month was higher than in any May since 1920, with the exception of 1922 and 1923, when the index number of wholesale prices of building materials was higher; standing at 162.5 and 167.4 respectively, as compared with 147.7 in May of 1926.

Some 45 cities reported that they had issued permits for nearly 1,950 dwellings valued at nearly $9,500,000, and for nearly 4,000 other buildings, valued at over $8,200,000. In April, authorizations included some 1,700 dwellings and 2,900 other buildings, each category being valued at about $7,000,000.

As compared with April, 1926, there were increases in all provinces except Manitoba, where there was a decline of 76.0 per cent from last month's unusually large total of $5,301,628. All provinces except Ontario registered higher totals of permits issued than in May, 1925. Ontario showed a decrease of $734,468 or 8.7 per cent from last year's total for May.

Montreal and Vancouver showed increases in the value of building authorized as compared with both April, 1926, and May, 1925, while Toronto's total was greater than last month's, but under that for May, 1925. Winnipeg, on the other hand, showed an increase over the May, 1925, figures, but a decrease from last month's total. Halifax, Moncton, Sherbrooke, Three Rivers, Westmount, Brantford, Chatham, Fort William, Hamilton, Kingston, Kitchener, London, Niagara Falls, Peterborough, Stratford, St. Catharines, St. Thomas, Windsor, Ford, Walkerville, Brandon, St. Boniface, Moose Jaw, Calgary, Edmonton, Nanaimo, Point Grey, South Vancouver, and Victoria recorded greater totals of building permits issued in May than in either the preceding month or the corresponding month of last year.

Cumulative Record for First Five Months, 1926.—The table on page 709 shows the value of the building authorized in May and in the first five months of each year since 1920. The January-May average index numbers of wholesale prices of building materials during the first five months of those years are also given (1913=100).

*Total—35 Cities	15,816,509	16,206,805	12,212,694
Cumulative Record for 60 Cities—first five months	1926	1925	1924
	59,753,631	50,011,236	45,890,525

Year	Value of permits issued		Average Indexes of wholesale Prices of Building Materials in first five months
	In May	In first five months	
	$	$	
1926	18,513,422	59,753,631	151·1
1925	15,500,165	50,011,236	153·8
1924	14,762,400	45,890,525	166·0
1923	18,917,418	57,852,503	165·7
1922	19,468,741	33,918,812	161·1
1921	14,433,990	41,320,556	200·7
1920	13,076,380	47,574,581	215·9

It will be observed that the cumulative total for the first five months of 1926 is the largest since this record was begun in 1920, being 3.3 per cent larger than in 1923, the previous high level, and 43.7 per cent higher than in 1921, when building in the cities reached its lowest point in recent years. Further, the wholesale prices of building materials are lower in 1926 than in any previous year during the period.

The table on page 708 gives the value of the building permits issued by cities in May and April, 1926, and May, 1925. The 35 cities for which records are available since 1910 are marked with asterisks.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest:—

Manufacturing: Iron, Steel and Products

OTTAWA, ONTARIO.—MASTER SHEET METAL WORKERS' ASSOCIATION OF OTTAWA AND DISTRICT AND LOCAL NO. 47, SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION.

Agreement to be effective from June 8, 1926, until April 30, 1928, except when three months' notice be given by either party of any desired change, previous to April 30.

Employees to have an increase in wages of three cents per hour, making minimum rate for journeymen 83 cents per hour, and for junior journeymen, 58 cents per hour until April 30, 1927; from May 1, 1927, journeymen, 85 cents; junior journeymen, 68 cents.

Hours, eight per day, forty-four per week. Overtime, from 5 p.m. to midnight and Saturday afternoons, time and one-half. After midnight and Sundays and holidays, double time.

On work out of town, men to have fare and board paid. Travelling time to be paid single time to 9 p.m. Sleeper to be provided at night.

Man laid off at beginning of morning or afternoon to have one-half day's pay.

Each party agrees to create a board of arbitrators of three to settle disputes; board to meet within 48 hours with power to settle grievances and appoint an arbitrator if necessary. If any dispute cannot be settled matter must be referred to general office of the International Union, and no strike or lockout shall take place without an investigation and a decision.

No union member shall sub-contract or do work pertaining to the trade after the regular working hours.

Question of apprentices to be referred to the joint committee to draft rules governing apprenticeship, to be considered part of agreement when adopted.

Two apprentices may not work together unless under supervision of journeyman.

After an apprentice has served four years, if satisfactory to employer he shall become a junior journeyman for one year. Apprentices shall be registered.

Only sheet metal workers shall be employed when available.

Employers will notify the business agent of union when in need of sheet metal workers. If such are not supplied within 48 hours non-union men may be employed in the meantime, and shop stewards may approach them regarding joining the union after two weeks.

Manufacturing: Printing and Publishing

GUELPH, ONTARIO.—GUELPH MERCURY AND INTERNATIONAL TYPOGRAPHICAL UNION NO. 391.

Agreement to be in effect from May 1, 1926, until May 30, 1928. Proposed agreement to be submitted by union at least 30 days previous to expiration of this one.

Good standing members to be employed.

A standing committee of two from each party shall be appointed to settle wages and other questions under the agreement. If committee is unable to agree, matter shall be referred to a board of arbitration, of a representative from each party and a third selected by them, decision to be final.

Disabled employees may be placed on a superannuation list and receive wages as agreed on, subject to approval of the union.

Apprentices: one to four journeymen; not more than three at one time. Apprentice in order to change from one office to another must have written consent of the first employer and the president of the union.

Minimum wage for apprentices, third year, one-third of journeymen's scale; fourth year, one-half; first six months of fifth year, two-thirds; last six months, three-quarters.

Journeymen learners on typesetting machine, two-thirds of minimum operators' scale, for period not exceeding three months. Thereafter, regular union scale to men judged competent by examining board.

Other questions concerning apprentices shall be International Typographical Union laws.

Hours per weeks, day work, forty-eight; night work, forty-two.

Overtime, time and one-half; all work on Sundays and holidays, time and one-half.

Wages per week, hand compositors, machine operators and make-up men, $35 per week of 48 hours. Foremen, $2 above minimum scale.

KITCHENER, ONTARIO.—CERTAIN LOCAL FIRMS AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 366.

Agreement to be in effect from January 1, 1926, until December 31, 1927.

Hours, forty-four per week, day work; forty-eight per week night work.

Wages per week, hand compositors, operators, make-ups, proofreaders, and other journeymen, day work, $32.12; night work, $40. Machinist operators, not less than $35 per week for day work.

Overtime work time and one-half.

Apprentices: Scale, per week: 1st year, $6; 2nd year, $7; 3rd year, $9; 4th year, $12 and $14; 5th year, $16 and $18. One apprentice to every four journeymen; there must be a journeyman regularly employed in the composing room. Applicants to the trade shall be examined. Apprentices shall be not younger than sixteen years of age, and shall be registered and serve five years. Beginning with the third year, apprentices shall take the International Typographical Union course in printing. During the fifth year, apprentices shall be instructed on typesetting and typecasting devices. Apprentices must undergo yearly examinations. No apprentice shall work overtime unless four journeymen in the same office are employed on the same shift. No apprentice shall leave one office and enter another without written consent of first employer and president of union.

Overtime, Sundays and holidays, time and one-half.

Foremen may employ and discharge help, by discharging first the persons last employed. These shall be reinstated in reverse order if force is increased.

WINNIPEG, MANITOBA.—CERTAIN LOCAL NEWSPAPER OFFICES AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 191.

Agreement to be in effect from November 1, 1925, to November 1, 1926.

Only union members are to be employed. The union constitution, by-laws and scale of prices are to be observed by the employers.

A standing committee of two shall represent each party. This joint committee shall consider questions of prices and clauses of the agreement, and shall meet when a question is referred to it. If committee is unable to agree it shall refer matter to a board of arbitration, having a representative from each party and third appointed by them. Local union laws (not affecting wages, hours or condition of labour) and laws of the International Typographical Union shall not be subject to arbitration.

If machines are installed or substituted, a scale of wages may be agreed upon by the joint committee or matter shall be referred to a board of arbitration.

The parties to the agreement guarantee each the other against walkouts, strikes, lockouts or boycotts, as individuals or as a body.

Both parties desire that provision should be made for an appeal board sitting in some Canadian city to supplement the local arbitration board. Within ten days of date of execution of the agreement both parties will appoint a special committee to prepare an arbitration agreement.

Wages per week—machine operators, make-ups, proofreaders, bankmen, machinists and employees engaged in hand composition and distribution—day work, $44, 8 hours per day for five days and six on Saturday; night work, $46 per week, 7¼ hours per night. Middle shift employees, night scale of wages, 7¼ hours per shift. Overtime, first three hours, time and one-half; thereafter, double time.

Wages per week for machine learners, on day work, first three weeks, $14; second three weeks, $16; third three weeks, $18; fourth three weeks, $21; fifth three weeks, $24; sixth three weeks, $27. Night or middle shifts, $2 over day rate. When learner attains set standard of competency he shall receive regular scale.

Work on statutory and civic holidays, double time.

Apprentices: two journeymen and under ten, one; ten journeymen and under fifteen, two; fifteen journeymen and under thirty, three; thirty and under forty, four. Never more than five.

Before the third year, apprentices must be enrolled in and complete the International Typographical Union course of lessons in printing, before being journeymen members.

Apprentices shall serve their apprenticeship in accordance with schedule as set forth in the agreement.

Scale for apprentices, per week, from $12 at the start to $33 at the end of four years and six months. Apprentices working on night shift, $1 over scale.

A machinist's apprentice shall be classed as an apprentice but shall not interfere with the present allotment.

WINNIPEG, MANITOBA.—PUBLISHERS OF TWO DAILY NEWSPAPERS AND INTERNATIONAL STEREOTYPERS' UNION, NO. 59.

Agreement to be effective from January 11, 1926, until January 11, 1927.

Wages per week, journeymen stereotypers, $43.75.

Hours, eight per day, seven per night. Overtime, fraction of hour after regular day's work to be paid as a full hour.

Overtime, time and one-half. After three hours, and Sundays and holidays, double time.

No apprentice shall work overtime when a journeyman is obtainable. A member called to work double shift shall be paid at overtime rates.

Wages for apprentices, per week, $18 with $5 per week raise each year.

The provisions of the arbitration agreement, in so far as it provides for local conciliation and arbitration shall be binding and effective during period of the agreement, being amended to provide for one arbitrator to be selected by each party and a third selected by them.

SASKATOON, SASKATCHEWAN.—CERTAIN LOCAL FIRMS AND INTERNATIONAL PRINTING PRESSMEN'S AND ASSISTANTS' UNION NO. 206.

Agreement to be in effect from November 1, 1925, to October 31, 1927, and thereafter for one year unless changed on six months' notice.

Hours per week in job press rooms, day shift, 44, consisting of 8 per day and 4 on Saturdays; night shift, 6½ hours Sunday, Monday to Friday, inclusive, 7½ hours each.

Minimum wages, web pressrooms, journeyman, night, $47; day, $44; pressman in charge, $5 over journeyman's scale. Assistant, first year, 33⅓ per cent of journeyman scale; second year, 42 per cent; third year, 53 per cent; fourth year, 68 per cent; fifth year, 80 per cent.

Hours, 8 per day; 7½ per night.

Job pressrooms—platen presses, journeymen, $37.50. cylinder presses, journeymen pressman, night, $45.98; day, $40.35; assistant, 1st year, 40 per cent of journeymen scale; 2nd year, 50 per cent; 3rd year, 70 per cent; 4th year, 80 per cent. Feeder, 2nd year, 33⅓ per cent. Offset Presses, pressmen, $46.

Apprenticeship: term, four years, an apprentice to be a feeder of at least two years. One apprentice to four journeymen or less.

Overtime, for all work after regular hours, time and one-half. Sundays and holidays, double time.

The foreman may employ or discharge help.

Manufacturing: Clothing

TORONTO, ONTARIO.—VARIOUS FIRMS AND THE CLOTH HAT, CAP AND MILLINERY WORKERS' INTERNATIONAL UNION, LOCAL NO. 46.

Agreement to be in effect from various dates in February, March and April, 1926, in each case for one year.

Only union members are to be employed. Workers shall give one week's notice of leaving employment. The union to fill vacancies. Workers shall not be discharged without cases being submitted to a Board of Adjustment, composed of an equal number from each party and an impartial chairman.

Hours, 44 per week. Overtime, time and a half. Week work shall be the system in all branches of the trade.

When the firm is unable to supply full time work, work will be equally divided among the workers.

No work is to be given out to non-union shops.

At the beginning of each season a committee of the union shall meet representatives of the firm to adjust wages of employees whose work improved during the previous season.

The union agrees to supply the firm with help within one week, failing which, firm may engage help. Such help shall join the union within one week, or remain at work during the busy season only.

Construction: Buildings and Structures

KINGSTON, ONTARIO.—MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 221.

Agreement to be in effect from April 1, 1926, to March 31, 1927, and from year to year, with two months' notice of change or amendment.

Hours, eight per day; forty-four per week.

Minimum wage per hour, 90 cents.

Work on Saturday afternoons and after 5 o'clock only when absolutely necessary. Overtime rate, until midnight, time and one-half; thereafter and Sundays and holidays, double time. No men shall work two Saturday afternoons in succession without the consent of the union.

Men working out of town shall have board and transportation paid; travelling time to be paid single time.

Only union members will be employed.

Grievances will be referred to a joint arbitration board of three from each party, who shall meet within 48 hours of any grievance arising, with power to settle same and appoint an arbitrator if necessary. This does not include sympathetic strikes called by the Kingston Building Trades Council over matters coming within their jurisdiction, which can be adjusted locally.

In event of a dispute arising which cannot be settled, or violation of clauses of the agreement by the union, the matter must be referred to the General Office of the United Association, and no strike or lockout shall take place until matter has been investigated.

KINGSTON, ONTARIO.—CARPENTER CONTRACTORS AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL NO. 249.

Agreement to be in effect from June 1, 1926, until May 31, 1927, and thereafter from year to year on two months' notice of change.

Hours per day, eight, with four on Saturdays. No work Saturday afternoon without a permit from the local union, under penalty of a ten dollar fine.

Overtime until 5 p.m. Saturdays, and midnight other days, time and one-half. Thereafter and Sundays and holidays, double time.

Minimum wages, per hour, June 1, 1926 to March 31, 1927, 85 cents. April 1, 1927 to March 31, 1928, 90 cents.

Only union carpenters are to be employed.

No carpenter shall work for any employer for less than the union rate.

TORONTO, ONTARIO.—CERTAIN CONTRACTING PLASTERERS AND THE INTERNATIONAL UNION OF PLASTERERS OF AMERICA, LOCAL NO. 48.

Agreement to be in effect from May 1, 1926, to April 30, 1927.

A joint committee will meet three months' before expiration to discuss renewal of agreement.

An arbitration committee of five from each party shall hear and adjust questions arising.

Wages, per hour, $1.25.

Overtime, and holiday work, double time.

Saturday afternoon work may be done only on a permit.

Where tenders have been given to general contractors and others by members of the Contracting Plasterers, the Union having been notified, no member of the union shall work for these firms until settlement has been made by the Arbitration Committee.

Any one desiring to engage in contracting must first resign his membership in the union, and then let six months elapse.

The union shall give precedence to the Contracting Plasterers in Toronto in the supply of men.

The union shall not order any strike until after complying with terms of the International Agreement, the matter being brought before a joint committee for settlement. No plasterers shall leave work collectively or take part in any sympathetic strike until after complying with terms of the International Agreement, and upon a two-thirds vote at a "summons" meeting.

On country work, transportation shall be paid. Regular scale of wages while travelling, and full board.

Any firm in business for one year may have one apprentice, indentured for four years. Where eight men are employed, there may be a second apprentice.

Where men are working in elevator shafts, employers should have enclosures made over-head and under the same.

Provision for shop hands: any firm in business one year may have one apprentice, to serve four years, and a second when the first enters his fourth year. It is suggested that an apprentice should be given three months' trial before being indentured. None but union men shall be employed in the staff shop. In event of an extreme demand for shop hands, union failing to supply men, employers may engage men from local 48 or other men with a travelling card.

NIAGARA FALLS, ONTARIO.—CONTRACTORS' ASSOCIATIONS AND BRICKLAYERS, MASONS AND PLASTERERS' UNION NO. 27.

Agreement to be verbally in effect from May 1, 1926, until April 30, 1927.

Wages, per hour, bricklayers, stonemasons and plasterers, $1.25. Sewer and conduit work, $1.35 per hour. Pit and tunnel work, $1.50. Apprentices, 1st year, 40 per cent; 2nd year, 50 per cent; 3rd year, 70 per cent; 4th year, 80 per cent of journeymen's wages.

The union as a whole shall not order any strike against contractor under this agreement. Matter in dispute must be brought before a joint committee.

Hours, eight per day. Overtime, time and one-half. Sundays and holidays, double time.

HAMILTON, ONTARIO.—CONTRACTORS' ASSOCIATION OF HAMILTON-NIAGARA PENINSULAR DISTRICT AND THE FRONTIER AND HAMILTON DISTRICT COUNCIL OF CARPENTERS.

Agreement to be in effect from March 15, 1926, to March 1, 1927.

An effort will be made to equalize rates of wages in all localities in the Niagara District next year.

No obstacles will be placed in the way of workmen joining the union, and union men will be employed when available.

Wages per hour, in Niagara Falls, Chippawa, Montrose, Stamford, Allenburg, St. David's, Queenston, Thorold, Merritton, St. Catharines, Homer, Port Weller, 85 cents. In Bridgeburg, Fort Erie, Port Colborne, Welland, and the city of Hamilton and within a radius of ten miles, 80 cents.

Hours, 44 per week; 8 per day, 4 hours on Saturday. Overtime, time and one-half; Sundays and holidays, double time.

WINNIPEG, MANITOBA.—MASTER PLUMBERS ASSOCIATION AND PLUMBERS AND STEAMFITTERS' UNION, No. 254.

Agreement to be in effect from May 1, 1926, to May 1, 1928, with one month's notice of change or amendment.

Hours, 8 per day; 4 on Saturday.

Minimum wages, per hour, $1.12½.

Overtime, until 10 p.m., time and one-half. Thereafter and Saturday afternoons, Sundays and holidays, double time.

Extra car-fare will be paid for work outside the regular city fare. Travelling beyond limit of city fare will be considered equivalent to being on the job or shop. Men sent out of town shall have transportation, board and lodging paid, and travelling time, at regular rate up to midnight. Thereafter, a sleeper to be provided.

One apprentice of each craft to each shop. One additional to each five journeymen, and not more than four to each shop. Apprentices to serve five years—three years helping and two years with the tools. When using the tools, wages for first year, 40 cents per hour; second year, 50 cents.

Grievances shall be referred to a joint arbitration board of three employers and three journeymen. This board may appoint an arbitrator if necessary.

A joint committee is to meet in January each year to arrive at a satisfactory scale of wages to be effective on May 1 of each year.

A Joint Conference Board shall meet every month to make recommendations for improving the general conditions of the trade.

Firms who are parties to the agreement are to be protected in case of a strike in shops who have not signed.

REGINA, SASKATCHEWAN.—ASSOCIATION OF CONSTRUCTION INDUSTRIES OF REGINA AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL No. 1867.

Agreement to be in effect from May 10, 1926, until May 10, 1927, and from year to year thereafter, or until one association has given three months' notice of alteration.

Hours, 10 per day; 5 on Saturday.

Overtime to be discouraged and worked only when necessary.

Wages per hour, from May to July 31, 1926, 90 cents. From August 1, 1926, to May 10, 1927, 95 cents.

Members of the association may employ other carpenters than members of the union.

Construction: Waterworks, Gas and Sewer

TORONTO, ONTARIO.—SEWER CONTRACTORS OF THE CITY OF TORONTO AND VICINITY AND HOISTING ENGINEERS, LOCAL UNION No. 793, INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS.

Agreement to be in effect from January 6, 1926 until January 6, 1927, with 60 days' notice of termination.

Wages, operators on tunnel sewer work, using two drum machinery, $48 per week of 56 hours, 7 days, or 90 cents per hour for broken time. Overtime, time and one-half. Single drum hoists, mixers and compressors, $45 per week of 56 hours, 7 days, and 85 cents per hour, broken time.

Open cut sewer work: two drum hoists, clam shells and excavators, 85 cents per hour. Broken time, 90 cents. Mixers, compressors, pumps, 80 cents; broken time, 85 cents. Hours, 8 per day. Overtime, time and one-half. Sundays and holidays, double time.

Only union members are to be employed.

In a six day week, engineers shall get a rate based on six-sevenths of the seven day schedule, or $6.80 per day of 8 hours at 85 cents per hour for one drum hoists.

Transportation: Street Railways

OTTAWA, ONTARIO.—OTTAWA ELECTRIC RAILWAY COMPANY AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISION No. 279.

Agreement to be in effect from May 1, 1926, until May 1, 1928, and thereafter from year to year, with 30 days' notice of change.

No discrimination shall be shown against any employee on account of membership in any association.

Employees shall not be censored in public. Cases will be investigated and employees found not guilty will be paid for time lost.

Promotions or transfers shall be based on merit and seniority, company being the sole judge.

When men are laid off owing to slackness of work, after 10 days' notice last on shall be first off, and last off first on.

No leave exceeding 30 days in any one year without loss of seniority, except employees on association business or employees in the service over 10 years.

Employees shall have free transportation on company's lines.

Hours, nine per day except in water power plant.

No extra work shall be compulsory excepting emergency work. Overtime rate, time and one-half. Sundays and holidays, time and one-quarter.

The agreement provides for choosing of runs, classification of runs, spare men, supply of uniforms, and various other working conditions.

A student who has passed his preliminary examination and been accepted will be a spare man, on probation for four months, after which if he passes an examination he will be permanent.

Vacancies in shop or shed (day staff) will be filled on probation by senior night employees engaged in similar work.

Day gangs in track department required to do night work for a period of two nights or less shall not on that account be compelled to lose a day prior to the commencement of that night work, and they shall be paid time and one-half for work in excess of 9 hours.

Hours in water power plant, 8 per day.

Wages per hour, conductors and motormen, first year, 45 cents; second year, 47 cents; third year, 48 cents; thereafter, 50 cents. One-man car operators, 5 cents above regular rates.

Wages for other employees, same as on April 30, 1926.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING June the Department received information regarding various contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed thereunder.

Three contracts were awarded by the Department of Public Works in connection with works of construction, etc. ("A" group), the general fair wages clause being inserted as follows:

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Two contracts for interior fittings ("B" group), were also awarded by the Department of Public Works. These contracts contained the general fair wages clause and other conditions for the protection of the labour employed in their execution, as sanctioned by the Fair Wages Order in Council, as follows:

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workpeople, the foregoing fair wages clause for the protection of the workpeople employed.

The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by each workman and the books and documents containing such record shall be open for inspection by the Fair Wages Officer of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

The Contractor's premises and the work being performed under this contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose; all such premises shall be kept by the Contractor in sanitary condition.

With a view to avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited unless the approval of the Minister is obtained; contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of contractors; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workpeople, or, except as specially provided for under legislative authority, by inmates of penal institutions.

All workmen employed upon the work comprehended in and to be executed pursuant to this contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that special circumstances exist which would render it contrary to the public interest to enforce this provision.

The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed in the office of the Minister in support of his claim for payment a statement attested by statutory declaration showing: (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish to the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

In the event of default being made in payment of any money owing in respect of wages of any workman

employed on the said work, and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amount so paid shall be deemed payments to the Contractor.

PUBLIC WORKS DEPARTMENT

Contracts in "A" Group

Dredging deep-water berths at Three Rivers, P.Q. Name of contractor, "National Dock & Dredging Corporation, Limited," Quebec, P.Q. Date of contract, June 21, 1926. Amount of contract, Class "A" $4.50 per cubic yard (scow measure), Class "B" $0.34 per cubic yard (scow measure). Approximate expenditure, $38,760.

Dredging Basin at Cap de la Madeleine, P.Q. Name of contractor "National Dock & Dredging Corporation, Limited," Quebec, P.Q. Date of contract, June 21, 1926. Amount of contract, Class "A" $4.50 per cubic yard (scow measure), Class "B" $0.37½ per cubic yard (scow measure). Approximate expenditure, $7,366.

Dredging at Batiscan Harbour, P.Q. Name of contractor, "National Dock & Dredging Corporation, Limited," Quebec, P.Q. Date of contract, June 21, 1926. Amount of contract, Class "A" $4.50 per cubic yard (scow measure); Class "B" $0.38½ per cubic yard (scow measure). Approximate expenditure, $13,125.

Contracts in "B" Group

Supply and installation of interior fittings (in oak) in the Public Building at St. Jérôme, P.Q. Name of contractor, "The Office Specialty Manufacturing Company, Limited," Newmarket, Ontario. Date of contract, June 17, 1926. Amount of contract, $1,475.

Supply and installation of interior fittings (in oak) in the Public Building at Port Colborne, Ont. Name of contractor "The Office Specialty Manufacturing Company, Limited," New Market, Ontario. Date of contract, June 18, 1926. Amount of contract, $2,544.90.

POST OFFICE DEPARTMENT

The following is a statement of payments made in June, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
	$
Making metal dating stamps and type, also other hand stamps and brass crown seals	909 23
Making and repairing rubber stamps, daters, etc.	206 36
Making up and supplying letter carriers' uniforms, etc.	9,849 26
Stamping pads, ink, etc.	58 09
Mail bag fittings	11,739 36
Scales	230 '0
Repairs, etc.	57 55

PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued downward. Both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being somewhat lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was $11.06 at the beginning of June, as compared with $11.29 for May; $10.44 for June, 1925; $9.86 for June, 1924; $10.23 for June, 1923; $10.18 for June, 1922; $11.16 for June, 1921; $16.92 for June, 1920 (the peak); $12.79 for June, 1918; and $7.49 for June, 1914. The prices of potatoes and butter were substantially lower, while less important declines occurred in the prices of milk, cheese, lard, rolled oats, rice and beans. The prices of beef, veal, mutton, fresh and salt pork, bacon and eggs were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged $21.31 at the beginning of June, as compared with $21.54 for May; $20.67 for June, 1925; $20.22 for June, 1924; $20.72 for June, 1923; $20.58 for June, 1922; $21.74 for June, 1921; $26.92 for July, 1920 (the peak); $20.36 for June, 1918; and $14.27 for June, 1914. Fuel was again somewhat lower, due to a further decline in the prices of anthracite coal and wood. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, declined to 155.7 for June, as compared with 157.0 for May; 158.8 for June, 1925; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; 256.7 for May, 1920 (the peak); and 196.0 for June, 1918. Fifty-two prices quotations were higher, thirty-seven were lower and one hundred and forty-seven were unchanged.

In the grouping according to chief component materials four of the eight main groups advanced, three declined, while one was practically unchanged. The groups which advanced were: Animals and their Products, due to higher prices for live stock, meats, butter, cheese, lard and eggs; Non-Ferrous Metals and their Products, due to higher prices for copper, lead, silver and spelter, which more than offset lower prices for tin and antimony; Non-Metallic Minerals and their Products, because of higher prices for gasoline and coal oil; and Chemicals and Allied Products. The Vegetables and their Products group was substantially lower, because of declines in the prices of grains, flour and potatoes. The Fibres, Textiles and Textile Products group, and the Iron and its Products group also declined, the former because of lower prices for cotton, silk, jute and hessian, and the latter mainly because of a decline in the price of pig iron. The Wood and Wood Products group was practically unchanged.

In the grouping according to purpose consumers' goods declined, while producers' goods was slightly higher. In the former group higher prices for meats, butter, cheese, eggs, bananas, lemons, oranges, gasoline and coal oil were more than offset by lower prices for flour, potatoes and other vegetables. In producers' goods materials for the textile and clothing, leather, and milling industries were somewhat lower, while materials for the meat packing industry, for the fur industry, for the chemical using industry, as well as miscellaneous producers' materials, advanced.

In the grouping according to origin raw or partly manufactured goods declined, due to lower prices for vegetables, grains, rubber, cotton, jute, pig iron, tin and antimony, which more than offset the increases in the prices of cattle, fresh meats, eggs, hay, straw, foreign fruits, copper, lead, silver and spelter. Fully or chiefly manufactured goods were slightly higher, due to higher prices for smoked meats, butter, cheese, gasoline and coal oil, which more than offset lower prices for flour, shorts, steel ingots, hessian and matches. Domestic farm products and articles of marine origin declined, while articles of forest origin and articles of mineral origin advanced.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, continued to decline, being 175.9 for June, as compared with 176.9 for May; 172.1 for June, 1925; 269.9 for June, 1920; and 115.6 for June, 1914. The index for twenty food stuffs fell from 200.0 for May, to 197.9 for June. That for twenty manufacturers' goods was unchanged at 153.9

The Canadian Bank of Commerce index of wholesale prices of exports declined from 162.17 in May to 160.84 in June. That for imports fell from 154.55 for May to 153.41 for June.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, not-

withstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6.

*LABOUR GAZETTE, December, 1923, page 1442.

Retail Prices

Beef prices continued to advance in most localities, sirloin steak averaging 30.2 cents per pound in June, as compared with 29.4 cents in May; round steak 24.5 cents per pound in June and 23.9 cents in May; rib roast 22.8 cents per pound in June and 22.1 cents in May; and shoulder roast 16.5 cents per pound in June and 16 cents in May. Veal roast was up from an average of 18.8 cents per pound to 19.1 cents; Mutton advanced from an average of 30.4 cents per pound to 31.4 cents, higher prices being reported from most localities. Both fresh and salt pork advanced, the formed from an average of 29.7 cents per pound in May to 30.7 cents in June, and the latter from 27.7 cents per pound in May to 28 cents in June. Breakfast bacon advanced, averaging 42.6 cents per pound. Boiled ham was up from an average of 61.4 cents per pound to 62.7 cents. In fresh fish cod steak and halibut were slightly higher. Lard declined slightly, averaging 24.3 cents per pound, increases in some localities being more than offset by declines in others.

Eggs showed a slight increase in price, fresh averaging 35.2 cents per dozen in June, as compared with 34.9 cents in May, and 39.8 cents in April; and cooking averaging 31.9 cents in June, 31 cents in May and 34.8 cents in April. Declines occurred in many localities in Quebec and the Maritime provinces, while higher prices were reported, for the most part, from Ontario and the Western Provinces. Milk declined from an average of 11.8 cents per quart in May to 11.6 cents in June. Lower prices were reported from New Glasgow, St. John, N.B., St. Hyacinthe, Thetford Mines, Timmins and Nanaimo. Butter prices continued to decline, dairy averaging 37.4 cents per pound in June, as compared with 40 cents in May, and creamery averaging 41.3 cents per pound in June, as compared with 43.6 in May. Lower prices were reported from most localities. Cheese showed a general decline, averaging 31.6 cents per pound in June and 32.1 cents in May.

Declines in the prices of bread were reported from St. Hyacinthe and Medicine Hat. Soda biscuits averaged slightly higher at 18.4 cents per pound. Rolled oats, rice and tapioca were somewhat lower. Canned tomatoes and canned peas continued towards lower levels. Prices of onions in many localities were substantially higher, the average being 8 cents per pound in June and 5.5 cents in May. The prices of potatoes were considerably lower, the average being down from $3.57 per ninety pounds in May, to $3.02 in June. The

Continued from p. 716

decline was less pronounced in the three prairie provinces. Raisins advanced slightly, averaging 18.9 cents per pound in June, as compared with 18.3 cents in May. Anthracite coal again averaged lower, at $17.06 per ton, as compared with $17.38 in May. Lower prices were reported from Halifax, St. John, N.B., Fredericton, Three Rivers, Sorel, St. John's, P.Q., Thetford Mines, Montreal, Hull, Peterborough, Guelph, Stratford, Sarnia, Timmins and Brandon. Bituminous coal averaged $10.18 per ton in June and $10.23 in May. Coke was down from an average of $13.76 per ton in May to $13.49 in June. Wood showed a slight decline, hardwood averaging $12.29 per cord and soft wood $8.94 per cord. Coal oil was up from an average of 30.3 cents per gallon in May to 30.7 cents in June. An increase in rent was reported from Calgary.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics. Grain prices showed little change as compared with last month. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged $1.53¼ in June, as compared with $1.53¾ in May. The low price for the month was $1.49¼, reached on the 2nd, and the high $1.55⅜ reached on the 8th. Coarse grains also fluctuated within narrow limits, Western barley averaging 61⅞ cents per bushel in June, and 61½ cents in May; Western oats 50 cents per bushel in June and 49⅝ cents in May; and flax seed $1.93 per bushel in May and $1.95 in June. Ontario barley rose from 61 cents in May to 62½ cents in June, while rye declined from 85 cents in May to 84½ cents in June. Flour, in sympathy with the lower wheat prices of the last two months, declined, the price at Toronto being down from $9 per barrel in May to $8.73 in June. Shorts fell from $33.25 per ton in May to $30.75 in June. Lemons advanced from $3.50-$4 per box to $3.50-$5.50; bananas from $3.75 per bunch to $4; and oranges from $5.50-$6 per case to $6. Rubber continued to decline, a grade of Ceylon being down from 47¾ cents per pound in May to 43 cents in June. Prices of potatoes were much lower, Quebec grades in Montreal being down from $2.91¼ per bag in May, to $2.10 in June; and Ontario potatoes at Toronto from $3.50-$4 per bag in May to $2.75-$3 in June. The price at St. John, N.B., fell from $5.75 per barrel to $4.95. The backward season together with a strong demand was said to be responsible for the upward movement in the prices of hay and straw. Baled hay at Toronto rose from $15.57 per ton to $17.50, and straw from $10.23 per ton to $11. Rosin advanced from $16 per barrel to $17.25. Turpentine at Toronto rose from $1.37 per gallon to $1.40. Choice steers at Toronto advanced from $7.34 per hundred pounds to $7.76. Western cattle at Winnipeg were up from $7 per hundred pounds to $7.59. Hogs at Toronto rose from $14.22 per hundred pounds to $15.24. Sheep declined from $8.81 per hundred pounds to $7.44. Dressed beef at Toronto advanced, fore-quarters being up from $9 per hundred pounds to $11.63, and hind-quarters from $14 per hundred pounds to $16.38. Veal advanced from 19 cents per pound to 21 cents. Dressed hogs were up from $18.50 per hundred pounds to $18.75. Bacon advanced 3 cents per pound to 38 cents. Creamery butter at Montreal rose from 35 cents per pound to 37 cents, and prints at Toronto from 38 cents per pound to 40 cents. Cheese at Toronto advanced 2 cents per pound to 22 cents. Fresh eggs at Toronto advanced from 36 cents-37 cents per dozen to 37 cents-38 cents. Cotton prices continued to decline, the price of raw cotton at New York being 18.5 cents per pound, as compared with 18.9 cents in May. Gingham fell from 17¼ cents per yard to 16½ cents. Japan silk declined from $6 per pound to $5.90. Jute was down from $12.12 per hundred to $11, and hessian from $11.38 per hundred to $10 63. Iron and steel markets were slightly weaker, due, it was said, to lower prices in the United States. Basic pig iron fell from $22 per ton to $21, black steel sheets from $3.25 per cwt. to $3.20, and galvanized sheets from $4.50 per cwt. to $4.40. In non-ferrous metals copper advanced from $15.75 per cwt. to $15.85; spelter from $8.35 per cwt. to $8.65; lead from $7.55 per cwt. to $8; and silver from 65¼ cents per ounce to 65½ cents. Tin fell from 65 cents per pound to 63¼ cents. Gasoline at Toronto advanced from 23 cents per gallon to 24 cents, and coal oil from 25½ cents per gallon to 26½ cents.

A Department of Labour has been established in Bolivia, its duties being as follows: To investigate and decide questions concerning industrial accidents; to intervene in questions between employers and workers as to employment and wage claims; to collect statistics on industrial accidents, cost of living, and conditions of the working class; to supervise the enforcement of the law as regards health and safety measures and the prevention of industrial accidents in mines and industrial establishments.

The personnel of the department will consist of a chief and two assistants, two inspectors, and a medical adviser, and such other employees as may be appropriated for.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The trend of retail prices according to the latest information available was slightly upward in various countries, namely, Poland, South Africa and Australia, continued to rise in France and Germany, and continued downward in other countries. Wholesale prices showed a slight upward turn in Great Britain in June for the first time in several months, and were continuing to rise in France and Germany in May. Wholesale prices were upward according to the latest reports received from Finland, Poland, Sweden and Australia.

The following description of the course of prices is taken from the United States *Federal Reserve Bulletin* for June, 1926.

"The year following the restoration of the free gold market in Great Britain has been characterized by a downward movement of prices in England and in most other European countries, as well as in the United States. An important factor in this international decline of the average of commodity prices has been a recession in the prices of farm products, which had advanced considerably during the preceding year. World prices of other commodity groups, however, and particularly of some of the important industrial products, like steel, also declined during the

year. . . . . In the latter part of 1924 and early in 1925, prior to the removal of the gold embargo, prices, according to official index numbers, were higher in England than in the United States, and the difference was larger than could be accounted for by the depreciation of sterling exchange. In February, 1925, when the committee of experts made its recommendation that England return to the gold standard, the value of the pound sterling was only 1½ per cent below gold parity, while the price level in the United States was 5 per cent lower than in England. The committee, in fact, pointed out that a readjustment of prices between the two countries was inevitable, because British prices had not declined in 1924 and the beginning of 1925 in proportion to the rapid rise in sterling exchange, and that the necessary readjustment would be rendered only slightly more severe by a rise of sterling to parity. At the end of April, when the gold standard act was adopted and sterling rose practically to par, prices had turned downward in both countries, but the difference in price levels between the two countries had narrowed somewhat, because in England prices had declined more rapidly than in the United States, and in April, 1926, according to the index numbers, British prices were about 5 per cent lower than American prices. In England the decline in prices during the year was somewhat larger in industrial than in agricultural commodities, while in the United States the decline in the prices of farm products was much larger than the reduction in the prices of non-agricultural commodities. Price recessions for the year in other countries were of varying degree, the largest declines occurring in Norway and Denmark and the smallest,

next to the United States, in the Netherlands. In Germany prices declined considerably less than in England, and the decline in the average reflected much larger reductions in the prices of foods than in the prices of industrial products."

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 144.9 in May, an advance of 0.9 per cent for the month. Foods advanced 4.1 per cent to 158.0, all three groups showing rises. Non-foods declined 0.7 per cent to 138.0, the only advance in this section being one shown by the cotton group.

The *Statist* index number (in continuation of Sauerbeck's figures), base period 1867-77=100, rose in May after a decline during the five previous months. The index for the end of May was 125.7, being 0.2 per cent above that for a month earlier. The advance was due to higher prices for foodstuffs, in which there was an advance in groceries. In materials, minerals showed a recovery but textiles were weak.

The *Times* index number for May showed the level of wholesale prices to be 0.7 per cent higher than a month earlier, being 143.9 on the base 100 in 1913. The fall in prices has thus been arrested. This is largely owing to increases in food values, the index for which is 2 per cent higher at 150.0, while that for industrial materials is 0.1 per cent lower on the month at 140.3. In the absence of quotations for coal, prices ruling at the end

of April were repeated. Cotton prices showed a recovery.

Finland

COST OF LIVING.—The official index number of the Ministry of Labour, on the base July, 1914=100, fell slightly from 1152.9 in March to 1141.2 in April and 1136.3 in May, a decline for the two months of 1.4 per cent. Foods declined 2.6 per cent to 1040.6, clothing and lighting and fuel advanced slightly, and the remaining groups remained unchanged.

France

WHOLESALE AND RETAIL PRICES.—The following is quoted from the *Economist* for June 19, 1926.—"The index figure for wholesale prices, at the end of May, which has just been announced by the *Statistique Générale*, is returned as 702, indicating a rise of no fewer than 38 points as compared with that for April (which was itself 19 points above that for March), and of 171 points as against the figure for May, 1925. The rise of 57 points during the month in the figure for textiles indicates how severely the renewed fall in the franc has affected cotton and wool, and the same cause may be ascribed to the rise of coffee, but it is difficult to find adequate reasons, in spite of the bad weather, why vegetable foods should have risen by 54 points. Retail prices in Paris have also shown a sharp rise, the general index figure for May (based on the sale prices of thirteen articles of common necessity, of which only

end of 1920; beginning of month thereafter. (*e*) Beginning of month. (*f*) Base is average for six capital towns. (*g*) 15th prices hereafter, 1914=100. (*m*) From Jan., 1925, end of previous month. (*n*) No figures published.

petroleum is directly affected by the exchange value of the franc) being returned as 522, compared with 503 in April, 497 in March, and 418 in May, 1925. The index figure representing the cost of living to be met by a Paris working-class family of four persons (based on 100 as representing the corresponding expenditure in 1914) is reported by the local Regional Committee as being 451 for the first quarter of 1926, as compared with 421 for the last quarter of 1925. The figure for foodstuffs alone is returned as 473, as against 437 for the previous quarter."

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 123.2 in May, a rise of 0.4 per cent over the April level. Farm products continued to rise and industrial materials fell slightly. Goods produced rose slightly and goods imported declined. The most noteworthy change among the groups was a decline of 3.2 per cent in textiles.

COST OF LIVING.—The official index number rose very slightly during May to 139.9. Foods showed a slight increase, being 142.3, and rent rose to 98.6. Other groups declined, heat and light being 140.4; sundries 188.0 and clothing 165.2.

Poland

COST OF LIVING.—The official index number of the cost of living of a workingman's family of four on the base 1914=100 rose from 168.5 in March to 183.2 in May. Foods and clothing rose considerably, and lodging and rates and sundries also rose. Fuel and light declined slightly in April and rose slightly in May.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base respective months of 1913=100, rose one point in May to 151. The principal change was an advance in vegetable foodstuffs and a decline in paper and paper goods. Other groups varied one point or less.

Australia

WHOLESALE PRICES.—The official index number of the Commonwealth Statistician, on the base 1911=1000, was 1856 in March, being slightly above the level at the end of the year. During the first quarter of 1926 there were sharp advances in dairy produce and meat and a slight advance in groceries. The groups jute, leather, etc., agricultural produce, etc., declined slightly. Metals and coal and chemicals showed no change.

New Zealand

WHOLESALE PRICES.—The official index number of the Census and Statistics Office was recently revised, a number of new commodities being included, such as benzine and gasolene. A system of cross-classifying the commodities has been introduced "in such a way as to meet the demand that exists for information as to the fluctuations in prices of the raw materials and equipment utilized in the leading types of industry (e.g. farming, building, etc.), and also to meet the demand for a separate index number for the prices of imported articles." The new index number has been calculated by yearly averages from 1913 to 1925 and thereafter by months. The base is average annual aggregate expenditure, four chief centres, 1909-13=1000.

RETAIL PRICES.—The official index number of retail prices of food, on the base average annual aggregate expenditure, four chief centres, 1909-13=1000, declined each month from February to April, from 1652 in January to 1618 in April. This movement was observable in the groups groceries and meat but dairy produce rose from 1511 in January to 1625 in April.

(a)Quarter beginning in specified month. (b) Average for year. (c) Figure for previous month. (d) Following month. index number (38 commodities) and all converted to base 1913=100. For 1920 and 1921, 76 quotations are included, and from

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1913=100 was 151.7 in May, showing a slight increase. Farm products averaged slightly lower than in April. Clothing materials, metals, building materials and house furnishing goods were also somewhat cheaper. In other groups prices were higher than in the preceding month.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities), was $12.7378 on July 1, a decline of 0.1 per cent. An increase in provision prices, owing to advances in hog and dairy products, with smaller advances in metals, oils and naval stores, were more than offset by declines in grains, live stock, leather and hides, textiles and miscellaneous products.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life of the cost of living in Massachusetts, on the base 1913=100, was 162.3 in May, showing a decline of about 1.3 per cent, due principally to lower food prices, while shelter and sundries also declined slightly. Clothing and fuel and light showed slight upward tendencies.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Limit of Rights to Union Benefit

A member of Local 190, American Federation of Musicians (affiliated with the American Federation of Labour), died in July, 1925, having duly made his last will and testament in favour of a Miss Theobald. The legatee was in no way related to the deceased. As executrix and legatee she claimed the right to receive the benefits payable by the Union to the representatives of a deceased member. The question rose whether the Union was under any contractual obligation to the plaintiff. The objects of the Association are set out in Bylaw No. 3, as being "for mutual protection by means of contributions, subscriptions, donations or otherwise, against all casualties caused by disease, inevitable accident or death, with a view of helping the afflicted or the widows, orphans, relations and dependents of deceased members."

The bylaw (No. 84) of the Association in regard to the payment of death benefit is as follows: "Upon the death of a member who has been in good standing continuously for a period of three months immediately preceding his death the sum of $250 shall be appropriated and set apart for the purpose of being applied and paid towards his funeral expenses in such manner as the Board shall direct and appoint, and the Board shall have full control and power for the purpose. Should it be deemed necessary for the purpose the Board may make an assessment of fifty cents *per capita* upon the members to raise and pay the same."

Bylaw 85 relates to payments in connection with the Donation Fund: "Upon the death of a member who has been for at least one year a member of the Association and who has been in good standing for three months previous to his death the proceeds of an assessment of $2.00 on each member of the Association not exceeding in amount the sum of one thousand dollars will be donated to a designated beneficiary, or to the legal representative of such deceased member, any indebtedness to the Association from the deceased member having first been deducted from the amount payable,"

The Court of King's Bench at Winnipeg dismissed the action with costs. The court found that a member of the Union cannot by his will designate any person as a beneficiary of the donation fund of the Union; that in the present case the plaintiff, not being a relative of the deceased, would not even if she had been properly designated, have been entitled to be a beneficiary of the funds. The bylaw of the Union which provided for payment of the benefit alternatively "to the legal representative of a deceased member" was held to be *ultra vires*. The deceased was held to be a member of the Union in good standing. The court further held that a beneficiary of a deceased member of the Union is not entitled to be paid the sum set apart by the Union for the member's funeral expenses, the question being raised whether any person has a legal right to enforce such a payment. The provisions of the Life Insurance Act do not apply to the destination of benefits conferred by membership in the Association, which was incorporated under the Charitable Associations Act of Manitoba.—*(Manitoba—Theobald versus Winnipeg Musicians Association)*

Fixing of Yearly Salary Does Not Involve Hiring by Year

An overman or pit boss employed by a mining company, having been dismissed from his employment without notice, brought action for damages for wrongful dismissal against the company. He alleged that he had been employed at a yearly salary, the position being stated to carry a salary of $3,132 per year. The Supreme Court of Alberta, which tried the case, gave judgment for the plaintiff for $51.60, with costs, holding that as he had been dismissed without notice and had been paid less than a full month's salary in lieu of notice, he was entitled to recover the difference between what he was paid and the amount of a month's salary. The judgment laid down the principle that the fixing of a yearly salary in a contract of hiring is not conclusive evidence as to the period for which the employment is intended to continue, although it is a matter to be taken into account in determining the duration of the engagement. In regard to the hiring of the plaintiff in this case, there appeared to be no time limit expressly stated for the duration of the contract. It was therefore held to be, not a yearly hiring, but one of unfixed duration, and therefore subject to termination by either party on reasonable notice.—*(Alberta—Strickland versus North American Collieries Limited).*

Company Pedlar Holding Provincial License Exempt From Municipal License

The agent of a company operating in Saskatchewan was convicted by a magistrate of having made sales within the limits of a municipality without having obtained a pedlar's license as required by municipal bylaw

and ordered to pay a fine of $25, besides costs. Appeal was taken against the conviction on the ground that the Company had paid the fees required under the provisions of the Companies Act and of the Corporation Taxation Act of the Province, the latter Act providing at section 35 as follows:—

> No company made liable to taxation by this Act nor any of its agents shall require any license, authorization or permit of any municipality for doing business in the municipality.

On this ground it was claimed that an agent of the Company should not be required to obtain a municipal license. The appeal was allowed with costs and the conviction quashed.

(This decision may be compared with that in the case of *Rex ex rel Kyte versus Aune* reported in the LABOUR GAZETTE for July, 1925).—*(Saskatchewan—Rex versus Gebhardt)*

Position of Teachers' Alliance Not Recognized in Discussion of Wage Schedules

On June 1 the Supreme Court of Alberta gave judgment in an action which was described by the Court as a "trial of strength between the Teachers' Alliance, an association of teachers organized on much the same lines as the Trades and Labour Unions, and the board of trustees of the Blairmore School District." During the summer of 1925 the Board deliberated upon the question of teachers' salaries, the majority arriving at the conclusion that a reduction should be made. Accordingly a letter was sent to the teachers individually asking them to accept a new schedule. The teachers replied in one letter, signed by all, in which they said: "While we sign separate agreements, we are wholly in the hands of our executive when it comes to accepting alterations in a salary schedule. Arrangements to meet with our executive can be made with Mr. Conway, President of the Crows' Nest Pass Local of the Alberta Teachers' Alliance."

At a subsequent meeting the teachers refused to discuss the salary question with the Board except through a representative of their organization, whereupon the Board decided to give them 30 days notice of the termination of their agreement, as required by the Schools Act. At a later meeting the Board agreed to meet the representative of the Alliance to discuss the schedule, but apparently through some misunderstanding he did not appear, although having powers of attorney from all the teachers. The principal however appeared on behalf of the teachers, and after the meeting new notices of dismissal were issued. It was finally agreed by the teachers amongst themselves and with the Alliance that they would not recognize the notice which they had received purporting to terminate their contracts and that they would not accept any other positions but would return to Blairmore and demand reinstatement as teachers in the school.

The teachers claimed that neither notice to terminate was good in law, but that the school board having engaged each teacher by contract in writing, had wrongfully and without cause terminated the hiring by dismissing them, thereby giving rise to a cause of action in damages for wrongful dismissal. In the alternative it was claimed that the contract was not legally terminated until the receipt of the notices given pursuant to the second meeting of the Board, and that the teachers, therefore, had due and owing to them balances of salaries.

The judgment discussed several points arising out of the observance of the proper form of agreement, etc. In regard to the notice of dismissal it was found that the required conditions had been complied with. The teachers were all notified of the meeting in sufficient time to be present, but chose not to be there. The action of the teachers was dismissed with costs. A counter-claim by the Board for the return by the teachers of certain sums alleged to have been received by them in overpayment of their salaries was also dismissed with costs.

—(Alberta—Thoreson versus Blairmore School District)

School Trustees Must Follow Prescribed Forms in Dismissing Teacher

The trustees of a school district in Alberta in June, 1924, hired a teacher at a salary of $1,200 a year. The teacher continued in employment till the end of June, 1925, no complaint being made by the trustees as to her work. On June 9, 1925, the trustees wrote to the teacher inviting her to continue teaching at the reduced salary of $1,000, the amount offered being raised later to $1,100. The teacher made no reply to the letter, and the trustees advertised for another teacher. The teacher saw the advertisement and concluded that her engagement had terminated. The case was tried in the Alberta Supreme Court, which found that the Board had not observed the provision of the Schools Act, as follows:

> Either party hereto may terminate the agreement by giving (30) thirty days' notice in writing to the other party; provided that no such notice shall be given by the Board until the teacher has been given the privilege of attending a meeting of the Board (of which two clear

days' notice in writing shall be given to the teacher) to hear its reasons for proposing to terminate the agreement.

The teacher was awarded the sum of $243, with costs of action.

—(Alberta—Hunt versus Board of Trustees of Brant School District).

Employer may recover from Sub-Contractor Compensation Payable to Workman

A workman employed by a building contractor received injuries for which he was awarded $2,559.47 under the Workmen's Compensation Act of Quebec. The accident occurred when the workman was engaged in work in connection with a rock-crushing machine, which was operated by a sub-contractor. He was engaged in shovelling stone from the bottom of a pile when the pile slid down and buried him. The sub-contractor alleged that he warned the men of the risk of the work, but it was not certain that the injured man was present when the warning was given. The principal contractor brought action against the sub-contractor to recover the amount ordered to be paid in compensation. The Superior Court at Montreal allowed the claim, ordering the sub-contractor to indemnify the principal in the full amount.

—(Quebec—Bernier versus Musy, and Musy versus Martineau & Company).

Unlawfulness of Unauthorized Strike by Local Union in Great Britain

A motion was made in May in the High Court of Justice (Chancery Division) of England and Wales by the National Sailors' and Firemen's Union of Great Britain and Ireland for an injunction to restrain the secretary and officials of the Tower Hill branch of the Union from calling out members on strike without the prior authority of the executive council of the Union. By the rules of the Union no strike may be called without the consent of two-thirds of the members voting by ballot. When the general strike was called by the General Council of the Trades Union Congress a ballot of the National Sailors' and Firemen's Union was in progress, but it had not been completed. The General Council of the Trades Union Congress called upon all Unions affiliated to the Congress to cease work if required by the General Council; the National Sailors' and Firemen's Union was one of those directed by the General Council to strike. The Tower Hill branch of the Union, without the authority of the Sailors' and Firemen's Union, passed a resolution endorsing the action of the Trades Union Council, and issued a notice calling out the members, although the executive council of the Union had given no orders for such action. The Union claimed an injunction, the grounds being a breach of the rules of the Union, and also at common law.

Judge Astbury's Judgment

Mr. Justice Astbury in his judgment delivered on May 11, 1926, said:—

"This is a motion in an action brought by the National Sailors' and Firemen's Union of Great Britain and Ireland against a number of defendants who are officers or officials of a branch in London of the plaintiff union, seeking an injunction to restrain the defendants, putting it shortly, as branch secretary or officials of the union, or in the name of the union, calling members of the plaintiff union out on strike or calling upon members of the plaintiff union to leave their employment without the authority of the executive council of the union. The defendants have appeared in person, and they have given me considerable assistance in dealing with this matter, which I am bound now to do. I will try and state as clearly as I can the facts which have been proved in the evidence which has been filed upon this motion.

The facts are as follows. First, a serious crisis has arisen in the country with regard to the dispute in the mining industry. The General Council of the Trades Union Congress have assumed control of this dispute, and have called upon all affiliated unions to the Trades Union Congress to cease work if required by the General Council. The General Council has called a so-called general strike; and the defendants have kindly explained to me the nature of that strike which has been so called. A large number of unionists throughout the country in railway, transport and other trades have been called upon by the Trades Union Council to come out on strike. The defendants are the branch secretary and delegates of the Tower Hill branch of the plaintiff union, and they intend to take instructions from the Trades Union Congress and not from the executive council of their own union in relation to the matter in question. The Tower Hill branch of the plaintiff union has, without the authority of that union, passed a resolution endorsing the action of the Trades Union Council or Trades Union Congress in calling a general strike, and that resolution is in these terms:—

> We, the members of the Tower Hill branch of the National Sailors' and Firemen's Union, endorse the action of the Trades Union Congress General Council in calling

the general strike, and pledge ourselves to do all in our power to help them; and we call on the branch secretary and officials to notify all members to cease work immediately.

In pursuance of the above resolution the defendant Stuart has issued the following notice. It is written on the plaintiff union's paper, it is addressed from 27, Plough Road, Rotherhithe, and dated 4th May instant. It is in these terms: "All members of the Sailors' and Firemen's Union except men on articles of agreement are to come out in support of the Trade Union Council's policy and are to picket their jobs." Mr. Stuart signs that as Acting Secretary, and he has explained to me in court what it means, and the other defendants are apparently in agreement with him. I have been told that that policy therein referred to is the policy of the Trade Union Congress in trying to induce and promote a general strike throughout this country. In addition to the resolution of the Tower Hill branch, which I have already read, they passed a further one as follows: "We, the members of the Tower Hill branch, express our confidence in the secretary and officials of this branch"—whom I have had the pleasure of seeing and hearing—"and we will support them in carrying out the instructions of the Trades Union Congress General Council." I have been informed by the defendants that those instructions are to come out on strike. The general president of the plaintiff union, Mr. Havelock Wilson, has made an affidavit, in which he has proved a number of the matters I have referred to; and in paragraph 3 he says this: "Having regard to the present emergency the attitude of the above-named defendants is one of national importance, inasmuch as, beyond it causing a breach of agreements with shipowners, it is an interference with the food supply on which the nation is dependent." According to the rules of the plaintiff Union certain trade union benefits are given to the members of the Union under certain conditions. One of these conditions is that, without the consent of a two-thirds majority assured, no general strike—that means no strike in the Union itself—shall be proclaimed; and I see in Rule 16, sub-rule 3, that there is a provision referring to members "wilfully and persistently doing or suffering any act or thing in contravention of any of these rules or of any lawful resolution of the executive council." According to the evidence before me certain members of the plaintiff Union have been misled and compelled in London by the defendants and their pickets to leave their ships and to suffer serious loss and damage, and have been placed in doubt as to their position as members of this Union. These acts on the part of the defendants have been done without the authority of the plaintiff Union and contrary to its rules and orders; and lastly, no strike has been called by the plaintiff Union and no ballot of its members, as provided for by its rules, has been completed. In these circumstances the plaintiff Union seeks the injunction which I have referred to, and the learned counsel who has appeared for the Union bases his right to claim this injunction on two grounds:—one, that the defendants have acted in breach of the rules and orders of the Union and are liable to be restrained as prayed; and secondly, that they have acted contrary to the common law of this country.

I will endeavour now to state what I apprehend is the law upon this matter. In the first place it is evident from the facts above mentioned, and from the rest of the evidence that has been filed that members of the plaintiff Union have been placed in a position of doubt and danger, and it is my duty to state shortly their rights and those of their Union. The defendants have very fairly admitted that they desire that the members of their Union shall be told their rights under the unfortunate circumstances which have arisen. The so-called general strike called by the Trades Union Congress Committee is illegal and contrary to law, and those persons inciting or taking part in it are not protected by the Trade Disputes Act of 1906. No trade dispute has been alleged or shown to exist in any of the Unions affected, except in the miners' case, and no trade dispute does or can exist between the Trades Union Congress on the one hand and the Government and the nation on the other. The orders of the Trades Union Council above referred to are therefor unlawful, and the defendants are at law acting illegally in obeying them and can be restrained by their own Union from doing so. The plaintiff's counsel has contended that, if the members of the plaintiff Union stay in their jobs and refuse to strike, they cannot be deprived of their trade union benefits, and the defendants who have appeared before me have stated, very properly, that it is important to them that their members should know their rights in this respect.

Now the law upon that matter is as follows:—No member of the plaintiff Union or any other trade unionist in this country can lose his trade union benefits by refusing to obey unlawful orders, and the orders of the Trades Union Congress and the Unions who are acting in obedience thereto in bringing about the so-called general strike are unlaw-

ful orders, and the plaintiff Union is entitled to have this fact made clear and brought to the attention of its members.

Mr. Luxmoore (counsel for the plaintiff Union) further contended that those members of the plaintiff Union who obey this order to strike will not be entitled during the continuance of the strike to receive any strike pay from their Union; and the defendants have, again very properly, and I think very fairly, stated that it is their desire that they should know, and that their members should know, their rights in this respect. Trade Union funds in this country are held in a fiduciary capacity, and cannot legally be used for or depleted by paying strike pay to any member who illegally ceases to work and breaks his contract without justification in pursuance of orders which are unlawful; and this fact also is one that the plaintiff Union is entitled and bound to make clear to its members in the difficult position in which they have been placed.

With regard to the second ground upon which the plaintiff Union seeks to obtain this injunction the matter is beyond question. The defendants, in addition to acting as above in defiance of the law, have acted contrary to the rules and orders of their own Union, and are on this ground also liable at the suit of that Union to be restrained by injunction from continuing to do so.

The result is that there must be an injunction until the trial or further Order, substantially in the terms of the Notice of Motion, which can be settled later; or the defendants may, if they prefer it, give an undertaking in those terms until the trial or further Order. I was desirous of assisting the defendants as far as I was able to do so in coming to a conclusion as to whether they would prefer to give this undertaking or be restrained by injunction. They agreed with me that they would like to know their rights before deciding which course to adopt. I have done my best to explain the rights as I understood them. I will now ask the defendants to kindly agree among themselves whether they will prefer that the injunction should be granted *in invitum*, or to give an undertaking substantially in the terms of the injunction that I have referred to."

The defendants submitted to an injunction.

United Kingdom—National Sailors' and Firemen's Union of Great Britain and Ireland v. *G. Reed and others.*

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] AUGUST, 1926 [NUMBER 8

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

REPORTS on employment received by the Dominion Bureau of Statistics from firms with a minimum of fifteen employees in industries other than agriculture and fishing, showed a further large increase in the volume of employment at the beginning of July. The number of persons added to the payrolls during June was greater than in the same month of any previous year of the record. Data were received from 5,898 firms, employing 850,718 workers, as compared with 830,019 in the preceding month. The employment index number (the base 100 representing the number of employees of the same firms in January, 1920) stood at 103.7, compared with 101.0 on June 1, 1926, and with 96.8, 95.9, 99.5, 91.1 and 87.5 of July 1, 1925, 1924, 1923, 1922 and 1921 respectively. Reports received from the offices of the Employment Service of Canada indicated a slight decrease in the volume of business transacted in June as compared with that of the preceding month. However a gain was shown by the comparison with the records of June last year. At the beginning of July the percentage of unemployment among members of local trade unions was 4.1, as compared with percentages of 4.9 at the beginning of June, 1926, and 6.1 at the beginning of July, 1925. The percentages for the month under review are based on returns received by the Department of Labour from 1,502 local trade unions with an aggregate membership of 145,732 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.07 at the beginning of July, as compared with $11.06 for June; $10.49 for July, 1925; $9.91 for July, 1924; $10.17 for July, 1923; $10.27 for July, 1922; $10.96 for July, 1921; $16.84 for July, 1920 (the peak); $13 for July, 1918; and $7.42 for July, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 rose slightly to 156.2 for July, as compared with 155.7 for June; 158.4 for July, 1925; 153.9 for July, 1924; 153.5 for July, 1923; 154.1 for July, 1922; 163.7 for July, 1921; 256.3 for July, 1920 (the peak); and 199.5 for July, 1918.

The time loss caused by industrial disputes in July was greater than during the previous month but less than during July last year. Nineteen disputes were in progress at some time during the month, involving 11,208 employees, and resulting in the loss of 52,141 working days. Corresponding figures for June were as follows: 13 disputes, 2,237 workpeople, and 45,348 working days; and for July, 1925, 21 disputes, 13,458 workpeople and 331,976 working days; due chiefly to a dispute in the coal mining industry in Nova Scotia.

Industrial Disputes Investigation Act, 1907

During July the Department received the report of a Board of Conciliation and Investigation in connection with a dispute between the Winnipeg Electric Company and its motormen and conductors, members of the Street Railway Employees' Unit, One Big Union. A minority report was also received. (The text of these reports is given on page 754 of this issue). An application for the establishment of a Board was received from conductors, trainmen and yardmen of the Canadian Pacific Railway Company and the Canadian National Railways, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen. Two members of the Board had been appointed before the end of the month.

Minimum wage for lumber industry in British Columbia

On November 1 a minimum wage of 40 cents an hour will be in force for employees in the logging industry of British Columbia under the provisions of the Male Minimum Wage Act of 1925. The order has not yet been gazetted, the act providing that the rates fixed by the Board of Adjustment are to take effect 30 days after the date of their publication in the *British Columbia Gazette*, but publication will be made, it is stated, in time to make the minimum rate operative on the date named above. The Board which administers this act is appointed under the Board constituted under the Hours of Work Act, 1923 (LABOUR GAZETTE, January, 1924, page 24). It is composed of the following members: Mr. J. D.

McNiven, Deputy Minister of Labour, Chairman; Mr. F. V. Foster, of the Brotherhood of Locomotive Engineers, representing the employees, and Mr. T. F. Patterson, representing the employers. The order for the lumbering industry will be the first order of the Board to take effect.

Claim that arbitration agreement is legally binding

The Joint Board of the International Ladies Garment Workers' Union of Toronto took steps early this month to bring suit against the Toronto Cloak Manufacturers' Protective Association, claiming damages for twenty-five employees alleged to have been discharged from work in a factory belonging to a member of the Association, and to obtain an order compelling the employer to re-engage the discharged employees. The Board's claim is based upon an alleged violation by the company of the terms of the agreement made in 1925 between the Association and the Union, which was printed in the LABOUR GAZETTE for June, 1925, page 619. A dispute occurred in which it is claimed that the employer had failed to make full use of the machinery provided in the agreement for the arbitration of disputes. This provision was as follows:—

"Complaints or grievances involving interruption or application of any clause of the agreement or relations between employer and employee shall be submitted in writing by parties claiming grievance to other party, and managers of Association and Union or their deputies shall jointly investigate matter and attempt an adjustment. Decision reached shall be binding. In failure to agree question shall be referred to a Trial Board of one member from each organization, and an impartial chairman selected by the unanimous consent of both parties. Majority decisions of the board shall be binding. No decisions shall be used as a precedent for any subsequent case. The impartial chairman shall order any investigation of facts involved in the case."

The suit is stated to be the first case of its kind in Canada, but a similar case was tried in Massachusetts in 1919, in which it was held by the court that an arbitration agreement was legally binding.

Inquiry into probable effects of 8-hour day in Alberta

The Alberta Government has appointed a commission to inquire into the probable effects of the operation of an eight-hour day in industry in the Province. The members of the commission are: Messrs. A. A. Carpenter, chairman of the Public Utilities Board and the Minimum Wage Board; Norman Hyndsley of the P. Burns Company, and an active member of the Calgary Board of Trade, and Elmer E. Roper, editor of the *Alberta Labour News* and secretary of the Alberta Federation of Labour.

It will be recalled (LABOUR GAZETTE, May, 1926, page 446) that the new Factory Act, passed at the last session of the Provincial Legislature provided, in regard to the proposal to establish a legal eight-hour day, that a commission should be established by Order in Council to investigate the subject of a 48-hour working week with regard to any or all of the industries carried on in a factory, shop or office; this commission to be appointed by the Lieutenant Governor in Council and to report at the next session of the legislature. In the meantime it was provided that the hours of labour for any person employed in a factory, shop, office or office building should not exceed nine in the day and fifty-four in the week.

Conditions of casual female employment in Manitoba

The Minimum Wage Board of Manitoba published during July Regulation No. 6, governing the occupation of female employees in brickyards and in seasonal and casual employment in industries not already covered by other regulations. The minimum rate of wages fixed for this group is $12 a week, and 30 cents an hour for part time and casual workers. Wages are to be paid weekly, within three days after such wages have been earned. The hours of labour must not be more than nine in any day or 48 in any week. Night employment, that is, between the hours of 10 p.m. and 7 a.m., and Sunday work, are forbidden. Between the close of one day's work and the beginning of another there must be an interval of at least eleven hours. In case of exceptional emergent conditions arising, overtime may be worked on permit from the Bureau of Labour. There will be extra pay at not less than the regular rate for all overtime worked. One hour must be allowed for lunch, and employees required by the employer to spend time on the premises must be paid therefor.

Among the necessary "conditions of labour," in addition to the usual provisions regarding drinking water, toilets, etc., it is provided that "all machinery and danger points shall be protected as far as possible by approved safety devices. All protection possible against occupational diseases shall be provided. Each establishment shall keep a First-Aid Kit to be approved by the Bureau of Labour, and at least one reliable member of the working force shall be trained in its use. No girl under seventeen years of age shall be employed."

The Board may issue a permit upon application therefor to any employer, granting modification of or exemption from these regulations. Such permits will be issued only in cases of exceptional or emergent conditions arising.

Any violation of these regulations is punishable by a fine or imprisonment, or both.

Ontario claims lead in compensation

The Workmen's Compensation Board of Ontario has published a useful compendium containing the text of the act of 1914, consolidated with the numerous subsequent amendments, including that made in the present year; together with the text of all the regulations issued under the act, and a synopsis of its provisions. After more than eleven years' experience of the present act, the Board expresses the belief that few either of the workmen or the employers would desire to return to the old system. "The oustanding features of the operation of the present law," they state, "are the simplicity of its provisions and procedure, the elimination of litigation and expense, wide protection for workmen and their dependents, immunity of the employer from individual liability, and expeditious payment of benefits directly into the hands of the injured workman or his dependents."

The claim is made that in liberality of compensation the benefits of the Ontario Act stands first among the laws of this continent. Only one other province and ten of some 46 states with compensation laws pay as high a wage percentage; and in most places the nominal percentage is sadly curtailed by weekly maximums or by limiting the period of payment or the maximum total. The weekly maximum in New York, for instance, is $20; in Ohio it is $18.75; in Michigan, $14; in Pennsylvania, $12; in British Columbia, $24.04, and in Nova Scotia, $12.69, as compared with Ontario's $25.64 a week. In Pennsylvania a man losing an arm or a leg is paid for only 300 weeks; in Iowa for 400 weeks, and in Michigan for 500 weeks; and in death cases these states pay the widow for only 300 weeks, while Ontario pays the workman for life and the widow during widowhood. In Ohio, for loss of an arm or a leg, the total may never be more than $3,750; in New York the limit is $3,500, and in Massachusetts, $4,000; while in Ontario the total may run as high as $20,000 or over. In Great Britain the weekly maximum is now 30 shillings, and the maximum total is £600.

Placing of handicapped men in employment

An account of the work of the Handicap section of the Toronto Employment Office of the Employment Service of Canada is given on another page of this issue. The report of the Department of Labour of the Province of Ontario for the fiscal year 1925, in the section dealing with the employment service, describes the extension of the placement work for handicapped men as "the most outstanding event of the year." This extension was the result of an agreement reached by the Federal and Provincial Governments in November, 1924, when the work of the employment branch of the Department of Soldiers' Civil Re-establishment was discontinued and its activities transferred to the Ontario Offices of the Employment Service of Canada. The results are stated to have surpassed the highest expectations of those responsible for the arrangement. The "handicap section" has enjoyed a greater degree of co-operation with the government and the civic departments, while the "employers in the large industrial plants appear to be realizing that the best possible results are not always obtained by the employment only of physically fit men to perform certain duties that may not require the utilization of 100 per cent physical effort."

Organization in Industry, Commerce, etc., in Canada

The Fifth Report on Organization in Industry, Commerce and the Professions in Canada, being for the year 1926, has just been published by the Department of Labour. The volume shows the extent to which employers have associated for the purpose of dealing with matters of common interest. The report also contains the names of associations whose members are concerned with co-operative buying and selling as well as of those embracing wholesale and retail dealers. The associations are divided into the following groups, which cover almost every phase of industrial, commercial and professional activity:—Manufacturing; Building and Construction; Mining; Transportation; and Communication; Printing and Publishing; Laundering, Cleaning, Repairing, etc.; Personal Service and Amusement; General Manufacturers & Employers; Financial; Agriculture; Dairying; Horse, Live Stock, Sheep Breeders, etc.; Co-operative Societies; Wholesale Merchants; Retail Merchants; Real Estate Dealers; Professional; Technical & Scientific; Insurance; Funeral Service.

According to the report, the membership included in the first eight of the above divisions,

which consists of 353 associations, with a combined membership of 24,197, is composed of employers or firms who are for the most part operating industries in which the employment of help is essential. With some of the corresponding organizations of workpeople these employers have agreements covering the conditions of employment in their respective establishments. In the remaining groups the employment of labour is in some cases only incidental, and with the exception of the personal service and amusement and the retail merchants groups there is no corresponding body of organized employees. Although the majority of the associations whose names are recorded in the report are wholly Canadian, a number are identified with organizations whose headquarters are in the United States.

The report states that there are in the Dominion 1,318 main and 623 branch associations, making in all 1,941, an increase of 616 in the number recorded in 1925. The bulk of this increase is accounted for in the co-operative societies group, which now numbers 802 associations, 554 more than appeared in the previous report. The total membership of all classes of associations is 1,238,812, an increase of 205,681. The report for 1925 contained the names of 1,325 associations with a combined membership of 1,033,131.

Railway co-operative management

The results of three years' experience of the "B. and O. Plan" of co-operative railway management are described by Mr. O. S. Beyer, Junior, in an article appearing in the *New Republic* (New York) for August 4. Notes on the adoption of this plan on the Canadian National and Baltimore and Ohio Railways have been given in former issues of the LABOUR GAZETTE (September, 1925; May, 1924, etc.). After the regular unions and the president of the Canadian National Railways decided to adopt the Glenwood experiment, the shop unions and managements of both the Chicago and North Western and the Chesapeake and Ohio railroad adopted the co-operative programme and proceeded to introduce it. Thus there are to-day about 50,000 railway shopmen working co-operatively through their unions with railway managements to improve service, eliminate waste, and improve conditions of labour.

Mr. Beyer proceeds to describe the results already achieved by the new system of management: "How the men on the job feel about co-operation is revealed by an increasing accumulation of evidence. For example, at the system federation conventions of the Canadian National and Baltimore and Ohio shopmen held during April and May of this year, special committees were appointed to take testimony and report back to the conventions. The reports of these committees revealed briefly:

(1) That co-operation had resulted in a decided improvement in the relationship between management and men, thus strengthening the morale of the service;

(2) That substantial improvement in tools and working conditions had been effected, enabling increased output of better quality;

(3) That considerable progress had been made in stabilizing employment and so increasing wage income;

(4) That satisfactory progress had been made in developing a sound understanding of the co-operative idea among employees and officers; and

(5) That causes ordinarily making for grievances had been greatly reduced while the settlement of grievances which did arise had been greatly expedited.

"When the Glenwood experiment was first inaugurated the purpose of the co-operative programme was rather general—co-operation for mutual benefit. As the programme developed in the three years of its existence, its immediate objectives became more specific. Chief among them are reductions in grievances, increased sense of responsibility on the part of employees for the success of the railroad, and on the part of management for the welfare of the employees, improvements in methods of employee training, better conditions of employment in respect to working facilities, sanitation, lighting and safety, conservation of material, increased output, improved quality of workmanship, recruiting of new employees, stabilizing employment and finally financial participation by the employees in the gains due to co-operation.

"Definite progress towards the accomplishment of each of these objectives has been made. For instance an actual check for the three-year period preceding the adoption of the co-operative programme revealed that the unions on the Baltimore and Ohio had to handle one grievance appeal case for every 58 men represented. In the year just closed, the number of these cases had declined to one for every 131 employees represented. The increased sense of responsibility manifested by employees and managements in one another's welfare is shown first, by the remarkable number of propositions affecting employee welfare and shop efficiency dealt with at the local joint co-operative conference held every two weeks between the regular union shop committees approved by the

conferences and put into practice. Up to the present time, on three of the railroads concerned, in round numbers a total of twenty thousand such propositions have been initiated by both men and management and considered by the joint co-operative conferences. Of these, more than sixteen thousand are now in effect."

Basis of successful industrial relations

References have been made in the LABOUR GAZETTE from time to time to various welfare schemes, plans for joint management and other arrangements designed to interest workpeople directly in the well-being of the concern in which they are employed. The Committee on Employment Relations of the National Association of Manufacturers (U.S.A.) presented a report on this subject at the last annual meeting of the Association. The Committee believes that all such "plans" depend for their success entirely upon the spirit animating the parties concerned in them. "Whatever may be the local conditions surrounding an establishment, or the hereditary practices of an industry, your Committee wishes to point out that the establishment of sound relationships between the management and the workers of the plant rests primarily upon a sincere desire on the part of both to deal fairly and squarely with each other. Unless this wish is present, or there is a sincere desire to bring it about, no specific plan or method of securing sound relationship can be a success. The basic desire to create and maintain the square deal in industry is at the root of every sound plant condition, and it should be stated, also, that no single method or plan used to improve employee-management relations can be regarded as a universal panacea, regardless of the success it may have had in individual establishments. Only a study of the plant conditions of a given establishment can determine the methods of dealing with employee-management problems best suited to them."

The report states further that "within the last few years there has been a growing change not only in the attitude of the workers towards industry, but also in the attitude of the management with respect to the workers and with respect to the community, and special attention is now being given to such subjects as constant employment, co-ordination between sales and management, group insurance, pensions, profit-sharing, vacations, stock ownership, yearly physical examinations, recreation and safety work. These are all subjects of importance in the securing of proper relations with employees and their contentment with their work in which, also, the community has a vital interest."

The reasons for the new industrial welfare policy are stated in the July issue of *Current History* by Mr. Abraham Epstein, research director of the Pennsylvania Old Age Commission, as follows:—

1. The wide diffusion of corporate ownership and the replacement of the old line "captains of industry" by salaried heads and managers.

2. The replacement of the marginal employer by well established concerns, who can afford to give adequate consideration to the improvement of their labour maintenance as well as the quality of their products.

3. The desire to anticipate or avoid governmental regulation and legislation.

4. The advent of the social service engineer.

5. The growth of insurance companies.

American Bar Association favours Joint Boards

The American Bar Association at its annual meeting held at Denver, Colorado, in July, received a report from its Standing Committee on Commerce, Trade and Commercial Law, in regard to the settlement of industrial disputes. The Committee recommended an extension, through industry generally, of the principle of the voluntary settlement of such disputes by representatives of the parties concerned, the decision of joint bodies to have the force of law. The conclusions of the Committee are stated as follows:—

1. That the great conflicts in industry are not so much over the details of hours, wages or working conditions as they are over control of the industry, involving such issues as the "closed shop" or "recognition of the union."

2. That where organizations of workers are wisely led, there is a marked tendency on the part of employers toward so-called collective agreements establishing arbitrational machinery in the industry, a sort of self-government of the industry itself.

3. That where the organization of employees is more or less communistic in its tendencies, there is strong opposition on the part of management to the attempts of the organization to gain a foothold in industry.

4. That even in the case of organized international unions, the presence of communistic tendencies works toward a break-down of the machinery of self-government established by both employers and workers.

5. That a relationship between unions and employers' associations based upon contracts voluntarily made is in the public interest. Encouragement can and should be given to the making and enforcement of such contracts.

6. Procedure for voluntary submission to arbitration made in advance of dispute coupled with validity of awards made by the arbitrators is in the public interest.

7. That as the law gives sanction to contracts for the arbitration of commercial disputes, the law should in similar manner give sanction and enforceability to contracts for the settlement of industrial disputes.

8. That in encouraging the voluntary settlement of controversy by agreements binding upon the participants, the national bar is moving in line with its long established traditions and in harmony with the principles of the United States Arbitration Law, which the Association framed and for which it was sponsor, with the aid and co-operation of commercial organizations.

9. That the Association has an opportunity, through its well-established contracts with business organizations, to bring about a better understanding of the problem, and in all probability to secure some advance in legal methods of approach.

10. Great care should be taken not to drive too fast but to make use of the experience of men who have special knowledge of the whole subject.

"For these reasons, we believe that instead of urging at this time the passage of an act for the creation of an industrial court with power of coercion, or adding to the penal statutes, the Bar of the country should now give its attention to the encouragement of a movement for dealing with industrial controversy through voluntary agreement by the parties themselves, in line with the principles of the Parker-Watson Bill (The Railroad Labour Act). We are not now persuaded that setting up judicial machinery will win the confidence of sufficient numbers of people interested in the problem to make such machinery effective. Our experience with the Interstate Commerce Commission, workmen's compensation boards and other commissions quasi-judicial in nature indicates that commissions more in the nature of fact-finding bodies are necessary in the solution of these economic problems, and that the wiser course for the present is to let the parties interested select the personnel of such tribunals. When we dealt with the large field of commercial disputes, we were led to the conclusion that we were strengthening the law by validating the agreement made by parties at the outset to adjust their controversy in their own way. We believe the same viewpoint can be adopted with profit in the case of industrial disputes. The principles involved are similar:

"(*a*) The parties should be permitted freely to enter into any contracts they desire to make which are not against public policy.

"(*b*) Their contracts should be made valid and enforceable by law.

"(*c*) Where they desire to avoid the friction of controversy, either in the case of commercial disputes by avoiding litigation or in the case of industrial disputes by avoiding strikes or lockouts, they should not only be permitted but encouraged to set up machinery of their own and if they have confidence in the effective workability of such machinery it will go a long way towards its success.

"(*d*) The law should support and encourage such efforts by giving enforceability to such contracts."

Eliminating risks in photo-engraving industry

During 1925 the Factory Inspection Branch of the Department of Labour of the Province of Ontario carried on investigations in order to secure more healthy conditions of work in the photo-engraving industry. Following this inquiry the Chief Factory Inspector made recommendations which seem to agree in their substance with those recently made by the Photo-Engravers Joint Industrial Council in New York City. This organization is composed of an equal number of representatives of the International Photo-Engravers' Union of North America and the Photo-Engravers' Board of Trade, the employers' organization. The conditions under which work is carried on in the industry are described in the July issue of the *American Federationist* by President Volz, of the New York Photo-Engravers' Union. "Photo-engraving," he says, "is a photo-mechanical process for making the printing plates from which pictures and illustrations are printed in one or more colours. These pictures appear in newspapers, magazines, catalogues, on cover pages, show-cards, display advertising, etc. In other words, the photo-engraver makes the printing plates or engravings from which all matter except straight type is printed. The process is one in which a great many chemicals and acids for etching in various forms are used, and owing to the nature of the process it is necessary to do part of the photographic development in rooms absolutely dark. As a consequence, proper ventilation has become quite a problem. The business in general is one necessitating very close application, and,

due to the use of inflammables, high-speed machines, chemicals, acids and various gases produced, is one which entails a great variety of industrial hazards and possibly more than are in evidence in most trades."

A recent investigation into the health of the employees in New York showed that 64 per cent of all the workers in the group had affected throats, while the teeth, eyes and skin of many others had received serious injury. It was therefore necessary to find some means of eliminating from the workrooms through mechanical means or otherwise the excess acid and chemical fumes and monoxide gases, and the Joint Council drew up a set of general sanitary recommendations, including the mechanical ventilation of all plants and dark rooms, the hooding and ventilating of all acid machines, etching tubs, etc. They further recommend the use of indirect or semi-indirect type of lighting where possible so as to prevent glare and consequent eyestrain. All arc lamps are to be shielded as far as possible, and glass enclosed in a method to filter dangerous rays of light.

Suggested provincial departments of commerce

The Retail Merchants Association at a convention held at Montreal in July adopted a resolution recommending the formation of a provincial department of commerce. Discussing the proposal the *Canadian Textile Journal* says:—

"The immediate benefits that might accrue to retail merchants are very easily seen in the provision of a means of contact between the government of the province and themselves. This matter has been taken up on several other occasions, but for various reasons it has never been given serious attention by any of the provincial premiers. However, such a department is becoming more and more necessary. Conditions vary so greatly between provinces in regard to wages, legislation, etc., that competition in many instances is quite unfair. There is another field, however, in which a provincial department of commerce might do most effective work, that is, in the field of research, undertaking to provide business men, manufacturers, farmers and all interested in the commercial affairs of the province with information in connection with markets, vital statistics, etc. The United States Government has shown that such a department can be of the utmost value. Many of the States have departments in constant co-operation with the Department at Washington. The same can be done in Canada. Provincial departments should be able to augment the present work with special application to provincial requirements and in this way furnish the nucleus of a commerce branch. Research is becoming more and more necessary in all lines of business. Competition is so keen that regulation is essential to prevent unfair practices and trade abuses. And it is the smaller business house that needs the government assistance."

Municipal salaries in the United States

The results of a study of municipal salaries in the United States, published by the *National Municipal Review*, show that with the exception of a few of the unskilled groups all classes of municipal employees have suffered a reduction in the purchasing power of their salaries during the last ten years. The largest proportionate increases in wages have gone to the lowest paid employees, and the smallest increases to the highest paid, while the scientific and professional classes have fared relatively worse than other classes. Public school teachers have been dealt with more generously than the average municipal workers. According to a computation by the National Education Association the average salary of public school teachers has advanced from $543 in 1915 to $1,226 in 1924, an increase of 125.78 per cent. On the other hand, the average salary of municipal workers, exclusive of patrolmen, hosemen and laddermen and unskilled labourers, increased 60.87 per cent between 1915 and 1925. The study shows that municipal workers have not kept pace with the employees of the steam railways of the country; that they have been far outstripped by wage earners in private industry; and that salaried employees in municipal service probably have advanced more slowly in compensation that salaried employees in private service.

"It is especially unfortunate," the report concludes, "that professional and scientific workers have been among the most neglected. Municipal service in the United States has suffered in the past from the fact that professional men and women were not admitted to it in sufficient numbers. Too much of the work that required the hand and brain of the trained specialist was left to the untrained layman. In recent years the tendency has been to make greater use of the professionally trained, but this tendency is sure to be checked if more liberal remuneration is not offered."

Trade union bill in China

A Trade Union bill was recently introduced in China, its object being to lay down general and detailed rules for the formation and operation of trade unions. Under its provisions workers

carrying on the same occupations, or employed in the same undertaking, may form trade unions for the defence and advancement of their interests. Trade unions and federations of trade unions have legal standing. The legitimate objects of trade unions are specifically defined as follows:—They are authorized to create employment exchanges, unemployment funds, mutual benefit funds, savings bank and insurance funds; also to set up distributive co-operative societies and hygiene associations, to choose arbitrators in the event of collective disputes, and to take part in all enquiries into conditions of labour.

A trade union is not legitimately constituted unless it has at least 30 members who are of age, and also employed in the occupation concerned. The by-laws of the trade union must be submitted to the authorities and approved, registered and published by them.

The by-laws must mention the following particulars: the object and functions of the trade union, its official name, its headquarters, the occupation or undertaking to which it belongs, the conditions of admission and retirement of members, the date and procedure of its general meetings, the number of its officers and the rules which govern their appointment and retirement, the rules under which the budget is drawn up and which govern the general financial administration of the union, the possible causes of a disbandment of the union, and the rules concerning any possible modification of the statutes themselves.

The freedom of members to adhere to or withdraw from trade unions is guaranteed.

Employers may not make the engagement of their workers conditional on their not being members of a trade union.

The Bill also provides for a procedure for conciliation and arbitration between the parties to a collective agreement. In the event of disputes between the members of a trade union and the employers, the local authorities may, at the request of the authorities, institute an enquiry into the question and organize a system of arbitration. They may also, according to circumstances, ordain that arbitrators should be chosen with their own approval, half by the trade union and half by the employers, to decide on the question, with the assistance of an equal number of technical advisers chosen by the authorities. If the dispute breaks out in a public department, it must in the first instance be submitted to the good offices of the authority concerned. The authorities will also take part in arbitration proceedings, subject to the approval of the competent higher authority. If the awards or decisions of arbitrators are not carried out, the local authorities may, by administrative measures, cause them to be carried out. During the time that the enquiry or arbitration is in progress, both lockouts and strikes are forbidden.

Proposed amalgamation of British mining companies

An Act to facilitate the reorganization of the coal mining industry was passed during the past month in the British House of Commons. Its purpose was to carry out some of the recommendations of the "Samuel Commission," whose report was summarized in the April issue of the LABOUR GAZETTE (page 393). The Commission declared that "the amalgamation of many of the present small units of production is both desirable and practicable. This may often be effected from within, but in many cases it will only take place if outside assistance is given. Any general measure of compulsory amalgamation, on arbitrary lines, would be mischievous; the action to be taken should be elastic and should enable each case to be treated individually. The State as mineral owner will be able to promote desirable amalgamations when granting new leases or renewing old ones. Legislation should provide for a compulsory transfer of interests under existing leases where desirable amalgamations are prevented by the dissent of some of the parties or their unreasonable claims. Existing leases would not otherwise be affected."

The Secretary for Mines (Col. Lane Fox) explained the purpose of the bill in moving its second reading on June 23. He pointed to the success of the larger as compared with the smaller mines, the tables given in the report showing that the output per man increased in proportion to the size of the mines, and the cost of production per ton decreased correspondingly. "It is desirable," he continued, "in order to be of service to the mining industry, to encourage the elimination of small old-fashioned undertakings which in these days of big business cannot hope to carry on with complete success, but which in many cases might be improved by amalgamation. We have the contrast of Germany. Germany, in the great Westphalian coal-fields, giving an annual output of 100,000,000 tons, produces this output with some 70 undertakings. Great Britain, on the other hand, with an output of 220,000,000 tons a year, requires no less than 630 undertakings. I think it must be a matter of common agreement that bigger groups are desirable, but in this case compulsion in such matters is very often very undesirable and mischievous. Amalgamation should be a

natural growth and, in the first instance, should be inspired by the fact that someone who is interested in the industry sees some chance of success and thinks it worth while."

The Secretary for Mines further stated that "if when the time comes, three years hence, the Mines department consider that amalgamations are not going on as they ought to do—which will mean that those who are interested in the mines think that they are not likely to be a paying proposition—a report will be made to Parliament and Parliament will then have an opportunity of dealing with the situation."

The Act contains provisions for facilitating the reorganization of the coal-mining industry, by means of amalgamations and absorptions; it also proposes certain amendments of the Mines (Working Facilities and Support) Act, 1923, with a view to increasing the facilities for working minerals. It proposes a levy of 5 per cent on mineral royalties and wayleaves, to be paid into a fund for providing washing and drying accommodation at all coal mines. It proposes to limit the recruitment of persons over the age of 18 years, for employment in coal mines, to those who were so employed in the seven days ended April 30, 1926. It also proposes to empower any coal-mining company, notwithstanding anything in its memorandum or articles of association, to establish a profit-sharing scheme.

8-Hour day in British mines

By an Act passed in July the Parliament of Great Britain re-established the 8-hour day for underground work in the mines. The Coal Mines Regulation Act, 1908, provided, subject to certain exceptions, that a workman shall not be below ground in a mine for the purpose of his work, and of going to and from his work, for more than eight hours during any consecutive twenty-four hours; the eight hours being reckoned, in the case of workmen in a shift, from the time when the last workman in the shift left the surface to the time when the first workman in the shift returned to the surface. Section 3 of the Act permitted the statutory hours to be extended as respects any mine by the owner, agent, or manager of the mine on not more than 60 days in any calendar year by not more than one hour a day; a register, open to inspection by the Mines Inspector, was to be kept of all such extensions.

The Coal Mines Act, 1919, reduced the eight hours normally permitted to seven hours, but made no change in the provision as to an extension by one hour on not more than 60 days in any year.

The Coal Mines Act, 1926, which received the Royal Assent on July 8, provides that Section 3 of the Coal Mines Regulation Act, 1908, shall have effect as if the words "on not more than 60 days in any calendar year" were omitted. The effect of this is to permit a working day of eight hours (reckoned as above) without restriction. The Act also dispenses with the necessity for keeping a record of the days on which the extra hour is worked.

The Act, which is purely permissive, came into force immediately, and is to continue in force for a period of five years from its passing.

The British Columbia Professional Gardeners' Association was incorporated in July under the Societies Act.

The Farmers' Co-Operative Collieries Limited, was incorporated in July under the Companies Act (Canada), with headquarters in Edmonton, Alberta, the amount of authorized capital being $200,000, divided into 4,000 shares of $50 each.

The *London Gazette* of July 13, contains a list of public employees in Canada to whom the Imperial Service Medal has been awarded by His Majesty the King. The list contains the names of six employees of the Post Office Department, 57 of the Department of Railways and Canals and one of the Department of Justice.

During July a commission appointed by the German Government, assisted by advisers from the National Economic Council, presented plans for the relief of the unemployed in Germany, who are stated to number about two million persons. It was proposed that productive emergency undertakings should be organized, chiefly on the railways, postal system and canals, giving employment to half a million workpeople.

According to reports in July there were 13,000 positions open in France for which no workpeople were available. On July 10 there were only 369 persons receiving unemployment allowances in all France. The Ministry of Labour reports the number of unfilled jobs as rising rapidly. A year ago there were 10,000 vacancies. There has been practically no unemployment in France for five years, it is stated, clerical labour being the only kind for which the demand does not exceed the supply.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of July was as follows:—

Crop prospects in the Province of Nova Scotia were reported as good, although the season was somewhat backward. The fishing industry reported good catches. Pulpwood cutters were wanted, but applicants were not anxious to take this particular work in the warm weather; the logging industry was quiet. Construction was fair, especially in Halifax, where work of some proportions yet remained to be put in hand. With iron and steel showing scarcely any fluctuations, manufacturing generally was taken as fair. The coal mines were working practically full time with exceptionally large production reported. The augmented activity in this latter industry was due to water shipments. Both trade and transportation were rather brisk.

Crop prospects in New Brunswick were fair. Pulpwood cutters were in demand, but men were shy about taking this work, owing to seasonal conditions. The fishing industry reported fish as plentiful. Construction of all kinds in fair volume was proceeding satisfactorily. Generally manufacturing was normal, with seasonal lines very busy. Transportation was rather good, while trade was showing some improvements.

Farm workers were in brisk demand in the Province of Quebec. In this Province logging and lumbering were absorbing some workers, and preparations for the next year's cut were about to begin. Asbestos mining showed increased activity. Manufacturing reported a continued improvement in textiles, boots and shoes and metals, while the pulp and paper industry maintained its normal activity. In Quebec City the industrial dispute which has been effective for some weeks in the boot and shoe industry continued to drastically curtail production in that line. The building trade in every branch seemed very active throughout the Province. The volume of trade was reported as being on the increase.

Farm orders were general and heavy throughout Ontario, and not a few offices reported shortages of applicants. Though a few centres reported stock-taking as being somewhat prevalent among manufacturing concerns, industries in this line seemed to be maintaining, and in some cases slightly augmenting, the increased working staffs reported earlier in the year. Building and construction in all branches were active throughout the province; most building tradesmen seemed to be employed. The activity in the bush and logging industries seemed chiefly to centre around the demand for pulp cutters, but here as elsewhere applicants for this line of work were not numerous, owing to the season of the year. Although only nominal demands for labour were being received from the mining industry, this line was reported as making normal progress. Employment conditions generally throughout the province appeared in a healthy state with demands for all classes of labour more encouraging.

Heavy demands for farm hands, with the first of the demands for the annual harvest labour just beginning to come in, were reported from Manitoba. So far the local supply of agricultural labour had been fair, and was practically adequate to meet requirements. Building construction was active, particularly in the City of Winnipeg, but railway and highway work were inclined to be quiet. Having reference to the City of Winnipeg, it was reported that odd jobs of short duration were fairly numerous, but that there were more than enough applicants to fill them. The usual seasonal increases in the demands for and placements of women domestic workers were recorded.

On the eve of the harvest, superintendents in Saskatchewan reported the demands for farm help as becoming very heavy, and some local shortages of labour had already developed. Railway construction and building construction, both being proceeded with in fair volume, were stated to have absorbed most of those seeking such work. As in Manitoba the customary increases in the demand for domestic workers, particularly for farms, were reported.

In common with Manitoba and Saskatchewan, Alberta reports showed an increasingly heavy demand for farm workers. While to date the local supply had been adequate, temporary shortages were imminent. The construction industry was reported as very active with practically all skilled workers employed, and several additional unskilled workers being constantly absorbed. Due to a variety of reasons, the coal mining industry was quiet. Fire fighting in the bush in some sections of the Province was affording temporary work to a number of men. The demands for women domestics were heavy.

The logging and lumbering industries in British Columbia were quiet, although signs of a resumption of increased activity were not lacking. Bush fires, which incidentally had caused the closing down of some logging

camps, gave temporary employment to some men engaged in fire-fighting. The construction industry was in a fair way, and some centres reported all tradesmen as working, while others stated that the earlier surplus of labour in this group had been substantially reduced. From Vancouver Island coal mining was reported as showing fair activity. The metal mining industry appeared to be busy, some little development work being proceeded with, although there were no exceptional demands for metal miners. Manufacturing was normal, and most lines were reasonably busy. Conditions generally in the Coast Province were rather good, and resident workers appeared to be rather well employed. An exodus to the Prairies for the harvest was expected to begin during the first week of August.

Employers' Reports

Information was tabulated by the Dominion Bureau of Statistics from 5,898 employers with 850,718 workers on July 1, as compared with 830,019 in the preceding month. This increase of 20,699 persons was the largest reported on July 1 of any year of the record, which was begun in 1920. The index number continued to be

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending July 31, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

higher than in any other month of the last five years.

Firms in all provinces registered increased employment, Quebec showing the greatest gain. In the Maritime Provinces, manufacturing, logging, mining and construction recorded improvement, but there were seasonal losses in transportation. In Quebec, all groups except logging, which showed a seasonal falling off, reported heightened activity, the expansion in construction, manufacturing and transportation being most noteworthy. In Ontario, manufacturing, transportation and construction absorbed a considerable number of additional workers, but the customary midsummer losses in logging camps offset part of the gain. In the Prairie Provinces, there was marked activity in construction and smaller increases on steam railways and in manufacturing, communication and trade. In British Columbia, further but more moderate improvement was noted, especially in manufacturing and construction.

An analysis of the returns for eight cities shows that there was slight curtailment in Windsor and the Other Border Cities, and in Vancouver, while in Montreal, Quebec, Toronto, Ottawa, Hamilton and Winnipeg the movement was upward. In Montreal, manufacturing, construction, trade and services afforded more employment, but shipping and longshore work was slightly less active. In Quebec, employment in transportation improved, while the industrial dispute in boot and shoe factories continued to affect the situation in the leather industry. In Toronto, the most marked expansion took place in manufacturing and construction, while retail trade showed midsummer dullness. In Ottawa, there were general but small increases in manufacturing, construction and communication. In Hamilton, the trend of employment in iron and steel works was decidedly favourable, while minor changes only were registered in other industries. In Windsor and the Other Border Cities, automobile factories laid off a comparatively small number of workers, but there were gains in construction and some other groups. In Winnipeg, there was another but smaller increase in employment; moderate improvement was shown in manufacturing, communication, construction, and trade. In Vancouver, very little change was registered, advances in trade being offset by declines in shipping.

Manufacturing, construction, mining, communication, transportation, services and trade recorded greater employment, the gains in the two industries first named being most extensive. Logging showed seasonal dullness and shipping, on the whole, was slacker. Within the manufacturing division the largest increases were in lumber, food, pulp and paper, electric current and non-ferrous metal factories. Iron and steel works released some employees, as is usual at midsummer, but the losses were less pronounced than on July 1 of any previous year of the record.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of July, 1926.

TRADE UNION REPORTS

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Continued improvement in the trade union situation was registered at the end of June as shown by the reports tabulated from 1,502 labour organizations, with a combined membership of 145,732 persons. Of these 5,965, or a percentage of 4.1 were out of work, as compared with percentages of 4.9 in May and 6.1 in June last year. All provinces except Manitoba reflected more favourable conditions than in May, though the percentage of change was not particularly outstanding in any one province. In comparison with June last year Nova Scotia unions reported a nominal reduction in employment, while in all other provinces there was a greater volume of work afforded, the most substantial gain being that of nearly 6 per cent in Alberta due to greater activity among coal miners. The manufacturing industries, as a whole, showed some improvement in comparison with May, cigar makers, bakers, metal polishers, iron and steel, leather, glass, and hat and cap workers all indicating a somewhat higher level of employment. On the other hand, pulp and paper makers, printing tradesmen and wood workers were not so busy. The garment trades continued to be slack as in May, and the percentage of unemployment among textile and carpet workers remained stationary. Greater activity than in June last year was reported in the manufacturing industries, especially in the iron and steel trades. Coal miners were better employed than in May, both in Nova Scotia and Alberta, the increase in employment in the latter province being quite sub-

stantial. As was the case in May, both coal miners in British Columbia and quarry workers in Nova Scotia registered no idleness. The percentage out of work in the building and construction trades stood at 4.4, as compared with percentages of 7.4 in May and 8.4 in June last year. Alberta and British Columbia were the only provinces to register more unemployment in building and construction than in May, and the most noteworthy percentage gain was shown in Manitoba. Granite and stone cutters, and hod carriers and building labourers indicated a much better situation than in May, and minor increases occurred among steam shovel and dredgemen, bridge and structural iron workers, bricklayers, masons and plasterers, electrical workers, and plumbers and steamfitters. Carpenters and joiners, painters, decorators and paperhangers, and tile layers, lathers and roofers, on the other hand, were afforded less work. Practically no change was registered among transportation workers. The percentage of idleness among steam railway employees, whose returns constitute over 81 per cent of the entire group membership reporting, remained almost the same as in the preceding month, 2.2 per cent of the members being out of work as compared with 2.3 per cent in May. Street and electric railway employees also reported a gain of .1 per cent, while teamsters and chauffeurs registered no unemployment as in May. Navigation workers were not so active, 7.2 per cent of the members being idle, as compared with 5.9 per cent at the close of May. The transportation industry as a whole afforded more employment than in June last year. Retail shop clerks were busier than in May. Hotel and restaurant employees were more fully engaged, and the situation for barbers and stationary engineers and firemen also improved. Theatre and stage employees, however, were less actively employed. The percentage out of work among fishermen remained practically stationary. Lumber workers and loggers reported no idleness, as compared with an unemployment percentage of 4.8 in May.

An article elsewhere in this issue gives a summary of unemployment as reported by trade unions during the quarter ending June 30, 1926.

Employment Office Reports. Reports of the Employment Service of Canada for the month of June, 1926, showed 33,649 references to positions and a total of 32,483 placements. Of these the placements in regular employment were 23,117, of which 19,727 were of men and 3,390 of women, while the placements in casual employment were 9,366. Vacancies offered by employers to the Service numbered 36,103, of these 26,021 were for men and 10,082 for women. Applications for employment were registered from 31,712 men and 10,479 women, a total of 42,191. A slight decrease was shown in the volume of business transacted when the above figures are compared with those of the preceding month, but a gain was shown when the comparison is made with the records of June last year, the reports for May, 1926 showing 36,966 vacancies offered, 43,209 applications made and 33,655 placements effected, while in June, 1925 there were recorded 29,335 vacancies, 38,017 applications for work and 27,069 placements in regular and casual employment. A report in detail of the work of the offices for the month of June, 1926 and for the quarterly period April to June, may be found elsewhere in this issue.

Production in Certain Industries. Some figures indicating the recent movements of trade and industry are given in the table on page 749.

The Dominion Bureau of Statistics reported that production of pig-iron in Canada in June amounted to 70,854 long tons, a decline of 3 per cent from the 72,762 tons of May. The month's output was composed of 52,614 tons of basic iron, 10,087 tons of foundry iron and 8,153 tons of malleable iron.

For the first half of 1926, the cumulative production totalled 370,864 tons as compared with 290,892 tons for the corresponding period of last year, 427,105 tons in 1924 and 435,000 tons for the first six months of 1923. This year's tonnage was composed of 257,459 tons basic iron, 93,323 tons of foundry iron and 20,083 tons of malleable iron. Most of the basic iron was produced for further use by the reporting firms while the bulk of foundry and malleable grades was made for sale. Of the total produced 32 per cent was intended for sale as against 13 per cent in the previous year.

Blast furnace charges in June included 123,400 long tons of iron ore, 76,444 short tons of coke and 33,953 short tons of limestone. For the year to date each long ton of pig iron produced necessitated a furnace charge of 4,006 pounds of ore, 2,236 pounds of coke and 1,099 pounds of limestone. For the first half of 1925 the furnace charges for each long ton of pig iron included 4,131 pounds of ore, 2,217 pounds of coke and 1,146 pounds of limestone.

There was no change in the number of active furnaces, the same six being in blast on June 30th as at the end of May, April and March. The active furnaces had a capacity of 2,375 long tons per day which represented about 47

per cent of the total capacity of all blast furnaces in the Dominion. In June of last year 15 per cent of the Dominion capacity was in blast and 10 per cent banked. On May 31st, 1926, two working furnaces were located at each of the following points: Sault Ste. Marie and Hamilton in Ontario, and at Sydney in Nova Scotia.

Production of ferro-alloys at 3,938 long tons showed an increase of 14 per cent over the 3,396 tons reported for May and consisted mostly of the grade having a silicon content of 15 per cent or less. For the half year, the output of ferro-alloys totalled 17,851 tons as compared with 12,217 tons during the first six months of 1925 and 15,768 tons in 1924.

Production of 81,277 tons of steel ingots and castings in Canada in June was 9 per cent under the 89,513 tons of May, but 29 per cent over the 63,410 tons produced in June a year ago. This month's output was composed of 77,684 tons of steel ingots and 3,593 tons of steel castings: all of the ingots were produced for the further use of the makers and 5 per cent of the castings were made for sale.

For the six months ending June cumulative production amounted to 431,184 tons as compared with 423,697 tons in the first half of 1925 and 488,733 tons in 1924. Steel ingots at 410,603 tons showed little change from the 413,891 tons made last year; steel castings at 20,581 tons marked an increase of 210 per cent over 9,806 produced in the first six months of 1925.

Pig iron prices remained practically unchanged in June. At Montreal, No. 1 foundry was still quoted at $28.70 and No. 2 foundry at $28.20. At Toronto, No. 1 foundry was $25.80 and No. 2 foundry $25.30. Basic pig iron at mill fell from $22 to $21 per ton. The Bureau's index number for iron and its products (1913 prices=100) fell from 144.1 to 143.5 owing to declines in price of basic pig iron and of steel sheets.

During the first quarter of 1926, pig iron prices remained steady, No. 1 and No. 2 foundry at Montreal being quoted at $29.25, while No. 1 at Toronto was $26.85 and No. 2, $26.35. During the second quarter downward revisions occurred to the levels above stated, following those in the United States markets, which were feeling the competition of cheaper foreign iron. At Montreal a further cut was made effective by re-establishing a 55 cent differential for silicon content.

Full statistics of coal production during June are not yet available. The output of coal from Canadian mines during May was 17 per cent more than the production for the preceding month, and 30 per cent greater than the average for May in the past five years. The figures were 1,140,630 tons in May as against 972,106 tons in April, and an average of 877,308 tons for the month during the five preceding years.

The coal-producing provinces of Nova Scotia and British Columbia showed a gain in production over the preceding month, and the outputs of Nova Scotia, Alberta and British Columbia were greater than the averages for the month in the five preceding years.

Men employed in the coal mines of Canada during May numbered 24,413, of whom 18,568 worked underground and 5,845 on surface, as compared with a total of 24,206 in April, of whom 18,417 worked underground and 5,789 on surface. Production per man was 46.7 tons in May, as against 39.8 tons per man in April. During May the production per man-day was 2.4 tons, as against 2.3 tons in April. The tonnage lost was largely due to "lack of orders."

EXTERNAL TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in June, 1926, the merchandise entered for consumption amounted to $91,513,173, as compared with $75,517,505 in June, 1925. The domestic merchandise exported amounted to $118,188,590 in June, 1926, as compared with $91,353,423 in May, 1926, and $93,462,993 in June, 1925.

The chief imports in June, 1926, were: Iron and its products, $23,392,995, and fibres, textiles and textile products, $14,326,768.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $58,832,330, and wood, wood products and paper, $25,668,734.

In the three months ending June, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $115,217,969, and wood, wood products and paper at $64,644,773.

BUILDING PERMITS

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada during the month of June, 1926, amounted to $18,672,238, as compared with $18,537,932, in the preceding month, and $14,915,884 in June, 1925. This was a slight increase of 0.7 per cent over last month's total, but was a considerable gain, 25.2 per cent, over June, 1925.

The *MacLean Building Review* estimates the total value of the contracts awarded in Canada in July, 1926, at $33,864,700, as compared with $54,186,400 in June. Of the con-

templated new construction in Canada during July, 1926, $12,096,700 was for residential building; $12,445,300 for business building; $1,829,700 for industrial building, and $6,132,200 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). By classification the construction contracts awarded during July, 1926, were divided as follows: business building, $14,276,400; residential building, $10,154,700, and engineering, $2,230,600. The apportionment by provinces was: Quebec, $93,899,600; Ontario, $80,932,700; Prairie Provinces, $32,749,100; British Columbia, $16,860,300, and the Maritime Provinces, $3,966,600.

Prices

Retail food prices showed little change. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.07 at the beginning of July, as compared with $11.06 for June; $10.49 for July, 1925; $9.91 for July, 1924; $10.17 for July, 1923; $10.27 for July, 1922; $10.96 for July, 1921; $16.84 for July, 1920 (the peak); $13 for July, 1918; and $7.42 for July, 1914. Prices of beef, veal, fresh and salt pork, bacon, lard, eggs, creamery butter and rolled oats advanced, while a substantial decline occurred in the price of potatoes, with less important declines in milk, mutton and dairy butter. Including the cost of fuel and rent with that of foods the total budget averaged $21.30 at the beginning of July, as compared with $21.31 for June; $20.70 for July, 1925, $20.30 for July, 1924; $20.65 for July, 1923; $20.67 for July, 1922; $21.53 for July, 1921; $26.92 for July, 1920 (the peak); $20.66 for July, 1918; and $14.17 for July, 1914. Prices of coal and wood again averaged slightly lower. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced slightly to 156.2 for July, as compared with 155.7 for June; 158.4 for July, 1925; 153.9 for July, 1924; 153.5 for July, 1923; 154.1 for July, 1922; 163.7 for July, 1921; 256.3 for July, 1920 (the peak); and 199.5 for July, 1918. In the grouping according to chief component materials four of the eight main groups advanced, one declined and three remained unchanged. The groups which advanced were: Vegetables and their Products, because of higher prices for grains, flour, rubber, hay and straw; Fibres, Textiles and Textile Products, because of slightly higher levels for cotton, silk and wool; Non-Ferrous Metals and their Products, due to higher prices for copper, lead, tin, spelter, antimony and solder; and Chemicals and Allied Products, mainly because of an advance in the price of glycerine. Animals and their Products declined, due mainly to lower prices for live stock, butter and cheese. Wood and Wood Products, Iron and its Products and Non-Metallic Minerals and their Products were practically unchanged.

Strikes and Lockouts

The time loss due to industrial disputes was greater than in June, 1926, but less than in July, 1925. There were in existence during the month 19 disputes, involving 11,208 employees, and resulting in a time loss of 52,141 working days, as compared with 13 disputes in June, involving 2,237 workpeople and resulting in a time loss of 45,348 working days. In July, 1925, there were recorded 21 disputes, involving 13,458 work-people, and resulting in a time loss of 331,976 working days. None of the strikes and lockouts commencing prior to July were terminated, but nine of the strikes and lockouts commencing during July terminated during the month. At the end of the month, therefore, there were eleven strikes and lockouts affecting 6,488 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

An association of industrial nurses was organized lately at Toronto, membership being open to nurses in other industrial centres. The first industrial nurse began to practise at Toronto about ten years ago, and there are now said to be twenty regularly at work. Among the firms employing nurses are the Dominion Express Company, the Bell Telephone Company, the Canadian General Electric, the Canada Kodak Company, the Toronto Carpet Company, the Massey-Harris, the Gutta-Percha Rubber Company, the Hydro Commission, Gunns Limited, the Harris Abattoir, the William Davies Company and Swift's.

Miss M. F. McKeown, employed by the Dominion Express Company, described the work recently to the Toronto *Globe*. Actual casualties are infrequent, she said, and the work consists mainly in organizing health and comfort work on behalf of the employees. This company now provides an employees' cafeteria, rest and recreation room, reading material, etc. Every morning and afternoon a rest pause of ten minutes is allowed, when all the employees are permitted to move freely about.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JULY, 1926

DURING the month of July the Department received the report of a Board of Conciliation and Investigation established to deal with a dispute between the Winnipeg Electric Company and certain of its employees, being motormen and conductors, members of the Street Railway Employees' Unit, One Big Union. The membership of the Board was as follows: the Honourable Mr. Justice J. H. Lamont, Regina, Sask., chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, namely, Messrs. J. B. Coyne, K.C., Winnipeg, Man., appointed by the Minister in the absence of a recommendation from the company, and Fred. J. Dixon, Fort Garry, Man., nominee of the employees. The report was signed by the chairman and Mr. Coyne, and contained recommendations as to the settlement of the dispute. A minority report was presented by Mr. Dixon. The text of the Board's findings and of the minority report is given below.

Application Received

An application for the establishment of a Board of Conciliation and Investigation was received during July from employees of the Canadian Pacific Railway Company and Canadian National Railways, being conductors, trainmen and yardmen, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen. The application arose from the companies refusal to accede to the employees request for increased wages. The number of employees stated to be directly affected was 15,000. A Board was established by the Minister, Mr. Isaac Pitblado, K.C., Winnipeg, Man., being appointed on the recommendation of the companies, and Mr. David Campbell, K.C., Winnipeg, Man., on that of the employees. At the close of the month a chairman had not been appointed.

Report of Board in dispute between the Winnipeg Electric Company and certain of its employees being motormen and conductors, members of the Street Railway Employees' Unit, One Big Union

In the matter of the Industrial Disputes Investigation Act, 1907, as made applicable to the Province of Manitoba, by Chapter 26 of the Statutes of Manitoba, 1926, and of the dispute between The Winnipeg Electric Company, employers, and certain of its employees, being motormen and conductors, members of The Street Railway Employees Unit, One Big Union.

To the Hon. G. B. JONES,
Minister of Labour,
Ottawa.

SIR,—The undersigned members of the Board of Conciliation and Investigation established under the provisions of the above mentioned Acts to examine into the merits of the dispute referred to, have the honour to report as follows:—

The Board held its first meeting on July 9, when it was informed that the company would not take part in the proceedings nor would their officers appear unless subpoenaed. The chairman thereupon issued subpoenas to L. Palk, secretary and assistant to the president, C. H. Dahl, assistant general manager, R. R. Knox, assistant to the president, and George McIntosh, statistician.

The members of the Board then spent two days, July 10 and 12, discussing the items in dispute, first with one side and then with the other, in an endeavour to negotiate a settlement acceptable to both parties.

The Board held its first public meeting on July 13, and thereafter held further public meetings in the course of the inquiry and negotiations on July 20, 21, 22 and 23. All members of the Board were present at each meeting. Between the meetings and even subsequent thereto, members of the Board spent several days in further negotiation and in the consideration of this report. The employees were represented throughout by a committee consisting of Herbert Jones, W. T. Rendall and A. Hume.

At the opening of the session of July 13 Edward Anderson, K.C., counsel for the company, appeared and asked to be allowed to make a statement. He said that the company was refusing to appear before the Board for two reasons. The first reason was that the Board had no jurisdiction to investigate the dispute, as the Industrial Disputes Investigation Act, 1907, had been held by the Privy Council to be *ultra vires* of the Parliament of Canada, and that chapter 26 of the Statutes of Manitoba, 1926, could not make effective Federal legislation which the Parliament of Canada had no jurisdiction to pass. The second reason for the company's refusal to

appear, he said, was that the company refused to recognize the organization known as the One Big Union, which made the application for the appointment of the Board, as it was not a trade union within the meaning of the Industrial Disputes Act, 1907. Having made his statement, Mr. Anderson withdrew.

The officials of the company who had been subpoenaed then stated that they were before the Board not voluntarily, but by reason of having been subpoenaed. They, however, expressed their willingness to give the Board any information in their possession.

The committee representing the employees then took up the matters in dispute, leaving the question of wages until the last. In opening their case they gave an outline of the negotiations which had taken place between the company and themselves before they applied for the appointment of a Board of Conciliation and they submitted the correspondence which passed between them. From that correspondence it appeared that the company had offered an increase of wages over those specified in the agreement of April 27, 1922, which was the agreement under which the parties had been working. This offer, however, was conditioned upon, including in the agreement a clause requiring the employees not to permit any outside influence to be used against the company or any interference between the company and its employees. The demand for this clause arose by reason of the fact that last fall, when some of the motormen and conductors were protesting against the policy of the company in converting two-men cars to one-man cars, the Central Labour Council of the One Big Union joined forces with the protesting employees and put up a propaganda which was deemed hostile to the company and detrimental to its business.

The Company's offer was submitted to the employees and was rejected.

The Board felt that no progress could be made towards getting the parties together in an agreement unless a clause relating to this outside interference could be drafted which both sides would accept; consequently the members of the Board spent some days discussing various proposals and negotiating between the parties. Finally a clause was drafted which seemed to the members of the Board to embody the protection desired by the Company without infringing the rights of the employees. It read as follows:—

It is distinctly understood by the parties to this agreement that it is entered into directly between the company and its motormen and conductors represented by a committee of said motormen and conductors authorized to execute the same on their behalf. It is further understood that in order to avoid outside influence or interference of any kind both the company and the motormen and conductors agree that they will not invite or encourage and so far as in their power lies will not allow outside influence or interference in any dispute between them, and further that, in any dispute regarding wages or working conditions or other street railway matters, if the matter is not satisfactorily adjusted by the traffic superintendent, the manager of the railway utility and the assistant general manager to whom it shall be referred in successive steps, the parties hereto agree that such dispute shall be considered by a body consisting of officials of the company on the one side and a grievance committee composed of motormen and conductors on the seniority list on the other and they shall endeavour to arrive at a satisfactory settlement of the dispute. Failing a satisfactory settlement the matter shall be referred to arbitration and it is agreed that there shall be no strike on the part of the employees nor lockout on the part of the company until the dispute has been submitted to arbitration.

Discrimination:

Neither the Company nor the employees shall discriminate against any employee for joining or continuing as a member of any labour organization or for not being a member of any labour organization.

This discriminatory clause should follow immediately after the clause respecting outside interference and be substituted for the discriminatory clause in the agreement of 1922.

While not definitely agreeing to these clauses, both sides intimated that, if an agreement were reached upon the other points in dispute, the clauses would probably be accepted.

The Board then heard the other items in dispute, which were as follows:

1. *Reporting Time*.—The time allowed under the previous agreement for reporting was five minutes, for which the men got paid. The Committee asked that this be raised to ten minutes, because in some cases the work could not be completely performed within the five minutes. The officers of the Company stated that the work had been satisfactorily performed under the five minutes clause and further that the reason for the payment of reporting time was that the Company desired to have the men on the ground five minutes before the schedule time for starting their cars, so as to be sure that the cars would all be taken out, and that, to secure the attendance of the men five minutes before starting time, the Company agreed to pay them for such time.

The payment for reporting time was passed upon by a former Board of Conciliation and Investigation and the time to be paid for was fixed at five minutes. Since then there has not been any very material increase in the duties to be performed by a motorman or conductor during the time fixed and in the opinion of the majority of the Board payment for five minutes reporting time is a fair provision.

2. *That extra pay earned by the employees for working over time or training students should be given to them the following pay day.*

We think this should be done.

3. *That all men should be paid the following pay day for schedule time travelling between relief points and the place of receiving or delivering fare boxes or schedule cards.*

This is reasonable and we think it should be allowed.

4. *Equipment of cars.*—We recommend that to the clause in the agreement of 1922 dealing with this matter there should be added the following words:

"All busses shall be equipped with the latest modern up-to-date equipment and it is agreed that the company will at all times provide every reasonable facility for the comfortable operation of the busses by the operator".

5. *Seniority.*—The complaint under this heading was that the Company had been in the habit a year or so ago of too frequently posting runs for selection and the Committee desired to add to the former agreement a clause requiring two months to elapse between postings. The Committee admitted, however, that for the past six months this cause of complaint has been largely remedied.

Mr. Dahl, Assistant General Manager, pointed out that, as the changing of runs depended upon changing traffic conditions and the necessity of meeting these, the Company could not be restricted in such a way as to prevent them from taking care of the traffic. He stated that he could assure the motormen and conductors that the runs would not be changed oftener than the traffic conditions demanded.

In our opinion the Company must be allowed some latitude in meeting changing traffic conditions. So long as the clause contained in the previous agreement is carried out in practice as it has been during the last six months the restriction asked for is not necessary and might prove detrimental to the proper management of the railway. We therefore recommend that no alteration be made in the clause.

6. *Promotion.*—One of the conditions specified by the Company in its offer to enter into an agreement with the employees represented before the Board was that men promoted from conductors and motormen to the position of supervisor, time-keeper or other officer in the traffic department, should retain seniority in the same manner and to the same extent as a motorman or conductor absent by reason of being employed as an officer in an association of motormen or conductors. The employees were unwilling to accept this condition. After some negotiations the following clause was submitted as meeting for all practical purposes the requirements of the Company and at the same time meeting the objection of the employees to the condition:

"If an employee who has been three years in the service as a motorman or conductor is promoted to the position of division or assistant superintendent, traffic supervisor, timekeeper, etc., he shall, if promoted immediately after he has been operating as motorman or conductor, retain his seniority rights, but such seniority rights shall not be exercised until the next regular sign-up of the runs after the employee retires from such position as he may now hold or to which he may hereafter be promoted in the traffic department".

We recommend the adoption of this clause as covering an employee's right to retain his seniority standing upon promotion.

7. *Change money.*—This should be increased from $35 to $40, as that sum was agreed upon by the parties during the negotiations.

8. *Uniforms.*—The chief controversy here was in respect to the demand of the men for an extra pair of pants with their uniform. Under the previous agreement the Company furnished each motorman and conductor after the first year with a regulation uniform free of charge. For their first uniforms the motormen and conductors paid half their cost. The contention on behalf of the men is that one pair of pants cannot be made to last a year and that pants will not wear as long as the coat and be presentable. The Committee stated that if the material in the uniforms was of as good wearing quality as in the uniforms furnished before the War, they would not be asking for an extra pair of pants, but that it was not. Mr. Max Goldstein, who supplies the uniforms, admitted that the quality of cloth obtainable since the War was not as good as he had been able to purchase in former times, but that it was getting better each year, and he expected that it would soon be as good as heretofore. The officials of the Company pointed out that this was the first demand they had ever received for extra pants and further that on April 27th last the Company had concluded an agreement with some fifty of its motormen and conductors who were members of the Amalgamated Association of Street and Electric Railway Employees and that these employees were satisfied to take only one pair of pants with the uniform. They also pointed out that they knew of only one Company "The British Columbia Electric Railway Company" who gave an extra pair of pants with the uniforms; that the cost to the Company of the uniforms, including overcoat, pea-jacket and caps, averaged $29,562 a year, and that an extra pair of pants would cost in the neighborhood of $7,000 additional.

It was also stated that the men would not wear out two pairs of pants in one year.

The question of uniforms is closely allied to that of wages. Some of the Companies do not supply uniforms to their employees at all, while other Companies pay a portion of the cost thereof.

The Winnipeg Electric Company supplies its men with uniforms. The undertaking to supply a uniform each year implies, we think, an undertaking to supply one that with due care will last a year. We think also that it is established that one pair of pants of the quality now obtainable will not last a year. The members of the Committee who were operating cars stated so positively. We also believe that two pairs of pants would last more than a year. Under these circumstances it seems to us not unreasonable that an extra pair of pants should be supplied to cover this year and next. This would be on the footing that two coats will last as long as three pairs of pants. At the expiration of two years the quality of the cloth in all probability will be as good as before the War, in which case further extra pants will not be required.

If, however, a motorman or conductor leaves the service of the Company for any cause or is discharged within four months after receiving the extra pair of pants, such motorman or conductor will be charged the full price of the same.

9. *Box Time.*—We recommend that schedule time required for the trip between the place of receiving or delivering a fare box or schedule card and the relief point be allowed. Also that overtime should be specified on the sign-up sheet.

10. *Runs and Spreads.*—The Committee requested that the percentage of straight runs should be increased from 35 per cent to 50 per cent; that all three-piece runs should be eliminated, and that spreads should be cut down from 13 hours to 10½ hours. In actual practice the straight runs have been increased to 46 per cent and the other runs have been arranged so that out of 400 runs only 12 runs require a spread of over 12½ hours and only 33 require over 12 hours. The officials of the Company pointed out that the runs are arranged so that the spreads will be kept as low as is consistent with good operating.

All things considered we recommend the continuance of the clause contained in the previous agreement.

11. *Wages.*—From May 1, 1922, until April 30, 1926, the wages paid to motormen and conductors were those set out in an agreement entered into between them and the Company on April 27, 1922, with this exception, that after the installation of a one-man car the operator of that car was paid an additional five cents per hour. On April 27, 1926, the Company entered into an agreement with the Amalgamated Association of Street and Electric Railway Employees representing some fifty of the Company's motormen and conductors. That agreement provided that the rate of wages for motormen and conductors operating a two-men car should remain the same as in the agreement of April 27, 1922, but that the wages of the operator of the one-man car and bus drivers should be increased 6½c. per hour above the schedule rate in the 1922 agreement, or 1½c. per hour above the wages which the Company were actually paying to operators of one-man cars.

The Company offered to the motormen and conductors represented before this Board the same wages as those contained in the agreement with the members of the Amalgamated Association. That offer was not accepted, because it did not provide for any increase of wages to the operators of two-men cars. During the negotiations the Company offered to increase the wages of the operators of two-men cars by 1c. per hour over the former rate. This would add some $27,000 per year to the wages received by the men.

The Committee representing the employees based their claim to an increased wage upon the improved revenues of the Railway, a somewhat higher cost of living in 1926 than in 1922, and that under the present rate they cannot maintain the standard of living to which they are entitled. They claimed that in 1922 they accepted a reduction in wages in view of the fact that the revenue of the railway was decreasing and that there had been a reduction in the cost of living since 1920.

The officials of the Company on the other hand pointed out that, while the net earnings for 1925 were $71,056 more than for 1924, they were $12,899 less than in 1922, $177,960 less than in 1921, and $236,996 less than in 1920; that although the net revenue of the Company decreased approximately $224,000 between 1920 and 1922, being over 30 per cent, and the cost of living as shown by the weekly budget of the Labour Department decreased approximately 20 per cent, yet the employees' wages were reduced in 1922 only 4c. or less than 7 per cent; that having carried the men over a period of depression without further reduction in pay, it was not reasonable that an increase should be demanded at the first sign of improved conditions and before the Company had been able to recoup itself in any degree for the losses of the last few years; that in no instance had any increase been given in street railway wages in Canada this year and that the Winnipeg wages are 8c.

above the average Electric Railway wages in Canada.

The officials also claimed that the earnings of 1925 fell far short of the fair return on its investment which the Public Utilities Commission held the Company entitled to, and that the increase of wages now offered would absorb the whole of the increased revenue anticipated from the Railway Utility in 1926 over that of 1922.

A large amount of material was presented and many statements were handed in and figures furnished in support of the respective contentions of the Company and the employees.

As the decreasing revenue of the Railway was one of the reasons which in 1922 influenced the motormen and conductors to accept a reduction in their wages, the present improved revenue of the Railway is in our opinion an element to be considered in determining what is a fair wage for the men.

After full consideration of the material before us, the majority of the Board are of opinion that the wages which the Company now offers are fair and reasonable for this year.

The majority of the Board therefore recommend the following wage schedule:

	Daily ex. Sunday		Sundays only	
	One-man car operators	Two-men car operators	One-man car operators	Two-men car operators
	per hr.	per hr.	per hr.	per hr.
First 6 months...	52½ cts.	47 cts.	57½ cts.	52 cts.
Second 6 months.	55½ "	50 "	60½ "	55 "
Second Year.....	59½ "	54 "	64½ "	59 "
Third Year and thereafter.....	62½ "	57 "	67½ "	62 "

At the close of the hearing of the matters in dispute the Committee requested the Board to enquire into the dismissal by the Company of W. Bancroft, Conductor. The reason for asking the Board to consider an individual case was that it was alleged that Bancroft had been dismissed owing to his activity in respect of the dispute now before the Board.

The Board expressed the opinion that if such was the case his dismissal might be germane to the enquiry and the Board might have jurisdiction to enquire into it, but that unless the dismissal was connected with the dispute, it would not be a matter into which the Board could enquire.

After hearing the evidence we are of opinion that it has not been shown that Bancroft's activities in respect of the dispute now before us had anything whatever to do with his dismissal. It is therefore not a matter for the Board's consideration.

The Board cannot close its report without a reference to the unfailing courtesy and good feeling displayed by the representatives of the employees and the officials of the Company who were before us.

(Sgd.) J. H. LAMONT,
Chairman.

(Sgd.) J. B. COYNE,
Member of the Board.

Dated at Winnipeg this 29th day of July, 1926.

Minority Report

To the Honourable G. B. JONES,
Minister of Labour, Ottawa.

SIR,—While concurring in the main with the Report of the Majority, there are certain points upon which I must differ, namely:—

(1) *Reporting Time.*—In my opinion sufficient evidence was submitted to the Board to show that five minutes was not sufficient in which to do the work required. Since the five minute rule was made additional duties have been imposed upon the Motormen and Conductors and the One Man Car has been introduced. The One Man Car Operator has to perform the duties of two men and has only five minutes in which to do it. It is only under the most favourable circumstances that the men can perform the duties required in five minutes. A number of other companies allow ten minutes reporting time and in my opinion it is not too much.

(2) *Runs and Spreads.*—In their original agreement submitted to the Company, a copy of which was forwarded to the Minister of Labour with the application for a Board of Conciliation, the men asked that Spread Time be cut to ten and one-half hours. This seems long enough time to take to work an eight hour day. However, during the negotiations, the Committee representing the men said they would be satisfied at this time if the spread was cut to twelve hours. The Company pointed out that there were only twelve runs requiring a spread of twelve and one half hours or more, and only thirty-three requiring over twelve hours. In view of the fact that, according to the Company's own statement, they are so near the twelve hour limit, I am of the opinion that the Company could easily arrange to have no runs with over a twelve hour spread.

(3) *Wages.*—The main arguments used by the Company against paying better wages at this time were that the Cost of Living was not

much higher now than it was in 1922 and also that while the Company admitted that its financial position had improved in 1925 and the early part of 1926 and gave every indication of continuing to improve, they were still unable to offer more than is set out in the Majority Report. Much higher wages are paid to Motormen and Conductors both in Toronto and Vancouver in spite of the fact that the cost of living is lower in both places than it is in Winnipeg—at least that is the only conclusion I could arrive at after a careful study of the Cost of Living Statistics in the Labour Gazette. However, apart altogether from the question of the Cost of Living and the financial position of the Company, the men are entitled to a decent living wage. The Company's own figures show that the average weekly wage of their employees is approximately twenty-seven dollars, while, according to the figures published in the Labour Gazette, the Cost of Living for a family of five is twenty-one dollars and fifty four cents per week. This does not include any allowance for clothes, education, medical expenses or recreation. It should be apparent to the most casual observer that this sum is insufficient to provide the decencies of life. If we had been dealing with the old horse car, the Company would have been required to keep their horses in decent working condition regardless of the cost of feed or the financial condition of the Company. If they failed to do this, they would have been prosecuted by the Society for the Prevention of Cruelty to Animals. Unfortunately, there is no society for the Prevention of Cruelty to working men and their families.

I am of the opinion that the employees should receive a substantial increase in wages in order to enable them and their families to enjoy the kind of life to which they are entitled in a community which calls itself civilized.

I have the honour to be, Sir,
Yours respectfully,

(Sgd.) F. J. Dixon,
Representing the Employees.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

SIX new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This Board was established under an Order in Council dated July 11, 1918, while the war was still in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods.

Case No. 272.—Canadian National Railways (central region) and Brotherhood of Maintenance of Way Employees.

The members of a section-gang worked six nights per week, the hours being from 10 p.m. to 6.30 a.m. They went on duty on Saturday, but not on Sunday night. These employees are paid an additional allowance of two cents per hour to the section-men and five cents per hour to the foremen during the period that they are required to work at night time; this being in conformity with the decision rendered by the Board on Case 250, dated July 15, 1925. (Labour Gazette, August, 1925, page 766.)

The employees claimed payment at time and one-half rate between midnight on Saturday and Sunday morning, under the provisions of Clause F, section 2 of their wage agreement No. 7, which reads as follows:—

Except as otherwise provided, time and one-half shall be paid for work on Sundays, Christmas Day, Labour Day, New Year's Day, except for patrolling track. Employees required to patrol their own sections on these days shall be allowed one day straight time. If required to patrol beyond the limits of their own sections, or perform other track labour on these days, they shall be allowed time and one-half while so occupied.

The Railway contended that as these employees worked six hours per week and were allowed one night per week off duty like the other employees, the shift commencing prior to midnight on Saturday should be considered the Saturday shift, and that the shift commencing on Sunday, which was their regular assigned seventh day off, should be considered as the shift to which punitive rates apply.

The Board denied the claim of the employees, in view of the clause above quoted providing for relief on one day in seven.

Case No. 273.—Temiskaming and Northern Ontario Railway Commission and Brotherhood of Locomotive Engineers, Order of Railway Conductors, and Brotherhood of Railroad Trainmen.

A controversy arose between the Commission and the Brotherhood as to the interpretation of Article 27 of the Enginemen's Schedule and Rule 7 of the Trainmen's Schedule,

both being copied from corresponding articles in the Canadian Pacific (Eastern lines) schedules, as follows:—

Through freight or mixed train engineers and firemen making more than five stops to take on or set out a car (or cars) or who make more than ten (10) switches en route or a combination of seven (7) movements of such service will be paid way freight rates for the trip.

The Commission held that only a "stop" should be considered in the definition of what constitutes a "stop to set out or pick up cars," and that it does not include setting-off cars at a station in two or more sidings, as claimed by the employees.

The Board recommended further conferences between the parties in regard to the interpretation of the article in question. Failing an agreement on the matter the Board decided that the agreed interpretation of the corresponding articles in the Schedule of the Canadian Pacific (Eastern lines) should govern in the present case.

Case No. 274.—Canadian Pacific Railway (Western lines) and Order of Railroad Telegraphers.

This case concerned the interpretation of Article 21 of the Telegraphers' Schedule, which is as follows:—

Train Dispatchers will not be required to do clerical work that will interfere with the proper handling of their trains, nor will they be required to issue train orders to any person other than an authorized Telegrapher except in case of emergency.

The employees claimed that this article had not been complied with in connection with the running of a log-train belonging to a company which had running rights over the Canadian Pacific Railway tracks under agreement, the conductor having copied his own train orders from the train despatchers, instead of having these orders copied by the agent. They claimed that the telegraphers affected should be compensated for the calls that should have accrued to them while this practice was followed.

The Company denied that there had been a violation of the agreement on their part, and that the independent company making use of the Canadian Pacific Railway tracks was entitled to obtain orders direct from the dispatcher. Moreover, the orders for the log train had been copied by the conductor, not on Canadian Pacific Railway premises, but on the premises of the other company.

The Board held that orders had been transmitted in a manner contrary to agreement, and sustained the employees' claim.

Case No. 275.—Canadian Pacific Railway (Western lines) and Order of Railroad Telegraphers.

The position of agent and operator were abolished at a station at Proctor, British Columbia, and a telephone was installed between the station and Nelson, the slipman at Proctor making use of this telephone for giving information to the train dispatcher at Nelson as to movements of boats, etc. The Company stated that the telephone was intended only for use in emergencies. The telegraphers claimed that a telegrapher should be employed at Proctor.

The Board saw no necessity for the maintenance of an operator at this point, and denied the employees' claim to that extent. The evidence however indicated that information relative to the movement of trains and barges had been transmitted contrary to the terms and conditions of Telegraphers' Schedule Agreement. As the result of negotiations between the parties the practice complained of has been discontinued, and the Railway's representative assured the Board that it will not occur again.

Case No. 276.—Canadian Pacific Railway (Western lines) and Order of Railroad Telegraphers.

The railway telegraph operators at Banff, Alberta, formerly received a commission for handling commercial telegraph business. At the beginning of the tourist season of 1924 the company decided to re-arrange its commercial telegraph business at this point, having the telephone monitors accept telegrams and transfer them to the city by messenger. The telegraphers claimed an increase of $5 per month in wages, each of the three operators concerned having lost, it was claimed, $8.99 per month in consequence of the re-arrangement. In support of their claim they cited Article 23 of the Telegraphers' Schedule, which reads:

When the handling of express or telegraph business for which a commission payment is allowed is created or withdrawn at any office, thereby increasing or reducing the average monthly compensation paid to any position, prompt adjustment of the salary affected will be made conforming to the rates paid for similar positions at stations in the same locality. The amounts of commission earned will not govern in establishing the rates for positions.

The Board denied the employees' claim, finding that according to the evidence submitted the fluctuation in the commissions formerly paid to the telegraphers at Banff did not justify a revision of the wage rates.

Case No. 277.—Canadian Pacific Railway (Western lines) and Order of Railroad Telegraphers.

A controversy arose as to the rate to be paid to a relief dispatcher who is temporarily relieving regular "trick" dispatchers in an office where the latter are employed for less than six days each week. A relieving dispatcher claimed a shortage of pay, the Company hav-

ing paid him the rate for the position he filled when not working as a dispatcher. The employees contended that the rate for relief dispatcher was fixed by the schedule in Article 30, Telegraphers' Schedule, and should not be deviated from, as it represented the minimum for this class of service. The Company, on the other hand, contended that when a relieving dispatcher is not employed relieving a train-dispatcher he is only entitled to the rate for such position as he reverts to. That is, if he assumes a position in the yard office he should be paid accordingly. There is no stipulated rate, they contended, for a relieving dispatcher when he is not relieving in that capacity, and the rate applying to the position he is filling is the one he should be paid.

The Board sustained the employees' claim, holding that a relief dispatcher is entitled to the rate of pay prescribed for this class in Article 30.

Case No. 255.—Canadian Pacific Railway (Western lines) and Order of Railroad Telegraphers.

This case was presented to the Board on August 11, 1925, when it developed that additional information was required before the Board could reach a decision in the matter. It was accordingly referred back to the parties.

The Board was informed that a settlement had been reached and acceded to a request for the withdrawal of the case.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1926

THE number of strikes and lockouts in existence during July was 19 as compared with 13 in June. The time loss for the month was less than during July, 1925, being 52,141 working days, as compared with 331,976 working days in the same month last year. The considerable time loss and number of employees involved in July, 1925, were chiefly due to the cessation of work involving coal miners in Nova Scotia, from March to August.

Date	Number of disputes	Number of employees involved	Time loss in working days
July, 1926	19	11,208	52,141
June, 1926	13	2,237	45,348
July, 1925	21	13,458	331,976

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving 653 workpeople, were carried over from June, and thirteen disputes commenced during July. None of the strikes and lockouts commencing prior to July were terminated, but nine of the strikes and lockouts commencing during July terminated during the month. At the end of the month, therefore, there were on record ten strikes and lockouts, as follows: Boot factory employees at Toronto; boot factory employees at Quebec; hat and cap makers at Montreal; ladies' garment workers at Toronto; bookbinders at Montreal; moulders at New Westminster and Vancouver; coal miners in the Edmonton field; Clothing (men's) workers at Montreal; pile drivers and wharf builders at Vancouver, and structural steel and iron workers at Winnipeg.

The record does not include minor disputes as described in the third paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet declared them terminated. Information is available as to nine such disputes, namely: cigarmakers at Montreal, commencing March 24, 1925; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Owen Sound, January 19, 1925; upholsterers at Montreal, June 27, 1925; stage hands at Vancouver, January 9, 1926; musicians at Vancouver, January 11, 1926; men's clothing factory workers, Montreal, March 19, 1926; and firemen and engineers at New Westminster, B.C., May 17, 1926.

Of the strikes and lockouts commenced during July, five were for increased wages, two were for union wages and working conditions, two were for changes in working conditions, one for increase in wages and recognition of union, one against employment of non-union workers, one for reduction in hours and one for enforcement of union rules. Of the strikes and lockouts which terminated during the month, five were in favour of the employers, two were in favour of the employees and two ended in compromises.

The following notes give particulars in regard to certain disputes in addition to information given in the tabular statement.

BOOT AND SHOE FACTORY EMPLOYEES, TORONTO, ONT.—This dispute involved boot and shoe workers in one factory in Toronto since January 13, but the employers replaced most of the strikers within a short time. The strikers obtained work elsewhere from time to time until at the end of July only fifteen were still involved.

BOOT AND SHOE FACTORY EMPLOYEES, QUEBEC, P.Q.—During July in connection with this dispute picketing continued with some conflicts between the picketers and factory employees. The City Council voted a sum of money for the relief of the strikers' families and funds were collected from various organizations and other sources. The administrator of the diocese attempted to have negotiations for a settlement renewed but without result by the end of the month. It appeared from correspondence regarding these negotiations that each party held that the other had not carried out the award of the arbitrators and that there might be resort to the courts in regard to the money deposited by each to be forfeited in case of non-compliance with the award.

RIVER DRIVERS, GATINEAU POINT, P.Q.—The employees, engaged in the sorting of logs, ceased work in order to secure an increase in wages from 35 cents per hour to 40 cents per hour, a ten-hour day being worked. Within a few days the employers increased the rate to 40 cents for those over eighteen years of age.

COAL MINERS (DRIVERS), GLACE BAY, N.S.—The drivers in two collieries at Glace Bay quit work in order to secure piece rates instead of day rates of pay. Under the agreement between the mine operators and the union it was provided that in such cases there should be no cessation of work until the case had been dealt with by the pit committee and the mine manager, with a further reference to higher authorities in case of no settlement being reached. The employers, therefore, refused to negotiate until work was resumed. The number of drivers on strike totalled 219 but nearly 1,600 other employees were indirectly affected as the mines were shut down for one day shift and two night shifts. After work was resumed the negotiations for dealing with wage rates were carried on between the district executive and the officers of the company as provided under the agreement.

COAL MINERS, GLACE BAY, ETC., N.S.—Five coal mines in Cape Breton Island were not operating part of the time from July 27 to July 31 as a large number of the employees in these refused to work with employees who would not join the union, the United Mine Workers of America, or had left that union, some of them being reported to have joined another organization, the One Big Union. The strikers claimed that this was not in accordance with the recommendations of the Royal Commission (LABOUR GAZETTE, January, 1926, Supplement, page 10), wherein it was recommended that the coal mine operators should recognize and deal with the United Mine Workers as representing the employees. By the end of the month the work was resumed in all these mines, the employees complained of having either joined the United Mine Workers of America or left the employ of the company. The employees resumed work early in August. Some of the officers of the United Mine Workers were charged in court with intimidation in connection with these disputes, at the instance of members of the One Big Union. They were remanded for trial at the next term of the Supreme Court.

COAL MINERS, EDMONTON DISTRICT, ALTA.—This dispute, involving four mines, arose on the termination of an agreement reached in 1925 settling a dispute of some weeks' duration (LABOUR GAZETTE, September, 1925, p. 871). The miners in the meantime had affiliated their organization, the Edmonton District Miners' Federation, with the Mine Workers' Union of Canada, organized in the southern part of Alberta following a dispute in that part of the province in the latter part of 1925 (LABOUR GAZETTE, February, 1926, p. 97). On the expiration of the agreement at the end of June the miners proposed an increase in wages of thirteen per cent and desired the check-off of union dues for their organization. The operators refused to grant the increase in wages or to recognize the Mine Workers' Union of Canada and are reported to have demanded that the employees sign agreements which would have involved non-union conditions. The miners accordingly ceased work, alleging they were locked out. They also claimed that immigrants from central Europe with no previous experience in mining were being employed in the mines. These later were reported to have joined the union. There were some disturbances in connection with picketing and some of the officers of the union were in court and were fined as result of charges of intimidation and assault. Early in the dispute the miners applied for a board of conciliation under the Alberta Industrial Disputes Act (LABOUR GAZETTE, May, 1926, p. 447). By the end of the month the board

STRIKES AND LOCKOUTS DURING JUNE, 1926

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to July, 1926.			
MANUFACTURING—			
Boots and shoes (other than rubber and felt):			
Boot factory employees, Toronto, Ont.	15	390	Commenced January 13, against changes in working conditions alleged to be in violation of agreement. Unterminated.
Boot factory Employees, Quebec, Que.	500	13,000	Commenced May 3, owing to disagreement as to the application of a reduction in wages awarded by arbitrators. Unterminated.
Clothing (including knitted goods):			
Hat and cap makers, Montreal, Que.	10	260	Commenced March 4, against violation of agreement. Unterminated.
Ladies' garment workers, Toronto, Ont.	23	598	Alleged lockout, commenced June 30, against enforcement of non-union conditions. Unterminated.
Printing and publishing:			
Bookbinders, Montreal, Que..	4	104	Alleged lockout commenced March 9, of members of certain unions. Unterminated.
Iron, steel and products:			
Moulders, Vancouver and New Westminster, B.C.	101	2,626	Commenced April 1, for increased wages. Unterminated.
(b) Strikes and lockouts commencing during July, 1926.			
LOGGING—			
River drivers, Gatineau Point, Que.	92	322	Commenced July 10, for increased wages. Settled by negotiations and work resumed July 15. Compromise.
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners (drivers), Glace Bay, N.S.	219*	300	Commenced July 13, for change in working conditions. Employer under terms of agreement refused to negotiate during strike; work resumed July 16 and negotiations followed.
Coal miners, Edmonton Field, Alta.	140	3,640	Commenced June 28 for increase in wages and recognition of union. Unterminated.
Coal miners, Glace Bay, etc., N.S.	4,090	6,022	Commenced July 27 against employment of non-union workmen or members of another organization. Work resumed July 30, many of the employees in question having joined the union.
MANUFACTURING—			
Vegetable foods:			
Cannery employees, New Westminster, B.C.	175	22	Commenced July 6, for changes in wages. Work resumed July 6. In favour of employers.
Clothing (including knitted goods):			
Clothing (men's) workers, Montreal, Que.	5,500	22,000	Commenced July 28, for union wages and working conditions in non-union shops. Unterminated.
NON-METALLIC MINERAL PRODUCTS:			
Glass workers, Montreal, Que...	90	270	Commenced July 21, for change in hours. Strikers returned to work or were replaced by July 23.
CONSTRUCTION—			
Buildings and structures:			
Pile drivers, wharf builders, etc. Vancouver, B.C.	130	1,755	Commenced July 2, for increase in wages. Increase granted to about half and work resumed July 5; rest remained out. Dispute unterminated.
Steam and operating engineers, Vancouver, B.C.	11	33	Commenced July 5, for increased wages. Work resumed July 8. Partial increase secured.
Structural steel and iron workers, Winnipeg, Man.	60	660	Commenced July 20, for increase in wages. Unterminated.
Plasterers, Winnipeg, Man.....	10	10	Commenced July 17, for enforcement of union rule. Work resumed after one day. In favour of employees.
Carpenters, Trenton, Ont.....	28	84	Commenced July 24, for increased wages and shorter hours. Strikers returned to work or secured work elsewhere by July 30.
Highway and Bridge construction:			
Structural steel and iron workers, Elbow, Sask.	10	50	Commenced July 23, for union wages and working conditions. Strikers returned to work by July 30.

*1,570 employees indirectly affected.

had not been completed as the operators involved desired a board for each mine and the employees desired one board for all parties involved.

CANNERY EMPLOYEES, NEW WESTMINSTER, B.C.—This dispute arose out of a complaint on the part of certain employees in a fruit and vegetable cannery that the piece rates at which they were working and the amount of work available for each person resulted in very low earnings. The employees refused to work, and, on being told that they must begin to work within a short time or be dismissed, the bulk of them did so within an hour. It appears that eleven of them were discharged and complained to the City Council, requesting an investigation of the working conditions in the plant. The employer concerned also asked for an investigation by a committee specified by him.

CLOTHING (MEN'S) WORKERS, MONTREAL, P.Q.—Employees in the factories and shops employed in the manufacture of men's ready made clothing in Montreal were called out toward the end of July in order to compel certain employers to agree to union wages and working conditions, employees in union shops being called out as well as those in non-union shops. Within a few days the workers in the union shops returned to work and a large number of the non-union employers had signed agreements with the union, the strike continuing in a small number of large factories and a large number of contract shops which had not yet done so.

GLASS WORKERS, MONTREAL, P.Q.—This dispute involved a number of the employees, chiefly boys, in a glass factory, who desired an eight-hour day in three shifts. Within a short time the strikers had returned to work or had been replaced by new employees.

PILE DRIVERS, WHARF BUILDERS, ETC., VANCOUVER, B.C.—Toward the end of June the union to which these employees belonged proposed a new agreement with the employers involving increases in wages from $7.00 per day to $8.00 per day. By the end of June this was accepted by some of the employers, but was refused by others on June 30. Some of the employers shut down their works over the holiday on July 1 and until the next Monday, on which date they agreed to pay the higher rate. Other employers offered an increase of 50 cents per day but this was refused and the strike continued.

STEAM AND OPERATING ENGINEERS, VANCOUVER, B.C.—The steam and operating engineers demanded an increase of $1.00 per day, the same as the piledrivers, and on being refused the men ceased work on July 5. On July 8 an increase of 50 cents was granted some classes and $1.00 per day to others and work was resumed.

STRUCTURAL STEEL AND IRON WORKERS, WINNIPEG, MAN.—The employees demanded an increase from 90 cents per hour to $1.15, and, being refused, work ceased and no settlement was reached.

PLASTERERS, WINNIPEG, MAN.—This dispute caused a short cessation of work owing to the enforcement of the union rule that only one member of a firm of employers should be allowed to work on a job, there being two members of the firm working in this case. The firm in question dissolved partnership and work was resumed under the remaining member next day.

CARPENTERS, TRENTON, ONT.—Employees ceased to work on July 24 for an increase of wages from 50 cents per hour to 70 cents per hour and a reduction of hours from ten hours per day to nine. They also complained that they had expected to receive 60 cents per hour when hired. Within a few days the strikers found work elsewhere or had returned to work.

STRUCTURAL STEEL AND IRON WORKERS, ELBOW, SASK.—Employees on the construction of a bridge ceased work demanding wages and working conditions according to the union scale as in the similar strike mentioned above at Winnipeg, the district headquarters. It was reported that the strikers had returned to work by the end of the month.

Beginning July 23, the employees of the E. B. Eddy Company, of Hull, Quebec, numbering 1,400, are protected by life and accident insurance. The plan is non-contributory, as the Company pays the entire cost. According to arrangements with the Metropolitan Life Insurance Company, each single employee is protected to the amount of $500 of life insurance; married men and widowers with dependents have $1,000 life insurance. The contract also covers the employees with an equal amount of Accidental Death and Dismemberment insurance. In the event of an employee dying as a result of an accident within 90 days of the date of accident, the beneficiary is entitled to the full amount of insurance plus $500, or $1,000 of Accidental Death and Dismemberment insurance, as the case may be. The total amount of insurance involved under this plan is over one million dollars.

In addition to the above all employees insured under this plan are entitled to the free Nursing Service of the Insurance company, providing they live in the nursing area.

MINERAL INDUSTRY IN CANADA IN 1924

THE Dominion Bureau of Statistics has published recently its annual report on the mineral production of Canada for the calendar year 1924. The report continues the series of annual reports that have been published for many years, first by the Geological Survey, later by the Union Branch of the Department of Mines, and since 1921 by the Dominion Bureau of Statistics. The present issue contains much new material, and gives full information regarding every class of mining in Canada.

The mineral industry of Canada, representing a capital investment of about a half-a-billion dollars and employing upwards of 60,000 hands, is a basic industry second only to agriculture and forests production among the primary industries. The value of the output *per capita* has risen from $2.23 in 1886 to a maximum of $26.40 in 1920, and the value of production has grown in the same period from 10 million dollars to a high point of 228 million dollars. The fact that every province contributes annually to the output emphasizes the variety and wide distribution of Canada's mineral products.

Canada's mineral industry in 1924 yielded products valued in the aggregate at $209,583,406, a total which has only been exceeded in three previous years; in 1923, when the output was valued at $214,079,331; in 1920, when the peak of $227,859,665 was reached; and in 1918 when the total value of $211,301,897 was recorded. Ontario was again the principal mineral producing province of Canada, the value of its output in 1924 being determined at $86,398,656, or 41.22 per cent of the total for Canada. British Columbia came second with a mineral production valued at $52,298,533 or 24.94 per cent of the total for Canada. Nova Scotia contributed $23,820,353 or 11.38 per cent of the production, winning third place over Alberta which held this position in 1923. Alberta's output was valued at $22,344,940, representing 10.61 per cent. Quebec's minerals were valued at $19,136,504 or 9.14 per cent; and New Brunswick, Manitoba, Saskatchewan and Yukon Territory followed in the order named. In 1923 Yukon Territory held sixth place, but in 1924 it dropped to the end of the list; this was due in part to the reduction in the output of placer gold, but more particularly to the fact that shipments of silver-lead-zinc ore accounted for in 1924 were much less in quantity than those reported in the preceding year. Climatic conditions however, are an important factor in the movement of Yukon ores, and the totals from year to year therefore are not subject to the same strict comparisons that may be made in the case of other areas.

The accompanying table gives the principal statistics for the year 1924 under the three main headings into which mining is grouped, metallics, non-metallics, and structural materials and clay products.

SUMMARY OF PRINCIPAL STATISTICS RELATIVE TO THE MINING, METALLURGICAL, STRUCTURAL MATERIALS AND CLAY PRODUCTS INDUSTRIES, OPERATING PLANTS IN CANADA, 1924

—	Number of active operators	Number of operating plants or mines	Capital employed	Number of employees	Salaries and wages paid	Miscellaneous expenses	Cost of fuel and electricity	Total expenditures	*Net value of bullion, ore, concentrates or residues shipped from the mines and smelters
			$		$	$	$	$	$
METALLIC—									
Auriferous quartz mining and milling	70	70	83,982,765	6,738	10,500,140	6,925,027	1,559,406	18,984,573	31,298,107
Silver-cobalt mining and milling	26	34	41,013,466	1,769	2,534,304	2,479,316	468,651	5,482,271	6,594,032

Total	**2,214**	**7,840**	**632,443,946**	**64,328**	**82,787,421**	**28,493,006**	**19,587,452**	**130,867,879**	**193,263,319**

*Net value here in gross value less freight and treatment charges.
[1]Does not include capital of Granby Co., Anyox, B.C.
[2] Includes $420,750 value of placer output for B.C.
[3] Includes 1 manganese producer in N.B.; 1 molybdenum producer in Quebec.
[4] Value of pig iron made from domestic ore less net value of the domestic ore.
[5] Value of shipments from metallurgical works less cost of ores, concentrates, matte, etc., treated at this latter value was included in the credits to the mines and mills.

MINING IN QUEBEC IN 1925

THE report on mining operations in the Province of Quebec during the year 1925, published recently by the Provincial Department of Colonization, Mines and Fisheries, shows that appreciable increases, as compared with 1924, were recorded for the year in the three branches of mining, metals, non-metallics, and building materials. In the rest of Canada the metal group alone showed an increase, non-metallics, building materials and clay products being below the level of 1924. The value of the products of the mines and quarries of Quebec in 1925 aggregated $23,824,912, an increase of 25.7 per cent over 1924. The value of the production in 1925 was the highest on record, except only that of the abnormal year 1920 when the impetus following the war period was in full effect. The bulk of the production of the province continued to be in the non-metallic group, which furnished 95.5 per cent of the total. However, the production of metallics which showed a value of $1,034,188, was in marked increase as compared with the previous five years. In fact it was the second highest annual value recorded, the banner year for metallics having been 1918, when the value reached $2,855,120.

It is to be noted that the figures given in the report for the value of metalliferous ores produced, represent the actual value received

by the operators from the purchasers of the ore. This method of calculation differs from that used by the Dominion Bureau of Statistics, in whose tables the metallic contents of the ores are calculated at the price of the refined metal. The figures given by the provincial department are therefore considerably below corresponding figures furnished by the Bureau.

The following table shows the quantities and value of the various products of the mines during the year, with the number of men employed and the wages paid in each division.

TABLE OF THE MINERAL PRODUCTION OF THE PROVINCE OF QUEBEC, 1925

Substances		Number of workmen	Wages	Quantities	Value in 1925	Value in 1924
			$		$	$
Asbestos	tons	2,836	2,724,527	273,522	8,976,645	6,571,594
Copper and Sulphur ore	tons	208	277,256	18,164	277,083	156,287
Dolomite	tons	.....	.....	.....	.....	9,049
Feldspar	tons	148	77,199	11,287	94,730	143,076

It is anticipated that the mining and metallurgical industries will benefit largely from the hydro-electric development now in progress in the Province on the St. Maurice, Batiscan and Gatineau Rivers, Quinze Lake and particularly in the Saguenay region. At the latter point a plant for the reduction of alumina into the metal aluminium is being erected at the present time. It is intended to eventually build here the largest plant in the world, and the hydro-electric development plans are for the installation of ten turbines of a capacity of 80,000 horse-power each, or a total of 800,000 horse-power, all to be applied to the aluminium industry. It is also projected to erect a zinc smelting plant in the same region, and it is probable that eventually an electrolytic copper refinery, to treat the matte from the Rouyn district copper ores, will also be established here.

The Quebec Bureau of Mines maintains at the Polytechnique School, of the University of Montreal, an up-to-date, well equipped laboratory for the convenience of the interested public. Analyses, assays, determinations of minerals, and tests of various ores, samples and materials found within the boundaries of the Province of Quebec, are made in this laboratory at prices which are extremely low for the high grade work done. This laboratory has been established for the sole purpose of aiding the development of the mineral resources of the Province of Quebec. The Quebec Bureau of Mines does not attempt to do any systematic geological work, but follows more the lines adopted by the British Columbia Bureau of Mines in restricting the field-work to examinations of ore deposits, prospects, mining properties, and mines of which detailed descriptions are given in yearly reports.

The report contains a full account of the operations of the year in each class of mining, and a description of the mineral deposits of Western Quebec and their development in 1925.

Detailed statistics of accidents which occurred in the mines and quarries during 1925, are given in the concluding section of the report. As stated in the table given above, 9,304 persons were employed during the year, as compared with 8,270 in 1924. In order

however to facilitate true comparisons from year to year the Bureau of Mines has for the past thirteen years reduced the number of employees to a basis of a full year of 300 working days. On this basis the number of 300-day men was 7,021 in 1925, 6,474 in 1924, 7,123 in 1923, and 5,885 in 1922. Wages paid to these workmen in 1925 amount to $7,954,877, a slight increase over $7,581,481 paid during the preceding year. Of that amount the miners received $3,751,964, and the quarrymen $4,202,913, which figures compare respectively with $3,915,506 and $3,745,087 for 1924.

The average wage earned by a 300-day workman during 1925 was $1,133; it was $1,171 for the preceding year.

The number of 300-day men at work at the mines was 3,395 and at the quarries 3,626. This is an increase of 12 per cent and 5 per cent respectively over the preceding year.

The mine and quarry operators sent to the Bureau of Mines, during the year 1925, notices for 269 serious accidents entailing loss of time of ten days or more.

The accident average is 38.3 per 1,000 full-year workers, as compared with 47.3 for the preceding year. There were seventeen fatalities in the mines and quarries during the year 1925, being an average of 2.42 per 1,000 men-year. This index number was 3.36, 2.51, 2.72, 2.38 and 1.83 for 1920, 1921, 1922, 1923, 1924 respectively. In the mines proper the proportion of fatal accidents was 3.23 and in the quarries 1.38, as compared with 2.98 and 0.86 for the year 1924.

The report contains an annotated list of all accidents, fatal and non-fatal. "Operators who have at heart the safety of their men" it is suggested, "will know from these tables the principal causes of accidents, and they will apply themselves to protect their employees. In that part of the annual reports for the previous years which deals with the statistics of accidents they will find numerous recommendations as to precautions to be taken to better protect their workmen."

Cable-derricks accidents show a higher percentage among the causes of accidents in 1925 than in 1924, and falls of ground show a decrease. This is because a number of accidents which in previous years were ascribed to falls of rock, are really cable derricks accidents. These are caused by rock falling from jams during the loading of boxes at the foot of talus in the bottom of open cast pits. Attention is also called to gearing and shafting accidents which were high in 1925. The report recommends that stronger and more efficient guards should be built around places in mills where men are exposed to come in contact with fast running belts and high revolutions shafts or pulleys.

The report contains a list of the principal operators and owners of mines and quarries in the Province.

COAL MINING IN ALBERTA

Annual Report of the Mines Branch for 1925

THE annual report of the chief inspector of Mines of the Province of Alberta, recently received by the Department, contains full statistics of the mining industry for the calendar year 1925. The report is mainly in the form of tables, giving particulars of the coal production and numbers employed in each mine; the number of accidents, fatal, serious and slight; the number and nature of prosecutions under the Mines Act; the certificates issued; shots fired and missed; use of electricity, and other information.

Under the schedule of the Coal Sales Act of 1923 (LABOUR GAZETTE, June 1923, page 619), which was re-enacted at the session of 1925, the province is divided into coal areas as follows:—

Ardley	Carbon
Big Valley	Cascade
Brooks	Castor
Brule	Champion
Camrose	Clearwater
Coalspur	Pekisko
Crowsnest	Pembina
Drumheller	Pincher
Edmonton	Prairie Creek
Empress	Redcliff
Gleichen	Rochester
Halcourt	Saunders
Highwood	Sexsmith
Lethbridge	Sheerness
Magrath	Smoky River
Milk River	Steveville
Morley	Tofield
Mountain Park	Taber
Nordegg	Valhalla
Pakan	Wainwright
Old Man	Wetaskiwin
Pakowki	Whitecourt
Panther	

An amendment was also made to the Mines Act during the year (LABOUR GAZETTE, June, 1925, page 566) with reference to the payment of wages. This requires the manager to

forward with the monthly statement as to production, etc., a form signed by him stating whether or not wages have been paid. It also provides, in the event of wages not having been paid, that the Chief Inspector may apply to a Judge for an order appointing a receiver for the mine.

Production in 1925.—There were three shale mines and 380 coal mines in operation during the year 1925, of which 34 were opened, 18 reopened and 92 abandoned. In addition to the mines abandoned, 44 were closed temporarily, leaving 292 mines in operation at December 31, 1925.

The total amount of coal produced in the Province during the year was 5,883,394 tons, of which 1,440,032 tons were sold for consumption in the Province of Alberta; 1,953,176 tons were sold in other Provinces in Canada; 40,507 tons for consumption in the United States; 2,139,716 tons were sold to railway companies; 729 tons were used for making briquettes; 225,564 tons were used under colliery boilers; 6,124 tons were used by Colliery railroads; 54,996 tons were put to stock; and 76,190 tons were put on the waste heap.

During the year 1925 the production of coal in the Province was 679,681 tons greater than the production for the year 1924, the greatest increase being in the output from the bituminous mines, the largest monthly production being during the month of November, when 750,626 tons were produced.

The production of domestic coal amounted to 3,156,359 tons; sub-bituminous, 581,835 tons, and bituminous coal, 2,145,200 tons. It is to be noted that no anthracite coal has been produced in Alberta since 1923.

Per capita production.—The average number of tons mined per man employed under ground during each year since 1918, was as follows:

1918..	1,001 tons
1919..	958 "
1920..	1,055 "
1921..	824 "
1922..	971 "
1923..	893 "
1924..	982 "
1925..	834 "

It is to be noted that in calculating the total *per capita* production for men employed underground, the tonnage mined from stripping pits was deducted and only the tonnage produced from mines was used.

The average hours worked per week each month was 33.18 hours in the domestic coal mine; 37.38 hours in the sub-bituminous; and 31.86 in the bituminous mines.

Number of Employees.—There were 11,176 persons employed during the month of December, 1925, which was a reduction of 885 from the number employed during the month of December, 1924.

The number of men employed in the domestic, sub-bituminous, and bituminous mines of the Province as at December 13, 1925, by classes, is shown in the accompanying table:—

EMPLOYEES IN COAL MINES IN ALBERTA ON DECEMBER 31, 1925

—	Domestic	Sub-Bituminous	Bituminous
Below ground—			
Officials	347	29	143
Hand-cutters	1,051	218	1,374
Machine-cutters	500	30	.....
Machine-loaders	2,331	170	.....
Horse haulage employees	648	19	151
Mechanical haulage employees	118	28	163
Ventilation employees	58	2	38
Roadmakers	176	6	59
Timbermen	226	24	103
Pumpmen	37	2	17
Other employees	136	28	299
Total below ground.	5,628	556	2,352
Above ground—			
Administration	74	15	22
Foremen and clerks	106	24	98
Screenmen and loaders	493	102	167
Enginemen	123	34	40
Firemen	71	23	48
Machinists	33	11	26
Carpenters and masons	34	13	25
Other mechanics	58	17	46
Surface haulage	57	7	37
All other employees	353	207	276
Total above ground.	1,402	453	785
Total above and below ground	7,030	1,009	3,137

Mining Machinery.—The report states that attention is being given to the introduction of mechanical loading underground, an electrically operated shaker conveyor having been placed in operation in the mine operated by the Brazeau Collieries, Limited, at Nordegg. In the mine operated by the McGillivray Creek Coal and Coke Company, Limited, at Coleman, a similar conveyor operated by compressed air had been installed, and in the mine operated by the West Canadian Collieries, Limited, at Blairmore, a shovel loader operated by compressed air is being operated on No. 5 Gangway. Two mines in the Crowsnest area have placed in use during the year a mechanical pick operated by compressed air. These picks are used to break down the coal, and result in considerably reducing the amount of powder required for coal production.

Prosecutions.—There were 86 prosecutions instituted for contravention of the provisions

of the Mines Act, a conviction being obtained in 83 cases; the other three charges against miners working overtime being withdrawn, owing to lack of evidence. Of those against whom convictions were obtained 22 were operators, ten officials, 43 miners, two farmers, two motormen and four miscellaneous.

Certificates.—There were issued during the year 263 provisional certificates giving authority to persons to act as overmen at mines which employed not more than ten men, if the person to whom the certificate was granted was the holder of a third class certificate, and not more than five men to be employed if the person was not the holder of a third class certificate. There is also the proviso that all shots fired in the mine must be fired by the person holding the certificate.

Accidents.—The report concludes with a number of tables of accidents in 1925. There were 30 fatal accidents, 59 serious, and 56 slight accidents recorded. The number of tons of coal mined per accident is given as 196,113 tons per fatal accidents, 97,718 tons per serious accidents, and 105,060 per slight accident.

It is to be noted that a large proportion of the accidents, both fatal and non-fatal, occurred in the smaller mines.

The most serious accident of the year, causing the loss of three lives, was caused by an explosion of gas at the bottom of a shaft. Two fatalities resulted from persons entering abandoned mines to get coal for their own use. The most frequent cause of accidents was haulage operations; the next largest group being the accident in connection with falls of rock.

MINING METHODS IN GREAT BRITAIN AND THE UNITED STATES

IN the LABOUR GAZETTE for August, 1924, it was noted that an arrangement had been made by the Mines Departments of Great Britain and the United States for co-operative research in regard to safety in coal mining operations, with particular reference to the prevention of coal dust explosions. The United States Bureau of Mines was represented in this inquiry by Mr. George S. Rice, its chief mining engineer. It will be recalled that Mr. Rice, at the invitation of the Government of Nova Scotia, carried out an investigation in 1924 into the occurrence of "bumps" in the coal mines at Springhill, the report of this investigation being outlined in the LABOUR GAZETTE for February, 1925. The British representative at the recent joint inquiry was Dr. R. V. Wheeler, of the Safety in Mines Research Board of the Mines Department. The report of the commissioners, which has lately reached the Department, gives the results of a series of tests designed to determine the relative inflammability of the coals in certain mines in Great Britain and the United States, and the proportions of stone dust required to render coal dust non-inflammable. The investigators found but little difference in the behaviour of the coals from the selected mines, this conclusion making the results reached through past investigations applicable to the mines in both countries alike.

The report contains a comparison of coal seams and mining methods in Great Britain and the United States. In Great Britain, it is found, coal mining is generally carried on at considerable depths; that is to say, at from 1,200 to nearly 4,000 feet below the surface, and the seams are usually dipping more or less steeply and irregularly. In the United States, the mining of bituminous coal is most often carried on at depths of less than 800 feet (except in the Rocky Mountains and Cascade Mountain regions of the Far West) and the seams are usually level lying. Firedamp is given off from the coal seams in both countries, while in some mines of the United States natural gas, issuing from deeper measures and reached by wells through the mine, is liable to be encountered.

The longwall method of mining is prevalent in Great Britain, but in the United States the natural conditions and the conditions of labour are such that longwall mining is not applicable except in a few coal-fields, and the room and pillar, or pillar and stall, method is generally used. This method necessitates coal ribs and sometimes coal roof, along the roadways and rooms; and a much greater length of open roadway than in longwall for the same tonnage production. From the ribs and roof coal may fall and be ground to dust. Generally only one coal seam in any one mine of the United States is worked at a time. This is in part because of acute commercial competition which calls for the mining only of such coal as can be won most cheaply, but is mainly because there is usually a long distance between commercially mineable beds. In Great Britain, it is generally possible to mine several seams at the same time because they are steeply dipping or because the distance between seams is not great. The method of underground transport in Great Britain is by small cars (tubs), generally of less than 1,100 pounds capacity,

hauled by ponies and by rope at a comparatively slow rate with a minimum production of dust. In the mines of the United States, rapid electric trolley haulage is employed on the main roads, using large cars (of from 1½ to 4 tons capacity) which, except in the newest mines, are not tight-ended, and the coal is "built up" or "topped." There is thus considerable spillage and grinding of coal under the wheels of the cars.

"It would thus appear," the investigators state, "that the production of coal dust daily in the mines of the United States is liable to be greater than in British mines, while the widespread use of electrically operated mining machines (about 65 per cent of the coal production of the United States is machine mined) introduces, in a gassy mine, a risk of ignition which a room and pillar system of mining accentuates. One can understand, therefore, that American mining engineers who are primarily concerned with the safety of coal mines should seek to determine, and should place on record, the extent to which the 'stone dust remedy' must be applied in order that, so far as is humanly possible, absolute immunity from widespread coal dust explosions can be obtained; a matter of particular importance when comparing one coal dust with another."

WORK OF ONTARIO DEPARTMENT OF LABOUR IN 1925

THE sixth annual report of the Department of Labour of the Province of Ontario describes the activities of the Department during the fiscal year ending October 31, 1925 (an account of the establishment of this Department, and its functions was given in the Labour Gazette for April, 1925, page 355). The Department administers the Stationary and Hoisting Engineers' Act; the Factory, Shop, and Office Building Act; the Employment Agencies Act; the Steam Boilers' Act; and the Ontario Government Offices of the Employment Service of Canada.

Industrial Conditions.—The statement of the volume of employment in the manufacturing industries during the fiscal year is based on reports supplied by employers to the Dominion Bureau of Statistics, which reports are summarized each month in the Labour Gazette. Approximately 2,700 firms in Ontario were covered by these reports, with a working force of from 288,744 in December to 335,061 in September. Taking the index number in January, 1920, as 100, the volume of employment for the fiscal year 1925 is indicated by 88.7 as compared with 90.1 for 1924, 93.1 for 1923 and 86.4 for 1922.

The most marked decline was reported for December, 1924, when reductions, mainly in iron, steel, lumber, textiles, construction and transportation, affected more than 25,000 workers. The pronounced recovery, however, along these lines of the manufacturing division in the following months, as well as improvement in the rubber, pulp and paper, logging and mining industries, resulted in the favourable balance in June, which was maintained for the remainder of the year, although the improvement was not sufficient to counteract the effect of the contractions of the early months.

The employment situation in building and construction work showed considerable expansion during the fiscal year, as indicated by the estimated value of building permits issued in twenty-five centres in Ontario. The total for 1925, $58,548,330, showed an increase of $2,569,401, or 4.39 per cent as compared with the previous year.

Wages and Hours.—In the building trades a wage decrease of 12½ cents per hour was reported for bricklayers in Toronto; a change in painters' wages from 65-75 to 75 cents, and in builders' labourers' wages from 40-65 to 45-65 cents per hour. Carpenters' and plumbers' wages remained unchanged in that centre. In Hamilton the only change was reported for plumbers, when the wage of 85-90 changed to 90 cents per hour. The hours of labour in the building trades remained unchanged in both centres except in the case of labourers in Hamilton, when the number of hours per week changed from 50-60 to 44-60.

In Toronto the wages of machinists increased from 50-70 to 55-75 cents per hour with no change in the number of hours per week. In Hamilton the wages increased from 40-65 to 50-70, and the hours changed from 48-50 to 44-59 per week.

Strikes and Lockouts.—The fiscal year 1924-25 was marked by a decided decrease in the time loss in working days through strikes in the Province. The total of 27,477 days showed a decrease of approximately 71 per cent as compared with the previous year, and a decrease of more than 57 per cent as compared with the year 1917, which showed the next smallest time loss in the past nine years. Altogether there were twenty-one strikes commenced during the year, two more than in 1924, and 2,499 workers were affected. Ap-

proximately 61 per cent of the working days were lost by members of the clothing industry, 15 per cent by members of the building trades, 13 per cent by employees in the metal and machinery group and the remaining 11 per cent was divided among the wood-working, pulp and paper, transportation and personal and domestic groups.

Factories, Shops and Office Buildings

The factory inspectors made 18,095 inspections during the year and in addition many special visits incidental to inspection were necessary and the delivery of 404 contract clothing permits. The employees in the industries, mercantile establishments and office buildings covered by the above inspections numbered 260,272. The various requirements of the Factory, Shop and Office Building Act called for the issuance of 7,200 orders, as compared with 8,025 in 1924. The total of 3,806 accidents reported during the year was a decrease of 981 as compared with the number last year, and the fatalities, numbering thirty-five, showed a decrease of sixteen. In connection with their responsibility in the enforcement of the Stationary and Hoisting Engineers' Act, the Steam Boiler Act, the Adolescent School Attendance Act and the Minimum Wage Act, the factory inspectors reported 1,854 violations of these Acts.

It is stated that the inspectors experienced little difficulty in carrying out their duties in connection with the enforcement of the Adolescent School Attendance Act. "It would appear however," the report continues, "that

SUMMARY OF ACCIDENTS FOR THE YEAR 1925

Cause of Injury	Totals		Class of Industry														
	Fatal	This year to date	Pulp and Paper trades	Metal trades	Rubber and rubber goods	Textiles	Food	Lumber	Laundries	Chemicals	Conveyances, etc.	Transportation	Clay, glass and stone	Unclassified trades	Leather goods	Woodworking	Wearing apparel

some employers are not cognizant of their responsibility for obtaining certificates from school authorities before giving employment to any adolescents."

The chief inspector reported improved sanitary conditions in the factories. "An increasing number of employers," he says, "realize the beneficial effect on employees and their work of clean, bright, well ventilated workrooms, although there are still those who have a general clean-up of workrooms, halls, stairways and windows only on the occasion of the inspector's visit. Many employers have established cafeterias and lunch rooms, where meals are served at cost, or tea and coffee are provided. Usually lack of space is the reason given by firms who have not provided such equipment and they are frequently firms occupying the old-fashioned type of building.

The employees in the shops and office buildings covered by the Factory inspectors numbered 260,272 in 1925 (188,581 males and 71,667 females) as compared with 272,949 (193,730 males and 79,199 females) in 1924. In 1925 there were 541 male employees between the ages of 14 and 16 years, and 2,315 female employees between the ages of 14 and 18 years. Fourteen children were dismissed, having been found to be under 14 years of age.

Industrial Accidents.—Three thousand eight hundred and six accidents were reported during the year 1925, thirty-five of which were fatal, as compared with 4,787 reported in 1924, with fifty-one fatal.

Employment Service

Statistics of the work of the Ontario Offices of the Employment Service of Canada are given regularly in the Labour Gazette. In the 25 offices of the Service, 200,068 applicants were registered during the year, 158,341 vacancies reported and 135,454 placements were made.

Board of Stationary and Hoisting Engineers

The certificates granted by the Board of Stationary and Hoisting Engineers during the fiscal year numbered 14,529; 1,412 of these were by examination, 26 were provisional, 20 duplicate, 12,922 by renewal and 149 plant owners' registration certificates.

Steam Boiler Branch

The volume of work performed by the members of the Steam Boiler Branch showed considerable expansion during the fiscal year. The number of drawings and specifications surveyed, registered and re-registered increased from 345 to 384 in 1925; the new pressure vessels inspected from 275 to 290 and the number of pressure vessels repaired, sold or exchanged increased from 874 to 1,412. The year's work was marked by a decided increase in the number of requests from plant owners to have their boilers inspected annually by members of the Steam Boiler Branch.

MOTHERS' ALLOWANCES IN ALBERTA IN 1925

THE seventh annual report of the Superintendent of Neglected Children of the Province of Alberta contains statistics of the administration of the five acts with which this official is now concerned, namely: The Children's Protection Act of Alberta; the Juvenile Courts Act of Alberta; the Dominion Delinquents Act; the Mothers' Allowance Act and the Children of Unmarried Parents Act.

In regard to Mothers' allowances the Superintendent, who is appointed under the Children's Protection Act, acts on behalf of the Provincial government, having authority to check all recommendations made by the municipal officers. The Mothers' Allowance Act requires that every city and town shall appoint an inspector whose business it is to receive applications, and after careful investigation, to make recommendation to the Superintendent, and in the event of an allowance being granted to keep the home under constant and careful supervision. When applications are received from rural municipalities, it is necessary for an inspection to be made by an officer of the Department. This is done when possible in conjunction with some official of the municipality, the aim being to secure, as far as possible, the interested co-operation of municipal authorities in the proper enforcement of the act.

Under the Alberta Act applications are considered from any woman who is a widow, and who has in her custody a child or children under the age of fifteen, in the case of boys, and under sixteen, in the case of girls, and who is otherwise unable to take

proper care of her children. The wife of an insane person is admitted to the same benefits as a widow. The legislature appropriates each year a definite sum from which allowances are paid, the amount in each case being in accordance with the recommendation made to the Attorney-General by the Superintendent of Neglected and Dependent Children. The attorney-general may require municipal treasurers to repay one-half the amount expended by the province on allowances within their respective areas.

The total number of mothers in Alberta in receipt of allowances for the year was 825, as compared with 742 in 1924. The total amount expended by the provincial government in payment of these allowances was $283,585.50 in 1925 and $257,411.50 in 1924. The total amount of refunds received from municipalities in the province was $142,469.63 in 1925, and $107,464.12 in 1924. The cost of administration was $421.59 in 1925 and $1,073.20 in 1924.

Allowances to the number of 128 were discontinued in 1925 for the following reasons: Improved circumstances, 57; left province, 10; remarried, 26; immorality of mother, 4; mother died, 5.

The number of children on whose behalf allowances were granted in December, 1925, was 2,271. The following table shows the number of mothers in receipt of allowances in December, 1925, classified according to the size of the families to be provided for, and the total amount of the allowances paid during that month in each group:

Number of children per family	Number of mothers	Amount received
1	53	$ 1,180 00
2	207	6,023 00
3	167	5,757 50
4	136	5,351 00
5	72	3,038 00
6	40	1,929 50
7	18	870 00
8	3	155 00
9	1	40 00
	697	$ 24,344 00

Under the Children of Unmarried Parents Act, 354 cases were reported through the Department of Vital Statistics. The number of neglected children brought before the Juvenile Court was 232 (107 male and 125 female). A large proportion of these children were infants under one year.

The number of children dealt with in connection with the "Children's Shelter" work was 793 (443 male and 350 female); 154 children were adopted; 248 were placed; 28 were sent to institutions; 5 to hospital; 6 ran away; in Shelter December 31, 34; in outside Shelters, 97; returned from foster homes, 26; died, 6; returned to parents, 184; married, 5.

The report states that an important activity in the children's department is the procuring of foster homes for children who have been deserted, removed from unsuitable homes or left alone in the world. This required frequent visits to different towns and districts, investigations, and supplementary correspondence, but excellent results followed.

TECHNICAL EDUCATION IN NOVA SCOTIA

THE work of the Technical Education Branch of the Education Department of Nova Scotia is described in the annual report of the Superintendent for the year ended July 31, 1925. The subsidy from the Federal Department of Labour was forthcoming to the province of Nova Scotia under the Dominion Act for the promotion of Technical Education, passed on July 7, 1919, one-half of the expenditure of the province for secondary technical education being refunded to it from the federal treasury. In 1924-1925 Nova Scotia received $34,978.47 from this source as compared with $34,140.88 in the previous year. The province did not expend enough on this service to entitle it to the full amount that was available.

The Provincial Director of Technical Education states that "the province would doubtless proceed with plans to extend secondary technical education if it could be sure that the financial aid from the Dominion would be continued after 1929. The act of 1919 provided for only a ten-year period, and Nova Scotia does not wish to launch out into such a program as will involve it too heavily to meet the cost entirely out of its all too slender resources. In fact it will probably have to curtail even its present modest provisions for vocational education if the Dominion does not supplant the enactments of the legislation of 1919 with some policy of continued assistance as is now done in the United States."

Technical Schools

The main effort of the Technical Education Branch of the Provincial Department of Education consists in the carrying on of a series of evening technical schools all over the province. These are the type known as in-

dustrial continuation schools, and furnish preparatory, technical, and trade training to supplement the knowledge and skill of people who have left the public school system and are already engaged in some occupation. For purposes of administration these are classified under two heads:—

(1) Coal Mining and Engineering schools, and

(2) Evening Technical Schools.

Because coal mining is a basic industry in Nova Scotia and such a great proportion of the provincial revenue is derived from a royalty on the tonnage produced, and because instruction was already established for colliery workers prior to the passage of the provincial Technical Education Act in 1907, all the expenses of conducting these schools are paid by the province. In the case of the Evening Technical Schools, the municipality is required to furnish school rooms, heat, light and janitor care and one half of the teachers' salaries.

The first class of school ministers to those in coal mining communities who desire to prepare themselves for government certificates of competency necessary in order to hold responsible positions in collieries as officials or stationary engineers. The second class offers advantages in technical instruction to those in industrial communities who wish to increase their knowledge and efficiency in business, industry, or in the home.

The evening technical schools are conducted in the principal industrial communities of the province. The classes offered differ according to the leading industries of the place and, of course, the larger cities had a much more extensive series of subjects than the smaller towns. The general policy followed is to organize a new class in any subject where ten or more prospective students petitioned for its formation and promise to attend the sessions faithfully.

In order to induce students to continue their work through a series of winter studies, the different subjects are grouped into courses which represent three successive winters of technical instruction related to a single group of occupations and a diploma is offered for the successful completion of these together with the acquirement of a good working knowledge of English and mathematics. In the larger communities where the evening technical schools are held, there is a committee of business men, manufacturers, and labour representatives which co-operates with School Board and the Technical Education Branch in the general conduct of the school. The advice and co-operation of these men has been invaluable to the success of these schools in securing the attendance of employees in evening classes, in working out the details of the actual instruction offered so that it would be vital and practical to the large variety of students who were striving to improve themselves, and in the promotion of the general interest and efficiency of the schools.

Technical College

The report also contains a full account of the work of the Technical College. There were 33 regular and 35 special students in the college year 1924-5. The graduates were between the ages of 21 and 25 years. In spite of the continued industrial depression in Canada, all of the men secured places in industry where they could use their training to good purpose and start on their professional careers toward positions of responsibility. The College carries on a continuous employment service for its former graduates as well as placement of students in practical work for summer vacations. Every effort is made to find out all possible vacancies in Nova Scotia and then to put the employer in contact with the man who has the personal and technical qualifications desired.

Short Term Courses

The Technical College not only provides engineering training leading to the degree of Bachelor of Science for those who can afford the four years for university work but gives abbreviated courses for those who had to enter practical life from the common or high school. There are no definite entrance requirements for these short courses other than that the applicant shall have completed the public school courses through Grade VIII, that he has had experience in industry to which the course is related, and that he can directly profit by the instruction. In two or three of the courses a knowledge of elementary algebra is required, but if he has not this knowledge he can easily acquire it through correspondence study with the College before entering the short course.

The short-term courses are held during the first three months of the calendar year when industrial activity in many lines is at its lowest annual ebb. A special staff of instructors who have had both technical training and inndustrial experience is engaged for this work. The student enrolls for one special subject, and spends all his time every day in pursuing instruction in this direction. These classes, the report states, fill a real need because there is now practically no opportunity for education or training in industry itself. In only a few occupations are there still re-

quirements for apprenticeship, and in these there is not the same obligation that used to rest on the master workman or employer to impart to the youth all the skill and knowledge required in the craft.

The short courses are also designed to serve the needs of men who have been engaged in industry for a number of years and find their path to development and promotion blocked because of a lack of technical knowledge. Further they help the more mature mechanic who has become a competent journeyman and desires to better himself. The cost of these short courses is kept to a minimum. The tuition for any one course is only $15. Board and room for the three months can be secured for about $8 per week. Textbooks and supplies would not amount to more than $25. Therefore, a student can take the full course for less than $150.

The director points out that "this form of education is a partial solution, but partial only, of the problem of training men in industry for positions as expert mechanics and minor executives. The courses would be much more effective if employers would more commonly try to discover and develop social ability among their workmen and assist the capable ones to secure training."

Correspondence Study

An account of the correspondence study division was given in the LABOUR GAZETTE, March, 1925 (page 253). The report states that, after four years, it has become firmly established as part of the educational system of the Province. The number of course-enrolments during that period under review was 356, or 42 more than in the previous year.

The number of course-enrolments to date is 1232 and of completed courses 431 or 35 per cent, which compares very favourably with the figures available from other institutions teaching by the correspondence method. The comparison is even more favourable when it is remembered that most of the 801 uncompleted courses are "active" ones and will be completed within a reasonable period.

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

Printing Schools

An article by Mr. Fred J. Hartman, appearing in the *Typothetae Bulletin* of May 24, 1926, describes some of the printing trade schools in the United States and Canada, as follows:—

Among the thirty or more employers' organizations in America that are actively interested in training their employees, the United Typothetae of America is perhaps unique in maintaining and operating over a period of years an educational institution that bears the name of the organization, is financially supported by it, and makes a nation-wide appeal for students. What was once a pioneer school in trade training is now one of many printing schools scattered over the country. According to available statistics at headquarters, there are over nine hundred schools of printing in the United States and Canada with which the Department of Education is in direct active touch. It is generally believed there are more than two thousand schools of printing in North America.

In order to state the problem as concretely as possible, the following is a distribution by Typothetae districts of the various educational institutions and organizations of which we have some record:—

	Schools
Maine, New Hampshire, Vermont, Massachusetts, Rhode Island and Connecticut	87
New York (exclusive of the city of Greater New York and Long Island)	30
Pennsylvania and New Jersey	118
Maryland, Delaware, District of Columbia, Virginia and North Carolina	37
South Carolina, Georgia and Florida	11
Wisconsin and Michigan	66
Indiana, Ohio, West Virginia and Kentucky	122
Tennessee, Alabama, Mississippi, Louisiana and Arkansas	28
Iowa, Missouri and Illinois (exclusive of City of Chicago and Cook County)	54
Texas	24
North Dakota, South Dakota, Minnesota and eastern Montana	41
Nebraska, Kansas and Oklahoma	46
Wyoming, Utah, Colorado, Arizona and New Mexico	17
Washington, Oregon, Idaho and western Montana	18
California and Nevada	75
Canada, east of 85th Meridian	10

	Schools
Canada, between 85th Meridian and Rocky Mountains	3
Canada, British Columbia	5
Greater New York and Long Island	46
City of Chicago and Cook County	63
Total	891

A detailed study of various schools of printing is being made but for this report we are selecting typical schools that are well-known to compare with the U.T.A. School at Indianapolis. We are passing by the public elementary schools where printing is nothing more than a manual training subject. The following schools are admittedly of an apprenticeship or higher grade.

The Wentworth Institute, School of Mechanics, Boston, is mentioned first because its department of printing is a continuation of the School for Printing Apprentices of the North End Union of Boston, which was recognized as one of the first printing trade schools in America. It is a private trade school, giving instruction in twelve trades. It offers one-year day courses to young men sixteen years of age or over, without entrance examinations, and two-year day courses to high school graduates or the equivalent in training. The plan of instruction requires the student to spend part time in the school shop and the other part of the day in related subjects. Evening courses are also offered. The courses are intended for young men who desire to become compositors and pressmen; hand composition and platen and cylinder presswork being the only printing subjects taught. Its graduates go directly into the industry. The faculty consists of three regular instructors and one evening instructor.

The Dunwoody Institute at Minneapolis, Minnesota, may be considered as the same general type of private trade school as the Wentworth Institute; except that its entrance requirements for the regular two-year day course are lower. It requires its applicants to this course to be over fifteen years of age and to have completed the eighth grade or its equivalent. Instead of one-year courses it offers unit courses varying from one month to nine months. It also offers co-operative training with outside shops, and correspondence courses. Hand composition, linotype operation, and presswork are the printing subjects taught.

The Isaac Delgado Central Trades School is another private trade school which probably would rank below Wentworth and Dunwoody because of the lower entrance age, 14 and 15, and the limited field of instruction offered. It aims to develop the student as a hand compositor primarily. Courses in linotype and monotype are offered to those who complete the school course in hand composition and who are already hand compositors.

The Ottmar Mergenthaler School of Printing, Baltimore, Md., is one of the newer distinctively vocational schools in printing. It is a part of the public school system of Baltimore, but has the active backing, partly financial, of the Baltimore Typothetae. It has its own building with a principal and teaching staff, devoted entirely to printing. Its equipment is valued at more than $60,000. The school is open to boys fourteen years of age who have completed at least the eighth grade. The course is outlined for four years. The first two years are spent at the school with a schedule of half-time shop and half-time related subjects. In the second year, if the student shows sufficient progress, he will be advanced to a part-time basis with pay as provided for the third year. During the third year, the student spends two weeks in school and two weeks in a print shop in the city, throughout the year. He receives a minimum of six dollars per week from the employer; his pay to be advanced as he shows progress in his work. At the end of the third year he enters the full-time employment in the trade and starts with a wage of approximately sixty per cent of the normal wage in the industry. The school plans to keep in touch with the students during this fourth year and see that they are given proper supervision and attention by the employer. This school, of course, is still in its initial experimental stage.

The Chicago School of Printing is a part-time trade school for apprentice printers, maintained by the Open Shop Employing Printers of Chicago. It is operated on the co-operative plan of half-day outside shop and half-day in school. Its work covers hand composition and some presswork. Boys must be at least 14 years of age and have the equivalent of a grammar school graduation. The course is outlined for two years.

New York School for Printers' Apprentices is somewhat similar in scope of training to the Chicago School. However, it provides for the training of the registered apprentices in the various branches of the printing trade in New York City, requiring that the apprentice attend the school from the beginning of the second years of their apprenticeship to the end. This school is under a joint board of

management of the Printers League Section of the Employing Printers Association and the Typographical Union.

The School for Apprentices of the Lakeside Press, Chicago, is the best known and oldest of the plant schools in printing. Like the co-operative school, it offers the boy an opportunity to learn while earning. In addition to the regular apprentice course, it has special co-operative courses for high school students of Chicago and is now planning a co-operation arrangement with the University of Chicago. The York School for Printing Apprentices, York, Pennsylvania, and the J. Horace McFarland School at Harrisburg, are also types of plant schools.

The Empire State School of Printing, Ithaca, N.Y., opened in 1922, is another type of private trade school; it was founded and is supported by the New York State Publishers Association. It offers a six-months course in printing to young men 18 years of age or over, three months being devoted to advertising composition and commercial printing and three months to linotype and intertype operation and mechanism.

The Carnegie Institute of Technology, Pittsburgh, Pa., offers a college course for printers. The entrance requirements are rather high, being the same as required by the best engineering schools of the country. The student in printing gets a well-rounded college education plus the printing processes. The courses include hand composition, machine composition, linotype and monotype, presswork, bindery and what is known as fine printing. The equipment is ample for the work. A degree of Bachelor of Science in printing is given at the completion of the four-year course. The graduates become printing salesmen, estimators, production managers, teachers, and are prepared for executive positions rather than craftsmen. Several other schools are giving what amounts to a college training, such as the South Dakota State College of Agriculture and Mechanic Arts, Brookings, South Dakota, which has a year course in printing and journalism, and the Kansas State Teachers College, Pittsburgh, Kansas, which gives a teachers' training course in printing.

Apprenticeship and Vocational Training in Denmark

In the iron and metal industry, as indeed in all other industrial occupations in Denmark, no apprentice may be engaged without a written contract, the clauses of which must conform to the provisions of the Act on apprenticeship of May 6th, 1921.

Apprenticeship, lasting usually from four to five years, is so planned as to enable the young worker to acquire by degrees the technical ability of a skilled worker, and—an important point—the rapidity of execution required in manufacture. As a general rule the apprentice begins his training in small ironworks and passes later through different workshops where he gradually completes his technical knowledge. It is to be noted that the large factories which have no special workshops for apprentices fail to provide satisfactory training; the apprentice is forced to specialize too soon, and cannot acquire a general or sufficiently comprehensive knowledge of his trade.

In addition to his practical work at the shop, the apprentice is legally obliged to follow a theoretical course. To this end he attends evening classes three or five times a week. These classes are spread over three or four winters; the curriculum includes mathematics, arithmetic, draftsmanship, and other subjects which will be useful in the workshop. Classes of this kind have been organized in all the towns in Denmark and in a large number of villages. The teaching staff frequently includes employers or workers, but all teachers must have followed special courses organized by the state. The technical courses, numbering at present 262, are perfectly adapted to their special object, which is to give the young worker the theoretical grounding essential to the exercise of his trade. They are autonomous, and are due to the initiative of the industries and trades concerned; they are organized and financed by manufacturers' and employers' associations. At the end of his apprenticeship the apprentice usually sits for a qualifying examination, which however is optional.

Skilled workers in the iron and metal industry who wish to improve their qualifications may attend the classes given at the Copenhagen Technological Institute. The courses of specialized instruction include a day class (six weeks) for artisans from the provinces and evening classes for students living in Copenhagen. The curriculum comprises a technical and theoretical part and a practical part. The practical instruction is given in workshops under the direction of specialists. The theoretical instruction usually deals with the technology of materials, mechanical power and transmission, book-keeping and arithmetic. Students frequently attend several special courses, in particular those on the manufacture of tools, autogenous soldering, tempering of iron, repairs to motor vehicles, etc. Special

instruction is frequently given to artisans who wish to set up on their own account, and particular attention is paid to book-keeping. An examination is rarely held.

Certain trades or occupations, on the other hand, demand wider theoretical knowledge. Marine engineers, for instance, must pass a qualifying examination, for which preparation is provided at a special school in Copenhagen, as well as at schools of navigation and numerous technical schools. Before taking the examination the candidate must have worked for three years, including one at least in a workshop recognized by the state. He must also pass a practical test showing that he can do the necessary repairs to machinery on board ship.

Special courses have also been instituted in the higher technical schools for workers who intend to enter the engineering trades. They comprise six weeks' study and are followed by a qualifying examination for the trade of electrical or mechanical engineer.

The aim in Denmark has been to give iron and metal workers a practical and general training which will enable them to carry out any work entrusted to them and to specialize without difficulty in any given line. Scholarships given by large undertakings or individuals and state grants are available for poor and deserving candidates who wish to complete their vocational studies.

Employers' Recommendations on Apprenticeship in the United States

The Department of Manufacture of the Chamber of Commerce of the United States, Washington, D.C., has issued an instructive bulletin on apprenticeship. It describes the recent developments in various types of industrial apprenticeship and indicates how the work may be organized and carried on by large and small plants in different types of commodities.

The advantages of apprenticeship are enumerated as follows:—It supplies a reservoir from which to fill vacancies in the supervisory force; it offers opportunity to promote men from within the organization who are familiar with the policies and ideals of the company; it produces dependable, efficient, and capable workmen; it reduces labour turnover through loyalty; it supplies skilled artisans in view of restricted immigration; it produces men who are more valuable to themselves as well as to their employers. The necessity for co-operation is emphasized, and the value of organization is clearly shown by examples and quoted opinions. Special attention is given to training in the construction industry and metal-working trades.

The following deductions from the investigation are made in the report:

While a limited number of individual corporations maintain excellent apprenticeship schools, the community (including many small concerns) would likely profit more by a community apprentice plan.

Co-operation with the public is essential in promoting and conducting apprentice training on a community basis, and may be of assistance to individual plant apprentice schools.

A better organized effort should be made through the public schools to interest pupils in industry by giving facts. One chamber of commerce in co-operation with the city school system conducts "Know the City's Industries" visits for certain classes of the schools.

There should be uniform standards or methods of apprenticeship in contrast to haphazard methods, and assurance that such courses will lead to a recognized degree of skill and proficiency acceptable everywhere.

Certificates of graduation and proficiency should be granted either by state, city schools, or national associations, preferable to those given by local companies.

In order to attract apprentices there must be sound inducements and leading somewhere, too. Instances exist where in the same locality one company has a waiting list while another cannot keep its quota of apprentices.

There is not an apparent shortage of apprentice material, but more a lack of selling the real opportunities. As an example, when Milwaukee presented the opportunities the apprentices were forthcoming. This has also occurred in other localities.

The trend of opinion is that the training of industrial apprentices should be carried on either under the guidance of each industry as a whole, or through community effort.

The agencies which may function in a community co-operative effort are the state, local public schools, chamber of commerce, manufacturers association, employers, labour.

There exist a number of co-operative apprentice schools where the apprentices alternate periods at work and at school which are proven successes.

The Legal Aid Society of New York City, which was founded in 1876, serves as a clearing house for charity cases in the legal profession, its aim and purpose being to see that the poor are not deprived of justice by reason of their poverty.

CONFERENCE ON INDUSTRIAL ACCIDENT PREVENTION AT WASHINGTON, D.C.

A CONFERENCE on industrial accident prevention was held at Washington, D.C., on July 14 and the following days, under the auspices of the United States Department of Labour (the call to the convention sent out by the Honourable James J. Davis, Secretary of Labour, was noted in the May issue of the LABOUR GAZETTE, page 463). The Secretary of Labour, in his opening address, suggested lines along which discussions should proceed, including the following proposals:—

1. To create in the Department of Labour an agency, adequately staffed, which should co-operate with existing agencies in bringing together complete accident statistics regarding industries not now covered.

2. To provide for the prompt publication of accident data and its transmission to American industry.

3. To develop in the Department of Labour an industrial safety museum which should exhibit the latest and most efficient safeguards.

The conference was attended by labour officials, and safety administrators from many states. Canada was represented by Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations, who contributed a paper on the use of accident statistics in Canada.

Uniform Accident Statistics

The following resolution recommending the various states and provinces to adopt uniform forms in compiling accident statistics, was adopted:

Whereas, statistics are an indispensable aid to most effective accident prevention, and national accident statistics are of fundamental importance for most dependable comparisons of experience; and whereas, it is necessary for state governments to collect accident statistics in the several states in connection with their own accident prevention work and administration of compensation laws, and duplicate reporting of data by employers to state and Federal authorities should be avoided so far as possible; and whereas, it is entirely feasible for state departments of labour to collect the original data from employers and furnish copies to the Federal Department of Labour as needed for statistics on a national scale, therefore be it resolved, that this conference recommends that a system of national accident statistics should be developed as rapidly as possible by the following plan:

1. Standard and uniform data to be prepared in each state by the department of State government dealing with such matters and copies thereof to be furnished to the Federal Bureau of Labour Statistics, which Bureau shall promptly transmit such records and information to the other governmental agencies interested.

2. The data in general to be standardized and made uniform in the several states by compilation so far as possible in accordance with the definition, classification and table forms adopted by the International Association of Industrial Accident Boards and Commissions.

Corrected Accident Rates

The following resolution was also adopted:

Whereas dependable accident rates showing accident occurrence in relation to amount of employment or exposure are indispensable as a guide to accident prevention; and whereas, such accident rates on a national scale are dependent upon development in the first instance of the necessary data in the several states; and whereas, the states generally recognize, by laws requiring accident recording and reporting, the necessity of securing one part of the data for accident rates, namely, the occurrence of accidents; and whereas, the recording and reporting of exposure in terms of amount of employment is equally necessary for accident rates; therefore be it resolved, that this conference recommends that the states should put this entire matter where it belongs as a matter of necessary information for the guidance of safety work, both public and private, by supplementing present accident reporting laws so as to provide specifically, in case such laws do not already provide for it, that employers shall furnish such information concerning numbers of employees and amount of employment as may be necessary for the purpose of compiling accident frequency and severity rates by industries.

The conference expressed appreciation of the work of Secretary of Labour Davis and the Commissioner of Labour Statistics, Mr. Ethelbert Stewart, for the welfare of the workers of this continent.

Importance of Statistics

Mr. L. W. Cheney, of the United States Bureau of Labour Statistics, in a paper on "the Statistical Factor in the Accident Experience of the Iron and Steel Industry," stated that the whole accident prevention policy of the United States Steel Corporation which has succeeded so remarkably in maintaining a steadily declining accident rate began with statistics, has continued with statistics and is now dependent on statistics. Accident conditions, he said, reached a climax in the year 1906. A large plant of one of the corporation subsidiaries which now regards a single death as a matter of most serious concern and which rarely has more than 5 fatal cases, had in 1906 a total of 40 cases. If 1906 be compared with 1925 a reduction of 60 per cent is found to have occurred. If lost time cases are noted the reduction is 80 per cent from 1912 to 1925. Let it be supposed that conditions of 1906 were continued down to the present time; 46,863 workers would have suffered serious injury more than did so suffer

in the actual condition. If 1912 conditions had been continued it would have meant 322,468 more disabling injuries than actually occurred.

For the five years ending in 1911 the rates ran as follows: Industry, 69.2; Blast furnaces, 76.1, Open hearths, 84.2; Foundries, 60.1; Heavy Rolling, 61.0; Plate Mills, 69.4; Sheet Mills, 44.1. In the 5 years ending 1924 the record was: Industry, 33.6; Blast furnace, 30.7; Open hearths, 32.0; Foundries, 62.7; Heavy Rolling, 21.2; Plate Mills, 29.4; Sheet Mills, 35.1.

The severity rates for the 5-year period ending with 1911 were: Industry, 5.0; Blast furnaces, 10.6; Open hearths, 7.5; Foundries, 2.7; Heavy Rolling, 4.4; Plate Mills, 5.1; Sheet Mills, 3.1. In the 5-year period ending with 1924 severity rates are: Industry, 2.8; Blast furnaces, 4.5; Open hearths, 4.2; Foundries, 2.8; Heavy Rolling, 2.3; Plate Mills, 2.4; Sheet Mills, 2.1.

It sometimes happens that the frequency and severity rates are at variance with each other. In such cases the severity rate is to be regarded as the more exact measure of hazard.

State and Provincial Statistics

Mr. Richard H. Lansburgh, Secretary of Labour and Industry, Pennsylvania, outlined the contribution that might be made by state departments to accident prevention statistics. State labour departments he said, are in the ideal position to collect, analyze and distribute accident statistics. Compensation laws everywhere require the reporting of industrial accidents. These accident reports contain the only complete data of accidents and their causes to be found anywhere. "Employers everywhere should recognize this, and give full information on the accident reports required in order that resultant statistics be accurate and complete. If statistically analyzed on approximately a uniform basis, state by state, these accident reports will give to the industries of each state the information needed by them in developing their safety efforts. The steel industry and other industries organized for safety have some of this information available. But other great and hazardous industries, such as the construction industry, have taken no steps within the industry to collect the necessary data. It is through the collection of detailed data that very real service can be rendered to the industries of a state by a state labour department."

Mr. R. B. Morley described the contribution made by the Ontario Workmen's Compensation Board to the work of accident prevention, which was one of the chief concerns of the framers of the Act: "When the late Sir William Ralph Meredith, Chief Justice of Ontario, was preparing his report to the Government in 1914 on the laws relating to the liability of employers, it was suggested by industry that there should be arrangements made for accident prevention work. Acting on this, the Chief Justice included a section in the proposed Act which authorized the industries in any of the classes grouped together by the Workmen's Compensation Board to create accident prevention organizations which might be maintained out of the accident fund of the Compensation Board. Under the authority given in section 101 of the Act, eighteen out of the twenty-four classes under compensation have set up such associations and these secure their funds from the Workmen's Compensation Board."

The Accident Prevention Associations receive every week from the Board accident reports covering all cases involving the loss of seven days or more in the classes covered by the membership. "This material is extremely valuable and is the basis of the statistics on which I wish particularly to speak to-day. The accident memo, as it is termed, gives us the name and address of the employer; the name, age, occupation, allegiance, etc., of the injured worker; the hour and the date of the accident, and a brief statement of the cause and the nature of the injury. We receive from 12,000 to 15,000 of these accident memos in every year. The information contained is of the greatest possible value in accident prevention work. It shows us where accidents are happening, how accidents are happening and gives the individual plant experience as well as the class experience on a general frequency basis."

Mr. Morley maintained that industrial accidents are preventible:—"We all know that statistics prove this and, in closing I want to cite two of the outstanding examples that we have in Ontario. The Canada Cement Company, Port Colborne, operating a cement mill and a quarry with an average of 245 men ran for 521 days without a single loss of time accident and won the Portland Cement Trophy for 1925. The International Harvester Company, Chatham Works operated for 908 days without a loss time accident with an average of 115 men."

National Accident Statistics

Mr. Leonard W. Hatch, Director of the Bureau of Statistics, New York State Department of Labour, contributed a paper on "The Problem of National Accident Statistics," stated that the United States Bureau of Labour Statistics has made recently a beginning in organizing a national system for

the compilation of industrial accident statistics, and that the state of New York was one of the co-operating states. For some time there has been in operation a co-operative arrangement between that Bureau and a number of the State departments for the collection of uniform reports of employment from representative lists of firms in manufacturing. Under this arrangement where the state and federal government cover the same firms, the state collects reports and supplies the federal bureau with copies, a plan which is economical for all concerned, and which serves the purposes of both state and national statistics of employment. In this is the foundation for accident rates which should be utilized as a start toward proper accident statistics. He stated that the only form in which accident statistics prove really useful, is that which shows accident rates per unit of employment or exposure, by industries. This form of statistics, he said, is now almost totally lacking.

Workers' Interest in Safety Problems

Mr. Frank Morrison, Secretary of the American Federation of Labour emphasized the importance of accident prevention from the standpoint of the workers, the real sufferers from the present losses. He said: "In the light of the terrible toll in both fatal and non-fatal accidents which the workers now suffer after so many years of accident prevention laws, accident prevention policies conceived and applied by the employers, and accident prevention movements of many kinds, it is apparent to me that the workers will probably never be adequately protected until they protect themselves by strong trade unions. Experience shows that the workers cannot rely either on legislatures, politically-appointed enforcement officers, or the employers to safeguard their lives and limbs in industry. Industrial accidents maim and kill the workers. It is the workers who pay the penalties for inadequate laws, inadequate enforcement, and inadequate employer accident prevention schemes. Until the workers assert their own organized power for adequate protection for themselves they will evidently continue to pay the price in both fatal and non-fatal accidents.

SOME PHASES OF "HANDICAP" PLACEMENT

Paper by Mr. J. F. Marsh, of the Handicap section of the Toronto Employment Office, Employment Service of Canada, at the recent annual Conference of Ontario Office Superintendent of the Employment Service of Canada.

THE Handicap Department of the Employment Service of Canada at Toronto deals specifically with four types of applicants, namely:—

(*a*) Disability pensioners of the Great War.

(*b*) Citizens disabled in industry and thereby unable to successfully engage in their pre-disability occupation.

(*c*) Citizens disabled by public accidents.

(*d*) Citizens disabled by disease or surgical operations.

To determine eligibility for registration, also the extent of disability affecting applicants who may be pensioners of the Great War, the medical and pension reports at the Department of Soldiers' Civil Re-Establishment are at all times available to the Handicap Department, while in the case of a civilian disabled, whose condition may not be apparent on observation, it is necessary prior to registration, for the production of an authentic diagnosis and report from the medical, surgical or neurological clinics at the Toronto General Hospital. These clinics furnish reports at the request of the Handicap Department.

During the fiscal year ending October 31, 1925, 2302 applicants were registered for employment in the Handicap Section of the Toronto office, 89.2 per cent being disabled ex-service men and 10.8 per cent being disabled citizens.

The disabilities of the new registrations are as follows:—

	Per cent
Leg amputations	7.5
Arm amputations	4
Leg and foot disabilities	13
Arm and hand disabilities	12
Head	2
Heart disabilities	8
Lung disabilities	13
Trunk disabilities	5
Eye disabilities	3
Ear disabilities	3
Hernia disabilities	2
Rheumatism	5
Old age	4
Mental and epilepsy	3
Other medical disabilities	15

Placements

During the same period 640 applicants were placed in "regular" employment, while 1,486 applicants were placed in employment of a temporary nature, making a total of 2,126.

The monthly average of the regular placements was 53.3 and that of the casual placements was 123.8.

When registering a handicap applicant, it is essential that the interviewer should use every effort to make the applicant feel at ease, in order to obtain as much as possible in the way of information concerning his industrial record, both prior and subsequent to his disability. While it is of course necessary to note the extent of the applicant's disability, together with its resultant effect on his industrial efficiency, the interviewer, to be successful in making a correct classification, must concentrate his study on the applicant's remaining physical and industrial efficiency. This can be obtained by carefully tracing and recording a complete industrial record subsequent to disability together with a careful analysis of the effect of the present disability upon his pre-disability occupation. This latter information is valuable in order to classify him in an industrial category where any knowledge or experience gained prior to disability may be utilized without further injury to his physical or mental condition.

Stress must be laid upon the applicant's education, personality, type, age, height, weight, nationality, occupation both prior and subsequent to disability, mental attitude, etc. In other words the most successful interviewer gets to know the applicant thoroughly.

Special scouts are attached to the Department whose duties consist of locating suitable employment for the numerous applicants. To be successful as a handicap scout, the scout should be enthusiastic, also a first-class salesman, His "samples" should consist of recorded qualifications and particulars of selected applicants, together with photographs of certain types. These samples are often the means of obtaining a sympathetic hearing during the initial interview with employers of labour. The personal interview with employers should be along strictly business lines. This can be accomplished by the scout demonstrating the established fact that the correct placement of selected handicapped citizens in employment, which does not demand 100 per cent physical efficiency, is economically sound, and tends to prevent an abnormal labour turnover. He should be able to convince the employer that handicapped men, possessing, say 60 per cent physical efficiency, can become 100 per cent industrially efficient when placed in positions which do not demand more than the specified amount of physical efficiency possessed by the above mentioned applicants.

When a vacancy is located and the order obtained, the Scout should carefully note the details of the employer's requirements, the nature of energy required to perform the duties involved in an efficient manner, ant all other particulars which would assist the department in selecting applicants capable of rendering 100 per cent efficiency to the employer.

Personal contact maintained with the employers is essential to success, as it is equally important for the handicap scout to get to know the employer as it is for the interviewer to get to know the applicant.

A follow-up system is in vogue in the Handicap Department, whereby when an applicant is placed in employment, contact is maintained direct with the employer and the man concerned. This follow-up is valuable as it not only tends to spur on the applicant who is placed, but also is the means of the employer maintaining a personal interest in the welfare of the man. It also assists in maintaining cordial relationship with the employers of labour and thereby stimulates increased business with the Handicap Department.

The following are typical of the placements made by the Handicap Department of the Employment Service of Canada, in Toronto, during the fiscal year ending October 31, 1925:—

Lung Disability.—No. 1734—Age 41, married; born in England; 16 years in Canada. Ex-soldier. Ed. 1. App. x 1. Pers. xl. Occupation prior to war, clothes presser. Four years treatment for disability at Christie St. Hospital subsequent to discharge. Placed as Health Inspector with Local Health Department. Making good.

Leg Amputation.—No. 2012—Age 38, married; born in England; 20 years in Canada. Ex-soldier. Ed. 1. App. xl. Pers. xl. Occupation prior to war, contractor. Four years hospitalization for disability subsequent to discharge. Placed as attendant in Public Library. Doing well.

Arm Amputation.—No. 454.—Age 25—Married; born in England: 12 years in Canada. Ex-soldier. Ed. 1. Pers. 1. App. 1. Occupation prior to war, apprentice (mechanic). Placed as Inspector with Federal Department of Agriculture.

Medical Disability.—No. 2101—Age 34; married; born in England; 15 years in Canada. Ex-soldier. Ed. 1. Pers. 1. App. 1. Disability, rheumatism. Occupation prior to war, motor mechanic. Placed as chauffeur with responsible company. Making good.

Orders in Council Pertaining to Handicapped Men

There are three Orders in Council which have materially assisted in the success achieved by the Handicap Department. These are as follows: P.C. 1639; P.C. 2328; P.C. 2944.

(*a*) Order in Council P.C. 1639 provides protection for employers against the possibility of any additional Workmen's Compensation risk, when employing disabled ex-service men who are in receipt of not less than 20 per cent pension.

While the benefits derived from this Order in Council are obvious, far greater success would follow were the privileges extended to include citizens disabled in industry and otherwise.

(*b*) P.C. 2328 was designed to care for a large number of problem cases, by providing sheltered employment for these designated by the Handicap Department as—(1) Unemployable; (2) Untrainable; (3) Applicants where no further permanent medical improvement can be effected. Owing, however, to lack of accommodation in the local vetcraft shops, many "problem cases" eligible for admittance under this Order in Council, are still unfortunately unable to earn a livelihood and are dependent more or less on charitable institutions for their existence.

(*c*) P.C. 2944 provides vocational training the various departments of the Federal Civil Service, followed by appointment to permanent positions, if qualified for same at the conclusion of training period.

Co-operation

There are several ways in which the Ontario offices of the Employment Service of Canada could co-operate with the Handicap Department of the Toronto office with respect to the placement of handicapped men in suitable employment:—

(*a*) Handicapped men should be placed, as far as possible, in all positions that do not demand 100 per cent physical efficiency. This can be accomplished without in any way impairing the efficiency of the Employment Service of Canada, and would ultimately result in greater national production by the 100 per cent physically efficient applicants being made available for greater productive industry.

(*b*) An educational campaign should be undertaken in each locality to familiarize employers of labour with the particulars of the Order in Council providing protection against any additional Workmen's Compensation risk when employing certain disabled ex-service men.

(*c*) The Department of Soliders' Civil Reestablishment should be requested to notify the office of the Employment Service of Canada when a handicapped ex-service man in that locality has been admitted to hospital, also when discharged.

This procedure would make it possible for the employment office in the city or town, from where the ex-service man was admitted to hospital, to make a special effort to locate suitable employment for him on his discharge, and thereby prevent deterioration through prolonged unemployment.

If the employment office concerned could be notified of the man's admission to hospital by the Department of Soldiers' Civil Reestablishment, it would be possible for the employment office superintendent to interview the man's previous employer, with a view to placing a suitable man in a temporary capacity, until such time as the ex-service man is discharged from hospital, or in a permanent capacity, provided the ex-service man is unable to successfully carry on in that particular line following his hospitalization.

(*d*) The Ontario superintendents of the Employment Service of Canada could also notify the Toronto office of any vacancies under their jurisdiction which could be satisfactorily filled by handicapped men and where disabled applicants may not be available.

The Handicap Department receives a daily discharge report from the superintendent of Christie St. Military Hospital. This report contains the diagnosis and other particulars of all discharged patients, and is greatly appreciated, as it prevents considerable delay when registering these applicants for employment.

"Problem Cases"

The number of chronic "problem cases" registered for employment in the Handicap Department is steadily increasing. The difficulty in placing these applicants, especially those suffering from old age and its attendant infirmities, mental and nervous disorders, epilepsy, also chronic medical cases forbidden to work more than a very limited number of hours each day, has not, by any means, been overcome. In this regard, however, the situation would be considerably eased, were the facilities of the vetcraft shops extended and other forms of sheltered employment created.

The Handicap Department of the Toronto office is experiencing a considerable degree of co-operation with the Civic, Provincial and Federal Governments and other public utilities, while the employers of labour are becoming more than ever convinced of the economic soundness of 100 per cent handicap placements.

Owing to the increased facilities at the disposal of the Handicap Department, together with the enthusiasm of the staff, continued progress is inevitable during the present fiscal year, resulting in an even greater number of worthy citizens becoming industrially reestablished and thereby prevented from becoming permanent wards of the State.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Recommendations of Factory Inspector of Ontario

THE Factory Inspector of Ontario, in his annual report which forms part of the report of the Department of Labour of the Province for 1925 reviewed elsewhere in this issue, makes the following recommendations in regard to sanitation and the welfare of employees in factories:—

"The most sanitary drinking system has been found to be the flowing drinking fountain, but the ordinary faucet may be used by reversing the outlet so that the pressure may be regulated in turning on the water for drinking purposes. Where drinking cups are used they should be sterlized frequently by steam or hot water, but preferably steam since hot water does not destroy all classes of germs unless immersed from twenty-five minutes to two hours.

"Complaints of poor heating during inclement months are often received, and upon investigation it is usually found that the heating equipment had received little attention during the week-ends, and that fires newly kindled on Monday mornings were not sufficient to heat the buildings early in the day, the result being discomfort for employees and sometimes illness. In many cases heat is obtained without regard to proper ventilation, and humidity or excessive heat is the result of the industrial process and it becomes necessary for the inspector to call the attention of the employer to this undesirable condition and have the heat regulated.

"Scientific illumination is an important factor in accident prevention. Employees' eyesight is sure to become impaired by the continued use of poor lights, and the strain causes extra fatigue which makes it difficult for machine operators to take the usual precaution. Moreover, lack of proper lighting in halls and stairways is a frequent cause of accidents. Special vigilance on the part of inspectors is necessary in having exits and fire escapes kept in readiness for emergencies. A number of inside stairways and fire escapes have been added during the year, but difficulties often arise in connection with the sub-letting of space to tenants and the erection of partitions which shut off the passages to exits. The blocking of passages with merchandise is another wrong practice which calls for the inspectors' careful attention.

"The subject of the provision of seats for women in factories has given rise to controversies since many employers claim that such seats would be an obstruction owing to lack of space. In shops this is a simpler matter, and the seats may be used by clerks when not engaged in attending to customers or in keeping the stock in order. Seats which may be used for fairly long periods without lessening the efficiency of the workers are an important factor in eliminating hazards through the reduction of fatigue."

Educational Suggestions of Quebec Safety League

A safety program for industrial plants has been prepared by the Quebec Safety League and is being distributed among the plants in Montreal. Among the suggestions for safety education are the following:

The interest of the management must be maintained. This can be accomplished through reports from the safety director, by the presence of executives at meetings of committees, and through familiarity with all the details of the more important individual accident cases.

The foremen and department heads need encouragement and advice from time to time. Various methods for meeting this requirement are suggested:

1. Many members of the league hold regular meetings of foremen at which accident prevention is one of the important subjects brought up for discussion.

2. Managers may write regular monthly letters on safety to all foremen.

3. A special foremen's safety committee may be organized to make special safety inspections and accident investigations, as well as to pass the plans and activities of the safety director. It is often advisable to include the manager, master mechanic, chief engineer, general superintendent, and safety director as permanent members of this committee. Some companies add several workers.

4. Inter-plant and inter-department safety contests foster friendly competition and always have a beneficial effect.

5. Selected individuals should be sent to conventions and to nearby regional safety conferences.

The comprehensive education programme which they claim is essential rests with three groups, the workers, the foremen, and the management.

Mine Inspector Recommends More Frequent Inspections

The State inspector of coal mines in Colorado, in his 13th annual report, recently received by the Department, comments on the increased number of fatal and non-fatal accidents in the mines in 1925 as compared with 1924. The increase, he says, is not encouraging, especially considering the great efforts that are being made by many companies to impress safety rules on their employees and the installing of safety appliances to aid in the protection of life. Fifty-seven lives were lost in the mines in the State last year, an increase of 13 over 1924. Fourteen of the fatalities happened on haulage ways, eleven on mechanical and three on animal haulages. The non-fatal accidents numbered 1,912, an increase of 7.3 over the preceding year. The number killed per million tons of coal produced was 5.466 men and the number injured was 183.13 men.

"To reduce the accidents at the face," the inspector says, "I would recommend that whenever the mine is so large that every working face cannot be visited by the mine foreman four times during the shift of eight hours, twice before dinner, and twice after dinner, that such mines be partitioned into districts and a first class, or an assistant first class certified man be put in charge of each district so that the number of daily visits above given can be made.

"The question of reducing haulage accidents is a very difficult one, and can only be remedied by the management through improving haulage ways, keeping equipment in good working condition, seeing that all the requirements of the law are enforced; that those employed are reasonably competent to do the work intended, and whenever an accident is caused by defective work or equipment, remedy the cause at once. The increase in accidents is no doubt the result of the turnover in labour as a result of the reduction in wages, when many of the most competent workers left the state to seek employment in other states where no reduction in wages had taken place; this applies especially to the haulage accidents, as most of the drivers, rope-riders, and motor men are young men who have been raised around the coal mines since boyhood, their places have been filled in many cases by inexperienced men from the country and cities."

Mine Inspection in Great Britain

Mr. John T. Ryan, vice-president and manager of the Mine Safety Appliances Company, contributes to the August issue of the *National Safety News* (Chicago) an article on "The European Mine Inspector." In Great Britain, he says, the head of the Mines Department is the Secretary of Mines, whose staff consists of a chief inspector, a deputy chief, a divisional inspector at the head of each of the eight divisions, under these divisional inspectors 15 senior inspectors, 29 junior inspectors, 33 sub-inspectors of mines, seven sub-inspectors of quarries and eight inspectors of horses—a grand total of 104 men in the Inspection Department, excluding the office force. There is also an electrical inspector reporting directly to the chief of mines whose duties cover all electrical equipment.

Under the Coal Mines Act the employees in any mine have a right to appoint two persons to make an inspection independent of the government inspectors. They must give the manager reasonable notice that an inspection is to be made, and he must place at their disposal all report books of foremen, certificates and other facilities to assist them in the examination. He may send someone with them if he desires. Generally the work is carried out the same as by a government inspector. Day by day, or at the end of the work, these inspectors are required to furnish a report to the manager of what they see, a special book being kept for them to write their report in, and the manager is required to send a copy of this report to the divisional inspector. It takes about 20 days to make a complete inspection, for which the miners pay.

The Secretary of State may make such regulations covering the management of mines as may appear best calculated to prevent accidents and to provide for the safety, health and convenience of the employees, and for the care and treatment of horses and other animals used.

All government inspection of mines and quarries are made without giving any notice to owner or management. The inspector starts off in the morning without any particular schedule. Arriving at a mine, he takes one section and having inspected that, uses it as a criterion of the remainder. If conditions are not found as they should be, he talks the matter over with the management. He also makes his daily report to the divisional inspector, who will write a letter of complaint to the mine owner, pointing out the various matters the inspector has found wrong. In a month or so another inspection is made, and if things are not found right, a follow-up inspection is made by two inspectors. If conditions are found very bad, the divisional inspector will report them to

the chief inspector, who will take severe measures if he thinks this advisable. This may mean prosecution at law.

Safety Code for Paper and Pulp Mills

A safety code for pulp and paper mills has been published by the Bureau of Labour Statistics, United States Department of Labour, as part of its Safety Code Series. The National Safety Council is sponsor for the code, which is also approved by the American Engineering Standards Committee (some of the earlier publications in this series were noted in the Labour Gazette for December, 1925, page 1192, and in previous issues).

The present code is the work of a sectional committee of the National Safety Council, composed of prominent safety experts, with Mr. R. M. Altman, safety director of the Marathon Paper Mills Company of Rothschild, Wisconsin, acting as chairman. The committee included a Canadian member, Mr. A. P. Costigane, the secretary and safety engineer of the Ontario Pulp and Paper Makers' Safety Association.

The code applies to establishments where paper and pulp are manufactured. Logging and the transportation of logs are dealt with in other codes in the series. It does not include the requirements for guards for belts, pulleys, gears, etc., nor other subjects covered in other codes. The purpose of this code is to provide "reasonable safety for life, limb and health." It is suggested that in cases of practical difficulty or unnecessary hardship, the enforcing authority may grant exceptions from the literal requirements of this code or permit the use of other devices or methods, but only when it is clearly evident that reasonable safety is thereby secured. It is further suggested that in cases where exceptions are asked the enforcing authority consult with the Committee on Safety Code for Paper and Pulp Mills, in care of the American Engineering Standards Committee, New York City, or National Safety Council, Chicago. Such consultation will tend to bring about uniform application of the code and will keep the committee informed of criticisms which should be considered if and when the code is revised. Copies of the code may be obtained through the office of the American Engineering Standards Association, New York, as may also copies of the codes governing boilers, building exits, conveyors, compressed air machinery and equipment, electrical (fire) code, national electrical (safety) code, national electric power control, elevators, floor openings, railings, toe boards, grinding wheels, head and eye protection (goggles, etc.), ladders, lighting, lightning protection, logging and saw-mill machinery, pipe lines, identification of, power transmission (including belts, gears, shafting, etc.), sanitation, ventilation and woodworking machinery. All these codes supplement the present code.

The safety code for Pulp and Paper Mills contains rules to be observed in connection with (1) the yard; (2) preparing pulp wood; (3) rag and old paper preparation; (4) acid making; (5) chemical processes of making pulp; (6) preparing pulp for paper machine; (7) machine room; and (8) finishing room.

General safety rules are given in an appendix, emphasizing the need for regular and frequent inspections of overhead structures and equipment. Bulletin boards should be strong and well lighted; loose clothing should be prohibited. In regard to belts, which cause numerous accidents the following rules are given:—When necessary to put on or take off power belts the driving machinery or power should be stopped, and when it is necessary to slow down or start up to do the required operation the power should be controlled or regulated by a competent man separated from the party actually handling the belt. Sticks, pipes, etc., shall not be used to throw off belts while machinery is in motion. Men not familiar with or competent to take off or put on belts should not be permitted to perform such work except under the personal direction of the department foreman or man in charge. Frequent inspections of belts, belt fasteners, pulleys, bearings and shafting should be made to determine the efficiency in operation and the factor of safety. Written reports of such inspections should be made to person in charge of plant, who should see that reported defects are corrected with the least practicable delay. Special attention should be given to the use and care of tools.

Finally, there should be created and effectively maintained at each plant an efficiently functioning safety organization whose duties shall be along the lines of generally accepted methods of accident prevention, plant and premises sanitation, and housekeeping.

"Bumps" in Springhill Colliery

The Labour Gazette for February, 1925, contained a summary of the results of an inquiry into the occurrence of "bumps" in the Springhill No. 2 mine of the Dominion Coal Company, which was carried out at the request of the government of Nova Scotia by Mr. George S. Rice, Chief Mining Engineer of the United States Bureau of Mines. The *Canadian Mining Journal*, in its issue for July 16, outlined the recent developments in

connection with the precautions taken against "bumps" in this mine, as follows:—

"Bumps still occur in No. 2 Colliery, Springhill, and take their toll of life. They are a great source of fear and anxiety to the workmen, and it requires more than ordinary courage to mine coal there. The method of mining while tending towards longwall is as yet only in the very early stages, and is but the preparatory step to it. It was not unforeseen that bumps would continue until the two lifts on the bord and pillar sections were worked out, and all the pillars drawn. It was hoped, however, that by drawing large pillars the number of bumps would be greatly lessened and their force much weakened. This has actually occurred although they still give trouble. It will be necessary to persevere until the time comes when longwall can be established under normal conditions. No doubt the patience of the workmen and the persistence of the company will be well tried before that much wished for time does come. But, there can be no turning back, no halting midway, the pillars must be all extracted. To leave any in would only be laying up trouble for the future, as miners know that pillars simply act as riders, and when the pressure comes on them it is thrown on other parts causing crushes and sometimes creep.

"The new sections lower down must begin under normal conditions if longwall is to be successful and be free from bumps, and no matter how much it is desired to help the Springhill Collieries, the advice of expert engineers must be heeded. The problem can be solved and will be if the Mines Department of Nova Scotia, with the coal companies and the workmen meet it in the light of the knowledge they possess. If not, then a worse fate will follow and Springhill will fail to be a producer on a large scale. This seam is of splendid quality and is much needed. Let science have her way without interference and Cumberland may long remain one of the leading coal producing districts of the Dominion."

NOTES ON LABOUR UNION ACTIVITIES

Trades and Labour Congress of Canada

THE forty-second annual convention of the Trades and Labour Congress of Canada will be held at the Mount Royal Hotel, Montreal, beginning on Monday, September 20. The "Convention Call," signed by President Tom Moore and Secretary Treasurer, P. M. Draper, says:—

"Recent happenings in our national, industrial and political life, affecting labour most vitally, make it imperative that a large number of the ablest men should assemble for the specific purpose of strengthening and consolidating our movement in order that the voice of labour may have more force in the immediate future with our law making bodies.

"May we mention in this call a few of the questions, such as the decision of the Supreme Court of Canada making peaceful picketing, during a strike, illegal; the rejection by the Senate of Canada of the Old Age Pension Bill, Criminal Code amendments, etc.; the eight-hour day; immigration, unemployment and a multiplicity of other matters that affect our affiliated membership in common with all other wage-earners throughout this Dominion.

"Forward resolutions or amendments to the constitution early, as each year a number fail to receive the attention of the convention because of neglect to comply with the constitution (section 4, article IV) which demands that resolutions, and amendments to the constitution, shall be received at the office of the Congress not later than twenty days prior to the opening of the convention."

Ontario Provincial Council of the United Brotherhood of Carpenters and Joiners

The fifteenth annual convention of the Ontario Provincial Council of the United Brotherhood of Carpenters and Joiners of America was held in Belleville on June 24-26, 1926. Owing to the absence of President Jeffery, Vice-president Hawes occupied the chair. Delegates were present from nineteen local unions. A number of fracternal delegates were also granted seats with the delegates with voice but no vote.

The executive report, which was read by the secretary, drew attention to the need of putting forth every effort to build up the local unions and to establish new locals in those localities which at present were not organized. An agreement had been signed between the employers and carpenters covering the Niagara and Hamilton district. One of the policies of the Provincial Council, as stated by the report, was advocating the es-

tablishment of a uniform wage rate and working conditions throughout the whole province. The Report drew attention to the fact that while the Old Age Pension Bill had been "passed by the elected representatives of the people," it was rejected by the Senate. This the executive stated, was a matter which should be taken up by every local union and all possible should be done towards the adoption of an amendment to the British North America Act providing for the abolition of the Senate. Reference was also made to the recent decision of the Supreme Court of Canada in regard to alleged "peaceful picketing" during a strike in Alberta. All members were urged to join in the strong protests that are being made to have section 501 of the Criminal Code amended in such a manner that peaceful picketing will be lawful.

The convention adopted a recommendation of the executive for the establishment of an apprenticeship system for carpenters throughout the entire province.

Mr. V. A. Sinclair, K.C., chairman of the Workmen's Compensation Board of Ontario, addressed the delegates on the working of the Board. After he concluded his address, he invited the delegates to ask questions on any point that was not clear to them. In this way much valuable information was gained and those present showed their appreciation in the usual manner after the president had thanked Mr. Sinclair on behalf of the delegates. Short addresses were made by J. Simpson, of Toronto, and fracternal delegates Arthur Martel and E. W. A. O'Dell.

Among the resolutions adopted by the convention were the following: (1) That the Old Age Pension legislation should be undertaken solely by the Federal Government as the only logical way of ensuring its success; and that $30 per month be allowed to each person reaching the age of 65 who has been domiciled in the Dominion for at least 15 years and whose income, including the pension, does not exceed the cost of living as published in the Labour Gazette; "but if the proposed legislation is enacted, we hereby call upon the Provincial Government of Ontario to endorse and to pass the necessary legislation to bring it into force forthwith."

(2) Pressing for legislation that will leave no doubt as to the legality of peaceful picketing, and offering to co-operate with all organizations that are pressing for similar legislation.

(3) Requesting the General Executive Board of the Brotherhood to commence building operations at once so that the home for aged members may be an established fact and the pension system may be in operation at the earliest date possible.

(4) Protesting against military training in the schools and colleges, especially cadet training in the high schools, and recommending physical training as a substitute.

(5) Instructing the incoming executive to make representations to the Prime Minister and the Minister of Labour requesting the repeal of following clause in the fair wage regulations:—

> The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

(6) Demanding the enactment of legislation providing that where a strike exists and the employer advertises in the press for labour, he shall be required to set out in the advertisement that a strike does exist.

The election of officers resulted as follows:—

President, Fred. Hawes, Hamilton; First Vice-Pres., J. H. Fisher, Kingston; Second Vice-Pres., B. McSween, Niagara Falls; Third Vice-Pres., T. Brook, Windsor; Sec.—Treas., T. Jackson, Toronto.

Niagara Falls was selected as the convention city for 1927.

Pattern Makers League of North America

The fifteenth convention of the Pattern Makers' League of North America was held in Cleveland, Ohio, June 14-19, 1926, about seventy-five delegates being present.

General President Wilson, in his address, reviewing the activities of the League since the last convention which was held in Washington, D.C., in 1917, stated that the constitution provided for the holding of a convention every four years, but owing to the condition of business and the conditions that confronted the organization in 1921, the general executive board, in consultation with representatives from a number of associations, came to the conclusion that a postponement was desirable. The board decided to submit the proposal to a referendum vote, the membership concurring in the postponement. Conditions during the following years showed no improvement, consequently no convention was held. When the question of holding a convention in 1926 was submitted to the membership the vote was in favour of the proposal. The president gave the numerical standing of the organization from 1920, which showed that the largest membership

(11,360) was reached in September, 1920, and the lowest (5,903) in April, 1925; since which time a gain in membership was recorded. He drew attention to the fact that $3,675 was paid out in death claims as a result of members being killed in military service overseas, and that dues to a total of $20,410 had been remitted to members who had enlisted. Among other questions dealt with in the very comprehensive address of the president were: dues, finances, sick and death benefits, assessments, apprentices, overtime, eight-hour-day and wages.

Letters were read from William Green and Frank Morrison, President and Secretary respectively of the American Federation of Labour, expressing their regrets at being unable to be present at the convention. Mr. John Manning, secretary of the Label Trades Department of the A.F. of L., and James O'Connell, president of the Metal Trades Department of the A.F. of L., addressed the convention. The report of the general executive board gave in detail particulars of the Board's activities from May 1, 1917, to April 30, 1926.

A large number of resolutions were submitted to the convention, some of those adopted being as follows: (1) Recommending that the Pattern Makers' League try to secure absolute jurisdiction over pattern makers employed on railroads within the jurisdiction of the League and that the resolution be referred to the General Executive Board for action.

(2) Instructing the General Executive Board to take under advisement the institution of closer affiliation between the moulder and pattern maker through the medium of Joint Boards, or any other method agreeable to both trades that will bring the desired results.

(3) Recommending that candidates over fifty years of age shall not be entitled to sick or death benefits and shall pay the dues set by the local association of which he is a member and shall be exempt from sick and death benefit assessments.

(4) Urging that the best offices of the General Executive Board be used to prevent the practice of exporting patterns into Canada without due fulfilment of Custom duties.

(5) Recommending to the League executive that quarterly information as to the names and addresses of the Leagues' officers be sent to unions in the United Kingdom in order that immigrant pattern makers may be posted on leaving Europe as to where to secure information regarding wages, hours and conditions in North America.

(6) Endorsing the campaign of the American Federation of Labour "to liberate from industry the childhood of America, and calling upon the members everywhere to join in this holy crusade, to the end that little children may not toil."

(7) Instructing the incoming General Executive Board to make investigation and recommendation as to the advisability of industry bearing the expense of its own operation by supplying the necessary tools in each shop, for each man, employed at the trade of pattern making.

The election of officers resulted as follows: President, James A. Wilson; General Executive Board, James L. Gernon, A. J. Berres, L. R. Thomas, J. S. Forrest and F. J. Dillon. The next convention of the Pattern Makers' League will be held in Indianapolis, Ind.

International Typographical Union

President James M. Lynch, of the International Typographical Union, writing in the June issue of the *American Federationist,* describes the recent progress of the Union as follows: "In the brief space of seventeen months membership of the International Typographical Union was increased 3,962 and total earnings of members increased $25,920,953, a rise of 12.6 per cent as compared with the earning of the preceding seventeen months. These gains—really, only the forerunners of more important progress—parallelled four highly important new activities of the union, the inauguration of an extensive publicity campaign, the reorganization of our Bureau of Trade Education, the development of an extensive Bureau of Statistics and the launching of a widespread 'reconstruction' campaign. The last-named movement was called forth to repair breaches in the organization made in the long and expensive struggle to establish the forty-four hour week in book and job printing shops.

"One of the first steps taken by the present executive council of the International Typographical Union was the employment of a trained newspaper writer to organize a publicity department. It was the purpose to make all news of International Typographical Union activities available for the newspapers and magazines. The plan was successful from its beginning. International headquarters became a recognized source of news. Editors knew that an organization with interested and active members in every city of the United States and Canada was a social and economic factor of general interest and therefore of news importance.

"One of the most ambitious undertakings of the International Typographical Union publicity campaign was the production of a motion picture, 'His Brother's Keeper,' filmed a year ago. This picture was offered free of rental charge to each local union that would arrange for a showing in a leading theatre. Eighteen films are in circulation and more than 5,000,000 theatre patrons have been entertained by them. The International Union has 791 subordinate unions and the picture has been shown in more than 500 cities.

"The reorganized Bureau of Trade Education has been of great value in the general campaign for the advancement of International Typographical Union interests. In the first place, it has made a strongly favourable impression on employers and has revealed to them a new usefulness of the Union in the trade. In 1907 the International Union established a commission on supplemental trade education and the task of teaching apprentices the fine points of the printing art by mail was begun. For years the instruction work was entrusted to outside agencies, and the difficulty of overcoming the boy's natural antipathy to study was not finally overcome until the bureau was reorganized eighteen months ago, a competent educator was placed in charge and a corps of instructors was formed at International headquarters. The course was made compulsory under International Typographical Union law and results were almost immediately evident. The bureau, now housed at headquarters and under direction of this trained educator, who is also a union printer, is making remarkable progress. More than 8,000 apprentices are enrolled whereas only 2,000 were enrolled two years ago. What is more important these boys are studying and are completing their courses in English, proof-reading, advertising and printing technique. They must complete their work, or they will not be admitted to union membership. Formerly very few boys were graduated from this school. In the last year 400 have been graduated and this number will be greatly increased next year. Instruction by mail in printing is less difficult than in some other branches of study. The apprentice printer has a printing shop for his laboratory and his job requires that he shall spend much time in it. Usually the employer keeps the boy at routine tasks, giving him little opportunity to 'work' at the case or machine. The International Typographical Union course is intended to supply this deficiency in apprentice training. The beginner's course consists of fifty lessons, grouped in units of ten each. The first includes historical intelligence on printing and is intended to give the lad a background of the trade's traditions; the second unit concerns simple display composition; the third, simple job work or newspaper work as the students elect; fourth, art in printing and advertising; fifth, English for printers. The student must enroll in the course not later than the third year of his five years apprenticeship and he must complete it before he may attain journeyman membership. The price of the course is $22.50 cash or $5 on enrollment and four quarterly payments of $5 each. The school is not yet self-supporting, but it is accomplishing the prime object which is improvement of the work standard. Instruction for teachers of printing is also included in work of the bureau. Many high schools now offer this subject and naturally it is desired that these instructors shall be union printers. It is planned to grant credit for printing instruction in public schools to apprentice printers by arrangements with school officials. Educators favour this proposal because it gives new importance to the public school course. In every shop apprentice committees are charged with responsibility for the study of apprentices. The 'Big Brother' movement has developed very rapidly. By this arrangement an apprentice is taken 'under the wing' of a journeyman printer and assisted with his lessons and given encouragement. If a boy is found who seems to possess no natural aptitude for the trade, he is kindly advised to transfer his ambition to some other line of work."

The establishment of a printer's statistical bureau by the Union was noted in the Labour Gazette, October, 1925, page 953. "The Bureau," Mr. Lynch says, "has been of pronounced value in preparing cases for local unions. The present administration employed a trained and thoroughly equipped statistician as one of its first acts. Under his guidance the bureau has made a careful study of all factors entering into scale making. It has accumulated facts not only on the cost of living but also on the state of business in the printing industry and the rates of wages in other trades. The bureau bases its evidence on local as well as general conditions and facts. It leaves nothing in doubt that can be reduced to tangible form."

The Fair Wage Schedule for Public Works in Manitoba for the current year (published in the Labour Gazette for May), have since been amended, the wages for licensed journeymen, inside electrical wiremen being raised from 85 cents to $1 per hour from July 7. The time of employment per week remains unchanged at 44 hours. These schedules are drawn up by the Provincial Public Works Department each year under the provisions of the "Act to Establish and Protect the Wages of Workmen employed on Public Works."

ARBITRATION AND CONCILIATION IN LABOUR DISPUTES ON UNITED STATES RAILWAYS

Provisions of Railway Labour Act, 1926

THE passage of the new Railroad Labour Act (the Watson-Parker bill) through the United States Congress was noted in the May issue of this GAZETTE. It was signed by the President and became law on May 20. The new act abolishes the Railroad Labour Board provided for in Title III of the Transportation Act, the Esch-Cummins Law, enacted in 1920 to transfer the principal railroads in the United States from administration under the government back to their owners, the railroad companies. This Board was a tri-partite body, consisting of representatives of the public, the railroad companies and the employees, and had power to determine wages and working conditions when the parties concerned could not agree. The organization and powers of this Board were described in the LABOUR GAZETTE for April, 1920, page 426, and some of its principal decisions, being made applicable substantially to railways in Canada by agreement between the railways and their employees, were given in the LABOUR GAZETTE for August, 1920, page 1068; July, 1921, page 906; May, 1922, page 502; July, 1922, page 722; December, 1922, page 1305. Following the strike of railroad shopcraft employees in July, 1922, considerable opposition to the Board from various quarters developed, and proposals were made from time to time for changes in the law.

The representatives of the railway companies and of the unions of railway employees in conference drew up the new legislation and asked for its enactment by Congress.

The Act provides for the consideration, and if possible the settlement of disputes between railways and their employees, first, by conferences between representatives of the parties; second, by boards of adjustment to be established by the parties concerned for each groups or several groups of employees; third, through mediation by an official Board of Mediation provided for by the Act; fourth, if the parties involved so agree, by Boards of Arbitration appointed as cases arise, having equal representation of the parties concerned with additional members not interested in the dispute to be appointed by the parties' representatives on the board or if they fail by the Board of Mediation; fifth, by an Emergency Board to be appointed by the President whenever the Board of Mediation reports to him that a serious interruption to transportation is imminent. The first four of these methods were in use prior to the establishment of the Railroad Labour Board in 1920, while the fifth is new. The first method is a provision for collective bargaining between the railways and the employees' unions, with safeguards against abuses.

It is interesting to note the provisions for mediation and arbitration, which in some respects follow the lines of the Canadian Conciliation and Labour Act, Revised Statutes, 1906, for railways and other industries, and the provision for compulsory investigation and the deferring of changes in wages and working conditions pending such investigation as in the Industrial Disputes Investigation Act, 1907, particularly the provision that either party must give thirty days' notice of desired changes in wages, rules and working conditions, and that no change is to be made until the dispute has been dealt with. The Canadian law further provides that no strike or lockout is to be declared pending the report.

It is provided that the railways or the railway employees shall give at least 30 days' notice in writing of an intended change affecting rates of pay, rules or working conditions, the time and place for conference to be agreed upon within 10 days, and the railway is not to alter rates of pay, rules or working conditions until 10 days after the conference has been terminated, or if the case has been placed before the Board of Mediation, or has been taken up by it, not until the Board has finally dealt with it, either by securing a settlement through mediation, by getting the parties to refer the case to an arbitration board, or if the dispute threatens a serious interruption to transportation, by notifying the President. If he appoints an Emergency Board (to report within 30 days) no change in wages or working conditions can be made except by agreement between the parties until thirty days after the board has reported to the President.

A Board of Adjustment is to be established for each class (or for groups) of railway employees to deal with disputes regarding the application or interpretation of agreements between the railways and their employees similar to the four boards established in 1918 for certain classes when the railroads were under federal control and administered by the Director General, W. A. McAdoo,

Secretary of the Treasury, and also similar to Canadian Board of Adjustment, No. 1, established in August, 1918, Labour Gazette, November, 1918, p. 981, and Canadian Board of Adjustment No. 2, established in September, 1925, Labour Gazette, October, 1925, p. 950, and November, 1925, p. 1054.

A board of arbitration established under the Act is to consist of three persons, one chosen by each party (these may be interested in the dispute), the third to be impartial and chosen by the other two, or by the Board of Mediation if they do not agree; or the parties may have a board of six, in which case two are appointed by each party, with two independent or impartial members. The compensation of the members chosen by the parties to the dispute is to be paid by them and the compensation of the independent members and of any staff required and appointed by the board with the approval of the Board of Mediation is to be paid by the Board of Mediation. The decision of each board is to be final and to be filed in the Federal district court, the court to enter judgment of the award "which judgment shall be final and conclusive on the parties," with provision for appeal to higher courts on grounds of lack of conformity with the provisions of the statute, fraud or corruption, etc., but not on account of technicalities, etc.

It is apparent that the Board of Mediation to be established under the act will be of great importance. It is to consist of five members each to hold office for five years, except the first appointees, one retiring each year, appointed by the President, with the same salaries as members of the President's cabinet and a staff appointed under the provision of the Civil Service Acts. Its duties are to mediate when requested by either party to a dispute, to offer its services in all cases not decided in conference or by boards of adjustment, to appoint the third or impartial member of each Arbitration Board (two in case of a board of six) if the other arbitrators do not agree, and to notify the President of any dispute likely to cause a serious interruption to transportation so that he may appoint an Emergency Board. It is also to take over the records of the Railroad Labour Board, and other papers and documents relating to railway disputes, including those of the mediators appointed under previous legislation, such as the Erdman Act, 1898, and the Newlands Act, 1913. The functions of the new Board of Mediation are similar in principle, but considerably enlarged, to those of the board established in 1913 under the Newlands Act (Labour Gazette, March, 1915, p. 1123) which functioned until 1920, when the Railroad Labour Board was established.

President States Objects of Act

President Coolidge, in signing the Act, commented as follows:—

"The measure," he said, "abolishes the present Railroad Labour Board and provides for a series of adjustment boards for the purpose of collective bargaining upon wages and conditions of labour, as well as the creation of a Board of Mediation to be appointed by the President.

"After some months of earnest negotiation between the representatives of a majority of the railway executives and the railway employees, they adopted a plan of labour relationship designed to provide a method of self-government within the industry.

"This plan has been enacted into law by Congress in substitution of the present Railroad Labour Board. The plan provides for a series of joint adjustment boards for purposes of collective bargaining upon wages and conditions of labour, with the right of these boards to refer such matters as they may determine to arbitration.

"In case of failure to find a solution by collective bargaining or such arbitration, the plan provides for the intervention of a permanent Board of Mediation, which is to be appointed by the President of the United States.

"In failure of the Mediation Board to effect a settlement of any important dispute, the plan further provides for the appointment of an Emergency Commission by the President to determine the facts and to report upon the rights and wrongs of the dispute. These are to protect the public and insure regular operation of railroad service.

"The plan therefore comprises the essential principles of the Railroad Labour Board created by the Transportation act of 1920, except that it throws a far larger measure of responsibility for amicable relations upon the industry itself.

"The proposal has been criticized on the ground that it does not give adequate protection to the public from collusion between the railway managers and their employees to establish wages which would be reflected in unjust rates upon the shippers.

"I do not understand that this act greatly, if at all, increases the power which the roads and their employees have to do the same thing under the present law, if they were so disposed.

"The answer to this criticism is that increases in railway rates must be approved by the Interstate Commerce Commission, and this commission is required by law to exercise its power to prescribe just and reasonable rates under honest, efficient and economical management.

"Moreover, this act expressly stipulates that the powers of the Interstate Commerce Commission are unimpaired to fix rates in accordance with the present law.

"It does appear to me that there is involved in all of these proposals a much wider issue, and one of first public importance.

"This wider aspect is that we should give every encouragement to industry to create within itself such a relationship and such machinery of adjustment between its employers and employees as will give the public continuous and efficient service, and to accomplish these relations within itself without the intervention of the Government.

"Nor does this imply that the railways have by undertaking the self-government in the smallest fashion relieved themselves of their responsibility to the public at large, but rather they have increased their responsibility by virtue of the self-government which this act imposes upon them.

"I have come to the conclusion that the plan in this act should be tried. I should have preferred some more definite declaration for the possible protection of the public, but should the operation of the plan demonstrate such protection is needed it can easily be supplied by a future Congress.

"It is not now possible to foretell such need, and the fact that the roads and their employees are committed to the necessity of making this law a success goes far to assure that it will be a success."

Analysis of Provisions

The provisions of the Act were analyzed in the *Survey* (New York) March 15, 1926, as follows in part:—

All disputes must be first considered "in conference between representatives, designated and authorized so to confer, respectively, by the carriers and by the employees thereof interested in the dispute." Primary emphasis is laid upon these conferences, already an established practice on almost every system. The Act provides that in such conferences the conferees must be independent, selected "without interference, influence or coercion" by the other party.

It has long been recognized that disputes over *changes* in rates of pay or working conditions involve considerations of a different character from disputes over the application to specific situations of trade agreements, or disputes arising out of individual grievances. Accordingly the bill provides different methods for the handling of each, although the duty to seek first a settlement in conference applies equally to both. It is provided that all grievances and disputes over the application of existing agreements, not settled in such conferences, are to be passed upon by Boards of Adjustment, to be established by agreement between any carrier or group of carriers and the employees thereof. These boards are to be composed of practical railroad men, half from the management, half from the employees, and their decisions are to be binding upon the disputants. To these boards will go the problems which can be adjusted intelligently only by men within the industry who, through years of experience, have become versed in its traditions and customs. Such boards are not innovations; they are patterned after those operating for years on the Canadian railroads; a few, covering the transportation service only, are now functioning upon some of our carriers; during federal control four such boards, national in scope, proved their merit beyond all doubt. For example, Board No. 1 handled nearly three thousand disputes during federal control. It was reported that every case was decided by *unanimous* vote of the eight members, and not a single case was appealed to the director-general. Since these boards handle simply technical questions of interpretation under agreements already existing, and have nothing to do with policy, or with the *formation* or change of agreements, the objection that no place has been provided for a "public member" has no weight.

If a dispute arises over a proposed *change* —a request for an increase in wages, or for a revision of working rules, for example—the conference method must first be exhausted. In most cases, if railroad history is any guide, a compromise settlement will be effected in such a conference. For the exceptional cases involving changes, and for those cases taken to an adjustment board which it is unable to decide, provision has been made for a Board of Mediation.

This third administrative method set up by the bill further illustrates the emphasis put upon voluntary agreements and the employment of tested agencies. The board is to be composed of five nonpartisan commissioners to be named by the President; the positions are to carry a salary and a dignity to make them attractive to men of high ability and the ripest experience. When they speak, it is to be on behalf of the general public,

but their tone is to be that of conciliation, not compulsion. Through the medium of this board the whole community is provided with a spokesman. It is to be the duty of this board to further the purposes of railroad peace by endeavouring to induce disputants who have been unable to agree to re-open negotiations, to recede from extreme positions to compromise and yield, so that an agreement may finally be reached.

From 1898 until 1920 just such a board was in existence under both the Erdman and the Newlands Acts; time after time during those years the good offices of the commissioners led to a peaceful and voluntary disposition of a stubbornly contested controversy, which otherwise would surely have catapulted the nation into a disastrous strike. For instance, in less than four years (1913-1917) the board participated in 107 disputes, involving a total of 545 carriers and over 610,000 employees, a settlement being reached in every case without a single strike.

On May 12, the United States Railroad Labour Board issued its last decision, No. 4197, in view of the pending legislation, referring back to the parties concerned for negotiation all pending disputes, 468 in number, of which 44 were of a general nature.

Members of Board of Mediation

On June 24, the names of four of the members of the Board of Mediation nominated by the President were announced: Samuel E. Winslow, of Massachusetts, for a term of five years; Edwin P. Morrow, of Kentucky, for four years; G. Wallace Hanger of the District of Columbia for two years, and Hywel Davies of California for one year.

Mr. Winslow was formerly chairman of the Interstate Commerce Committee of the House of Representatives; Mr. Morrow was a member of the Railroad Labour Board and had been Governor of Kentucky; Mr. Hanger was also a member of the Railroad Labour Board since its establishment in 1920, from 1913 to 1920 was Commissioner of Mediation and Conciliation under the Newlands Act, 1913, and prior to that time was Chief Statistician in the United States Bureau of Labour since 1887; and Mr. Davies was formerly president of the Kentucky Coal Operators' Association and recently a conciliator in the United States Department of Labour. Later the fifth member was appointed, Mr. Carl Williams, editor of the *Oklahoma Farmer Stockman*. Mr. Winslow was chosen chairman by the Board.

At the end of July the Board of Mediation had before it a dispute between conductors and trainmen and the railways in the eastern part of the United States regarding a proposed increase in wages, with similar disputes on railways in other parts and also with other classes of engine and train service employees to be next considered. A similar dispute in Canada has been referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907.

Vocational Guidance in Hungary

Legal provisions adopted in Hungary in 1922 authorized the founding of an organization for vocational guidance, and a bill is being discussed for the examination and registration of more intelligent children in elementary schools.

The first official psychotechnical laboratory was opened in 1924, and the second in the following year. A vocational guidance office was also founded in 1925. Some years before, in 1921, a private association had begun to devote its attention to the intellectually gifted child. To-day each school-child is given a booklet in which are written the observations made by doctor and teacher, physical measurements, etc. During the fourth year at school the children have to pass memory ,attention and intelligence tests, and before leaving a further medical and general ability examination. The vocational guidance office gathers information on supply and demand in the labour market. An annual conference is attended by delegates of employers and workmen, scientific and artistic associations, etc.; each representative gives a forecast of the number of new employees required and of the outlook in the various professions.

Advice as to choice of profession is given to each child on leaving school, the opinion formed being based on the observations made in the above-mentioned booklet, and the actual state of the labour-market. A social worker is appointed to follow up the progress of the young people until they have reached their twenty-fourth year.

The most intelligent children are supervised by tutors who are chosen among persons conversant with the particular trade and who are also good educationists. A scheme of special classes for these children is also being discussed at the present time.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF JULY, 1926, AS REPORTED BY EMPLOYERS TO THE DOMINION BUREAU OF STATISTICS

FOLLOWING the pronounced expansion recorded at the beginning of June, there was a further important increase in employment on July 1, when the payrolls of the 5,898 co-operating firms aggregated 850,718 persons, or 20,699 more than in the preceding month. These additions to staff exceeded those reported on the corresponding date of any previous year of the record, and the index of employment (based on the number employed by the reporting firms in January, 1920, as 100) at 103.7, now stands higher than in any other month since 1920. On June 1, 1926, it was 101.0, while on July 1, 1925, 1924, 1923, 1922 and 1921 the index was 96.8, 95.9, 99.5, 91.1 and 87.5, respectively. The accompanying chart illustrates the decidedly upward trend followed by the curve of employment during 1926, especially in the last three or four months, as compared with its more sluggish movement in preceding years.

With the exception of logging, in which there was seasonal curtailment, all groups of industries reported improvement, that in construction being most extensive.

Employment by Provinces

Firms in all provinces registered increased employment, Quebec showing the greatest gains.

Maritime Provinces.—Further expansion was noted in the Maritime Provinces, where the 535 reporting employers enlarged their staffs from 64,892 on June 1 to 67,271 at the beginning of July. Manufacturing, logging, mining and construction recorded gains, while there were seasonal losses in transportation. Very marked, but brief, increases in construction were reported on July 1, 1925, which caused the index then to be higher than in any other month since 1923.

Quebec.—For the sixth consecutive month, employment gained in Quebec, 8,383 persons having been added to the working forces of the 1,277 co-operating firms, who had 247,758 employees. The situation was better than in any pervious month since the beginning of 1920; the improvement noted on July 1, 1925, was much less extensive. All groups except logging (which showed a seasonal falling off) recorded heightened activity on the date under review, the gains in construction, manufacturing and transportation being most noteworthy.

Ontario.—According to statistics received from 2,695 employers, their payrolls included 344,441 workers, as against 339,118 at the beginning of June. This increase was not as large as that registered on July 1 of a year ago, but the index then was over five points lower. Manufacturing, transportation and construction absorbed a considerable number of additional workers; the customary mid-summer losses in logging camps, however, offset part of this gain.

Prairie Provinces.—Marked activity in construction, and smaller increases on steam railways and in manufacturing, communication and trade, accounted for a 3.5 per cent expansion in the Prairie Provinces; 734 firms reported 112,643 employees, or 3,811 more than in the preceding month. The index, at 107.3, was over 11 points higher than on the corresponding date in 1925, when less pronounced expansion was indicated.

British Columbia.—Further but more moderate improvement was noted in British Columbia, of which that in manufacturing and construction was the most important. Statements were tabulated from 657 employers whose staffs aggregated 78,605 persons, compared with 77,802 on June 1. Rather greater gains were indicated at the beginning of July last year, but the situation then was not so favourable.

Table I gives index numbers of employment by economic areas.

Employment by Cities

An analysis of the returns for eight cities shows that there was slight curtailment in Windsor and the Other Border Cities and Vancouver, while in Montreal, Quebec, Toronto, Ottawa, Hamilton and Winnipeg improvement was registered.

Montreal. — Manufacturing, construction, trade and services afforded more employment, but shipping and longshore work was slightly less active. Statements were compiled from 693 employers with 118,621 workers, or 1,595 more than on June 1. The index number of employment in Montreal was higher on the date under review than in any other month since the record for the cities was begun in 1922.

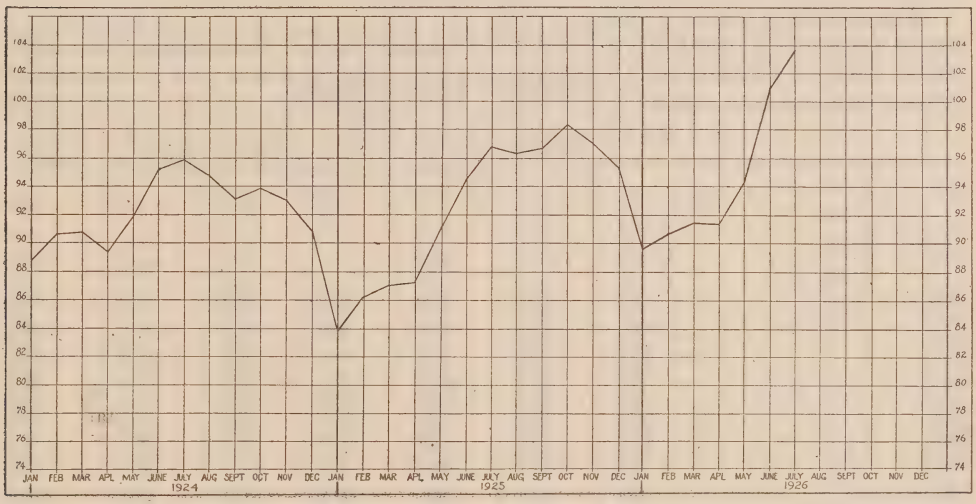
Quebec.—Employment in Quebec showed an improvement, chiefly in transportation, while boot and shoe factories continued to

be affected by the industrial dispute still in existence. The payrolls of the 87 reporting firms aggregated 8,893 on July 1, as compared with 8,283 employees in the preceding month. Activity was greater than on the corresponding date last year.

Toronto.—The number of persons employed by the 778 co-operating establishments in Toronto was 97,610, against 97,141 in their last report. The most marked expansion took place in manufacturing and construction, while retail trade showed midsummer dullness. Employment was better than at the beginning of July, 1925, when gains were also recorded.

Ottawa.—Further but less pronounced increases were noted in Ottawa, according to data from 126 employers, whose staffs rose from 10,476 workers on June 1, to 10,681 at the beginning of July. There were general, though fairly small gains in manufacturing, construction and communication. The situation was slightly more favourable than on July 1 a year ago.

Hamilton.—The trend of employment in iron and steel works was decidedly upward, while minor changes only were registered in other industries. An aggregate working force of 29,722 persons was reported by the 200 firms making returns, compared with 29,254 in the preceding month. The level of employment continued to be much higher than on the corresponding date of last year.



Windsor and the Other Border Cities.—Automobile factories laid off a comparatively small number of workers, but there were gains in construction and some other groups. The result was a decline of 125 persons in the payrolls of the 78 employers whose statistics were received and who had 11,980 workers. Considerably greater activity was indicated than on July 1, 1925.

Winnipeg.—Another but smaller increase in employment was noted in Winnipeg, where 267 employers added 381 persons to their staffs, bringing them to 26,966 on July 1. Moderate improvement was shown in manufacturing, communication, connstruction and trade. The index was nearly 13 points higher than on the same date last year.

Vancouver.—Very little change in the situation was registered in Vancouver; 222 firms employed 24,921 workers as compared with 25,010 in the preceding month. Trade was rather more active, while shipping was slacker. Employment was much brisker than on July 1, 1925, although gains were then recorded.

Index numbers by cities are given in Table II.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January 1920, as 100.

Employment by Manufacturing Industries

Employment in manufactures on July 1 showed the sixth consecutive increase recorded this year; the situation was more favourable than at any time since 1920, the index standing over six points higher than on July 1, 1925. Lumber mills registered the greatest improvement, while there were also important gains in food, pulp and paper, electric current and non-ferrous metal works. Employment in iron and steel plants regularly declines at

midsummer, but the losses on the date under review were the smallest reported on July 1 of any year of the record. The working forces of the 3,825 manufacturers furnishing data totalled 469,048 operatives, as compared with 462,746 on June 1.

Animal Products, Edible.—Further improvement was noted in dairies and fish canning and smoking establishments, chiefly in British Columbia. The payrolls of the 209 co-operating firms aggregated 16,556 persons, as compared with 16,117 in the preceding month. This increase was rather less than that reported on July 1, 1925, when the index number was, however, slightly lower.

Leather and Products.—Boot and shoe factories showed increased activity, although the strike of their workers continued to affect conditions in the city of Quebec. Statements were tabulated from 195 employers having 16,630 persons in their employ as compared with 16,331 on June 1. Employment was better than on the corresponding date of last year; reductions in personnel were indicated at that time.

Lumber and Products.—Seasonal activity in lumber mills caused the employment of a considerable number of extra hands, while container, vehicle and furniture factories were also rather busier. A combined working force of 58,151 persons was employed by the 727 firms whose statistics were tabulated, and who had 54,542 employees in the preceding month. All provinces shared in the upward movement. Employment had also advanced on July 1, 1925, but the index number then was slightly lower.

Plant Products, Edible.—The biscuit, fruit and vegetable canning, sugar, syrup, flour and other cereal divisions of this group reported heightened activity. The increase in canneries was not quite as pronounced as that indicated at the beginning of July a year ago, partly owing to the prevailing cold weather. Employment was a little slacker than it was last year. The payrolls of the 301 co-operating firms totalled 26,477 persons, or 1,021 more than on June 1, 1926. The largest gains were in Ontario, Quebec and British Columbia.

NOTE.—Number employed by the reporting firms in Jan. 1920 = 100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

July 1	103·7	91·1	112·8	97·0	107·3	118·1	95·3
Relative weight of employment by Districts and in Manufacturing as at July 1, 1926	100·0	7·9	29·1	40·5	13·2	9·3	55·1

Pulp and Paper Products.—There was a further increase in employment in pulp and paper mills at the beginning of July, when 814 persons were added to the working force of the 453 firms furnishing statistics, whose staffs aggregated 56,094. This advance, which took place chiefly in Ontario, was practically the same as that noted on the corresponding date of 1925, but the situation then was very much less favourable. The index number on July 1, 1926, at 110.0, was higher than in any other period of the record.

Textile Products.—Partial recovery from the seasonal losses indicated of the two preceding months was indicated in textiles on the date under review. Employment was in greater volume than on July 1, 1925, when the downward movement was also checked. Cotton mills were slacker in the preceding month, but garment, personal furnishing, hosiery and knitting factories reported larger staffs. The gain was chiefly confined to Ontario and the Prairie Provinces, while elsewhere further moderate declines were noted. Returns were compiled from 511 manufacturers with 71,006 employees, as compared with 70,812 in the preceding month.

Tobacco, Distilled and Malt Liquors.—Employment in tobacco works and breweries in Quebec and Ontario showed a further falling off; 101 firms reduced their staffs from 11,812 on June 1 to 11,624 workers on the date under review. Conditions were not quite so good as on July 1, 1925.

Chemicals and Allied Products.—For the first time since the beginning of this year, there was a reduction in employment in chemical works. The decrease, which took place largely in Quebec and Ontario, repeats that noted at the beginning of July a year ago, when the index was lower. A combined working force of 6,428 persons was employed by the 111 firms making return, as against 6,611 on June 1.

Clay, Glass and Stone Products.—Continued, but less extensive improvement was registered in this division, chiefly in stone yards. The gain was fairly well distributed over the country, except that moderate curtailment was shown in British Columbia. The payrolls of the 121 employers whose reports were received aggregated 10,620, an increase of 218 workers over the preceding month. Activity was considerably greater than on the same date last year, although the movement then was also favourable.

Electric Current.—Further expansion was reported in electric current factories, chiefly in Quebec. The gain exceeded that made on

Relative weight of employment by cities as at July 1, 1926	13·9	1·0	11·5	1·3	3·5	1·4	3·2	2·9

July 1, 1925, but the index number then was slightly higher. The working force of the 88 co-operating producers totalled 12,485 persons, as compared with 11,918 in the preceding month.

Electrical Apparatus.—There was a moderate increase in employment in this division at the beginning of July, according to statistics from 34 manufacturers, whose staffs rose from 9,218 employees in the preceding month to 9,370 on the date under review. Plants in Quebec and Ontario absorbed practically all of these additionally employed workers. The situation was better than at the beginning of July a year ago.

Iron and Steel Products.—Employment in iron and steel plants on July 1 showed the first contraction indicated since the beginning

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920 = 100)

—	Relative weight	July 1 1926	June 1 1926	July 1 1925	July 1 1924	July 1 1923	July 1 1922

NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

of this year, 1,024 persons being released from the payrolls of the 632 manufacturers making returns. They employed 128,585 workers. Curtailment has been indicated on July 1 of every year of the record, but the decline this year was the smallest ever recorded on that date; the index number stood over 12 points higher than at the beginning of July, 1925. The reductions were reported chiefly in automobile and other vehicle factories and in rolling mills, in the Maritime Provinces, Quebec, Ontario and British Columbia. Agricultural implements, on the other hand, afforded more employment.

Non-Ferrous Metal Products.—Smelters and refineries and other industries coming under this heading recorded heightened activity 347 workers being added to the forces of the 106 co-operating establishments, which had 14,621 employees on July 1. Conditions were much better than on the corresponding date in 1925, when an increase on a much smaller scale was reported. The bulk of the gain during the month under review was in Ontario.

Logging

There was a reduction of 3,768 men in the staff of the 212 reporting logging firms, whose payrolls included 17,407 at the beginning of July. Quebec, Ontario and British Columbia shared in this seasonal curtailment of operations. The decline was smaller than that noted on July 1 last year, when employment was in rather less volume.

Mining

Coal.—There was a further recovery in coal mining the gain exceeding that indicated on the same date in 1925, on which index was very slightly lower. Statements were received from 86 operators employing 24,227 workers or 563 more than in the preceding month. The improvement was reported in the Maritime Provinces.

Metallic Ores.—An increase in employment was registered in this group according to 48 establishments having 11,314 employees. Activity was less than at the beginning of July a year ago.

Communication

Telephones and telegraphs were more active, 182 companies and branches enlarging their pay rolls from 24,334 persons on June 1 to 24,612 on the date under review. Employment was above its level at the commencement of July, 1925.

Transportation

Street Railways and Cartage.—Further improvement was indicated in these industries on July 1, when 547 employees were added to the working forces of the 111 reporting firms, bringing them up to 19,811. Practically all the increase was recorded in Quebec. The number of persons employed in local transportation was greater than on the corresponding date last year, the index number was, in fact, higher than in any month of 1925 or 1924.

Steam Railways.—The trend of employment continued to be favourable, especially in Quebec, Ontario and the Prairie Provinces. A combined working force of 76,868 persons was employed by the 99 reporting companies and divisional superintendents, as compared with 75,453 in the preceding month. This increase was not as large as that noted on July 1, 1925, although the index number then was slightly lower.

Shipping and Stevedoring.—Repeating the downward movement indicated on the same date last year, there was a falling off in employment on July 1, but the situation was better than it was at midsummer in 1925. Fifty-nine firms in this industry employed 15,968 persons, as against 17,154 in their last report. Employment at Quebec and Ontario ports was more active while there was curtailment in the Maritime Provinces and British Columbia, that in the former being seasonal in character.

Construction and Maintenance

Building.—Continued important gains were indicated in building construction on July 1, when 3,067 workers were added to the payrolls of the 329 contractors reporting, who had 34,959 employees. All provinces except British Columbia shared in this increase, which exceeded that noted on the corresponding date of last year. The index number, at 183.8, was higher than in any other month of the record, which was begun in 1920.

Highways.—There was a further pronounced expansion in employment in this industry, according to 114 contractors whose payrolls included 21,014 persons, as against 12,824 in the preceding month. Employment gained largely in all except the Prairie Provinces, but rather more extensive improvement was noted on July 1 a year ago.

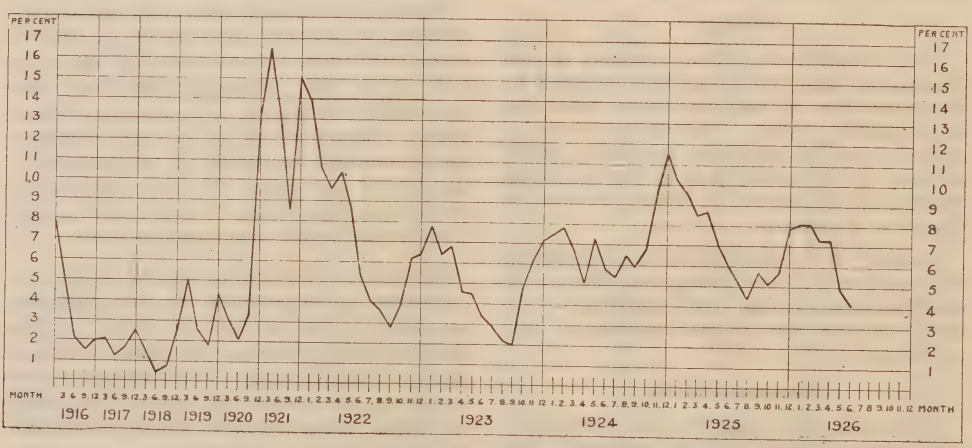
Railways.—Activity on roadbeds continued to increase, 4,079 more persons being employed by the 35 divisional superintendents and contractors making returns, who had 55,348 workers on July 1. This gain was considerably greater than that reported on the same date in 1925, when the index number was a great deal lower.

Services

Continued seasonal increases in personnel were reported in summer hotels, while minor changes only took place in other branches of the service group. Statements were tabulated from 164 establishments employing 15,237 workers, or 618 more than at the beginning of June. Although more decided improvement was indicated at the beginning of July last year, the situation then was rather less favourable.

Trade

Wholesale houses afforded more employment, and there was also an insignificant gain in retail stores. The staffs of the 562 firms making returns aggregated 58,118 persons, as compared with 57,638 in the preceding month. Practically no change was noted on July 1, 1925, when conditions were not as good.



Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area of industry is of the total number of employees reported in Canada by the firms making returns for July 1, 1926.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING JUNE 30, 1926, AS REPORTED BY UNIONS MAKING RETURNS

UNEMPLOYMENT as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among the members of local trade unions deals with the situation reported during the quarter ending June 30, 1926, and is based on returns of the locals reporting at the end of each month during the quarter. The percentage of unemployment at the close of April remained identically the same as that reported on March 31, 7.3 per cent of the members being idle on the last day of each month. During the following two months of the quarter the situation steadily improved until on June 30 the percentage out of work stood at 4.1. The trend during the second quarter of last year was similar to that reported during the quarter under review, gains being recorded from month to month, but conditions this year throughout the quarter were better than in the corresponding period of last year.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS
Quarterly 1916-1921, Monthly 1922-1926

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters from 1916-21 inclusive, and by

months from 1922 to date. It will be seen that the curve remained on the same level during both January and February of this year. In March there was a slight downward tendency and the April trend was similar to that of the previous month. During May and June there were further downward projections, the situation at the end of the latter month being more favourable than that registered in June, 1924 and 1925.

Owing to unemployment among lumber workers and loggers in British Columbia, the situation in that province during April was much less favourable than in March. In Quebec also, conditions were unfavourable due to inactivity in the garment trades. No change in the situation occurred in Alberta. In the remaining provinces, in all of which gains were reported, that of 4.1 per cent in Ontario was the most pronounced. Employment in the manufacturing industries declined partially owing to the reductions in the garment and textile trades. The building trades showed an 8 per cent increase in the members working and a slightly higher level of employment was maintained by transportation workers. Lumber workers and loggers on the other hand reported considerable slackness.

During May, unions in all provinces except New Brunswick and Alberta were afforded more employment than in April, the increase in Nova Scotia being most substantial due to increased work for coal miners. The situation in Alberta was also affected by coal mining but adversely. The change in New Brunswick was merely nominal in character. Practically no change was reported in the manufacturing industries as compared with April, though there were fluctuations throughout the various trades. The coal mining situation improved considerably as did also the building and construction trades. Employment for transportation workers was in slightly greater volume, the steam and street electric railway and navigation divisions all contributing to the gain. Lumber workers and loggers were much busier.

Improvement during June as compared with May was general throughout the various provinces except Manitoba where a nominal decline was recorded. Of the gains, none were particularly outstanding, ranging from 0.3 per cent in Nova Scotia to 2.3 per cent in Alberta. The situation in the manufacturing industries was slightly more favourable, owing chiefly to greater activity among bakers, cigarmakers, leather and iron and steel workers. The lumber and logging industry reported no idle members. There were further advances in employment in the building trades but a nominal change only among transportation workers. The situation in the coal mining industry improved.

Table I on this page summarizes the returns by provinces for each month from April, 1922, and Table III on page 808 shows the percentages of unemployment reported in the different groups of industries also by months from April, 1922.

During April, unions in the manufacturing industries registered over 2 per cent more employment than in the corresponding month of last year, greater activity among garment, iron and steel and glass workers, cigar makers, metal polishers, paper makers and printing tradesmen all contributing to the increase. Textile and hat and cap makers, on the other hand, were slacker. An almost 6 per cent

(Continued on page 806)

gain was reported in the building trades and a smaller advance in the transportation group. Lumber workers were considerably better employed but the situation among miners was somewhat less favourable.

Slightly greater activity was recorded in the manufacturing industries during May than in the same month last year, due mainly to improvement among garment and iron and steel workers, paper and cigar makers and printing tradesmen. A slight adverse change occurred in the building trades. The mining industry reported an almost 4 per cent increase in employment, and lumber and logging over 12 per cent. Transportation workers were slightly better engaged, the improvement in the steam railway division being partly offset by reductions in navigation.

In June, unions in the manufacturing industries were afforded slightly more work than in June last year. Employment for iron and steel workers, metal polishers, glass and wood workers, cigarmakers and printing

tradesmen was on a higher level, but reductions were registered among garment workers, paper makers, and hat and cap workers. In the lumber and logging industry there was a 25 per cent gain. The situation in the building trades improved as did also the mining industry, the gain in the former being 4.0 per cent and in the latter 4.5 per cent. A slightly greater volume of employment was reported in the transportation industries, both the steam railway and navigation divisions contributing to the gain. Retail shop clerks were a little better employed. Fishermen reported a small percentage of idleness as compared with no unemployment in June last year.

The accompanying tabulation (Table II) shows the percentages of unemployment for the months of April, May and June for all Canada, and also by provinces for the month of June. For this month reports were received from 1,502 locals with a combined membership of 145.732 persons, of whom 5,965 or a percentage of 4.1 were unemployed.

TABLE III—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mills	Printing, publishing and lithographing	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Government	Miscellaneous	All occupations

EMPLOYMENT OFFICE REPORTS FOR JUNE, 1926

THE volume of business transacted by the offices of the Employment Service of Canada during the month of June, 1926, as shown by the average daily placements effected, was somewhat lower than that of the preceding period, but showed a gain of over 20 per cent when compared with the average daily placements effected during June, 1926. The decline from the preceding month was due to lessened activities in the services group, while the increase over last year was general in all industrial divisions, that in the building and railway divisions of the construction and maintenance group being the most pronounced.

The accompanying chart shows the trend of employment since January, 1924 as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curves of vacancies and placements in relation to applications remained practically on the same level throughout the month, the variations being so slight as to be almost negligible. In both instances, however, the ratio of vacancies and of placements to applications was on a much higher level than that shown during June last year. The ratio of vacancies to each 100 applications was 86.1 and 85.0 during the first and second half of June 1926 in contrast with the ratio of 77.6 and 76.8 during the same periods in 1925. The ratio of placements to each 100 applications during the period under review was 76.3 and 77.7 as compared with 71.7 and 70.7 during the corresponding month a year ago.

The summary of the reports from the offices showed that the average number of applications recorded daily during the first half of June was 1,766 as compared with 1,783 daily during the preceding period and with 1,552 daily during the corresponding period of 1925. Applications for work during the latter half of the month registered 1,616 daily in contrast with 1,493 daily during the latter half of June a year ago. Employers notified the Service of a daily average of 1,521 vacancies during the first half of the month and 1,374 during the latter half of the month under review as compared with a daily average of 1,204 and 1,146 vacancies during the month of June, 1925. Vacancies offered to the Service during the latter half of May, 1926 averaged 1,526 daily. The Service effected a daily average of 1,347 placements during the first half of June of which 946 were in regular employment and 401 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,381 daily and with 1,113 daily during the first half of June, 1925. During the latter half of the month under review placements averaged 1,256 daily (905 regular and 351 casual) as compared with an average of 1,056 daily during the corresponding period a year ago.

During the month of June, 1926 the offices of the Service referred 33,649 persons to vacancies and effected a total of 32,483 placements. Of these the placements in regular employment numbered 23,117, of which 19,727 were of men and 3,390 of women, while placements in casual work totalled 9,366. Opportunities for employment numbered 26,021 for men and 10,082 for women, a total of 36,103. The number of applications for work was 42,-191, of which 31,712 were from men and 10,479 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:

Year	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926 (6 months)	107,814	51,783	159,597

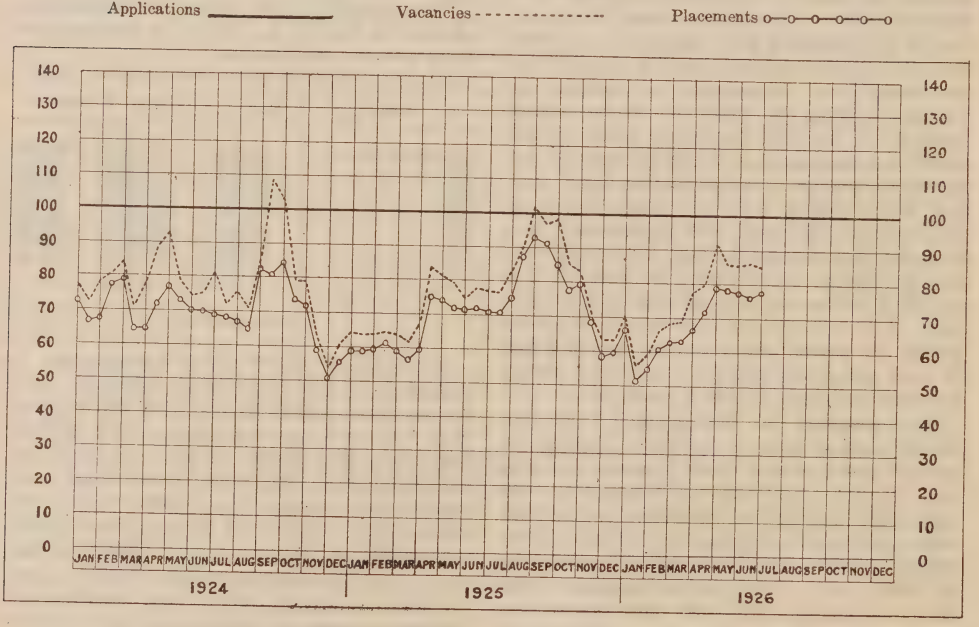
Nova Scotia

Employment opportunities during June, as indicated by orders listed at offices in Nova Scotia, were nearly 10 per cent less than in May, but over 5 per cent higher than in June last year. Placements declined nearly 5 per cent from May, but were almost 8 per cent higher than during June, 1925. Increased placements of household workers were mainly responsible for the gains over last year, offset in part by fewer placements in the manufacturing industries, logging and construction. Industrial groups in which most of the placements were effected during the month were manufacturing 64; logging 98; construction and maintenance 63, services 345, of which 232 were household workers; and trade 58. Regular employment was secured for 284 men and 102 women during the month.

New Brunswick

During June there was a reduction of nearly 27 per cent in the number of positions offered when compared with the preceding

month, but a gain of nearly 11 per cent in comparison with the corresponding month last year. Placements were 28 per cent less than in May, but over 9 per cent higher than during June, 1925. The manufacturing industries and construction and maintenance were the only industrial groups in which declines were shown from June last year. The most important gain was in the logging industry, in which 115 placements were effected. Placements in the services group numbered 515, of which 279 were of household workers. During the month under review 205 men and 93 women were placed in regular employment.



QUEBEC

There was an increase of nearly 30 per cent in the number of orders received in Quebec offices during June, when compared with the preceding month, and an increase of nearly 83 per cent in comparison with June last year. Placements were nearly 8 per cent higher than in May, and over 29 per cent higher than during June, 1925. All industrial groups except farming and services participated in the gains over June last year, those in construction and maintenance being the most pronounced. Placements by industrial divisions included manufacturing 262; logging 436; farming 76; services 499; and construction and maintenance 1,176, of which 1,064 were in building construction.. Placements in regular employment during the month numbered 2,109 of men and 354 of women.

ONTARIO

The demand for workers, as reflected by orders listed at employment offices in Ontario during June, declined over 8 per cent from the preceding month, but was over 7 per cent in excess of the corresponding month last year. There was a decrease of less than 1 per cent in placements in comparison with May, and a gain of nearly 16 per cent over June, 1925. Increased activity over June last year was shown in all industrial groups except farming, the most noteworthy gains being in construction and maintenance. Industrial divisions in which most of the placements were made during the month were manufacturing 1,814; logging 1,262; farming 947; mining 152; transportation 703; construction and maintenance 4,104, of which 2,059 were in railway, and 1,659 building; services 4,074, of which 2,263 were household workers; and trade 336. Regular employment was secured for 8,461 men and 1,197 women during the month.

*52 Placements effected by offices since closed.

MANITOBA

Manitoba offices received orders for nearly 19 per cent less workers during June than in May, but nearly 21 per cent more than in June last year. Placements declined nearly 24 per cent when compared with May, but were nearly 17 per cent higher than during June, 1925. All industrial groups except farming participated in the gains in placements over June last year, the most noteworthy increases being in services and construction and maintenance. Industrial groups in which most of the placements were effected during the month were manufacturing 149; farming 630; construction and maintenance 249; services 1,817, of which 1,224 were of household workers; and trade 200. During the month under review 999 men and 606 women were placed in regular employment.

SASKATCHEWAN

Opportunities for employment, as indicated by orders received at Saskatchewan offices during June were over 9 per cent less than in the preceding month, but nearly 31 per cent higher than during the corresponding month last year. Nearly 13 per cent less placements were effected than in May, but there was an increase of nearly 25 per cent in comparison with June last year. Increased placements of farm hands and construction workers were responsible for most of the gains recorded over June last year. Placements by industrial groups included manufacturing 76; farming 1,335; construction and maintenance 963; services 647; and trade 73. Regular employment was secured for 2,310 men and 280 women during the month.

ALBERTA

Orders listed at Alberta offices during June showed a decline of nearly 6 per cent in the number of positions vacant, when compared with the preceding month, but a gain of over 29 per cent in comparison with the corresponding month last year. Placements were over 7 per cent less than in May, but over 23 per cent higher than in June, 1925. All industrial divisions except services showed gains over June last year, those in farming and construction and maintenance being the most noteworthy. Industrial groups in which most of the placements were effected during the month were manufacturing 259; farming 1,746; construction and maintenance 1,033; services 727; and trade 92. During the month 3,096 men and 310 women were placed in regular employment.

BRITISH COLUMBIA

There was an increase of nearly 34 per cent in the number of positions offered through British Columbia offices during June, when compared with May, and of over 44 per cent in comparison with June, 1925. Placements during the month under review exceeded the totals for May by nearly 22 per cent, and were also nearly 30 per cent higher than in June last year. All industrial groups except services participated in the gains over last year, those in farming and construction and maintenance being the most pronounced. Placements by industrial groups included manufacturing 632; logging 381; farming 895; mining 124; transportation 312; construction and maintenance 1,122; services 986; and trade 161. During the month 2,263 men and 448 women were placed in regular employment.

Movement of Labour

During June, 1926, the offices of the Employment Service of Canada made 23,117 placements in regular employment of which 14,459 were persons for whom the employment was found outside the immediate locality of the offices at which they were registered. Of the latter 1,363 were granted the Employment Service reduced transportation rate, 998 going to points within the same province as the despatching office and 365 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of $4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The Quebec certificates numbered 155 of which 60 were provincial and 95 interprovincial. Provincially Montreal transferred 14 bushmen and 46 saw mill labourers to points within its own zone. Of the interprovincial transfers Hull sent one cook to Sault Ste. Marie and 93 bushmen to North Bay and Montreal one bushmen to Sault Ste. Marie.

From the Ontario offices 466 persons travelled at the reduced rate, 345 going to points within the province and 121 to other provinces. The provincial movement from Pembroke included 6 survey men sent to employment in the Port Arthur zone, from Timmins one fitter to Kingston, from Toronto 2 riggers and one pattern maker to Port Arthur and one storekeeper, one domestic, one rod man to Fort William and from North Bay 2 miners and 2 farm labourers to Cobalt

and 5 miners to Fort William. Sudbury shipped 3 miners to Sault Ste. Marie, one farm labourer to Toronto and 2 miners to Ottawa and Sault Ste. Marie sent one diemaker to St. Catharines. In addition 81 bushmen, 118 construction labourers, 44 sawmill labourers, 12 station workers and 61 railroad labourers were transferred to Northern Ontario points, principally around Timmins, Port Arthur, Fort William, Sudbury, North Bay, Cobalt and Pembroke, the majority of whom were despatched by the Port Arthur, Fort William, North Bay and Sudbury offices. Of the transfers outside the province 119 were for Hull, including 12 bushmen travelling from Pembroke and 24 from North Bay, 30 construction labourers from Port Arthur and 39 from North Bay, 12 railroad labourers from Toronto and one construction labourer and one engineer from Sudbury. The remaining 2 were coal miners despatched by the Toronto office to the Sydney, N.S. district.

Manitoba offices issued 293 special rate certificates, 188 to points within the province and 105 to other provinces. The Winnipeg office effected all the provincial transfers which included 123 farm hands, 13 farm domestics, one ward maid, one housemaid and 4 hotel workers sent to Brandon, 10 bushmen, 10 carpenters, one baker, one sawmill labourer and 2 farm hands to Dauphin and 16 farm hands and 6 bushmen to the Winnipeg zone. Of those transferred to other provinces one was a carpenter travelling from Dauphin to Regina and the remainder were despatched by the Winnipeg office, 12 of whom were teamsters going to North Battleford, 8 farm labourers, 6 carpenters, 2 household workers, 2 teamsters and one waitress going to Regina, 10 farm labourers, one general and 2 teamsters to Weyburn, 2 teamsters to Moose Jaw, one blacksmith, one farm labourer and 3 teamsters to Saskatoon, one construction foreman to Edmonton, one farm labourer to Calgary and 19 bushmen, 15 sawmill labourers, one waitress, 10 track men, one deck hand, one chainman, one moulder, one fisherman, one blacksmith and one cook to Port Arthur.

The Saskatchewan offices despatched 140 workers at the reduced rate, 2 of whom were berry pickers and one a carpenter sent by the Regina office to Nelson and Vancouver respectively. The balance were all provincial certificates. Of these, Moose Jaw granted 3 to rock pickers, 3 to labourers, 6 to teamsters, 18 to farm hands and one to a cook going to employment in the Moose Jaw zone. Regina sent 2 farm labourers, one waitress, one carpenter and 2 teamsters to Moose Jaw, one chambermaid to Swift Current, 2 farm labourers to North Battleford, one saw-mill labourer to Prince Albert, one farm hand and one housekeeper to Swift Current and 2 farm hands within its own zone. From Saskatoon one blacksmith and 36 teamsters went to North Battleford, 48 farm labourers to points in the Saskatoon zone and one teamster to each of the Yorkton and Moose Jaw zones. The remainder were 4 saw-mill labourers and one river driver shipped by the Prince Albert office within its own zone.

In Alberta 179 certificates were granted, 167 provincial and 12 interprovincial. Of the latter 9 were farm hands going from Edmonton to points in Saskatchewan, the balance being issued by Calgary to one housekeeper, one farm hand and one waitress travelling to the Saskatoon, Vernon and Revelstoke zones respectively. Provincially Edmonton transferred to points within its own zone 47 farm hands, one setter, 5 teamsters, 2 dairymen, 15 miners, 2 truck drivers, 3 painters, 7 labourers, 7 mill hands, 2 carpenters, 12 river drivers, one handy man, 2 cookees, one bookkeeper, one fireman, one stableman and 9 hotel and household workers, to Lethbridge 8 beet workers and one miner, to Calgary one brick setter and to Drumheller one engineer. From Calgary one maid, 2 road construction labourers and 3 housekeepers were despatched to Drumheller, one cook to Edmonton, one sheep herder to Medicine Hat, one waitress within the Calgary zone and 28 farm labourers to various points throughout the province and from Medicine Hat one farm hand was sent to Calgary.

The British Columbia offices granted 130 certificates, 29 to workers going to employment in other provinces and 101 within the province. Of the former, Alberta received 9 farm hands, 7 from Vancouver and 2 from New Westminster and Saskatchewan, 13 farm hands, 7 from Vancouver, one from Victoria, 2 from Nelson and 3 from New Westminster. Vancouver transferred one housekeeper to each of the Moose Jaw, Regina and Calgary zones and 3 bricklayers to Regina. From Nelson one printer went to employment near Edmonton. The provincial movement from Vancouver included 12 bolt cutters, one miner, one fireman, one planer man, one farm labourer and one flunkey travelling to Kamloops, one miner, one farm labourer, one engineer, one saw filer and one flunkey to Prince George, 4 miners, one flunkey and 5 station men and 2 cooks to Penticton, 4

cooks and 2 miners to Revelstoke, one housekeeper and one barber to Vernon, one tally man and one edgerman to Cranbrook, 2 fruit pickers and 3 farm hands to Kelowna and 3 labourers, one miner, 5 cooks, 3 flunkies, one station man and one concrete mixer man to points within the Vancouver zone. From Prince George 3 farm labourers went to Kamloops and 6 mill men, 2 lumber pilers, one trimmer man and 2 flunkies to points within the Prince George zone. Prince Rupert sent 2 miners within its own zone and Victoria transferred 3 fruit pickers to Vernon and 4 fruit pickers to Kamloops. From the Nelson office, 2 bushmen and 5 miners were despatched to Revelstoke and 6 bushmen and one teamster to the Nelson zone, while from New Westminster one construction labourer was transferred to Revelstoke.

Of the 1,363 workers who benefited by the Employment Service reduced transportation rate 906 were carried by the Canadian National Railways, 432 by the Canadian Pacific Railway, 16 by the Pacific Great Eastern Railway and 9 by the Temiskaming and Northern Ontario Railway.

Labour Legislation in the United States in 1925

The Bureau of Labour Statistics of the United States Department of Labour has published a Bulletin on Labour Legislation in 1925, giving digests and summaries of the measures enacted during the year in the several States. The Bulletin is a supplement to Bulletin No. 370, entitled "Labour Laws of the United States, with decisions of courts relating thereto." Workmen's Compensation laws, however, form a separate bulletin, and are not included in this series of publications. A cumulative index is provided in the Bulletin, forming a guide to labour legislation as existing in the States at the end of 1925. The Bulletin calls attention to some of the outstanding features of the legislation of the past year, which however was less in importance than in former years. A vigorous legislative campaign in Illinois secured the enactment of a law restricting the issue of injunctions in labour disputes; while a novel piece of legislation in Wisconsin also received the support of organized labour, the effect of this statute being to require the licensing and bonding of private detectives or inside shop operatives, employed to report on labour and other conditions. The law of Idaho on criminal syndicalism received a specific industrial aspect by reason of the new definition of sabotage. Contempts in cases of labour disputes were a subject of legislation in New Jersey.

Repeals of existing laws, but no new enactment were made in regard to apprenticeship in New Mexico and Utah, and in regard to anti-tipping in Arkansas and in Tennessee.

Lying on the borders of labour legislation were (1) a law of California regulating the acceptance of builders' tools as pledges for loans and (2) one of North Carolina requiring certain classes of general contractors to procure licenses. Extension of the idea of the licensing of occupations occurred in connection with beauty culture, or the occupation of cosmeticians; on the other hand the Colorado statute relative to licensing horseshoers was repealed.

The subject of the sale of stock to employees received attention in several States. The regulation of trade schools is also noted as legislation lying on the fringe of labour legislation. Of social and economic rather than industrial interest is the slowly growing activity throughout the States with regard to old-age pensions.

There was a steady extension of the idea of retirement for employees in public service, while the co-operation for vocational rehabilitation proposed by the Federal Government continues to gain acceptance, such action now being practically complete throughout the country. (LABOUR GAZETTE, October, 1924; August, 1925).

An "industrial relationship inquiry commission," made up of British employers of labour and workers' representatives, will proceed in September to the United States. It will be headed by Sir William MacKenzie, who was chairman of the industrial court. The object of the commission is to investigate the methods by which close relationships are maintained in the United States between employers and employees, resulting, in a great measure, in immunity from strikes and industrial unrest. In Australia also Premier Bruce has requested employers' and employees' organizations each to nominate 18 men from among whom the government can select a party of eight to visit the United States to study industrial conditions. Mr. Bruce recently said it was a unique phenomenon that during the past six years in the United States a substantial fall in the price level had been accompanied by a substantial rise in wages.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1926

EMPLOYMENT conditions as indicated by the work of the offices of the Employment Service of Canada during the quarter April to June, 1926, were much more favourable than those reported during the corresponding quarter of 1925 as there was an increase of 14.3 per cent in the vacancies offered, and of 11.5 per cent in the placements registered in regular and casual employment. These gains were general throughout Canada, all provinces participating in the increases shown, those in Quebec, Saskatchewan and British Columbia being the most noteworthy, due for the most part to increased activity in building and railway construction. Farming showed increased vacancies, but recorded a nominal decline in placements, as the demand for workers was not fully met; all other industries registered improvement both in opportunities for service and in placements effected. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period April to June, 1926.

From the chart on page 810 which accompanies the article on the work of the employment offices for the month of June, it will be seen that the trend of the curves representing the ratio of vacancies and placements to applications showed an upward trend during the first part of the quarter under review, declining somewhat during the latter part of the period, but throughout the three months remaining on a much higher level than that recorded during the corresponding quarter last year. During the period April to June, 1926, there was a ratio of 85.7 vacancies and 76.8 placements for each one hundred applications for employment, as compared with 78.9 vacancies and 72.5 placements during the coresponding period a year ago. The average number of applicants registered daily during the quarter under review was 1,723, of positions offered 1,477, and of placements effected 1,324, in contrast with the daily average of 1,636 applications, 1,292 vacancies, and 1,187 placements in regular and casual employment during the same quarter of 1925.

During the three months April to June, 1926, the offices of the Service reported that they had made 101,854 references to positions, and had effected a total of 97,910 placements, of which 67,379 were in regular employment and 30,531 in casual work. Of the placements in regular employment 56,911 were of men and 10,468 of women, while casual work was found for 16,040 men and 14,491 women. A comparison with the same period of 1925 shows that 87,790 placements were then made, of which 67,074 were in regular employment and 26,716 in casual work. Applications for employment during the period under review were received from 94,838 men and 32,591 women, a total of 127,429, in contrast with the registration of 121,024 persons during the same period of 1925. Employers notified the Service during the quarter April to June, 1926, of 109,235 vacancies, of which 77,381 were for men and 31,854 for women as compared with 95,548 opportunities for work offered during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of June, 1926.

BUILDING PERMITS ISSUED IN CANADA IN JUNE, 1926

THERE was an increase of 0.7 per cent in the value of the building permits issued by 63 cities during June as compared with May, and a considerable gain of 25.2 per cent over June, 1925. The former increase, though slight, is interesting because the building authorized in June is generally less than in May. The total for the month under review stood at $18,672,238, while in the preceding month it was $18,537,932, and in June, 1925, it was $14,915,884. The list of cities this month includes, for the first time, Kamloops and North Vancouver; the former was added to give representation in these statistics to the interior of British Columbia and the latter on account of its proximity to Vancouver. The monthly record since 1920 of building permits issued has been altered by the inclusion of these two centres.

Some 45 cities reported that they had issued over 1,800 permits for dwellings estimated to cost approximately $8,000,000 and more than 3,100 permits for other buildings valued at over $9,800,000. In May, authorizations included nearly 1,950 dwellings and almost 4,000 other buildings valued at approximately $9,500,000 and $8,200,000, respectively.

During June there were increases over May in the value of building permits issued in Prince Edward Island, Ontario, Alberta and British Columbia. The gain in the last named, of $859,055 or 34.8 per cent, was most pronounced. Of the declines in the remaining provinces, that of $866,479 or 16.1 per cent in Quebec was absolutely the largest, but the loss of $44,261 or 47.8 per cent in Nova Scotia was proportionately greater.

As compared with June, 1925, New Brunswick and Quebec registered reductions in the value of building authorized. The other provinces recorded increases; that in Ontario of $1,539,256 or 23.8 per cent, was the largest absolute gain, while Alberta showed the greatest proportionate increase of $446,230, or 125.3 per cent.

Montreal and Toronto reported decreases in the permits granted as compared with May, 1926, and June, 1925, while in Winnipeg and Vancouver there were gains in both comparisons. Quebec, Niagara Falls, Oshawa, Owen Sound, Port Arthur, Stratford, York Townships, Welland, Windsor, Ford, Sandwich, Woodstock, Saskatoon, Calgary, New Westminster, Point Grey, and North Vancouver also recorded increases as compared with both the preceding month and the corresponding month last year.

Table I gives the value of the building permits issued in 63 cities during May and June, 1926, and June, 1925. The 35 cities for which records are available since 1910 are marked with asterisks.

Cumulative Record for First Six Months, 1920-1926

The 1926 aggregate for the first six months was $78,620,362; this was 19.3 per cent, 29.6 per cent, 7.6 per cent, 10.3 per cent, 41.0 per cent, and 27.3 per cent, higher than in 1925, 1924, 1923, 1922, 1921, and 1920, respectively. Since the average index number of wholesale prices of building materials is this year considerably lower than in any other year since 1920, the increase in the volume of construction is greater than would be indicated by the percentage gain in the value of building permits issued by the co-operating cities.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

25251—6½

Manufacturing: Animal Foods

Vancouver, British Columbia—Fraser Valley Milk Producers' Association of Vancouver and New Westminster, B.C. and International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, Local No. 464. Milk Drivers and Dairy Employees.

Agreement to be in effect from July 1, 1926 until July 1, 1927 and from year to year, with 30 days' notice of change.

Union members shall be employed except when other suitable persons are desired or where union men are not available. Non-union labour shall receive union wages and apply for membership within two weeks. A man shall not be considered unworthy of membership if and because a union man is out of employment.

If a route becomes vacant employees of one year's standing may change before new employees are engaged. An employee changing route shall be paid at the rate of one dollar per day while learning, and full scale when he takes over the route.

The employer may discharge any employee for the usual disqualifications. Employees shall provide own working apparel, employer supplying aprons. No discrimination against men for upholding union principles.

One day off in seven, or one week off in seven weeks. Employees other than salesmen, eight hours per day; overtime, time and one-half.

In accidents or breakdowns men shall be given a fair hearing.

New employees shall be asked to sign the agreement within thirty days of starting work.

Two meetings each month to discuss problems of interest to dairy salesmen. Inside help to attend one meeting per month.

In case of breakdown of machinery beyond control of employer, he shall not be compelled to pay overtime, provided: men shall be notified to lay off during repair of breakdown, and men kept standing by shall be paid overtime if working over eight hours. No lay-off to be less than 2 hours.

An employee working 51 per cent of time at any of the classified occupations shall receive highest scale specified for such work.

In event of a strike in another firm with which this firm is doing business, employees of this firm will do their usual work only.

Employees shall not engage in any other business.

Wages to be paid on 5th and 20th. Employees not on commission shall receive one-half of their wages on each date. Those on commission, $86 advance for previous month on 5th, and balance including commission on 20th.

The basic wage rate is given as $86 per month, and provision is made for rise or fall according to rise or fall in the price of milk. Rate per month for inexperienced salesmen for first three months, $75. An additional commission is paid, based on points, as specified in the agreement.

Wages per month, truck drivers (haulers) and relief, $130; truck drivers (specials), checkers, and inside relief men, $125; truck helpers, stable helpers, and all other inside help, $120; outside relief men, $150. New employees, first three months, $100; next three, $110; thereafter, scale.

Employees may appeal against charges of dishonesty.

New men on routes, $1 per day for three days' learning.

No employee receiving more wages or working fewer hours shall suffer because of adoption of the agreement, this not to affect employees on routes.

No cessation of work or lockouts; no sympathetic strikes.

In a controversy, men shall continue working, and adjustment shall be made by representatives of parties if possible. If arbitration is necessary a board shall meet five days after request for same.

If parties are unable to agree on amendments to agreement, application shall be made under the Industrial Disputes Investigation Act for a Board of Arbitration, decision of majority to be accepted by both parties as final and binding.

Manufacturing: Printing and Publishing

HULL, QUEBEC, AND OTTAWA, ONTARIO—OWNERS OF "LE DROIT" AND NATIONAL CATHOLIC SYNDICATE OF PRINTERS AND BOOKBINDERS.

Agreement to be in effect from February 1, 1926 to February 1, 1927.

Preference to be given to union members. If union cannot supply workers, only such shall be employed as will agree to join the union within one month.

Hours, 48 per week.

Minimum wage, journeymen printers, linotype men, newspaper pressmen and job pressmen, bookbinders and rulers, day work, $36; night work 25 per cent extra. Journeymen stereotypers, day or night work, $25.

Apprentices in typesetting, stereotyping, presses and ruling, to serve five years. Wages per week, third year, $11.75 and $13.25; fourth year, $16.50 and $17.75; fifth year, $19.12 and $22.50. Wages per week for apprentices in stereotyping, day or night work, first year, $12; second year, $15; third year, $18; fourth year, $25; fifth year, $35.

Apprenticeship on linotype or other composing machine, to last six months and commence only after the first six months of the fifth year of apprenticeship. Wages: when the apprentice on the linotype produces in an appreciable way, wages shall be in proportion to production during first eight weeks. Wages for remainder of apprenticeship term, divided into three parts, $22, $26 and $30 per week.

Number of apprentices, in any department, one to three or less journeymen.

Overtime, first three hours, time and a half; thereafter, double time.

Holiday rate, including every Sunday, Catholic holidays, and five other holidays, double time.

Union shall be notified of necessity of reducing number of employees. Last hired to be first discharged.

One week's notice shall be given of leaving work or dismissal except for serious cause.

CALGARY, ALBERTA—CERTAIN FIRMS AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, NO. 201.

Agreement to be in effect from January 1, 1926 until September 1, 1926.

Wages per week, cylinder pressmen, day, $39.60; night, $42.60; platen pressmen, 4 presses, day, $35.20; night, $38.20; 3 presses, day, $33; night, $36; 2 presses, day, $30.80; night, $33.80. Assistant pressmen, $30.80.

Cylinder feeders, per week, first six months, $15.84; second six months, $18.48; second year, $20.25; third year, $23.76. Platen feeders, first six months, $9; second six months, $10.60; second year, $13.20; third year, $15.84; after three years, $18.48.

A feeder with three or more years' experience shall enter his apprenticeship as assistant pressman when a vacancy occurs, and after two years shall have an examination, set by Local No. 1. If successful, he shall be qualified to fill first opening for pressman.

One apprentice to four journeymen.

Those receiving higher wages than provided for by the agreement shall not be reduced.

Feeders and assistants, 50 cents extra per shift for night work.

Hours, 44 per week; 8 per day, 4 Saturday. Night work, 42 hours per week, 7 hours per night.

Overtime, first 3 hours, time and one-half; thereafter, and Sundays and holidays, double time.

Manufacturing: Pulp, Paper and Paper Products

MERRITTON, ONTARIO—LINCOLN PULP AND PAPER COMPANY, LIMITED, AND VARIOUS INTERNATIONAL TRADE UNIONS.

Agreement to be in effect from May 31, 1926 until May 15, 1927.

Questions of jurisdiction shall be decided by the American Federation of Labour.

Employees shall be union members, when available.

Paper mills shall operate six days per week. Pulp mills, six days per week, and six and one-half when pulp is needed, and longer when agreed.

Only members of paper makers' union, assisted by swipers, sweepers and labourers, shall clothe and operate paper machines. On Sundays work shall be limited to cleaning, oiling and repairs.

Rules governing mill employees shall form part of the agreement.

No strikes or lockouts shall take place.

Wages shall be discussed with all the labour unions at one time.

Wages per hour—Lincoln Mill: rope cutter, 45 cents; beater boss, 65 cents; beater helpers, 45 cents; machine tender, 76 cents; back tender, 53 cents; third hand, 46 cents; packer, 50 cents; oiler, 52 cents. Finishing room girls, new, 30 cents; experienced, 32 cents; regular day labourers, 42 cents. Bag Room: bag machine tenders, 58 cents; operators, 45 cents; helper, 20 cents; apprentice pressmen, 50 cents and 40 cents; pressman's helper, 20 cents; compositor, 50 cents; compositor's helper, 20 cents; girls, 28, 30 and 32 cents. Packer, 50 cents.

Iroquois Falls, Ontario—Abitibi Power and Paper Company and Various Unions

Agreement to be in effect from May 1, 1926 until May 1, 1927 and from year to year thereafter, subject to 30 days' notice of change.

The text of the agreement is similar to that previously in effect as summarized in the Labour Gazette for July, 1924, with changes in the duration of the time and one-half rate on certain holidays.

General mill rates are as summarized in the Labour Gazette for September, 1924, with the following changes: Wood room foreman, salary; grindermen, 48 cents. Sulphite mill: riffler men, 50 cents; deckers, 47 cents.

Mechanical and miscellaneous rates: digester repair man, 72-82 cents; roll grinder, 80 cents; lead burner, 87 cents; pump repair, 82 cents; millwrights, 72-75 cents; pumphouse, 62 cents; steam plant millwright, 59 cents; millwright helper, 59-63 cents; saw filer, 84 cents.

Mechanics: machinists, 72, 75, 81, 87 cents; tinsmiths, babbitt men, 72-80 cents; blacksmith, 72-75 cents; driller, 72 cents; welders, 87 cents; helpers, 59-62 cents; tool room men, 70 cents.

Pipefitting: pipe fitters, 72-81 cents; helpers, 59-63 cents.

Electrical: motor winder, 77-90 cents; lineman, 72 cents; journeymen, 72-75 cents; electrical hoist runner, 70 cents; electrical helpers, 59 cents; telephone man, 72-85 cents; sub-station operators (new mill), 75 and 78 cents. Twin Falls operators, 78 cents; assistants, 59 cents; oilers, 45 cents; mechanics, 72-75 cents; helper, 59 cents.

Masons, etc.: masons and bricklayers, painters and glaziers, 63-70 cents; mason's helper, 40-59 cents; painters' helpers, 59-63 cents.

Construction: Buildings and Structures

Quebec, Quebec—Various Contracting Firms and the Construction Trades Council of the National Catholic Unions of Quebec.

Wages per hour—bricklayers, first class, 90 cents; second class, 75 cents; apprentices, 40 and 60 cents; plasterers, 85 cents and 70 cents; apprentices, 40 and 60 cents; masons, 85 and 75 cents; carpenters, 50 cents; labourers, 40 cents.

Only members of the union are to be employed. This to apply in sub-contracts.

Hours of labour to be as usually worked by each union.

All overtime work after 6 p.m., time and one-half.

If it is found necessary to engage non-union men, they must join the union.

The employer will take up all grievances with the president of the Trades Council, who may visit the men at all times. No strikes or lockouts are to take place before all attempts at arbitration have failed.

The number of apprentices shall be arranged between the union representative and the contractor.

Montreal, Quebec—Montreal Builders' Exchange, Inc. and Montreal Building and Construction Industries—and the District Council of the United Brotherhood of Carpenters and Joiners of America.

Agreement to be in effect from April 1, 1926 to March 31, 1927.

Hours, nine per day; five on Saturdays. No overtime except to save life or property.

Minimum wage, carpenters and joiners, 75 cents. Any journeyman incapacitated through any cause may work for less, as agreed on.

The business agent may visit the job during working hours.

Union members are to be employed when available.

Notification must be given on the previous night to men not required on a job; otherwise they may claim two hours' pay.

There shall be no cessation of work owing to disputes over the agreement until negotiations have failed.

Sub-contracts shall be given under same conditions as in the agreement.

The union is not bound to work where there is labour trouble or under police protection.

Winnipeg, Manitoba—General Contractors' Section of the Winnipeg Builders' Exchange and Bricklayers' and Masons' International Union, No. 1.

Agreement to be in effect from May 1, 1926 until April 30, 1927. New agreement to be arranged in January, 1927.

No strikes or lockouts before disputes are brought before the Joint Arbitration Committee. This shall consist of three members of each party, settlement being binding.

Hours, eight per day: four on Saturday.

If shifts are worked, regular rate is to be paid, but if more than regular hours for any shift are worked, time and one-half shall be paid to 10 p.m. Double time after 10 p.m., Saturday afternoons, Sundays and legal holidays. In consecutive shifts, hours shall be seven and one-half per day.

Wages per hour, $1.35.

A man hired and then refused work shall receive not less than four hours' pay.

Board and lodging shall be arranged between employer and men.

Extra car fare to be paid for work outside the city limits. Walking time to be allowed, three miles per hour, failing a car service. Men sent out of town, to have transportation paid. Travelling time, regular rate; sleeper after midnight, provided but eight hours time is allowed each day.

Foreman shall be a union member and receive at least 10 cents per hour above journeymen's wage.

CALGARY, ALBERTA—GENERAL CONTRACTORS' ASSOCIATION AND BRICKLAYERS' MASONS AND PLASTERERS' INTERNATIONAL UNION, NO. 2.

Agreement to be in effect from April 1, 1926 until March 31, 1927. New agreement to be negotiated in January, 1927.

Hours, eight per day and four on Saturdays.

Wages, per hour, $1.15.

Workers outside the city, not less than 10 cents per hour above minimum rate. Railway fare to be paid and travelling time during working hours. Sleeper when necessary after working hours. No travelling before 5 p.m. Sundays. Time lost on arrival shall be paid unless contractor is not responsible. If return transportation is not available, lost time shall be paid for.

Night shift, 7 hours work, 8 hours pay.

Overtime, only for saving life and property, time and one-half from 5 p.m. to midnight and Saturdays, until 5 p.m. Thereafter and Sundays and four holidays, double time.

Boiler and fire work repairs, not less than 10 cents extra per hour. Overtime, double time.

One hour's notice of dismissal or departure of any workman.

Disputes shall be referred to a joint committee, settlement to be binding. There shall be no strike or lockout pending this decision.

Scaffolds shall comply with the Alberta Government regulation.

CALGARY, ALBERTA—CALGARY CONTRACTORS AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL NO. 1779.

Agreement to be in effect from May 1, 1926 until April 30, 1928. Agreement for the period following shall be negotiated during January, 1928.

Wages per hour, from May 1, 1926 until July 31, 1926, 90 cents; from August 1, 1926 until April 30, 1927, 95 cents; from May 1, 1927 to April 30, 1928, $1.

Hours, 8 per day; 4 on Saturdays. Night shift, seven hours' work, eight hours' pay.

Overtime, until midnight, and from noon until 5 p.m. on Saturdays, time and one-half. Thereafter, double time. Sundays and four holidays, double time. No work Labour Day except to save life or property.

One hours' notice before dismissal or leaving work.

Members shall not work for persons outside the Association, or for those who have not signed the agreement, for less than the agreement rate.

Disputes shall be referred to a committee of three of each party; settlement to be binding.

VANCOUVER, BRITISH COLUMBIA—CERTAIN LOCAL FIRMS AND UNITED ASSOCIATION OF JOURNEYMEN PLUMBERS, GAS, STEAM AND SPRINKLER FITTERS AND HELPERS, LOCAL NO. 170.

Agreement to be in effect from April 1, 1926 until April 30, 1927.

The agreement is the same as previously in effect with a few alterations.

Wages per eight hour day, during April, May and June, 1926, $8.40; and from July 1, 1926, $8.50. The five day week to prevail, any necessary work being taken care of on Saturday morning.

All work done on Saturdays and Sundays or on seven specified holidays, double time.

Service: Personal and Domestic

VANCOUVER, BRITISH COLUMBIA—CERTAIN LOCAL RESTAURANTS AND HOTEL AND RESTAURANT EMPLOYEES' UNION, LOCAL NO. 28.

Agreement to be in effect from May 22, 1926, until May 22, 1928, with three months' notice of reopening same.

Eight hours per day, six days per week.

Cooks' scale, per week: chefs, $42, second cooks, night cooks, combination cook and baker, or pastry cook, $36; fry cooks, $30. Overtime, $1 per hour.

Hours not to be over eight, or spread over longer period than twelve hours in one day.

Women cooks' wages same as men cooks.

Waiters' scale, per week: counter waiters, eight hours in twelve, $24; eight hours straight, $22.50. Table waiters, eight hours in twelve, $19; eight hours straight, $17.50. All five hours shifts, $15. Short shifts, $12; overtime, counters, 60 cents; tables, 50 cents. Split shifts, 15 cents extra per hour above table scale when working on counter.

Banquets (not to exceed two hours): breakfast, $2.50; dinner, $3; luncheons, $2.50; cold spreads, $2.50. Places outside the city (transportation extra, and room and board when overnight), $5. New Year's Eve (eight hours or less), $5. Overtime, 50 cents per hour. Cabaret work, first two hours, $1.50; additional, 50 cents.

The union not responsible for help hired other than through the employment bureau of the union, nor for supply of labour during rush season.

Complaints or charges against employees shall be made in writing and forwarded to office of union.

Relief wages to be same as those of persons relieved. Uniforms to be supplied, employees paying a maximum of 25 cents per coat for laundering.

Transportation and Public Utilities—Electricity and Gas

MONTREAL, QUEBEC—MONTREAL LIGHT, HEAT AND POWER, CONSOLIDATED, AND THEIR EMPLOYEES, MEMBERS OF CANADIAN ELECTRICAL UNION OF LINEMEN AND HELPERS, LOCAL NO. 1.

Agreement to be in effect from June 30, 1926 until June 30, 1927, and for one year thereafter, unless notice is given by May 31, 1927 of desire to cancel agreement.

Hours, eight per day, forty-eight per week. Work during dinner hour, only in case of urgent trouble.

For being called out after regular hours, not less than five hours' pay.

Overtime, time and one-half. Sundays and seven specified holidays, double time.

In a general reduction of staff, or in promotions, seniority and efficiency will be considered.

Grievances may be presented by committees or otherwise to foremen, to superintendent, and to General Manager of the Company.

The agreement applies only to permanent employees.

Wages per hour, overhead division: linemen, first class, 55 cents; second class, 50 cents; groundmen, 47 cents. Underground division: combination cable splicer and lineman, 61 cents; cable splicers, 57 cents; helpers, 50 cents; cable men, first class, 55 cents; second class, 50 cents; third class, 47 cents. Truck drivers, 47 cents; labourers, 35 cents.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING July, 1926, the Department received information regarding various contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed thereunder.

Two contracts were awarded in connection with works of construction, etc. ("A" group), the general fair wages clause being inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Public Works Department

Dredging at Port Arthur and Fort William, Ontario. Name of contractors, The Great Lakes Dredging and Contracting Company, Limited, of Ottawa, Ontario. Date of contract, June 25, 1926. Amount of contract: Class "B" $0.35\frac{3}{4}$ per cubic yard place measure for the execution of dredging and the sum of $795 for the removal of the temporary pile breakwater at Port Arthur and Fort William, Ontario. Approximate expenditure, $133,535.

Department of Railways and Canals

Construction and completion of section No. 4B of the Welland Ship Canal. Name of contractor, Johnston P. Porter, of the City of St. Catharines, County of Lincoln, Ontario. Date of contract, July 28, 1926. Amount of contract, schedule rates, approximately $647,390, estimated from estimated quantities.

Post Office Department

The following is a statement of payments made in July, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
	$ cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals	996 23

Making up and supplying letter carriers' uniforms, etc	11,138 46
Stamping pads, ink, etc	759 97
Mail bag fittings	1,155 00
Scales	227 70
Repairs, etc	113 65
Letter boxes, etc	1,317 19

Hospital Treatment for Government Employees in United States

The United States Employees' Compensation Commission has published instructions as to the medical facilities available to employees of the United States government injured in the performance of their duty under the Federal Compensation Act of 1916. The act requires that injured employees are to receive treatment in United States hospitals. "Where there is no United States hospital or dispensary then treatment is to be secured from one of the designated physicians in the locality. Mere convenience or personal preference of the injured employee will not be considered sufficient explanation for the selection of private physicians, or for designated physicians in those localities where Government hospitals and dispensaries are available."

"It is desired to emphasize the character of the services available at the United States marine hospitals. Both the hospital and dispensary services include every medical facility which can be utilized with advantage in each case. Specialists are always available whenever indicated, and a full staff of ophthalmologists, orthopedic surgeons, and neuropsychiatrists, with every facility for examination and diagnosis, are included on each hospital staff."

PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THERE was little movement in prices during the month. The weekly family budget in terms of retail prices was slightly lower, while the Dominion Bureau of Statistics index number of wholesale prices advanced slightly.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was $11.07 at the beginning of July, as compared with $11.06 for June; $10.49 for July, 1925; $9.91 for July, 1924; $10.17 for July, 1923; $10.27 for July, 1922; $10.96 for July, 1921; $16.84 for July, 1920; $13 for July, 1918; and $7.42 for July, 1914. Prices of potatoes were substantially lower, while less important declines occurred in the price of mutton, milk and dairy butter. Prices of beef, veal, fresh and salt pork, bacon, lard, eggs, creamery butter and rolled oats advanced. Including the cost of fuel and rent with that of foods the total budget averaged $21.30 at the beginning of July, as compared with $21.31 for June; $20.70 for July, 1925; $20.30 for July, 1924; $20.65 for July, 1923; $20.67 for July, 1922; $21.53 for July, 1921; $26.92 for July, 1920 (the peak); $20.66 for July, 1918; and $14.17 for July, 1914. The decline in fuel continued, due to lower prices for anthracite coal and hardwood. Rent was practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, advanced to 156.2 for July, as compared with 155.7 for June; 158.4 for July, 1925; 153.9 for July, 1924; 153.5 for July, 1923; 154.1 for July, 1922; 163.7 for July, 1921; 256.3 for July, 1920 (the peak); and 199.5 for July, 1918. In the grouping according to chief component materials four of the eight main groups advanced, one declined and three were practically unchanged. The groups which advanced were: Vegetables and their Products, because of higher prices for grains, flour, rubber, hay and straw; Fibres, Textiles and Textile Products, because of slightly higher levels for cotton, silk and wool; Non-Ferrous Metals and their Products, due to higher prices for copper, lead, tin, spelter, antimony and solder; and Chemicals and Allied Products, mainly because of an advance in the price of glycerine. Animals and their products declined, due mainly to lower prices for live stock, butter and cheese. The Wood and Wood Products group, the Iron and its Products group, and the Non-Metallic Minerals and their Products group were practically unchanged.

In the grouping according to purpose, consumers' goods were somewhat lower, while producers' goods advanced slightly. The decline in the former group was due mainly to lower prices for butter, cheese, potatoes and tea, which more than offset the advances in prices of flour, foreign fruits and meats. In the latter group materials for the milling and other industries, for the chemical using industries, for the metal working industries, the textile and clothing industries, as well as miscellaneous producers' materials, advanced.

In the grouping according to origin, raw or partly manufactured goods advanced, declines in the prices of live stock, vegetables and tea being more than offset by increases in the prices of grains, foreign fruits, meats, hay, cotton, silk, wool and non-ferrous metals. Fully or chiefly manufactured goods were lower mainly because of declines in the prices of butter and cheese. Domestic farm products, articles of marine origin and articles of mineral origin advanced slightly. Articles of forest origin were unchanged.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, continued to decline, being 174.0 for July, as compared with 175.9 for June.

The Canadian Bank of Commerce index of the wholesale prices of exports declined from 160.84 for June to 159.96 for July. That for imports advanced from 153.41 for June to 154.89 for July.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description

of the methods used in the construction of the index number appears in the Labour Gazette for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of July of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the Labour Gazette.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the Labour Gazette resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the Labour Gazette was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the Labour Gazette since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6.

Retail Prices

Beef prices continued to advance in the average. Lower prices were reported from many localities in the Maritime Provinces, in Saskatchewan and Alberta, but these were more than offset by the generally higher prices prevailing in Ontario and Quebec. Sirloin steak averaged 31 cents per pound in July, as compared with 30.2 cents in June; round steak 25.5 cents per pound in July and 24.5 cents in June; shoulder roast, 17.2 cents per pound in July and 16.5 cents in June; and stewing beef 13.3 cents per pound in July and 12.2 cents in June. Veal advanced from 19.1 cents per pound in June to 19.7 cents in July, lower prices in the Western provinces being more than offset by the advances in Ontario, Quebec and the Maritime Provinces. Mutton declined from an average of 31.4 cents per pound in June to 30.7 cents in July. Both fresh and salt pork showed a general advance, the former averaging 32.3 cents per pound in July, as compared with 30.7 cents in June, and the latter averaging 29 cents per pound in July, as compared with 28 cents in June. Bacon advanced 2 cents per pound, averaging 44.7 cents. Boiled

to 15c. more per gallon than the figures published (in bulk). k. New houses as high as $40.00 per month. m. For new tenants $30–$35 and $20–$25. n. Houses with conveniences not extensively occupied by workingmen but some at $35.00. p. Mining company houses $20, others $40–$60. r. Company houses $10–$20. Others $30–35. s. Delivered from mines.

ham was up from an average of 62.7 cents per pound in June to 66.7 cents in July. In fresh fish cod steak and white fish advanced slightly. Finnan haddie rose from 20.5 cents per pound in June to 21 cents in July. Lard advanced in most localities, averaging 24.9 cents per pound.

Eggs continued to advance, fresh averaging 38.2 cents per dozen in July, as compared with 35.2 cents in June and 34.9 cents in May, and cooking averaging 34.7 cents per dozen in July, 31.9 cents in June, and 31 cents in May. Increases were general. Lower prices for milk were reported from Charlottetown, Sorel, St. Hyacinthe, St. John's, Hamilton, Brantford, Sudbury, Port Arthur and Prince Rupert. Butter prices showed little change in the average. Dairy butter, however, was slightly lower, while creamery advanced somewhat. Bread and flour were unchanged in the average. Soda biscuits and rolled oats advanced slightly. Canned vegetables showed little change. Onions again advanced, averaging 8.7 cents per pound in July, as compared with 8 cents in June and 5.5 cents in May. Potatoes, which had advanced from $1.64 per bag in November, 1925, to $3.57 in May, 1926, declined in June with the appearance on the market of the new crop to $3.02, and again in July to $2.58. Lower prices were reported from nearly all localities. Evaporated apples and prunes were unchanged. Raisins and currants were slightly lower in the average. Raspberry jam continued to decline, averaging 84.2 cents per four pound tin. Marmalade was also slightly lower at 67.4 cents per four pound tin. Sugar was unchanegd in the average. Anthracite coal was down from an average of $17.06 per ton in June to $16.99 in July. Lower prices were reported from Quebec, Sherbrooke and Thetford Mines. Bituminous coal was also slightly lower, averaging $10.11. Coke fell from an average of $13.49 in June to $13.37 in July. Hardwood, four feet long, was down from $12.29 in June to $12.11 in July. Coal oil was slightly higher at 30.8 cents per gallon. A slight increase in rent was reported from Thetford Mines.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to higher levels during July. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, was up from $1.53¼ per bushel in June to $1.58⅝ in July. The low price for the month was $1.53¼ per bushel near the beginning, and the high price $1.64⅛ about the middle of the month. Lowered estimates of the Canadian wheat crop, together with reports of smaller stocks and poor crop conditions in Europe, and of a smaller amount of Argentine wheat available for export were said to be the factors causing the advance, in spite of the extremely large winter wheat crop in the United States. Coarse grains, for the most part, moved in sympathy with wheat. Western barley rose from 61⅞ cents per bushel to 62⅞ cents; American corn from 83⅓ cents per bushel to 90½ cents; flax from $1.95 per bushel to $2.07½. Western oats declined from 50 cents per bushel to 49½ cents, and Ontario oats from 45 cents per bushel to 42¾ cents. Flour advanced from $8.75 per barrel to $8.91. Oranges and lemons advanced, due to seasonal demand, the former from $6 per box to $5.75—$6.50, and the latter from $3.50—$5.50 per box to $4—$5.50. Linseed oil was up from 96 cents per gallon to 97 cents. Ceylon tea declined from 56 cents per pound in June to 52 cents in July. The prices of potatoes declined in most localities, due it was said to the increase in supplies of the new crop. Potatoes at Toronto were down from $2.75—$3 per bag to $2.50—$2.75. At St. John the price was down from $4.95 per barrel to $4. Turpentine rose from $1.40 per gallon to $1.43. Rosin was up from $17.25 per barrel to $17.75. Hay advanced from $17.50 per ton to $18.60. Prices of live stock declined, Western cattle at Winnipeg being down from $7.59 per hundred pounds to $7.23; choice steers at Toronto from $7.76 per hundred pounds to $7.37; sheep from $7.44 per hundred pounds to $6.60; and hogs from $15.27 per hundred pounds to $14.72. In dressed beef fore-quarters at Toronto declined from $11.62½ per hundred pounds to $11.60, while hind quarters, however, advanced from $16.38 per hundred pounds to $17.50. Dressed hogs were up from $18.75 per hundred pounds to $19. Creamery butter at Montreal fell from 37 cents per pound to 33 cents, creamery prints at Toronto from 40 cents per pound to 37 cents and dairy prints from 33½ cents per pound to 32¾ cents. The decline was said to be due to falling off in export demand and also in the lessened buying for storage purposes. Cheese at Montreal was down from 26 cents per pound to 25 cents. Raw cotton at New York advanced from 18½ cents per pound to 18¾ cents. Men's cotton hosiery at Toronto rose from $4.35 per dozen pairs to $4.75. Manilla rope declined from 28 cents per pound to 26 cents. Most non-ferrous metals advanced, copper from $15.85 per cwt. to $16; copper wire from 19 cents per pound to 19¼ cents; lead from $8 per cwt. to $8.10; tin from 63¼ cents per pound to 65 cents; spelter from $8.75 per cwt. to $9.08; solder from 35⅜ cents per pound to 37 cents; and antimony from 9½ cents per pound to 12½ cents. Glycerine advanced from 28 cents per pound to 32 cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. According to the latest information available wholesale prices rose slightly in Great Britain and fell slightly in the United States. On the whole there was no marked tendency shown.

Great Britain

Wholesale Prices.—The *Statist* index number (in continuation of Sauerbeck's figures), base period, 1867-77=100, declined 0.6 per cent at the end of June to 124.9, as against 125.7 at the end of May. The end of June index was with one exception the lowest recorded since January, 1916. Foodstuffs, which rose by 0.3 per cent in May rose again 0.2 per cent in June. Materials, which remained stationary in May, declined by 1.2 per cent in June. Vegetable foods declined owing to a seasonal fall in potatoes. Textiles declined 6.3 per cent.

The Board of Trade index number, on the base 1913=100, was 146.4 in June, an increase of one per cent for the month. Foods declined nearly 1.8 per cent to 155.2, all groups being slightly lower. Materials rose 2.5 per cent to 141.5. There were slight increases in the index numbers of iron and steel and the miscellaneous group, and a rise of 12.2 per cent in other metals and minerals. Cotton and other textiles declined.

Cost of Living.—The index number of the Ministry of Labour for August was 170, on the base July, 1914=100, showing no change from the July level. The food index at 161, rent at 150, clothing at 220, and sundries at 180, showed no change for the month. Fuel and light rose slightly from 195 to 200.

Finland

Cost of Living.—The index number of the Ministry of Labour, on the base July, 1914 =100, rose 1.4 per cent in June to 1152.2. Foods and light and fuel rose slightly and rent rose 5.4 per cent. Clothing declined slightly and the other groups showed no change.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office, on the base 1913 =100, was 124.6 in June, an increase of 1.1 per cent. Farm products rose 1.7 per cent and industrial materials declined slightly. Goods produced rose 1.6 per cent and goods imported declined 0.7 per cent.

Cost of Living.—The official index number, on the base 1913-14=100, was 140.5 in June, slightly above that for May. Foods and rent rose slightly to 143.2 and 99.9. The group heat and light was almost unchanged at 140.3. Sundries declined slightly to 187.5 and clothing to 164.2.

Poland

Wholesale Prices.—The index number of the Central Bureau of Statistics, on the base January, 1913=100, was 174.6 in June, as compared with 181.2 in May, a decline of 3.6 per cent. Agricultural products declined 3.2 per cent as did also industrial products. There were declines in wheat and vegetables products, colonial products and sugar, hides and leather, raw materials and finished textiles, and metals and coal, and advances in animal products, construction materials and chemical products.

Sweden

Wholesale Prices.—The index number of the Department of Commerce, on the base respective months of 1913=100, declined one point in June to 150. There were declines in vegetable and animal foodstuffs, feed and forage, metals, pulp and paper, textiles, and hides and leather, and advances in oils and chemicals. Other groups showed no change.

Cost of Living.—The official index number on the base July, 1914=100 fell one point at the beginning of July to 172 as compared with April 1. Foods, fuel and light and clothing each declined slightly to 156, 168 and 187 respectively. The miscellaneous group rose one point to 180 and housing and taxes remained unchanged at 188 and 185 respectively.

India

Wholesale Prices.—The index number of the Bombay Labour Office of wholesale prices in Bombay, July, 1914=100, was 151 in May, showing no change from the April level. Foods rose 4 points to 148 and non-foods declined 3 points to 152.

COST OF LIVING.—The index number of the Bombay Labour Office, of cost of living in Bombay, prices in July, 1914=100, was 155 in June, an increase of two points over the May number. Foods rose 2 points to 152, and clothing declined 8 points to 162. Fuel and lighting and rent remained unchanged at 164 and 172.

New Zealand

WHOLESALE PRICES.—The new index number of the Census and Statistics Office, on the base 1909-13=1000, was 1641 in May, a decline of 0.5 per cent for the month. In consumers' goods both classes declined slightly, foodstuffs being 1527 and non-foods, 1687. In producers' materials also all groups declined, materials for farming industry being 1519, material for building and construction being 2038 and material for other industries 1667. The index number of imported items declined 0.5 per cent to 1613. The index number of export prices rose 3.4 per cent to 1569.

RETAIL PRICES.—The official index number of retail prices of food, on the base average annual expenditure, four chief centres, 1909-13=1000, was 1614 in May as compared with 1610 in April. Groceries and meat declined while dairy produce rose.

United States

WHOLESALE PRICES.—Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was $12.6441 on August 1, showing a decrease of 0.7 per cent from July 1. The number is the lowest recorded since August 1, 1924. The decline is largest in provisions, mainly owing to lower prices for hog products, and to lower quotations for live stock, chemicals and miscellaneous products, chiefly rubber. Four groups declined and nine advanced, with largest gains in metals, textiles, hides and some vegetable oils.

COST OF LIVING.—The index number of the National Industries Conference Board, on the base July, 1914=100, was 167 in June as compared with 168 in May. Foods, clothing and sundries each declined one point to 160, 174 and 172 respectively. Shelter and fuel and light remained unchanged at 176 and 158.

The index number of the Special Commission on the Necessaries of Life of the cost of living in Massachusetts on the base 1913=100 was 162.5 in June as against 162.3 in May. Foods showed an increase of about 0.2 per cent. The clothing index increased about 0.5 per cent, and the fuel and light index rose slightly owing to a higher price for kerosene. Shelter and sundries showed no change.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1926

THE number of fatal industrial accidents recorded in the Department as occurring during the second quarter of 1926 was 247, there being 65 in April, 79 in May and 103 in June. For the corresponding quarter of 1925 there were 271 accidents recorded, including 75 in April, 104 in May and 92 in June. The supplementary list for the first quarter of the Current year contains one accident which occurred during February, making the number for that month 64; and 5 which occurred during March, making the total 78. The total for the first quarter thus becomes 210.

Reports were received from the Workmen's Compensation Boards, the Board of Railway Commissioners, and certain other official sources; from certain large employers of labour; and from the correspondents of the LABOUR GAZETTE. Reports of accidents were taken also from newspapers.

The fatal accidents during the second quarter of 1926, classified by industrial groups, occurred as follows: transportation and public utilities, 61; manufacturing, 42; logging, 34; mining, non-ferrous smelting and quarrying, 28; construction, 26; agriculture, 24; service, 20; fishing and trapping, 6; trade, 3; unclassified, 3.

Accidents in 1925.—The second supplementary list of fatal accidents occurring in 1925 contains 7 accidents not previously recorded, the victims of two of which died from industrial diseases. The total for 1925 thus reaches 1,073. By months the 7 fatalities occurred as follows: in August, one; October, two; November, two; December, two. Classified by industrial groups they were as follows: logging, one; mining, non-ferrous smelting and quarrying, two; manufacturing, three; transportation and public utilities, one.

The tables showing various details of the accidents follow.

Fatal Industrial Accidents in Canada During the Second Quarter of 1926

Trade or Industry	Locality	Date	Age	Cause of Fatality
Agriculture—				
Farmer	Tompkins, Sask.	Apr. 1	.....	Crushed by upset of load.
Farmer	Mountsberg, Ont.	" 2	.....	Kicked by horse.
Fruit grower	Mission, B.C.	" 5	45	Fell from truck.
Farmer	Murray Harbour, P.E.I.	" 9	45	Thrown from sleigh.
Farmer	Coteau, Que.	" 15	19	Bitten by mad boar.
Farmer	Chilliwack, B.C.	" 22	97	Apparently chopping wood for domestic purposes; was struck by stump from near-by blast.
Farmer	Wilcox, Sask.	" 29	70	Burned in burning barn.
Farmer	Gull Lake, Sask.	May 4	68	Trampled by frightened horse.
Farmer	Clarksburg, Ont.	" 8	over 70	Team bolted, throwing him out.
Farmer	South Hull, Que.	" 9	60	Kicked by horse.
Farmer	Inwood, Man.	" 13	.....	Stray horse kicked his horse, which bolted; man fell beneath wheels.
Farmer's son	White Star, Sask.	" 14	17	Run over by plough when team ran away.
Farmer	North Bay, Ont.	" 27	50	Thrown from load of hay in runaway.
Farmer	Kelvington, Sask.	" 29	24	Crushed by waggon in runaway.
Farmer	Puslinch, Ont.	June 5	40	Thrown from seat by frightened team, Crushed by roller.
Farmer	Ceylon, Sask.	" 5	60	Feet caught in lines when chasing runaway team; run over by waggon.
Farmer	Asphodel Twp., Ont.	" 12	44	Repairing manure spreader which broke, falling on him.
Farmer	Lac au Saumon, Quebec	" 14	68	Kicked by horse.
Farmer	Hoey, Sask.	" 16	46	Gored by mad bull.
Employee on horse ranch	Lethbridge, Alta.	June 24	24	Was breaking colt which fell and rolled on him.
Farmer	Kerrobert, Sask.	" 24	.....	Thrown off plough.
Farmer's son	Golden Lake, Ont.	" 25	18	Struck by falling tree, which had split while falling.
Farm hand	Liberty, Sask.	" 25	57	Thrown from waggon when king-bolt broke.
Farm nand	Vernon, B.C.	" 30	47	Team of horses bolted and ran over him.
Fishing and Trapping—				
Fisherman	Prince Rupert, B.C.	Apr. 2	.....	Drowned—probably result of violence.
Trapper	Stoney Beach, Sask.	" 23	42	Fell into creek, striking head—drowned.
Fisherman	Richibucto, N.B.	" 30	.....	Crushed by gunwale of fishing boat when launching same.
Fisherman	Buchanan's Beach, N.S.	May 24	.....	Boat capsized in heavy sea—drowned.
Fisherman	Elmira, P.E.I.	June 2	28	Fishing boat capsized—drowned.
Guide	Tewkesbury, Que.	" 20	33	Drowned when canoe upset in current.
Logging—				
Logger	Turnour Is., B.C.	Apr. 14	41	Struck by flying log.
Logger	Quatsino, B.C.	" 15	48	Struck by flying block.
Unhooker	Black Creek, B.C.	" 30	41	Struck by falling snag.
Rigging slinger	Bloedel, B.C.	May 4	.....	Struck by falling snag.
Logger	Port Renfrew, B.C.	" 4	21	Struck by falling tree.
Logger	Port Renfrew, B.C.	" 4	31	
Logger	Amherst, N.S.	" 4	.....	Slipped off log—drowned.
River driver	Puckasaw, Ont.	" 5	19	Drowned.
Logger	Stave Lake, B.C.	" 7	54	Struck by falling tree.
River driver	Stoney Creek, Ont.	May 14	17	Drowned.
Labourer	Blind River, Ont.	" 15	34	Drowned.
Teamster	N. Vancouver, B.C.	" 17	39	Astride horse hauling logs down hill. Horse fell and victim crushed by logs.
Logger	Ocean Falls, B.C.	" 18	30	Struck by log rolling down side hill.
Bucker	Toba River, B.C.	" 19	37	Drowned when float tipped over.
Bucker	Englewood, B.C.	" 24	62	Struck by falling tree.
Logger	Lake Cowichan, B.C.	" 27	26	Fell on drum and was whirled around it.
Lumber worker	Mont-Louis, Que.	" 27	21	Killed by jam of ice and logs.
Logger	Lake Cowichan, B.C.	" 28	37	Struck on head by choker.
Logger	Surf Inlet, B.C.	June 2	37	Struck by falling tree.
Labourer	Larchwood, Ont.	" 3	64	Fell—internal injury.
Logger	Lake Cowichan, B.C.	" 3	36	Struck on head by choker.
River driver	Mont Laurier Dist., Que.	" 5	40	Fell into rapids, drowned.
Logger	Powell River, B.C.	" 6	24	Struck by falling tree.
River driver	St. Maurice de Gaspe, Que.	" 9	.....	Crushed by timber when log jam broke.
River driver	St. Maurice de Gaspe, Que.	" 9	.....	
River driver	St. Maurice de Gaspe, Que.	" 9	.....	
River driver	St. Maurice de Gaspe, Que.	" 9	.....	
River driver	St. Maurice de Gaspe, Que.	" 9	.....	
River driver	Madawaska Co., N.B.	" 10	23	Fell from boat into river—drowned.
Fireman	Cracraft Is., B.C.	" 19	.....	Struck on head by wire cable.
Logger	Englewood, B.C.	" 23	24	Struck by falling tree.
Logger	Brittle Point, B.C.	" 23	.....	Fell off log—drowned.
Logger	Three Rivers, Que.	" 27	.....	Tractor used for hauling logs was hit by train.
River driver	Passage, Que.	" 30	19	Drowned while sorting logs.
Mining, Non-ferrous Smelting and Quarrying—				
Coal Mining:				
Miner	Cassidy, B.C.	April 6	42	Blowout; men buried in coal and suffocated.
Miner	Cassidy, B.C.	" 6	46	
Miner	Glace Bay, N.S.	" 12	.....	Scalded by bursting of valve.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1926—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS SMELTING AND QUARRING—Conc.				
Coal Mining—Conc.				
Miner	Drumheller, Alta	April 19	51	Gas explosion; fall of rock in mine.
Miner	Coleman, Alta	May 3	51	Fall of coal—cave in of roof.
Miner	Coleman, Alta	" 7	.....	Struck by piece of coal.
Chain runner	New Waterford, N.S	" 21	20	Crushed by fall of rock.
Driver	Cumberland, B.C	" 22	33	Thrown when mine car was derailed.
Prospector's employee	Near Mattice, Ont	" 25	.....	Drowned in river.
Miner	Glace Bay, N.S	" 28	19	Thrown against wall when riding box in mine.
Foreman in coal mine	Sheerness, Alta	June 8	36	Struck on head by fall of coal.
Timber man	Sandon, B.C	" 12	40	Buried in cave-in.
Timber packer	Cadomin, Alta	" 15	27	Coal in chute gave way—man carried down and buried.
Miner	New Glasgow, N.S	" 16	46	Crushed by fall of coal.
Miner	Estevan, Sask	" 18	22	Struck by falling clay.
Car driver	Taylorton, Sask	" 25	23	Crushed by collapse of roof when runaway car struck supports.
Metalliferous mining:				
Drill runner	Levack, Ont	April 19	40	Explosion.
Labourer	Timmins, Ont	May 15	43	Fell down shaft.
Prospector	Stewart, B.C	" 26	42	Drowned while crossing stream.
Miner	Anyox, B.C	June 4	43	Slipped and fell down chute.
Non-metallic mineral mining and quarrying, n.e.s.				
Miner	Thetford Mines, Que	April 21	over 21	Struck by falling stone.
Driller at oil well	Sumas Prairie, B.C	" 25	50	Fell off derrick.
Miner	Thetford Mines, Que	" 30	over 21	Struck by falling stone.
Powderman	Mine Centre, Ont	May 23	.....	Explosion of delayed charge.
Asbestos miner	Thetford Mines, Que	" 29	over 21	Buried by falling stones.
Asbestos miner	Thetford Mines, Que	June 4	25	Crushed by falling boulders.
Electrician	Thetford Mines, Que	" 10	30	Electrocuted.
Structural Materials:				
Quarryman	Lansdowne, Ont	June 24	28	Premature explosion of dynamite.
MANUFACTURING—				
Iron, Steel and Products:				
Riveter	Toronto, Ont	April 13	47	Fell from bridge.
Operator with gear company	Toronto, Ont	" 19	46	Struck by belt.
Machinist	Montreal, Que	" 28	67	Slipped while operating machine.
Labourer	Hamilton, Ont	May 22	41	Carrying a rail fell, striking head on ground, while rail struck him.
Labourer	Toronto, Ont	" 31	43	Struck on head by iron bar owing to bursting of valve.
Helper with steel company	Hamilton, Ont	June 7	.....	Cut near eye.
Carpenter with engineering co	Hamilton, Ont	" 18	65	Cut finger-infection.
Welder	Windsor, Ont	" 21	30	Inadvertently directed acetylene torch toward explosive substance-burned to death.
Foreman	Fergus, Ont	" 23	45	Drawn into shaft while adjusting a belt.
Labourer	Montreal, que	" 29	53	Burned when gasoline torch exploded.
Non-metallic mineral products:				
Quarryman	Montreal, Que	Apr. 14	20	Fell on pulley in connection with stone crusher—caught on revolving shaft.
Employee of oil co	Montreal, Que	June 16	40	Run over by shunting cars in yard.
Proprietor of marble works	Lancaster, Ont	" 16	55	Struck by train when delivering product.
Labourer at brick-works	Aldershot, Ont	" 21	19	Buried under load of clay when dump car overturned.
Pulp, paper, and paper goods:				
Labourer	Ocean Falls, B.C	Apr. 7	44	Cable broke causing derailment of loaded car, tipping off load which crushed victim.
Truckman	Powell River, B.C	" 16	.....	Fell from scow elevator.
Runner with pulp co	Hawkesbury, Ont	May 15	48	Caught in belt; crushed in machinery.
Employee	Fort William, Ont	June 14	33	Caught by machinery and crushed in rollers.
River driver	Michipicoten Falls, Ont	" 22	47	Electrocuted.
Printing and publishing:				
Mechanic	Toronto, Ont	Apr. 3	60	Bruised leg.
Saw and planing mills:				
Labourer	Hanover, Ont	Apr. 16	25	Caught in shafting while oiling machinery.
Sawmill worker	Transcona, Man	" 16	46	Thrown when hit by plank caught in machinery.
Labourer	Golden, B.C	" 28	39	Struck by log.
Labourer	Sarnia, Ont	May 13	28	Fell from loading platform, striking head.
Labourer	Tisdale, Sask	" 18	.....	Fell into saw; legs cut, died of amputation.

Fatal Industrial Accidents in Canada During the Second Quarter of 1926—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
Manufacturing—Conc.				
Saw and planing mills—Conc.				
Labourer	Ste. Cécile de Whitton, Que.	May 21	.....	Leg injured in mill; died following amputation.
Shingle buncher	Edmundston, N.B.	" 22	14	Foot slipped—fell on saw.
Labourer	Amos, Que.	June 9	.....	Struck by block of wood.
Logger	New Westminster, B.C.	" 10	.....	Conflagration—Chinese boarding house burned.
Logger	New Westminster, B.C.	" 10	.....	
Logger	New Westminster, B.C.	" 10	.....	
Logger	New Westminster, B.C.	" 10	.....	
Logger	New Westminster, B.C.	" 10	.....	
Edgerman	Northland, Ont.	" 18	40	Reparing log carriage when it started, machinery striking him on head, fracturing skull.
Stableman	Arnprior, Ont.	" 28	65	Cut hand—infection.
Vegetable foods, drink and tobacco:				
Driver for bread co.	Hamilton, Ont.	June 4	.....	Horse frightened by steam roller—bolted, throwing out driver, who caught in wheel.
Teamster	Montreal, Que.	" 11	.....	Thrown from waggon when frightened team bolted.
Cigar factory employee (woman)	Montreal, Que.	" 27	38	Auto-intoxication from poisoned air of cigar factory.
Animal foods:				
Net boss at cannery	Port Alberni, B.C.	June 13	.....	Drowned, while hauling in scow.
Wood products:				
Labourer	Montmagny, Que.	Apr. 22	.....	Struck by plank from circular saw.
Labourer	Bridgewater, N.S.	May 3	23	Caught on pulley and drawn into machinery.
Woodworker	Winnipeg, Man.	June 20	27	Struck by saw which kicked back when piece of wood caught behind it.
Construction—				
Buildings and structures:				
Carpenter	Toronto, Ont.	Apr. 1	59	Injured in elevator accident.
Labourer	East Templeton, Que.	" 9	21	Driving to work on crowded bus, riding on fender bus crashed into telegraph pole.
Plumber	Toronto, Ont.	" 13	36	Cut finger—infection.
Labourer	Montreal, Que.	" 14	40	Crushed by boulder while excavating.
Teamster	East Templeton, Que.	" 14	62	Horses took fright and bolted, throwing him under wheels.
Labourer	N. Vancouver, B.C.	" 15	21	Struck by revolving crane and thrown under truck—run over.
Labourer	Three Rivers, Que.	" 17	44	Hit by fragment of breaking derrick.
Labourer	Ford City, Ont.	" 19	45	Slipped and fell from ladder.
Labourer on excavation	Vancouver, B.C.	" 20	.....	Crushed by boulder.
Wireman	Montreal, Que.	" 20	28	Electrocuted; cutting wire when leg came in contract with radiator.
Labourer	Victoria, B.C.	" 29	.....	Fell from roof.
Carpenter	Vancouver, B.C.	" 30	51	Fell from roof.
Labourer	Port Alfred, Que.	May 4	31	Struck by plank falling from sling owing to victim having jerked rope.
Carpenter	Pine Falls, Man.	" 29	28	Crushed by scaffold which fell, following explosion.
Riveter	Arvida, Que.	June 7	28	Head crushed against steel beam by revolving electric crane.
Carpenter	Tweed, Ont.	" 13	40	Rung of ladder broke, throwing victim to ground.
Bridge and highway:				
Painter	Niagara Falls, Ont.	May 11	38	Fell into whirlpool.
Foreman, bridge building	Regina, Sask.	June 3	43	Fell from ladder.
Labourer	Long Lake, Ont.	" 28	.....	Explosion of delayed charge.
Miscellaneous:				
Labourer	Peterborough, Ont.	Apr. 6	21	Cave-in.
Labourer with contractor	Michipicoten Falls, Ont.	May 51	.....	Cut foot—infection.
Labourer on wharf construction	Tadousac, Que.	" 19	67	Fell on wharf and fractured skull.
Engineer on pile driver	Vancouver, B.C.	" 31	45	Fell from pile driver at wharf.
Office manager with contractor	Fort Erie, Ont.	June 5	.....	Struck by train.
Teamster	Farmers Rapids, Que.	" 11	34	Swept into rapids with team drinking on river bank: drowned.
Watchman with contractor	Port Colborne, Ont.	" 26	.....	Drowned.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1926—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam Railways:				
Sectionman	Superior Jct., Ont.	April 4	.....	Velocipede struck by train.
Sectionman	Near Kamloops, B.C.	" 4	25	While patrolling track on velocipede was struck by passenger train.
Railway employee	Vancouver, B.C.	" 12	.....	Crushed by falling tree.
Carman	Toronto, Ont.	" 13	58	Cut finger while repairing brake rod—infection.
Employee	Caughnawaga, Que.	" 17	18	Struck by train.
Painter	Stratford, Ont.	" 19	45	Caught between rod and drum when engine was reversed for valve-setting.
Extra gang labourer	Beavermouth, B.C.	" 21	51	Run down by train while digging jack holes.
Carpenter	Lake Louise, Alta.	" 24	50	Lost balance and fell from hand car.
Section labourer	Pasqua, Sask.	" 26	50	Struck by train.
Section labourer	Pasqua, Sask.	" 26	.....	
Fireman	St. Sophie, Que.	" 29	33	Scalded when derailed engine overturned.
Lineman	Parry Sound, Ont.	May 3	24	Electrocuted.
Brakeman	Ridgedale, Sask.	" 5	25	Tripped and fell beneath moving train.
Extra gang labourer	Cassils, Alta.	" 15	51	Struck by spike which glanced off hammer—gangrene.
Carman	Niagara Falls, Ont.	" 16	46	Struck by car.
Section labourer	Windham, Ont.	" 19	40	Struck by train.
Section labourer	Windham, Ont.	" 19	55	
Sectionman	Burlington, Ont.	" 20	52	Working on track; run over.
Engine driver	Stoney Creek, Ont.	" 21	48	Engine derailed by bags of cement dropped from a truck.
Head brakeman	Stillwater, B.C.	" 26	30	Run over by uncoupled car.
Track labourer	Montreal, Que.	" 27	70	Struck by locomotive.
Painter	Deeks, Ont.	" 28	49	Struck by train while on velocipede.
Labourer	Montreal, Que.	" 31	22	Struck by shunting engine.
Labourer	Toronto, Ont.	June 2	.....	Fell under car.
Labourer	Glace Bay, N.S.	" 5	21	Died of burns received in roundhouse.
Engineer	Elma, Man.	" 8	49	Collision.
Brakeman	Elma, Man.	" 8	40	
Cook	Chaffey's Locks, Ont.	" 8	48	Velocipede struck by train.
Car cleaner	Toronto, Ont.	" 12	40	Run over by car.
Sectionman	Grand Valley, Ont.	" 18	65	Alighting from velocipede to recover hat; fell, striking head.
Shop labourer	Transcona, Man.	" 18	48	Hernia.
Switchman	Winnipeg, Man.	" 24	52	Fell from top of box car—run over by train.
Locomotive fireman	Wainwright, Alta.	" 27	.....	Crushed against coal dock by motion of engine he was cleaning.
Electric railways:				
Electrical worker	Thorold, Ont.	April 12	26	Burned by high tension wires, died of injuries.
Lineman	Winnipeg, Man.	May 4	45	Working on pole; came in contact with high voltage wires—electrocuted.
Water Transportation:				
Longshoreman	Vancouver, B.C.	April 9	42	Sling cable broke, victim struck by lumber.
Fireman	Ogdensburg, N.Y.	" 12	20	Thrown from truck.
Seaman	Montreal, Que.	May 12	.....	While painting hull of vessel plank slipped throwing him onto wharf.
Ship's watchman	Welland Canal, Ont.	" 14	41	Caught by cables and dragged into winch.
Longshoreman	St. John, N.B.	" 16	67	Struck by hatch beam.
Deck hand	Fort William, Ont.	" 28	19	Jumped to dock with line and fell into river.
Sailor	Montreal, Que.	" 29	21	Fell from wharf—drowned.
Coal trimmer	Port Colborne, Ont.	" 30	37	Bucket off hoist fell on foot.
Deck hand	Lake Winnipeg, Man.	June 2	27	Fell from boat rail—drowned.
Foreman with dredging contractor	Goderich, Ont.	" 16	33	Fell overboard while repairing fender—drowned.
Dredgeman	St. Peter's Is., N.S.	" 18	.....	
Dredgeman	St. Peter's Is., N.S.	" 18	.....	
Dredgeman	St. Peter's Is., N.S.	" 18	.....	Drowned when dredge, being towed, was caught in gale.
Dredgeman	St. Peter's Is., N.S.	" 18	.....	
Dredgeman	St. Peter's Is., N.S.	" 18	.....	
Dredgeman	St. Peter's Is., N.S.	" 18	.....	
Ship's carpenter	Montreal, Que.	" 25	.....	Fell from ship's hold.
Longshoreman	Vancouver, B.C.	" 30	.....	Struck by falling packing case.
Local Transportation:				
Delivery man	Toronto, Ont.	June 21	.....	Run over when boarding moving truck.
Storage:				
Oiler at grain elevator	Halifax, N.S.	May 1	24	Fell into machinery.
Elevator employee	Fort William, Ont.	June 26	36	Fell off box car.
Electricity and Gas:				
Electrical worker	Hemming Falls, Que.	May 24	34	Electrocuted.
Electrician	Valois, Que.	June 7	28	Switch box ignited—burned.
Helper with power commission	Port Hope, Ont.	" 15	27	Electrocuted.
Lineman	Sault Ste. Marie, Ont.	" 28	47	Grasped live wire—electrocuted.
Telegraphs and Telephones:				
Telephone line worker	Reston, Man.	May 30	27	Crushed by load of poles when upright stakes broke.

Fatal Industrial Accidents in Canada During the Second Quarter of 1926—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
Service—				
Public Administration:				
Labourer (Dept. Railways and Canals)	Trenton, Ont.	April 10	.....	Struck by plank.
Civic labourer	Guelph, Ont.	" 15	55	Killed on city truck while riding to work.
Policeman	St. Lambert, Que.	" 16	35	Died of syncope after chasing crazed man.
Civic lineman	Montreal, Que.	" 23	45	Repairing street light—electrocuted.
First officer on light ship	St. Roch des Aulnais, Que.	May 15	.....	In boat with load of provisions which capsized in heavy sea.
Sailor	St. Roch des Aulnais, Que.	" 15	.....	
Rural letter carrier	Lindsay, Ont.	" 19	61	Buggy caught fire—victim burned fatally.
Labourer with municipality	Douglas, Ont.	" 29	.....	Explosion.
Labourer	Montreal, Que.	June 14	52	Repairing pavement when struck by motor truck.
Penitentiary guard	Stoney Mountain, Man.	June 25	45	Excavating for foundation—struck by rock from delayed charge.
Labourer with municipality	Mountain Grove, Ont.	" 28	47	Explosion.
Custom and Repair:				
Employee of wrecking co.	Gross Isle, Man.	June 5	.....	Driving tractor to repair shop when steering gear broke; tractor overturned, crushing driver.
Recreational:				
Circus employee	Mikado, Sask.	June 29	.....	Fell off circus train.
Personal and domestic:				
Companion (female)	Kingston, Ont.	Apr. 4	72	Gas oven exploded igniting clothing.
Maid in hotel	Montreal, Que.	May 11	38	Slipped in elevator—leg torn off.
Elevator operator	Windsor, Ont.	" 24	36	Fell down elevator shaft.
Janitor in apartment house	Ottawa, Ont.	June 12	62	Fell down unlighted cellar stairs, striking head on floor.
Elevator man	Montreal, Que.	" 17	45	Caught between elevator and floor.
Professional:				
Journalist	Hudson, Ont.	May 16	20	Drowned paddling to Red Lake.
Journalist	Hudson, Ont.	" 16	23	
Trade—				
Retail:				
Labourer with coal co.	Toronto, Ont.	May 17	38	Coal fell on foot.
Truck driver	Windsor, Ont.	June 22	27	Burned to death, following ignition of gasoline flowing over hot engine.
Wholesale:				
Labourer	Sault Ste. Marie, Ont.	June 28	56	Fell from coal tramway to dock—Injured internally.
Unclassified—				
Driver	Montreal, Que.	Apr. 28	21	Fell from waggon.
Night watchman	Montreal, Que.	May 4	50	Asphyxiated by gas fumes.
Labourer	Montreal, Que.	June 24	45	Lifted heavy bag—syncope.

Second Supplementary List of Fatal Accidents Occurring in 1925

Logging—				
Logger	Near Longworth, B.C.	Nov. 11	55	Struck by falling tree.
Mining, non-ferrous Smelting and quarrying—				
Coal Mining:				
Mine brakeman	Premier, B.C.	Oct. 26	30	Jammed between mine car and chute.
Metalliferous Mining:				
Labourer	Kirkland Lake, Ont.	Aug. 28	48	Silicosis.
Manufacturing—				
Iron, steel and products:				
Labourer	St. Catharines, Ont.	Ont. 7	44	Grinder's phthisis.
Leather, fur and products:				
Glove cutter	Waterloo, Ont.	Nov. 6	16	Fell down dumb waiter.
Pulp and paper products:				
Broke beaterman	Ocean Falls, B.C.	Dec. 31	18	Fell into broke beater.
Transportation and public utilities—				
Steam Railways:				
Asst. fireman	Gloucester Co. N.B.	Dec. 19	16	Burned when boiler burst.

SUPPLEMENTARY LIST OF FATAL ACCIDENTS OCCURRING IN THE FIRST QUARTER OF 1926

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—				
Faller	Alleo, B.C.	Mar. 22	56	Hit by tree kicking back when struck by falling tree.
Logger	Webster's Corner, B.C.	Mar. 23	17	Had legs mutilated when caught between log and choker line.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Coal mining:				
Miner	River Hebert, N.S.	Mar. 8	.....	Struck by fall of coal.
MANUFACTURING—				
Saw and Planing Mills:				
Labourer	New Westminster, B.C.	Feb. 19	41	Piling cedar, sliver entered finger—septicaemia
TRANSPORTATION AND PUBLIC UTILITIES—				
Water:				
Day watchman	Victoria, B.C.	Mar. 10	68	Slipped while stepping from one boat to another and fell on deck.
UNCLASSIFIED—				
Night watchman	Kings Co., N.B.	Mar. 2	52	Fell against coal gates on tender.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Jurisdiction of Workmen's Compensation Board

The Manitoba Court of Appeal dismissed the further appeal of the plaintiff in the case of *Foster versus the Canadian Pacific Railway Company,* which was outlined in this section of the LABOUR GAZETTE for April, 1926. The plaintiff in this case was a married woman, the daughter of an employee of the railway company who was fatally injured in the course of his employment. She brought action against the company for damages on behalf of herself and her sisters, also married and over 21 years of age. As the action was not taken under the Workmen's Compensation Act, defendant company made an application to the Board under section 50 (4) of the Act which provides as follows:

"Where an action in respect of an injury is brought against an employer by a workman or a dependent, the Board shall have jurisdiction upon the application of any party to the action to adjudicate and determine whether the action is one the right to bring which is taken away by this Act; and such adjudication and determination shall be final and conclusive, and if the Board determines that the action is one the right to bring which is taken away by this part, the action shall be forever stayed."

The Board decided that the right to bring the present action was taken away. The Court of King's Bench accordingly ordered that the action be stayed, holding that the Act conferred on the Board final authority to decide whether or not action could be taken by a dependent under another act. The Court of Appeal dismissed the further appeal of the plaintiff. The question having been raised whether the plaintiffs were "dependents" of the deceased workman, the Appeal Court held that by section 46 of the Workmen's Compensation Act the Board was given exclusive jurisdiction to determine all "matters and questions," including "the existence of dependency." This section provides moreover that

the action or decision of the Board thereon shall be final and conclusive and shall not be open to question or review in any court, and no proceedings by or before the Board shall be restrained by injunction, prohibition or other process or proceeding in any court or be removable by *certiorari* or otherwise into any court.

The appeal was therefore dismissed with costs.

—*(Manitoba—Foster versus Canadian Pacific Railway Company)*

Liberal Construction to be Given Provision of Mechanics' Lien Act

A farmer obtained from a dealer the materials required for constructing a house on a quarter-section owned by him. He subsequently moved the house to adjoining land which was owned by his wife. Some time after the removal the dealers filed a mechanics' lien, the farmer's own land being named in the claim. When the claim was filed the plaintiffs were aware that the building had been moved to the wife's land. They sued both the husband and the wife to enforce the lien, and asked for a declaration that they had a lien in the estate of the wife for the whole amount of the materials furnished both before and after the removal of the house. The County Court dismissed the

action as against the wife, and the plaintiffs appealed. The husband had not defended the action and the trial judge reserved judgment as concerned the claim made against him.

The Court of Appeal allowed the appeal with costs, holding that while a person claiming a mechanic's lien must show that the lien which he claims is clearly within the statute, yet when once the existence of the lien is established the statutory provisions dealing with its enforcement, being remedial, should be given a liberal and beneficial construction.

It was further held that where a person against whose land a mechanics' lien is enforceable has never agreed to pay interest on the price of the materials for which the lien lies, the lien holder is entitled to add interest thereto only at the legal rate of five per cent, and where no demand in writing for interest has been made prior to the beginning of the action to enforce the lien, the interest runs only from the time the writ of summons was served on such person.

—(Saskatchewan—Fitzgerald and Powell versus Apperley and Apperley)

Limit of Liability of Directors for Wages

A company incorporated under the Dominion Companies Act had a branch in Manitoba, the branch being under the control of one who signed himself "director in charge," but was not authorized by the company to assume that title. An employee of the branch brought action in the High Court of Justice at Toronto against the directors of the company under section 85 of the Companies Act, for wages alleged to be due to the plaintiff and to three other persons whose claims had been assigned to him. Section 85 declares that directors of a company shall be jointly and severally liable to the clerks, labourers, servants, and apprentices thereof for all debts not exceeding 6 months' wages for services performed for the company while they are such directors respectively, but that no director shall be liable to an action therefor unless the company is sued therefor within one year after the debt becomes due, nor unless the director is sued therefor within one year from the time when he ceased to be such director, nor unless an execution against the company in respect of such debt is returned unsatisfied in whole or in part.

The court found that the dealings of the plaintiffs had been solely with the so-called "director" in Manitoba, and not with the actual directors who were in Ontario. "There was no positive evidence that the claimants contracted with or were engaged by any representative of the company to whom the company's records gave authority to act for it in such matters." The court further found that the statutory liability of directors should not be imposed upon the defendants upon evidence so inconclusive as that which had been submitted. Failure to recover would be a hardship upon the claimants, but that of itself was not a sufficient ground for relief. Moreover the evidence did not indicate that the plaintiffs were "clerks, labourers, servants, or apprentices." The action was therefore dismissed with costs.

—(Ontario—Young versus Dannecker)

Blacksmith Shop not a "Factory" Under Quebec Workmen's Compensation Act

A blacksmith in the Province of Quebec employed two horse-shoers, one of whom sustained the loss of an eye in the course of his work. When the injured man brought action for compensation the question arose whether or not the Workmen's Compensation Act of the Province applied to a blacksmith establishment in which the employer and his two assistants were occupied in shoeing horses. The Superior Court at Montreal held that the expression "factories, manufactories or workshops" as used in the Act could not be interpreted as including such an establishment. "Workshops (ateliers)," the judgment stated, "are intended to describe establishments of the same nature or class as factories or manufactories, to wit, places operated for the transformation of raw material into finished material." A horseshoe shop could not, it was held, be brought under this category. The plaintiff's claim was therefore dismissed with costs.

—(Quebec-Lesperance versus Howard)

Dominion and Provincial Jurisdiction

A decision which was based to some extent on the recent decision of the Judicial Committee of the Privy Council in respect to the validity of certain provisions in the Industrial Disputes Investigation Act, 1907, was rendered in the Alberta Supreme Court on June 10 by Mr. Justice Boyle in the case *Dowsett versus Edmunds*. This was an action in damages for injuries from assault, and the question to be determined was whether or not section 734 of the Criminal Code is within the powers of the Dominion Parliament by virtue of the British North America Act. Section 734 purports to give immunity from civil action to persons convicted of, or tried and acquitted on the charge of, common assault. It will be recalled that section 91 of the British North America Act defines the legislative authority of the Parliament of Canada, and section 92 defines the exclusive

powers of the provincial legislature. Judge Boyle said:

"Shortly after the consummation of the Confederation there arose a legal school of thought in Canada holding the theory that the powers enumerated in section 91 of the British North America Act had greater potency than those designated in section 92 and that section 91 should be construed to mean that the Dominion could, if Parliament deemed it in the public interest of the whole country, pass legislation having an over-riding effect on provincial legislation and thus occupy fields allocated to the Provinces under section 92. I need not take time and space to discuss this theory as a very full elaboration of it will be found in the judgment of Judge Anglin, now Chief Justice of Canada, in the Supreme Court of Canada in *re* Board of Commerce Act and Combines and Fair Prices Act (1920)*."

The judgment points out that there was not much in early Privy Council decisions to lend strength to the theory referred to. The Board of Commerce case seemed to dispose effectually of the extra-potency or Dominion over-riding theory. But the theory was strong enough to persist in the case of *Toronto Electric Commissioners versus Snider* (involving the question of the validity of certain sections of the Industrial Dispute Investigation Act). On appeal, however, the judgment of the Ontario Supreme Court† was reversed in the Privy Council,‡ Viscount Haldane defining the limits of Dominion powers under the head of Criminal law.

Proceeding, Judge Boyle said: "If the Parliament of Canada can deprive the innocent victims of crimes of their civil remedies against criminals merely on the ground that it is within the scope of the criminal law to add special civil rights by way of immunities to criminals merely because they are such, and to take away civil rights of innocent persons because that civil remedy is against a criminal, then it can protect the man who commits arson from being sued in damages for compensation for losses due to his crime; the owner of a horse can be prevented from recovering it from the thief; the swindler can be protected from suit to recover money or land or goods obtained under false pretences; the man who injures another while driving a car, while intoxicated, and the man guilty of manslaughter can be given immunity from civil action. In fact there are few criminal acts that do not give rise to a civil action at law to some person suffering injury either in person or property.

"In deciding this question I think we must first examine as to whether or not the Province could enact this legislation under its powers over property and civil rights enumerated in section 92. I think it is quite clear that it could. It is in my view very clearly a civil right of action in damages for personal injuries, and the fact that the action is against a criminal and the damages sought to be recovered the result of his criminal act surely does not oust the jurisdiction of the Province to bar the civil remedy if the Legislature were to so enact. It seems to me that its jurisdiction could not be questioned unless it be that the Dominion has power to confer special civil rights on a person because that person has been adjudged a criminal or has been tried and adjudged not a criminal. It seems to me that the Province could pass this legislation barring this civil remedy and be quite within its powers and therefore, following the recent Lemieux Act decision, *Toronto Electric Commissioners versus Snider, supra,* it is, in my opinion, beyond the power of the Dominion as being an attempt to infringe on provincial rights.

"It seems to me that Parliament had in mind that it had fixed the punishment sufficiently high for common assault that the offender should not suffer further by being required to repair his wrong in a civil action at the instance of the person injured; and that, no doubt, was the view taken by the English Parliament from whose legislation this provision was copied; but in my opinion the Canadian Parliament was not in the same position to deal with civil rights and remedies as the Imperial one. The Canadian Parliament could, no doubt, have eliminated common assault altogether as a crime or criminal offence and left injured persons merely to their civil remedy in damages to be dealt with by the Provinces under section 92, or it could have imposed a milder penalty; but I fail to see how it can fix a penalty and at the same time take away a civil remedy of an innocent person for fear the offender might suffer further by being required in a civil suit to right his wrong. Our scheme of division of powers has its advantages and disadvantages, but the recent decision of the Privy Council leaves it beyond doubt that the Parliament of Canada cannot legislate in the fields allocated to the Provinces merely because it thinks the legislation in the interests of all of Canada, or in the interests of common justice."

Section 734 was therefore held to be *ultra vires* the Dominion Parliament " because it is not criminal legislation but legislation dealing with property and civil rights and could be enacted by the provincial Legislature but not by the Dominion Parliament."

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] SEPTEMBER, 1926 [NUMBER 9

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

AT the beginning of August there was a further increase in employment as reported by employers having a minimum of fifteen employees in all industries (except agriculture and fishing, which are not included) the situation continuing to be better than at any other period since 1920. Returns were received by the Dominion Bureau of Statistics from 5,864 firms with 854,604 employees, as compared with 849,565 on July 1. The employment index number (with the number employed by the reporting firms in January, 1920, as 100) stood at 104.2, while in the preceding month it was 103.7, and on August 1, 1925, 1924, 1923, 1922 and 1921, it was 96.3, 94.7, 100.2, 93.1 and 88.9, respectively. Reports received from the offices of the Employment Service of Canada indicated little change in the volume of business transacted in July, 1926, the trend however being upward as the month closed; but there was a marked increase as compared with the returns for the corresponding month of 1925. At the beginning of August the percentage of unemployment among members of local trade unions stood at 2.3 as compared with percentages of 4.1 at the beginning of July, 1926 and 5.2 at the beginning of August, 1925. The percentages for the month under review are based on returns received by the Department of Labour from 1,487 local trade unions with a combined membership of 140,256 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.10 at the beginning of August, as compared with $11.07 for July; $10.84 for August, 1925; $10.19 for August, 1924; $10.53 for August, 1923; $10.44 for August, 1922; $11.44 for August, 1921; $16.42 for August, 1920; $16.92 for June, 1920 (the peak); $13.41 for August, 1918; and $7.68 for August, 1914. On wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined to 153.9 for August, as compared with 156.2 for July; 158.9 for August, 1925; 156.8 for August, 1924; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; 256.7 for May, 1920 (the peak); and 202.8 for August, 1918.

The time loss caused by industrial disputes in August was less than during the previous month and less than during August last year. Fourteen disputes were in progress at some time during the month, involving 2,617 employees, and resulting in the loss of 49,115 working days. Corresponding figures for July were as follows: nineteen disputes, 11,208 workpeople and 52,141 working days; and for August, 1925, twenty disputes, 13,430 workpeople and 112,524 working days, due chiefly to a dispute in the coal mining industry in Nova Scotia.

Industrial Disputes Investigation Act, 1907

During August a Board of Conciliation and Investigation was completed in connection with a dispute between the Canadian Pacific Railway Company and the Canadian National Railway, on one side, and certain employees, members of the Order of Railway Conductors, and of the Brotherhood of Railroad Trainmen, on the other side. Advice was received by the Department that the award of the Board in the case of the dispute between the Winnipeg Electric Company and its motormen and conductors had been accepted by the parties concerned. The text of the award was given in the last issue of the GAZETTE.

Combines Investigation Act, 1923

On page 857 of this issue will be found an outline of the report of the special commissioner appointed under the Combines Investigation Act, 1923, to inquire into a combine alleged to exist among the dealers in fruits and vegetables in Ontario.

Labour Legislation in Canada in 1925

The Department of Labour of Canada has just published in its legislation series the text of the various acts affecting labour which were enacted in 1925 by the Dominion Parliament and the legislatures of the several provinces. This is the fifth annual supplement to the volume "Labour Legislation in Canada as existing on December 31, 1920," published

by the Department in 1920. A cumulative index to the series, contained in the present volume, provides a guide to all the labour legislation enacted in Canada up to the end of 1925, and the whole series, including the volume of 1920 and the four supplements, contains the body of existing Dominion and Provincial laws affecting labour.

The latest supplement contains a general summary of last year's legislation, which included the Dominion act amending the Industrial Disputes Investigation Act, 1907, limiting the application of the act to disputes not within provincial jurisdiction, and at the same time enabling any province to pass legislation bringing such disputes within the sphere of the federal act. One province, British Columbia had already passed such legislation in 1925, and similar measures were taken during the present year by Saskatchewan, Manitoba, New Brunswick and Nova Scotia. The Industrial Peace Act of Nova Scotia introducing the compulsory principle in regard to the settlement of industrial disputes, was another important measure of the year. However, Part II of the act, containing this special feature, never became operative and the whole act has since been repealed (see page 863). One of the most important measures of the year was the male minimum wage act of British Columbia. In the field of Workmen's Compensation an act was passed in Manitoba changing the rate of compensation payable in respect to the children of a deceased workman, introducing the principle of vocational training for partially disabled workmen, providing for the payment of compensation to foster mothers, etc. Various changes were made also in the compensation acts of Quebec, Alberta and British Columbia. The legislation of the year included amendments to the Mine Acts of British Columbia, Alberta and Nova Scotia; the re-enactment of the Minimum Wage Act of Alberta and amendments to the acts of Manitoba and Quebec.

Effects of eight-hour day legislation in British Columbia

The Board of Adjustment under the British Columbia Hours of Work Act, in their report on the operation of the Act during the first year, remark that "the 8-hour day certainly has not had the dire effect predicted by some of its critics prior to its being put into effect, to which expression was given in press comments in 1923, and in arguments submitted to the Cabinet while this legislation was before the House. Information received by the Department recently has proven that the eight-hour day has actually been the cause of reducing cost of production in various industries. The reason for this is that, in order to comply with the Act, a complete reorganization of systems was found necessary and more efficient methods have been worked out. This reorganization has been accompanied in some cases by a very substantial decrease in the number of Orientals employed. While it was formerly the policy of a large number of employers in the Province to bolster up production by cheap labour and long hours, there is no doubt that the shorter day has tended gradually to bring about improved methods. More up-to-date machinery is being installed, and it has been found that, with the employment of a superior class of labour, it is possible to equal the production of the longer day."

Further reference to the Board's report is made in the outline of the report of the British Columbia Department of Labour for 1925, on page 866 of this issue. The act now affects about 70,000 employees in the Province.

Progress of minimum wages for women

Practically all occupations that are followed by women in the Province of Ontario are now covered by orders of the Minimum Wage Board. These orders are now reprinted by the Ontario government in convenient form in a pamphlet of 14 pages. Forty-two orders in all have been issued during the five years of the operation of the Minimum Wage Act. These orders are grouped under various headings as follows:—Laundries, dye-works and dry cleaning establishments; retail stores; telephones; factories; office workers; hotels, restaurants and refreshment rooms; custom millinery; hair dressing or manicuring establishments, beauty parlours, etc. The minimum rates established by these orders vary according to district, the highest rates being in the largest centres of population and the smallest in villages and country districts. Reductions from the minimum rate are allowed to inexperienced adults and young girls graduated according to their proficiency as learners. The Board consists of five members, including the chairman, Dr. J. W. MacMillan, and the employees and the employers are equally represented, one representative of each of these classes being a woman. Each of the orders has been framed with the assistance of representative employers and employees, and each order, moreover, was considered at a public hearing before it was finally adopted.

In a preface to the reprinted orders the Board points out that "the lines drawn by the orders are not wage-rates but wage-limits. They protect wages from becoming subnormal, while leaving the whole region above these lines for the free play of wage-bargaining and

the opportunity for promotion. Most employers, we find, do not need to be forced to pay wages above these lines, and thus an important result of the Board's activity is to protect firms of the better sort from those competitors who would, if allowed to do so, cut wages below the line of living costs. The wage-limits have been reached through studies of the actual costs of living in the several districts of the province. They are subject to annual revision by the Board."

Another recent publication of the Board contains the text of the Minimum Wage Act, with amendments, and the Regulations issued in accordance with section 18 of the Act. A review of the fifth annual report of the Board is given on another page of this issue. This report states: "We look forward to the day when all Canadian women who work for wages shall be protected in their livelihood. We are already on excellent if informal terms with the Boards of other Provinces, and find that they like us are ready, as soon as is found practicable, to consider the question of interprovincial co-operation in minimum wage administration."

Proposed minimum wages for fruit-pickers

The General Superintendent of the British Columbia Employment Service, in his report for 1925, suggests that the minimum wage act of the Province should be extended to include berry pickers. At present the work of picking in the fields and orchards is excluded, only employees in jam and vegetable canneries, or in fruit packing and shipping houses, being covered by regulation. From the experience of the Employment Service offices with the fruit-picking problem, it appears as though the only solution, in the interests of the growers who offer the highest rates and best living conditions, is to apply the Minimum Wage Law to this industry. This would discourage the practice of engaging help in advance of the time the fruit is ready to pick and hiring more pickers than can earn the minimum wage at the piecework rates offered, on account of insufficient fruit ready for picking. The money spent by growers for newspaper advertising and in providing special attractions would go a long way towards meeting any additional cost incurred under this plan, and the knowledge that a minimum wage would be paid would attract an older and more satisfactory class of women as pickers, with a reduction in loss of fruit and a decrease in expense for supervision. Another suggested scheme is for the growers to fix a minimum wage through their associations, and if the organizations are sufficiently strong to enforce discipline among the members, this plan is said to be as effective as the application of the Statute. The farmers' organizations in the Prairie Provinces have been following it for several years past, and if a member pays below the minimum agreed upon, he has difficulty in obtaining help and is taken to task by other members in the district for bringing the district into disrepute and adversely affecting their labour-supply. The Employment Service has forwarded 30,000 men under this arrangement, and the total complaints in four years have not exceeded twenty in number.

Women's attitude to protective legislation

The introduction of the Lead Paint (Protection against Poisoning) bill, 1926, into the British House of Commons, was noted in the July issue of the GAZETTE (page 693). Among other provisions the bill restricts the employment of women and children, especially in building. Prominent public women have protested against this discrimination, which is said to mean "shutting women out of a well-paid trade and forcing them into lower and possibly less secure employment." In a letter addressed to the London *Times* they say: "The policy of the International Labour Office —and it is reflected in national labour legislation—has been to treat women as a class apart, without the same personal rights as men; and it becomes increasingly important that women should keep constant watch on this insidious tendency to restrict under the guise of protecting. Associations and individuals should get this matter clear to themselves, and then should make their opinion on it clear to those members of the House who are about to consider the Lead Paint Bill."

The question of "equal rights" for women in relation to protective labour legislation has been the subject of recent discussions in the United States (LABOUR GAZETTE, April, 1926, page 308; June, page 531).

Employment and wages of men and women in factories

A study of the employment and earnings of male and female employees in factories in the State of New York is made in a special Bulletin recently published by the State Department of Labour. The collection of separate figures for men and women was begun in 1923. It was found that women furnish an extra large proportion of the workers in the irregular or satellite industries and in those industries where the development of highly industrialized organization has pro-

ceeded to only a slight degree. They furnish also a large share of the irregular forces in the more highly organized industries. "Perhaps the most impressive fact brought out in the study," the report states, "is the large reserve of labour necessary to maintain the working force that appears on the payrolls of each industry. . . . In this outer circle of the half-employed the proportion of women is relatively greater than that of men." The general impression that women are more irregularly employed in industry than men is borne out in the study. "Whether it is interpreted as a result of the occupations in which women are employed, a result of deep-rooted social prejudice, or the fact that women work more irregularly because of instability, lack of interest or home responsibilities, depends on one's antecedent convictions."

During the year 1924-25 the men in the factories of the State averaged just under $31.50 a week. The women averaged just under $17.50 a week. That means that women earned wages a little more than half as high as the wages paid to men. Little evidence was found to explain the lower earnings of women. "A few facts, however, stand out. Women receive the highest earnings in industries where they are organized, like clothing and publishing. They receive the lowest wages in industries located in small towns or in one-industry centres where the cost of living is lower and the possible alternative jobs are fewer."

Group Insurance for Employees of Canadian firm

Arrangements have been made between the Canadian Chewing Gum Company, Limited, of Toronto, and the Life Extension Institute and The Travellers Insurance Company for a co-operative group plan including certain benefits applicable only to those employees of the former company who have completed six months or more of service. The plan gives as its benefits the health service of the Life Extension Institute and life insurance and accidental death and dismemberment insurance with the Travellers Insurance Company, Hartford, Connecticut. The plan will go into effect as soon as 75 per cent of the total number of employees who have completed six months or more of service have, while actually at work, signed and filed written application. For all classes the benefits include health service and physical examination and life insurance. An annual medical examination is made of each member by the Life Extension Institute, a detailed report being supplied to each employee with recommendations for the care and improvement of his health, based on the results of the examination.

Employees are divided into four classes in respect to the benefits and dues under the group plan:—Class I employees, earning less than $1,000 per year; Class II employees, earning $1,000 to $1,999.99 per year; Class III employees, earning $2,000 to $2,999.99 per year; Class IV employees, earning $3,000 per year and over.

Life insurance for employees in Class I, begins at $500 for those with over six months' but less than one year's service, increasing $100 for each year of service until a maximum of $1,500 is reached in ten years. In Class II the amounts payable range from $1,000 to $3,000; in Class III, from $1,500 to $4,500; and in Class IV from $2,000 to $6,000. This insurance is payable to beneficiaries in the event of death from any cause, or to the insured person himself in case of permanent and total disablement before the age of 60 years. The cost of these benefits is 10 cents a week for employees in Class I, and 15 cents, 20 cents, and 25 cents a week for employees in the other classes, respectively. The employee is also insured against accidents causing death, dismemberment, or loss of sight. The amount payable for loss of life is $1,000; for loss of both hands or both feet or one hand and one foot, $1,000; sight of both eyes, $1,000; one hand or one foot, $500; or one eye, $500.

The Accident Insurance indemnity for loss of life is payable to the beneficiary named by the employee, if surviving the employee; otherwise to the estate of the employee; all other indemnities under the Accident Insurance are payable to the employee.

In addition to the services mentioned above a Visiting Nurse Service, such as is furnished by Visiting Nurses' Associations is available in localities where there are such associations.

Local planning to prevent unemployment

A study of employment conditions has been carried on at Columbus, Ohio, for the past five years, in order to discover a "basis of industrial and social planning," that would result in stabilization of employment and improvement in economic and social conditions in the city. The investigation was begun in response to a suggestion made at the President's Conference on Unemployment in 1921, that each community should undertake to meet its own unemployment problem. Accordingly the mayor of Columbus, Ohio, organized an Emergency Unemployment Committee, composed of leaders in the community from the field of industry, labour, commerce and finance. The results of the inquiry are

given in Bulletin No. 409 of the United States Bureau of Labour Statistics. The report points out that Columbus is a city of diversified industries largely managed and owned locally. The diversity of industry tends to minimize extreme fluctuations in employment conditions affecting the community as a whole. The fact of local control is conducive to a definite acceptance of responsibility on the part of employers and has led to adoption of the policy of pushing plant improvements in times of depression, and to other methods of stabilizing employment on the part of several of the larger firms. The result of this practice is seen in the unusual amount of part-time work reported in 1924, a number of firms having retained a large proportion of their force on part-time work in preference to a smaller proportion on full time.

Figures such as those presented in this study it is pointed out, are of especial value in connection with social planning for a community. With the aid of data concerning unemployment, the social agencies in the city are able to plan their work and estimate their needs in advance. By a comparison with past years, especially when the causes and duration of unemployment are known, it is possible to make a reasonable estimate concerning the requirements of a coming winter in terms of previous winters.

The average employment status at Columbus for the five years, per thousand males enumerated, was 823 employed full time, 83 employed part time, and 94 idle. The average employment status per thousand females enumerated was 838 employed full time, 112 employed part time, and 50 idle.

Inquiry into falls of roof in coal mines in United States

The United States Congress, in considering the annual appropriation for the Department of Commerce, recently voted an additional sum of $7,500, to be expended in an investigation into the problems of falls of roof in coal mines. Mr. J. W. Paul, formerly chief coal mining engineer of the United States Bureau of Mines, and chief of the mining section of the Pittsburgh Experimental Station, has been appointed senior investigator. He will be assisted by Mr. John N. Geyer, also of the Pittsburgh Station. The fact that falls of roof and coal cause approximately half of the fatal accidents to men employed underground in the coal mines of the United States shows the serious nature of this problem. Most of the falls are stated to occur while the miners are loading coal on the cars or while they are engaged in cutting or barring down the coal.

Proposed State family allowances in New Zealand

The Government of New Zealand has introduced in Parliament a bill to provide assistance for large families with small incomes. It is proposed to pay two shillings weekly from State funds for each child in families of more than two children, until the child has reached the age of fifteen, payment to be limited to cases where the family income from all sources does not mount beyond £4 a week. There is a proviso that the allowances must be paid to the mothers, and a further proviso that the money must be used for the benefit of the children.

Some opinions on the questions involved in family allowances have been quoted in recent issues of the Labour Gazette (May, 1926, page 427, etc.) Organized labour has objected to family allowances as hitherto proposed on the ground that the system would tend to depress the level of wages, that the allowances must eventually be paid by labour, and that they would be used against the employees in case of strikes. Labour has therefore shown a preference for a system in which the expenditure would be met by the State rather than by the industry concerned. This principle is embodied in the New Zealand bill.

National insurance proposals in Australia

A Royal Commission was appointed in 1924 in the Commonwealth of Australia to inquire into the subject of National Insurance as a means of making provision for casual sickness, permanent invalidity, old age and unemployment; the operation of maternity allowances, etc. In their second progress report, issued in August, the Commission dealt with the question of unemployment, reaching the conclusion that the volume of unemployment may be reduced by means of joint action by the government and organized labour. They recommend that a council representing the government employees' organizations and trades unions should be constituted for the following purposes—To establish a national system of unemployment bureaux throughout Australia; to regulate and supervise the existing private labour exchanges; to collect, tabulate and analyze detailed statistical data relating to supply and demand with regard to the various industries throughout the year; to conduct special inquiries relating to the causation of unemployment; to co-operate with private employers and the government departments and local authorities in order to provide avenues of employment and regulate the demand for labour; to co-operate with the

educational departments in instituting an effective and extensive system of technical training; to co-operate with the immigration department with respect to the employment of immigrants; and to furnish regularly detailed information with regard to the trend of employment.

The commission's report also recommends that a system of unemployment insurance should be instituted.

In their first report, published last year, the commissioners recommended—

(*a*) that a National Insurance Fund be instituted which will provide for the payment of sickness, invalidity, maternity and superannuation benefits to insured members; and (1) that membership of such fund be compulsory; (2) that a sickness benefit of 30 shillings per week be payable to adult insured members during the first six months when incapacitated for work as the result of sickness; (3) that a sickness benefit not exceeding 20 shillings per week be payable to insured members under 21 years of age during similar incapacity; (4) that equivalent benefits be payable to insured members when incapacitated for work as the result of accident, and that the question of including workers' compensation legislation under the National Insurance Fund administration be fully considered; (5) that an invalidity benefit of 20 shillings per week be payable to insured members during that period when incapacitated for work as the result of sickness or accident extending beyond six months' duration; (6) that a maternity benefit of 20 shillings per week be payable for a period of two weeks prior to and for four weeks after the confinement of a female insured member or the wife of an insured member; (7) that, as the cost of the existing maternity allowance is at present borne solely by the Commonwealth this responsibility should continue with respect to the maternity benefit provided under the National Insurance Fund; (8) that a superannuation benefit of 20 shillings per week be payable to male insured members after attainment of age 65 and to female insured members after attainment of age 60; (9) that the existing rights of pensioners under the *Commonwealth, Invalid and Old-age Pensions Act* 1908-23 should not be interfered with; (10) that a child allowance of 5 shillings per week, in respect of each dependent child under age 16, be payable to the insured member when incapacitated for work;

(*b*) that a National Health Scheme be instituted which will provide adequate medical treatment for the people, and which will provide the requisite machinery for the prevention of sickness and accident, and (1) that such scheme be dissociated from the administration of the National Insurance Fund; (2) that the functions and objects of the Health Department be extended in such manner as will enable provision to be made as early as possible for the effective supervision of adequate medical services, especially with respect to maternity treatment.

President R. E. Dickie of the Canadian Lumbermen's Association, writing in the *Canada Lumberman,* reviews the work accomplished by the Association on behalf of the industry. He mentions particularly the adoption by the Association of the principle of arbitration in industrial disputes. "None of us like disputes, but with the best of intentions they sometimes arise, and to my mind the first and most satisfactory way to settle, is to put the case in the hands of fair and disinterested men who know the business; this method usually results in a just decision and the cost is low."

The coal production of British Columbia for the first half of 1926 was 1,062,343 long tons, and the coke production was 52,335 long tons. Corresponding figures for the same period of 1925 was 1,173,102 tons, of coal, and 45,508 tons of coke.

The twelfth annual report of the Commissioner of Co-operation and Markets of Saskatchewan gives particulars of the standing and activities of the various agricultural co-operative associations in the province. The co-operative activities promoted by the provincial Department of Agriculture include live stock marketing; poultry marketing; community sales days; potato marketing; beef rings; community grazing associations and community halls. The report notes a large increase in the number of applications for the incorporation of community halls, indicating a desire on the part of farmers for permanent housing accommodation for community work.

Organized labour's first radio station—WCFL—operated and owned by the Chicago Federation of Labour, has been opened on Municipal Pier, Chicago. The station was opened with addresses by Victor Olander, secretary-treasurer of the Illinois State Federation of Labour, and John Fitzpatrick, president of the Chicago Federation of Labour. The purpose of WCFL is to familiarize the public with the aims of the labour movement.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of August was as follows:—

In the Province of Nova Scotia the crops, which were in most parts satisfactory, provided employment for additional workers. The fishing industry was active and reported catches good. Storms however caused heavy damage to vessels and equipment and 48 men were reported as lost on the fishing banks during heavy gales. There was an average demand for workers in the logging industry, but in many instances it was difficult to secure workers owing to adverse conditions in the woods at this time of year and also to the fact that men preferred to work in the hay fields. Highway and building construction continued fair, with some new work opening up. The outlook in manufacturing, especially in the iron and steel industries, showed improvement and staffs were in most instances working full time. Coal mines, for the most part, reported steady time, while salt mines reported as working to capacity. Both trade and transportation were brisk.

Good crops were reported in New Brunswick and the supply of produce at the city market was abundant. The fishing industry reported conditions as favourable. Logging was somewhat quiet, though preparations for the opening of camps were under way. Construction work in all lines was proceeding satisfactorily. Manufacturing in the woodworking industries was quiet, owing to seasonal curtailment, while that in other industries was fairly good. Transportation was brisk and trade continued good.

The request for farm hands in Quebec decreased considerably, due to the completion of the haying season, but there was a continued demand for logging and lumber workers, especially around Montreal and Quebec. Manufacturing industries continued to show activity; boot and shoe establishments in Montreal were busy and the situation in Quebec somewhat improved, though an industrial dispute was still in existence in that city. Employment in the rubber, textile and metal trades remained steady, and greater activity was reported among the printing tradesmen. Building construction was in much greater volume throughout the Province, bricklayers, plasterers and joiners being in greatest demand. Trade showed much improvement.

From Ontario a continued general improvement was reported. Local farms absorbed substantial numbers of workers, while harvest excursions to Western Canada created a shortage of farm labour in some districts. Though stock taking, as during last month, still continued to affect the manufacturing industries in some instances, yet the situation as a whole throughout the Province was reported as very favourable. Building and construction in all branches showed increased activity, very few skilled mechanics being reported as unemployed. Preparations for the opening up of logging camps in the northern sections still further assisted in improving conditions in that section of the country, the demand for bushmen in some districts being greater than the supply. The situation in the mining industry showed little change from that of the preceding month, normal demands for mine labour being received.

The demand for farm workers in Manitoba was large and reduced considerably the number of those locally unemployed. In some districts the supply just about equalled the demand, while in others there was a shortage of workers available. Activities in building and railway construction continued steady, though labourers preferring employment in the harvest fields somewhat interfered with railway development. There was a normal demand for farm domestics, but applicants were scarce. Trade showed little variation.

There were exceedingly heavy demands for harvest workers in all sections of Saskatchewan with some localities reporting orders far in excess of applicants. As in Manitoba, outdoor work requiring the services of unskilled labour was interfered with by men preferring harvest work. The logging industry was quiet and the few orders received for workers were easily filled. There was a great call for domestic workers, especially for farms.

As in Manitoba and Saskatchewan a heavy demand for harvest help featured the Alberta situation. Though as yet the peak of the harvesting operations had not been reached, conditions throughout the Province were good but it was thought that the labour supply would not be nearly sufficient for the estimated need. Building operations were brisk with nearly all tradesmen employed and railway construction also absorbed its quota of the unemployed. The logging and coal mining industries remained quiet with prospects, however, of increased activity in both groups in the near future. Demands for women domestics remained steady.

The exodus of harvest workers from the Province of British Columbia to the Prairie Provinces lessened unemployment in the former. Favourable conditions prevailed throughout the fruit lands with sufficient labour available for the needs. The logging and lumbering industries were fairly quiet, though conditions in this group were expected to improve with the menace of forest fires practically at an end. Mining also remained steady, and prospects for the coming season appeared fair. Construction showed some improvement, much of the work offered, however, was of a temporary nature. Manufacturing was normal and all lines were reasonably busy. Conditions in general throughout the Province seemed appreciably more satisfactory.

EMPLOYERS' REPORTS.

A further increase in employment took place at the beginning of August, according to information from 5,864 firms tabulated by the Dominion Bureau of Statistics; they had 854,604 workers, or 5,039 more than on July 1. Conditions continued to be more favourable than in any other month since 1920.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics Except Where Noted)

		1926			1925

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending Aug. 28, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

In the Maritime Provinces, Quebec and British Columbia improvement was recorded, but in Ontario and the Prairie Provinces there was a slight falling off in employment. In the Maritime Provinces, construction, particularly road work, transportation and iron and steel reported heightened activity, while coal mining was slacker and there were seasonal losses in fish canneries and logging. In Quebec, manufactures, mining, communication, trade and construction registered increases in the number employed, those in the last named being largest. Logging and shipping showed the only marked declines, although some slackening was indicated in iron and steel and textiles, partly owing to shutdowns for holidays and inventories. In Ontario, the most outstanding changes were the declines in iron and steel plants and in railway construction. There were also further losses in logging. On the other hand, food, pulp and paper, rubber, textile and lumber factories showed improvement, as did mining, building and highway construction. In the Prairie Provinces, railway construction reported a slowing up and there were also seasonal losses in logging and coal mining. Transportation, services and manufacturing, however, afforded more employment. In British Columbia, improvement was again recorded; manufacturing, especially the canning and related industries, construction, services and trade registered increased activity, while there were further seasonal losses in logging.

Six of the eight cities for which separate tabulations are made showed increases in personnel; Montreal, Quebec, Toronto, Hamilton, Winnipeg and Vancouver reported increased activity, while in Ottawa and Windsor employment declined. In Montreal, construction was considerably more active and manufacturing and trade were somewhat more so. On the other hand, shipping was slacker than at the beginning of July. In Quebec, manufacturing and building afforded more employment, but shipping showed a slight decrease. In Toronto, textile, printing and paper factories and construction recorded the bulk of the increase, although there also were reductions in work on telephones and in metal plants. In Ottawa, construction showed a comparatively small loss, while not much change was noted in other groups. In Hamilton, manufacturing and construction were busier, the general situation being better than in any other month since the record of the city was begun in 1922. In Windsor and the Other Border Cities, automobile works were somewhat slacker, as is usual at midsummer. In Winnipeg, employment again increased, chiefly in manufacturing, but also in communication. In Vancouver, there was a large advance in employment; food and tin can factories were seasonally active, while construction and trade also showed improvement.

There was a moderate increase in employment in manufactures. The greatest gains were in fruit and vegetable canning, while pulp and paper, lumber, non-ferrous metal products, rubber, clay, glass and stone, tobacco, textiles and electric current plants were also busy. Employment in iron and steel declined, but the losses were considerably smaller than on the corresponding date of 1925 and 1924. Fish canning also reported a seasonal falling off. In logging, continued seasonal contractions took place. Coal mining was slacker, but improvement was noted in metallic ore and non-metallic mineral mining. Communication, transportation, construction and maintenance, services and trade, on the whole, reported increased employment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of August, 1926.

TRADE UNION REPORTS.

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Returns tabulated from 1,487 labour organizations at the end of July with a combined membership of 140,256 persons showed that 2.3 per cent of the members were unemployed as compared with percentages of 4.1 at the end of June and 5.2 at the close of July, 1925. The improvement registered as compared with June was for the most part due to the strike situation existing in the garment trades of Montreal. As in accordance with the statement in the first paragraph of this article all the members who are on strike are excluded from our tabulations. Unions in Nova Scotia, Ontario, Quebec, Manitoba and Saskatchewan reported a better situation than in June, the gains with the exception of those registered in Quebec, however, being very slight. In the remaining provinces nominal reductions occurred. As compared with July last year unions in all provinces except Nova Scotia were afforded a greater volume of employment, the increase of 4.3 per cent

in both Quebec and Alberta being the most substantial. Reports received from 396 unions in the manufacturing industries with an aggregate membership of 35,728 persons showed an unemployment percentage of 3.2 as compared with 8.3 per cent in June and 8.5 per cent in July, 1925. The garment trades were really the determining factor for the group when compared with the returns for June, though contributing increases were also recorded among iron and steel, textile, glass and hat and cap workers, paper makers, printing tradesmen and metal polishers. On the other hand, somewhat less employment was afforded cigar makers, bakers, wood and leather workers. The coal mining situation in Nova Scotia was better than in June but in Alberta there was a nominal reduction in employment. In British Columbia as in June there were no idle members. Quarry workers in Nova Scotia also were fully employed. The building trades again reported an improved situation 3.6 per cent of the members being idle at the end of July as compared with 4.4 per cent in June. Carpenters and joiners, granite and stone cutters, steam shovel and dredgemen, tile layers, lathers and roofers, and plumbers and steamfitters all registered greater activity. Considerable unemployment was indicated among bridge and structural iron workers and lesser declines among bricklayers, masons and plasterers, electrical workers, painters, decorators and paperhangers, and hod carriers and building labourers. In comparison with July last year all tradesmen in the group with the exception of bridge and structural iron workers reported a higher level of employment. The transportation group as shown by the reports received from 602 unions with 55,914 members registered a slightly more favourable situation than in June, employment in both the navigation and steam railway divisions being in greater volume. Among street and electric railway employees and teamsters and chauffeurs conditions were somewhat similar to those reported in June. In comparison with July of last year unions in the transportation group registered improvement during the period under review due to a greater volume of work for steam railway employees. Retail shop clerks were fully employed. Theatre and stage and hotel and restaurant employees were afforded less work than in June, but the situation for stationary engineers and firemen improved slightly. Barbers reported the same percentage out of work as in the previous month. Fishermen were considerably slacker, but lumber workers and loggers again reported no idleness.

EMPLOYMENT OFFICE REPORTS

During the month of July, 1926, the offices of the Employment Service of Canada made 35,137 references to positions and effected a total of 33,970 placements. Of these the placements in regular employment were 24,755, of which 21,199 were of men and 3,556 of women. The placements in casual work numbered 9,215. The offices of the Service were also notified of 37,851 vacancies, of which 28,812 were for men and 9,039 for women. Applications for work were registered from 32,813 men and 9,950 women, a total of 42,763. The volume of business transacted during July remained practically on the same level as that recorded during the previous month, a noticeable gain, however, over the transactions of the corresponding period last year was recorded, the reports for June, 1926, showing 36,060 vacancies offered, 42,191 applications made and 32,483 placements effected, while in July, 1925, there were recorded 31,502 vacancies, 39,502 applications for work and 28,788 placements in regular and casual employment. A report in detail of the work of the offices for the month of July, 1926, may be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES

Some figures indicating the recent movements of trade and industry are given in the table on page 852.

The Dominion Bureau of Statistics reported that production of pig-iron in Canada in July amounted to 67,232 long tons, a decline of 5 per cent from the 70,854 tons of June which in turn was 3 per cent under the year's record in May.

Foundry pig-iron at 22,490 tons was double the 10,087 tons of June but this gain was more than offset by basic pig-iron falling to 40,260 tons from 52,614 tons and malleable iron declining to 4,482 tons as compared with 8,153 tons in the previous month.

For the first seven months of the year the cumulative production at 438,096 tons was 40 per cent over the 311,838 tons made during the same period last year. This year's tonnage was composed of 297,719 tons of basic iron, 115,813 tons of foundry iron and 24,564 tons of malleable iron. Most of the basic iron was produced for further use by the reporting firms, while the bulk of the foundry iron and all the malleable iron was made for sale.

Blast furnace charges in July included 118,509 long tons of imported iron ore, 73,857 short tons of coke and 34,601 short tons of limestone. Each long ton of pig-iron produced necessitated a furnace charge of 3,948 pounds of im-

ported ore, 2,198 pounds of coke and 1,028 pounds of limestone.

During the month one furnace at Sydney, N.S., was shut down leaving 5 furnaces in blast on July 31st. The active furnaces had a daily capacity of 2,075 long tons which represented about 41 per cent of the total capacity of all blast furnaces in the Dominion. Active furnaces were located as follows: one at Sydney, N.S., two at Hamilton, Ont., and two at Sault Ste. Marie, Ont.

Production of ferro-alloys at 2,931 tons showed a decline in output of 26 per cent from the 3,938 tons reported for June. Production in July was composed mostly of the grades having 50 per cent or less silicon content, and some high grade ferro manganese.

Production of 64,847 tons of steel ingots and castings in Canada during July was 20 per cent lower than the 81,277 tons reported for the preceding month. The decline was general when applied to all grades. Steel ingots dropped to 62,396 tons from 77,684 tons and direct steel castings fell to 2,451 tons as compared with the June output of 3,593 tons.

For the seven months ending July the cumulative production totalled 496,031 tons an increase of 11 per cent over the 446,168 tons reported for the first seven months of last year. This year's output was composed of 472,999 tons of steel ingots made for further use by the producers and 23,032 tons of direct steel castings of which 95 per cent was intended for sale.

Pig-iron prices remained at the same levels in July as in June. No. 1 foundry (2.25 to 2.75 sil.) delivered Toronto was still quoted at $25.80 per ton and No. 2 foundry at $25.30. At Montreal, No. 1 foundry was $28.70 and No. 2 foundry $28.20. Basic pig-iron at mill remained at $21. The Bureau's index number for Iron and Its Products (1913 prices=100) was practically stationary being 143.7 as compared with 143.5 in June.

Full statistics of coal production during July are not yet available. The output of coal from Canadian mines during June was 21 per cent more than the production for the preceding month, and 47 per cent greater than the average for June in the past five years. The figures were 1,387,040 tons in June as against 1,138,738 tons in May and an average of 944,942 tons for the month during the five preceding years.

The coal-producing provinces showed a gain in production over the preceding month, and the outputs of Nova Scotia, Alberta and British Columbia were greater than the averages for the month in the five preceding years.

Men employed in the coal mines of Canada during June numbered 24,253, of whom 18,335 worked underground and 5,918 on surface, as compared with a total of 24,413 in May, of whom 18,568 worked underground and 5,845 on surface. Production per man was 57.1 tons in June as against 46.7 tons per man in May. During June the production per man-day was the same as in May being 2-4 tons. The tonnage lost was largely due to "lack of orders."

External Trade

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in July, 1926, the merchandise entered for consumption amounted to $88,610,048 as compared with $81,492,403 in July, 1925. The domestic merchandise, exported, amounted to $110,325,650 in July, 1926, as compared with $118,188,590 in June, and $101,678,787 in July, 1925.

The chief imports in July, 1926, were: Iron and its products, $20,070,780; fibres, textiles and textile products, $15,626,444, and Non-metallic minerals and products, $14,855,259.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $41,255,883, and wood, wood products and paper, $26,786,299.

In the four months ending July, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $156,473,852, and wood, wood products and paper at $91,431,072.

Building Permits

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada during the month of July, 1926, amounted to $18,717,028, as compared with $18,672,238 in June, and $12,812,603 in July, 1925. This was a small increase as compared with the preceding month, and a considerable gain over the corresponding month last year.

The *MacLean Building Review* estimates the total value of the contracts awarded in Canada in August, 1926, at $31,696,500, as compared with $33,864,700 in July. Of the contemplated new construction in Canada during August, 1926. $8,933,900 was for residential building; $8,923,300 for business building; $2,800,700 for industrial building, and $4,121,000 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). By classification the construction contracts awarded during July, 1926, were divided as follows: business building, $13,638,700; residential building, $8,671,400; engineering, $7,723,700 and industrial building, $1,662,700. The apportionment by provinces was: Ontario, $11,225,000; Quebec, $8,749,700; British Columbia, $4,901,700; Prairie Provinces, $4,560,800 and the Maritime Provinces, $2,259,300.

Strikes and Lockouts

The time loss due to industrial disputes was less than in July, 1926, and August, 1925. There were in existence during the month 14 disputes, involving 2,617 employees and resulting in a time loss of 49,115 working days, as compared with 19 disputes in July, involving 11,208 workpeople and resulting in a time loss of 52,141 working days. In August, 1925, there were recorded 20 disputes, involving 13,430 workpeople, and resulting in a time loss of 112,524 working days. Two of the strikes and lockouts commencing prior to August terminated during the month and two of the strikes and lockouts commencing during August also terminated during the month. At the end of the month, therefore, there were ten strikes and lockouts affecting 1,587 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The change in retail food prices during the month was slight. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.10 at the beginning of August, as compared with $11.07 for July; $10.84 for August, 1925; $10.19 for August, 1924; $10.53 for August, 1923; $10.44 for August, 1922; $11.44 for August, 1921; $16.42 for August, 1920; $16.92 for June, 1920 (the peak); $13.41 for August, 1918; and $7.68 for August, 1914. Prices of beef, veal, mutton, pork, butter and cheese declined slightly, while potatoes showed a substantial seasonal advance, with less important advances in the prices of bacon, lard, eggs, flour, beans and exaporated apples. Including the cost of fuel and rent with that of foods the total budget averaged $21.32 at the beginning of August, as compared with $21.30 for July; $21.05 for August, 1925; $20.57 for August, 1924; $21.03 for August, 1923; $20.88 for August, 1922; $21.98 for August, 1921; $26.60 for August, 1920; $26.92 for July, 1920 (the peak); $21.20 for August, 1918; and $14.41 for August, 1914. Fuel again declined slightly, due to lower prices for anthracite coal and wood. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined to 153.9 for August, as compared with 156.2 for July; 158.9 for August, 1925; 156.8 for August, 1924; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; 256.7 for May, 1920 (the peak); and 202.8 for August, 1918. In the grouping according to chief component materials four of the eight main groups declined and three advanced, while one was unchanged. The Vegetables and their Products group declined substantially, due to lower prices for grains, flour and other milled products, potatoes, coffee and foreign fruits. The decline in this group was more than sufficient to offset the advances in all the other groups. The other groups which declined were: Fibres, Textiles and Textile Products, due mainly to declines in the prices of cotton, jute, hessian and fibre; Non-Ferrous Metals and their Products, because of declines in the prices of silver and zinc, which more than offset the higher prices for copper, lead, tin and solder; and Chemicals and Allied Products. The Animals and their Products group advanced slightly, declines in prices of cattle, hogs and meats being more than offset by advances in the prices of sheep, fish, eggs and some grades of butter. Advances in the prices of pine and spruce lumber caused an increase in the Wood and Wood Products group. The Non-Metallic Minerals and their Products group was unchanged.

Need for a Textile School in Canada

Referring to the textile industry *The Canadian Textile Journal*, in its issue of July 30, expresses doubt whether any other industry in Canada maintains a higher standard of working conditions, of clean, healthful employment where the workers' skill and ability is given greater opportunity, or greater or more sincere attention is directed toward the health and welfare of those employed. "The one important thing lacking in the industry in Canada as yet," the *Journal* continues, "is in the provision of educational facilities. A textile school in Canada would do more to promote the interests of the industry than is at present conceived possible. This age of enlightenment and intense competition demands that education should be a principal factor in the development of any industry. All over the world, textile schools are recognized as integral parts of the industry, but here in Canada we have developed a textile industry without laying this most important foundation, and some of the present ills of the industry may be attributed to this lack."

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF AUGUST, 1926

DURING the month of August a Board of Conciliation and Investigation was completed in the case of a dispute between the Canadian Pacific Railway Company and Canadian National Railways, and certain employees of the said railways being conductors, trainmen and yardmen, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen. The Honourable Mr. Justice Hugh T. Kelly, Toronto, Ont., was appointed chairman in the absence of a joint recommendation from the other two members of the Board, Messrs. Isaac Pitblado, K.C., Winnipeg, Man., nominee of the companies, and David Campbell, K.C., Winnipeg, Man., nominee of the employees.

Other Proceedings Under the Act

In the case of a dispute between the Winnipeg Electric Company and certain of its employees, being motormen and conductors, members of the Street Railway Employees' Unit, One Big Union, advice was received by the Department that the award of the Board appointed to deal with the matter was acceptable to the parties concerned and that the recommendations contained therein had been put into effect by the employing company. The text of the award and of a minority report was given in the August issue of the Labour Gazette on pages 754 to 759.

COMBINES INVESTIGATION ACT, 1923

Alleged Combine in Distribution of Fruits and Vegetables Produced in Ontario

FOLLOWING the publication in February, 1925, of the report of the Commissioner appointed to inquire into a combine alleged to exist among the dealers in fruits and vegetables in the Western provinces (Labour Gazette, March, 1925, page 261), an application was received by the Registrar for an investigation into the marketing of the Ontario fruit and vegetable crop, the applicants being of the opinion that a combine within the meaning of the statute existed in connection with the business in these products. Mr. Lewis Duncan, barrister, of Toronto, who as Commissioner in the Western inquiry had reported that a combine was operating to the detriment of the growers in British Columbia, was appointed by the Minister of Labour as special Commissioner to conduct the inquiry into the charges made with regard to the marketing of fruits and vegetables grown in Ontario. The Commissioner's report was submitted to the Minister on July 31 and published immediately.

No evidence was found of any combine in Canada prejudicial to the interest of the public in the distribution of Ontario fruits and vegetables, with the exception of the operations of certain American brokerage firms owned by jobbing houses, which are regarded by the Commissioner as detrimental to the interests of the grower, as similar combinations in Western Canada were found to injure the British Columbia fruit grower. It will be remembered that the report on the Western fruit inquiry condemned the jobber-broker combine of the Nash Companies, and the jobber-owned brokerage houses were referred to by Mr. Justice McDonald in his charge to the jury at the trial at Vancouver of certain individuals and corporations connected with the Nash Companies following the publication of the report. The Minister of Labour, speaking in the House of Commons on June 7, 1926, voiced the disapproval of the Dominion Government of this unnatural combination. In the marketing of that portion of the Ontario crop which is exported to the United States, this jobber-broker combine intervenes, but in the domestic trade and trade with Great Britain the Commissioner found no evidence of a combine as defined by the Act.

The Commissioner refers to the "widespread belief among the growers, which has also been found to be held by individuals among the consuming public, that there is an unwarranted disparity between the prices received by the growers for their fruits and vegetables and those paid by the consuming public, and that this disparity is due to some improper combination or practice among the commission men wholesalers or retailers, who it is supposed, have unfairly profited by those practices." "In the course of the inquiry, many matters were brought to the attention of your Commissioner of great importance in the marketing of the crop. Whenever an allegation was made or evidence found of prac-

tices which might be injurious to producer or consumer these were investigated. If the inquiry disclosed no evidence that such practices were the result of any combine within the broad definition given to that word in Section 2 of the Combines Investigation Act, the matter was not pursued further, but your Commissioner considers that the proper course is not to ignore such matters in his report, but to set out in reasonable detail the facts which have come to his attention, in order that the situation may be clarified and the grounds for the conclusions which are arrived at may be apparent." The inquiry covered Toronto, Hamilton, London, Montreal, Kingston, Peterborough, Brantford, Grimsby, Niagara, Beamsville, St. Catharines, Simcoe, Stratford, North Bay, Sault Ste. Marie and other points.

Emphasis is laid on the value of adequate facilities for public marketing. "Where the municipal authorities have maintained adequate public markets, little complaint is found among producers or consumers as to prices or distribution. In addition to regulating prices and preventing any undue combination, a market prevents the growth of an excessive number of middlemen." "Speaking generally, the difference between the price paid by the consumer and the moneys received by the producer progressively increases as facilities for public marketing decrease. In places where adequate facilities for public marketing exist, prices on the farmers' market regulate prices in the retail stores; but where inadequate facilities for public marketing exist, prices on the market follow prices in the retail stores." Provision for public marketing in twelve Ontario cities varies from 33,000 square feet of space in Toronto available one day a week for a population of 522,000 to 300,000 square feet of space in Chatham open six days a week for a population of 13,000. For the week ending July 17, 1926, the number of inhabitants for every vendor on the public market varied as follows: Belleville 22, Kitchener 28, London 30, Chatham 44, St. Catharines 53, Brantford 58, Peterborough 69, Kingston 75, Ottawa 77, St. Thomas 106, Hamilton 156, Toronto 2,300.

"Surveys made in Toronto indicate that out of $100 paid by the consumer for domestic fruits and vegetables the retailer gets approximately $36 and the producer $45, $9 goes to the commission dealer and $10 to the express or other transportation company." "The main reason for the abnormal 'spread' in Toronto and the correspondingly high prices paid by consumers is the absence of adequate facilities for public marketing in Toronto" which is the principal absorbing centre for fruits and vegetables produced in Ontario. It appears that, of the five and one-half acres set apart for a market place for the Town of York in 1803 and vested in the City of Toronto for the public use in 1834, only 33,000 square feet are available as a public market at the present time. Outside the city limits two markets have been established—a wholesale market on the Humber and a retail market north of the city.

The report states that the "denial of adequate market facilities in Toronto has resulted in giving the commission houses occupying space on the Toronto Fruit Market a quasi-monopolistic control of the distribution of the domestic fruits and vegetables distributed in and through Toronto otherwise than by farmers or truckers direct to retailers; and that such control has been accompanied by irregular practices in making returns to the growers, the extent of which it is impossible to estimate in view of the fact that in many cases the existing records do not permit a complete accounting to be made; and that the records suggest that the irregularities are more pronounced in the case of some firms than others." The Commissioner has set out in his report the facts regarding such practices as might be injurious to the producer or consumer which have come to his attention.

The Toronto Fruit Market, which is a wholesale market, occupies an important place in the distribution of Ontario produce. The building, which is owned by the Canadian National Railways and leased by the Toronto Fruit Auction Company, "is the narrow funnel through which pass most of the domestic fruits and vegetables distributed to Toronto in a wholesale way." "This lease to all intents and purposes gave the Toronto Fruit Auction Company a monopoly of the only convenient public terminal facilities for the wholesale handling of fruits and vegetables in Toronto." Space in the building is subleased to dealers and "dealers who are outside this building complain that space on the market is of great value; that dealers who cannot obtain accommodation there are under serious handicaps; and that if any of the occupants of the building go out of business their space is usually divided between other occupants instead of being open for competitive bidding as (they allege) should be the case in public terminal facilities."

The Commissioner finds:—

"That in the flush season of the Ontario crop commission dealers on the Toronto Fruit Market are unable to dispose of all the fruit and vegetables consigned to them; that large quantities of fruits and vegetables spoil and are destroyed; and that the provision of faci-

lities for disposing of such surpluses direct to the consumer on the public market would result in a saving both to the grower and to the consumer.

"That the building known as the Toronto Fruit Market contains the only convenient terminal facilities for handling wholesale quantities of fruit and vegetables in Toronto; that this building is inadequate and unfitted properly to perform its ostensible function in the distribution of the Ontario crop; and that adequate terminal and wholesale facilities at Toronto are a necessity.

"That in 1919 all the accommodation in the Toronto Fruit Market was leased to one company (which sublets to certain dealers) but that it would seem advisable that accommodation in public terminals should either be open to all dealers or else be leased on some competitive basis to the different dealers who desire to obtain space.

"That there is a tacit agreement among commission houses occupying space in the Toronto Fruit Market to charge 12½ per cent commission plus certain sums for cartage; that the cartage charge amounts to an extra commission of over one per cent on commission sales; that this charge is made whether the goods are delivered or not; but that the sums collected from the growers for cartage over the year approximately equal the actual cost of delivery of goods sold on commission in the year; and that the sums collected for commission and cartage give a gross percentage profit on commission sales which in some cases is double and in others is four times the gross percentage profit made by the same firm on merchandising transactions.

"That the establishment of a properly operated, grower-owned commission agency in Toronto should result in improved service and a reduction of charges."

The chief complaint of the growers is that returns made to them by different dealers on the Toronto Fruit Market are not true. The inquiry revealed that in 49 per cent of the 1,300 shipments to commission dealers on the Toronto Fruit Market which were examined, no defined part of the shipment was fully accounted for, and in only 23 per cent of the cases did the records completely account for the disposition of the shipment. Occasional mistakes by salesmen in making up records and the absence of growers' names on the goods gave rise to some of these errors, but in the majority of cases records were not properly made or have been altered or destroyed.

Recommendations

The following recommendations are made by the Commissioner:—

"That legislation be enacted making the jobber-broker combine unlawful.

"That persons handling domestic fruits and vegetables on commission be required to make, and for a defined period to keep proper and complete records of the disposition of goods entrusted to them for sale; and that it be made an offence to render false or misleading account sales or other similar returns.

"That some proper official be given authority (*a*) to receive complaints from consignors of domestic fruits and vegetables; (*b*) to examine books and records of consignees; (*c*) to record fraudulent practices and bankruptcies of such persons; and (*d*) to take such action for the prosecution of offenders and the protection of the public as may be required.

"That consideration be given to the creation of a Market Department with wide powers for the purpose of co-ordinating co-operative and other shipping effort, disseminating reliable market information, and assisting the marketing of agricultural products on sound economic lines both in Canada and abroad."

Wage-earners' Mortality Record in 1926

The Metropolitan Life Insurance Company began in 1911 to keep records of its mortality experience for individual diseases among the wage-earning class in Canada and the United States. The rate of deaths in the first six months of 1926 is given in a recent issue of the company's *Statistical Bulletin*. Health conditions during this period are shown to have been less favourable than for the same period last year or for any year since 1920. The increased mortality so far for this year was due for the most part to the prevalence of influenza and pneumonia. It is still possible that sufficient improvement will develop in the latter half of 1926 to counterbalance the high rate of the first half of the year.

In addition to the higher rates for influenza and pneumonia, increases have been recorded for measles, organic heart disease, chronic nephritis, and cerebral hemorrhage. These increases have more than counterbalanced the improvement in the record of diphtheria, tuberculosis, diarrhoeal diseases, puerperal conditions, and accidents.

26379—2

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1926

THE number of strikes and lockouts in existence during August was 14 as compared with 19 in July. The time loss for the month was less than during August, 1925, being 49,115 working days, as compared with 112,524 working days in the same month last year. The considerable time loss and number of employees involved in August, 1925, were chiefly due to the dispute involving coal miners in Nova Scotia in a cessation of work from March to August.

Date	Number of disputes	Number of employees involved	Time loss in working days
August, 1926	14	2,617	49,115
July, 1926	19	11,208	52,1 1
August, 1925	20	13,430	112,524

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eleven disputes, involving 767 workpeople, were carried over from July, and three disputes commenced during August. Two of the strikes and lockouts commencing prior to August, and two of the strikes and lockouts commencing during August terminated during the month. At the end of the month, therefore, there were on record ten strikes and lockouts, as follows: Coal miners in the Edmonton field; boot factory employees at Toronto; hat and cap makers at Montreal; ladies' garment workers at Toronto; men's clothing workers at Montreal; men's clothing workers at St. John's, P.Q.; bookbinders at Montreal; moulders at Vancouver and New Westminster; structural steel workers at Winnipeg and various points in Manitoba, Saskatchewan, and Alberta; and coal miners at Stellarton, N.S. One of the disputes beginning in July was reported to the Department too late to be included in the August issue of the LABOUR GAZETTE, namely: men's clothing workers at St. John's, P.Q.

The record does not include minor disputes as described in the third paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet declared them terminated. Information is available as to seven such disputes, namely: moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Owen Sound, January 19, 1925; cigar makers at Montreal, March 24, 1925; upholsterers at Montreal, June 27, 1925; men's clothing factory workers at St. Hyacinthe, P.Q. (formerly of Montreal), March 19, 1926, and carpenters at Trenton, Ont., July 24, 1926. The dispute involving stage hands and musicians at Vancouver since January 11, 1926, carried in this list, was called off on August 10 when the theatre involved re-opened under new management. The dispute involving engineers and firemen at New Westminster, B.C., since May 17, 1926, lapsed at the end of July.

In regard to a dispute involving men's clothing factory workers in Montreal on March 19, 1926, early in July the owners of the establishment transferred their operations to St. Hyacinthe, P.Q., where the union proceeded to picket the plant. The picketers, however, were arrested on a charge of intimidation and assault and held for trial, not being able to furnish bail. The union concerned placed the establishment on the unfair list.

In connection with the strike of plasterers at Winnipeg reported in the August issue of the LABOUR GAZETTE as having commenced on July 17 for the enforcement of a union rule, work being resumed after one day, further information has been received that the demands of the union were conceded without a cessation of work so that no time loss resulted.

A dispute involving carpenters in Vancouver has been reported in the press indicating that a cessation of work occurred as a result of objections on the part of the employees as to the conduct of a foreman. Inquiries from the Department being made, it appears that the dispute was settled within a few minutes, the employer undertaking that the conduct objected to would cease.

Of the strikes and lockouts commenced during August, two were against the employment of non-unionists and one was for union wages and working conditions. Of the four strikes and lockouts which terminated during the month, two were in favour of the employers, one in favour of the employees, and one was partially successful.

STRIKES AND LOCKOUTS DURING AUGUST, 1926

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Commencing Prior to August, 1926.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Edmonton Field, Alta.	140	1,500	Commenced July 1, 1926, for recognition of union and increase in wages. Partial resumption of work August 9, 1926, under previous rates of wages and working conditions.
MANUFACTURING—			
Boots and Shoes (other than rubber and felt):			
*Boot factory employees, Toronto, Ont.	9	225	Commenced January 13, 1926, against changes in working conditions alleged to be in violation of agreement. Unterminated.
Boot factory employees, Quebec, P.Q.	.....	.....	Commenced May 3, 1926, owing to disagreement as to the application of a reduction in wages awarded by arbitrators. During August strikers reported to have returned to work or been substantially replaced.
Clothing (including knitted goods):			
*Hat and cap makers, Montreal, P.Q.	10	250	Commenced March 4, 1926, against violation of agreement. Unterminated.
*Ladies' garment workers, Toronto, Ont.	23	575	Alleged lockout, commenced June 30, against enforcement of non-union conditions. Unterminated.
Men's clothing workers, Montreal, P.Q.	225	35,000	Commenced July 28, for union wages and working conditions in non-union shops, partial resumption of work, August 9, under union conditions.
Men's clothing workers, St. John's, P.Q.	120	3,000	Commenced July 28, for union wages and working conditions in non-union shops. Partial return to work and replacement of strikers.
Printing and Publishing:			
*Bookbinders and pressmen, Montreal, P.Q.	5	125	Alleged lockout, commenced March 9, of members of certain unions. Unterminated.
Iron, Steel and Products:			
Moulders, Vancouver and New Westminster, B.C.	80	900	Commenced April 1, for increased wages; demands granted by some employers. Unterminated.
CONSTRUCTION:—			
Buildings and Structures:			
Pile drivers, wharf builders, etc., Vancouver, B.C.	80	480	Commenced July 2, for increase in wages. Terminated August 10; 50c. per day increase, demands being for $1.00.
Structural steel and iron workers, Winnipeg, and other points.	75	200	Commenced July 20, for increase in wages; partial resumption of work by strikers at previous rates of pay on August 4.
(b) Strikes and Lockouts Commencing During August, 1926.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Glace Bay, N.S.	850	1,660	Commenced August 3, against employment of non-union workmen or members of another organization. Work resumed August 6, when men concerned joined the union.
Coal miners, Stellarton, N.S.	900	4,500	Commenced August 26, against employment of non-union workmen or members of another organization. Unterminated.
MANUFACTURING —			
Wood Products:			
Mill Workers, Winnipeg and St. Boniface.	100	700	Commenced August 16, for a signed agreement of wages and working conditions. Work resumed August 24, under conditions prior to the strike.

*Reports indicate that the strikers had been replaced but there were still a number of employees out, and on the strike or lockout benefit list of the union.

26379—2½

The following notes gives particulars in regard to certain disputes in addition to information given in the tabular statement.

COAL MINERS, EDMONTON FIELD, ALBERTA.—This dispute, causing a cessation of work on July 1 to secure an increase in wages and recognition of union on the termination of an agreement signed last year, continued into August. On August 9 one of the mines involved reported a settlement with the miners, work being resumed at the same wages and under the same working conditions as prior to the strike. No settlement was reported in the other mines by the end of the month.

BOOT FACTORY EMPLOYEES AT QUEBEC, P.Q.—This dispute, causing a cessation of work from May 3 owing to a disagreement as to the application of an award by arbitrators involving a decrease in wages, continued during August, but the employers were operating the factories by means of employees who had resumed work and by new employees, stating that they had all the staff required. A number of the strikers were reported to be still out and receiving assistance from funds collected from various organizations and the public.

LADIES' CLOTHING WORKERS, TORONTO, ONT.—This dispute, beginning on June 30 and arising out of a demand from the employer that each employee deposit $100 as security for the acceptance of piece rates fixed by the employer, continued through August. The union contended that this was in violation of a signed agreement providing for arbitration of all disputes for a period of three years, signed January 17, 1925 (LABOUR GAZETTE, June, 1925, page 619). During July it was reported that the union had entered an action to secure damages and to compel the employer to re-engage the men and women concerned.

MEN'S CLOTHING WORKERS, MONTREAL, P.Q.—This strike, beginning July 28 to secure union wages and working conditions in a number of non-union shops and factories, continued during August, but on August 9 work was resumed in some of the factories and shops under agreements as to wages and working conditions signed with the union. The establishments of those refusing to sign agreements were picketed by the union. Some disturbances arose in connection with picketing, and some of the strikers were arrested and charged with intimidation and assault. Later an injunction was issued forbidding the picketing of the establishments of the three firms which requested the injunction. Some of the employers entered an action against the union, claiming damages as a result of the strike. At the end of the month 225 employees were reported to be still involved.

MEN'S CLOTHING WORKERS, ST. JOHN'S, P.Q.—This dispute occurred simultaneously with the strike of the same class of employees at Montreal on July 28 for the same demands. It was reported that some of the strikers returned to work and that the employer to a great extent replaced the others during August, but the dispute was unterminated at the end of the month.

MOULDERS, VANCOUVER AND NEW WESTMINSTER, B.C.—In connection with this dispute, commencing April 1 for an increase in wages, it has been reported that from time to time some of the employers involved, employing each a small number of men, agreed to the terms of the union and work was resumed. At the end of August, however, several of the employers had made no settlement with the union.

PILE DRIVERS, WHARF BUILDERS, ETC., VANCOUVER, B.C.—This dispute, which began on July 2 for an increase in wages (which was granted to some of the employees in a short time), was terminated on August 10 by a verbal agreement for an increase in wages of 50 cents per day, the original demand having been for an increase of $1 per day.

STRUCTURAL STEEL AND IRON WORKERS, WINNIPEG, MAN.—This dispute, commencing July 20 for an increase in wages, involved workers in Winnipeg and at several other points in Manitoba, Saskatchewan and Alberta, where construction of this nature was being carried on. At the establishments of the principal employers the employees returned to work on August 4 at the previous rates of pay, but no settlement has been reported in other cases.

COAL MINERS, GLACE BAY, N.S.—This dispute, commencing August 3, like that reported in the August issue of the LABOUR GAZETTE in the same locality and its neighbourhood, was to prevent the employment of non-union workmen or the members of another organization in the coal mines. The operator of these mines had an agreement with the union which provided for recognition of the union, but did not provide against the employment of workmen not members of the union. As a result of this cessation of work it has been reported that the majority of the men affected joined the union and work was resumed.

COAL MINERS, STELLARTON, N.S.—This dispute, commencing August 26, was of the same nature as in the dispute above, the mines affected being operated under the same management. This dispute was unterminated at the end of August, but early in September it was reported that the management posted a notice that only members of the union would be employed, and following this the majority of the men affected had joined the union and work was resumed within a few days.

MILL WORKERS, WINNIPEG AND ST. BONIFACE, MAN.—This strike, commencing August 16 for an agreement covering wages and working conditions, was reported to be terminated on August 24 when the strikers returned to work under the same conditions as prior to the dispute.

LABOUR LEGISLATION IN NOVA SCOTIA IN 1926

THE first session of the thirty-eighth General Assembly of the Province of Nova Scotia opened on February 9 and concluded on March 19.*

Industrial Disputes Investigation Act

One of the principal enactments affecting labour was an "act respecting the investigation of industrial disputes within the province." This act is similar in form to the acts passed recently in British Columbia, Saskatchewan, Manitoba and New Brunswick. These acts give effect to the amendment made last year to the Industrial Disputes Investigation Act, 1907, providing that the latter act shall apply among other disputes, to "any dispute which is within the exclusive legislative jurisdiction of any province, and which by the legislation of the province is made subject to the provisions of this act."

Industrial Peace Act Repealed

The same act contains a section repealing the Industrial Peace Act, in accordance with the announcement contained in the opening Speech from the Throne that the government would introduce legislation repealing the compulsory provisions of the latter act. The provisions of the Industrial Peace Act were fully outlined in the LABOUR GAZETTE for August, 1925. It was divided into two sections; the first was practically a re-enactment of the Dominion Industrial Disputes Investigation Act, 1907, as a provincial act; the second part supplemented that act by providing for the compulsory arbitration of labour disputes in which a settlement cannot be obtained. The first part provided that where a dispute had arisen in a mining industry or in connection with a public utility; either party, or the Minister of his own motion might have it referred to a Board of Conciliation and Investigation appointed by the Minister of Works and Mines, and that pending the report of the Board neither party could declare a lockout or strike or alter the condition of labour. After a report was filed, however, neither party was bound thereby, and no machinery is provided for its enforcement. The second part of the act, which was not to become effective until proclaimed by the Governor in Council as being in force, was designed to supply the lack of compulsory powers. It provided for the creation of a permanent Arbitration Commission. If within a month from the filing of the report of the Board of Conciliation under the first part no settlement was arrived at, either party might have the dispute referred to the Commission, which would then inquire exhaustively into all phases of the dispute and all relevant facts affecting both the employer and employees. After such reference to the Commission any strikes, lockouts or alterations of conditions were to be declared illegal under penalties. The award of the Commission was to be binding on all parties to a dispute and could be made an order of the Supreme Court and enforceable accordingly.

Collection of Statistics

The Statistics Act provided for the co-operation of the provincial government in the collection, by the Government of Canada, of statistics relating to the province. The provincial Department of Natural Resources is to distribute such schedules and instructions as may be prescribed from time to time by Dominion Order in Council for the collection of facts and statistics relating to the agricultural, fishing, lumbering, milling, mining, quarrying, manufacturing and other interests and resources of the Province, which shall contain, among other things, when completed, the value of the products thereof, and of the plant and real estate, the number of persons employed therein, and the amount of wages paid; and every owner or manager of any such industry shall be required to fill up and return such schedules. The information so collected is to be treated as confidential and is not to be published without the written consent of the owner or manager of the industry concerned. Penalties, however, are provided for neglect on the part of the individual concerned to supply the information sought for. Right of access to municipal and other local records is also established by the act.

Factories Act

Under an amendment to the Factories Act, the certificates of factory inspectors are to be issued by the Minister of Natural Resources instead of by the Provincial Secretary.

*Outlines of the labour legislation enacted during 1926 by the various provinces have been given in the LABOUR GAZETTE as follows:—Parliament of Canada, July, page 651; Prince Edward Island and New Brunswick, June, pages 546 and 549; Alberta, Manitoba and Ontario, May, page 446; Quebec, April, page 324; Saskatchewan, February, page 119; British Columbia (session of 1925), January, page 17.

Welfare of Children

An act was passed for the purpose of regulating the activities of organizations engaged in placing immigrant children under 16 years of age in the province, such organizations being required to obtain authority by order in Council to carry on this work. Each immigrant child is to be registered, records being kept of each case. Persons taking children into their homes also are required to furnish the provincial Director of Child Welfare with particulars concerning the children. The medical examination of an immigrant child may be ordered by the Director at any time. If any person resident in the province notified the Director that an immigrant child is being ill-treated or over-worked or is not being properly educated, the Director will order an investigation and take all necessary steps to protect the child from further ill-treatment or neglect. Persons convicted of ill-treating, over-working, or neglecting to provide proper maintenance and education for immigrant children, are liable, on summary conviction, to a fine of $500 with imprisonment up to six months.

The administration of the Children's Protection Act was placed under the Director of Child Welfare instead of being under the Superintendent of Neglected and Delinquent Children. The new official may be a judge of the Juvenile Court.

Relief of Unemployment

Among the local acts of the session was one authorizing the town of Glace Bay to borrow a sum not exceeding $8,000 for the purpose of relieving distress in the town caused by unemployment, to be repaid in eight years, the Governor in Council being authorized to guarantee the payment of principal and interest. Another local act was passed enabling the municipality of the County of Cape Breton to borrow money up to $34,000 in order to pay off the indebtedness due to Royal Bank of Canada on account of advances made to the Overseers of the Poor in certain districts in the municipality.

Acts Not Passed

A bill to amend the Workmen's Compensation Act was withdrawn before being finally passed. It sought to provide that each member of the Workmen's Compensation Board should cease to hold office ten years after the date of his appointment, but that he should be eligible for re-appointment. It was also proposed that claims for compensation should be filed within six months after an industrial accident, instead of within one year as at the present time; that when a claim has not been established fifteen months after the accident, no compensation should be paid.

A bill to provide for the early closing of barber shops at Halifax failed to pass.

Two government measures were rejected by the Legislative Council; one was the "Tenure of Office" bill, designed to place in the power of the government the dismissal of all officials appointed by the Lieutenant Governor in Council in case of unsatisfactory service; the other providing for the abolition of the second chamber on May 1, 1927.

Another proposed measure which failed to reach the final stage would have made compulsory the "check off" system in the coal mining industry in so far as "society dues" are concerned, and provided the society to which the miner belongs makes the request.

The closing Speech from the Throne said "It is gratifying that the wage agreement recommended by the representatives of the coal miners and operators has received the endorsement of both parties and that we may now look forward to a period of stability and continued employment in this important industry."

Members of the Brotherhood of Locomotive Engineers are now required to keep in force their insurance in the Brotherhood's Life and Accident Insurance Association. This obligation having been questioned by certain members the Circuit Court of Marion County, Indiana, decided that members must conform with the laws of the Brotherhood. The action was brought by William H. Rother and eight other former members who had declined to take or continue their insurance with the Association, against the officials of the Union, seeking to compel these officials to recognize them as members of the Brotherhood. Judge Gause declared that the plaintiffs by refusing to keep in force their insurance policies had forfeited their rights to membership in the Brotherhood.

The Vancouver and New Westminster District Trades and Labour Council has a special minimum wage committee to collect information regarding the employment of women in the industries covered by orders of the Minimum Wage Act. The committee has been engaged recently in inquiries into the conditions of female employment in the canning industry and in other occupations, and intends, it is stated, to bring certain recommendations before the Minimum Wage Board in regard to these industries.

PROPOSED FACTORY LEGISLATION IN GREAT BRITAIN

A BILL to amend the Factory Acts was introduced in the British House of Commons on August 2. An official memorandum explaining the proposed amendments states that the bill was introduced in order to allow time for full consideration of its contents by the parties concerned, and that any suggested changes will be considered before it is proceeded with next year. The bill abolishes the distinction which exists in the present law between factories and workshops and between textile and non-textile factories and employs only the one term "factories"; and, except where otherwise expressly provided, the provisions of the Bill apply indifferently to factories of all descriptions. Under the existing Acts the provisions relating to the sanitary condition of workshops, cleanliness, overcrowding, ventilation, and the drainage of floors are enforced in the first instance by the local sanitary authorities, and not by the factory inspectors, as in factories, and the provisions as to sanitary conveniences, both in factories and in workshops, are, in London and certain other places also enforced by the sanitary authorities.

Under the Bill all the corresponding provisions are enforceable by the factory inspectors, except that in any factory in which mechanical power is not used and which forms part of a dwelling-house or shop, or is adjacent to a dwelling-house or shop in the same occupation, the provisions are to be enforced by the sanitary authority; and in the case of any other factory in which mechanical power is not used, the Secretary of State, if satisfied that the provisions would be satisfactorily enforced by the sanitary authority, is to delegate the duty to them. These alterations are of general application. The other alterations are alterations of particular provisions, and are indicated in a table subjoined to the Memorandum.

General Provisions.—Among the general provisions of the Bill, cleanliness and freedom from effluvia in all factories are insisted upon; and it is provided that all inside walls, partitions, and ceilings shall be washed or recoloured every 14 months. In places where dangerous fumes are liable to accumulate the Bill provides that persons entering shall wear a belt to which a rope is attached held by a person outside, unless the worker is using suitable breathing apparatus. Special regulations are made for the fitting of steam boilers with valves and gauges to reduce the danger of explosions. Detailed regulations as to the provision of fire escapes are included, and the Bill ordains that when any factory fails to fulfil the regulations action may be taken ultimately to carry out necessary alterations and to recover the cost from the occupier.

Welfare provisions deal with the supply of drinking water, first-aid facilities, and the provision of seats sufficient to enable all female workers to rest during intervals in their work. Special arrangements must be made to carry off injurious or offensive dust or fumes, and spitting is prohibited. Underground workshops will be prohibited at the discretion of the factory inspector, and basement bakehouses except such as were in existence before the passing of this Bill, will not be allowed.

New clauses in the Bill concern the employment of women and young persons. These may not be employed for more than ten hours in any day, or 48 hours in any week, and their employment shall not begin before 6 a.m. or end later than 8 p.m. on week-days and 2 p.m. on Saturdays. Not more than 4½ hours may be worked without an interval of half an hour for a meal. Notwithstanding these provisions, such persons may work 100 hours' overtime in a year, provided such overtime does not exceed six hours in any week.

It is further provided that young persons under the age of 16 shall not remain in factory employment after a specified period unless they have been examined by an appointed doctor and certified to be fit for the employment. In the section which deals with home work a clause has been inserted providing that:—"Where work in respect of which this section applies is carried on for the purpose of or in connection with the business of a factory in any place which is, in the opinion of the district council, injurious or dangerous to the health of the persons employed therein, the district council may give notice in writing to the occupier of the factory or to any contractor employed by him that the place is so injurious or dangerous, and if the occupier or contractor after the expiration of one week from the receipt of such notice gives out work to be done in that place he shall, unless it is proved to the satisfaction of the Court dealing with the case that the place is not in fact so injurious or dangerous, be guilty of an offence and liable to a fine not exceeding £20."

A lengthy section on piecework and wages provides that every person who is paid by the piece in the worsted, woollen, and cotton trades, either in or outside a factory, shall be

furnished with particulars of his work and of the rate of wages applicable to it in the form of a written statement. In the factory this may be done by means of a placard. Deductions from wages are prohibited in the following clause:—"Save as otherwise expressly provided under this Act, the occupier of a factory shall not make any deduction from the sum contracted to be paid by him to any person employed or receive or allow any person in his employment to receive any payment from any such person in respect of anything to be done or provided by the occupier in pursuance of this Act."

A section on penalties and legal proceedings provides that the owner or manager of a factory guilty of an offence in contravention of this Act shall be liable to a fine not exceeding £20, and in the case of a continuing offence to a fine not exceeding £5 for each day of its continuance. In cases of death or injury it is provided:—"If any person is killed, or dies, or suffers any bodily injury or injury to health in consequence of the occupier or owner of a factory having neglected to observe any provision of this Act or any order or regulation made in pursuance of this Act, the occupier or owner of the factory shall be guilty of an offence, and, without prejudice to any other penalty, liable to a fine not exceeding £100, and, in the case of a second or subsequent conviction in relation to a factory within two years from the last conviction for the same offence, not less than £10 for each offence, and the whole or any part of the fine may be applied for the benefit of the injured person or his family, or otherwise as the Secretary of State determines."

LABOUR IN BRITISH COLUMBIA IN 1925

Report of the Provincial Department of Labour

THE eighth annual report of the Department of Labour of British Columbia contains full information concerning industrial, labour and governmental activities in the province during the calendar year 1925. The Department was established under an act of 1917. It has authority to require the trade unions, industrial societies and other organizations to supply information as to their rules and practices; to require employers to furnish reports as to their employees, that is, their names, occupations, wages, hours of labour, etc.; and to obtain from any available source information as to the cost of living, and the relations of prices to labour and industrial conditions in the province. The Department administers the employment service and the Factories Act. The Deputy Minister of Labour is *ex officio*, the chairman of the Board of Adjustment under the Hours of Work Act of 1923, providing for an 8-hour working day in the industries of the province, excepting those industries expressly exempted by the Board.

Hours of Work

The act became effective on January 1, 1925, so that the present report is the first in which its administration is described. The Board found that "in order to give workers in general the benefit of this legislation, it was necessary to permit a certain amount of latitude in regard to some occupations, and also to deal with any extraordinary pressure upon business at certain periods. In this respect the experience of the province was identical with that of a large number of other countries where eight-hour legislation is in force. One important concession made in the lumber industry was to allow mills in the interior of the province to work an extra hour daily in the working period of the year, partly to offset the winter months, when employers are compelled by weather conditions to close their plants. In all industries the percentage of workers affected by the exemptions is believed not to exceed 10 per cent of the total coming under the act, approximately 70,000 in number."

The report states that total exemption was granted certain parts of logging operations, shipping of all kinds, and repair work in the metal industries. These exemptions were found necessary in order to prevent serious interference with the operation of the industries mentioned and in the interest of both employers and workers. A large number of these are situated at isolated points far removed from labour supply and are of an intermittent nature, while other classes of work, being of a highly specialized character, necessitated overtime being worked, as in repair work on ships and other repair shops doing like work.

In all cases in which exemptions were granted, either total or partial, the Board emphasized that where additional hours of work were allowed by any of the regulations to cover certain classes of workers, or special conditions as set out in the regulations, such

additional hours should apply only in respect of the classes of workers and the special conditions so set out, and were not to be in any sense considered as part of the normal working day.

Male Minimum Wage Act

An important new function was assigned to the Board of Adjustment under the Hours of Work Act, namely the administration of the Male Minimum Wage Act (Labour Gazette, January, 1926, page 17).

Since the passing of the act the members of the Board have been busily engaged in making inquiries prior to bringing the measure into operation, and a large number of representations have been received from persons interested, either as employers or employees, in the fixing of a minimum wage. It was decided by the Board that the first order made under the Act should be in relation to the lumbering industry, the largest single industry in the province, in the various branches of which about 40,000 persons are employed. Shortly before this report went to press it was intimated by the Board that the order will fix the minimum wage in the industry at 40 cents an hour, and will come into effect on November 1, 1926.

The act applies to all occupations other than farm labourers, fruit pickers, fruit packers, fruit and vegetable canners, and domestic servants. It is the duty of the Board to ascertain the wages paid to employees in the various occupations and to fix a legal minimum wage. This is to be done, after inquiry, by the issue of an order or orders. The minimum determined by such orders may vary according to different conditions and times of employment; and in the case of any employee classified by the Board as handicapped, or as part-time employees, or as apprentices, a permit may be issued authorizing the payment of a wage less than the ordinary minimum wage. The Board is also enabled to limit or define the number of employees to whom such lesser wage is payable by any employer. Other sections of the act provide for inspection and examination of books, and also for penalties of fine or imprisonment in the case of violation of the act. Moreover, any employee who is paid less than the legal minimum wage to which he is entitled may recover from his employer, in a civil action, the amount by which he has been underpaid, with costs of action.

Industrial Conditions in 1925

The year 1925 is described in the report as a period of progress and general prosperity, and with remarkable freedom from labour disputes. From the returns made to the Department by 4,138 firms of employers, and a careful computation of the payroll of other employers not included in such returns, it has been estimated that the salaries and wages paid in connection with industrial operations in British Columbia last year totalled the sum of $159,959,820.80, compared with $151,037,316.20 for 1924, or an increase of nearly $9,000,000. This increase appears to have been fairly well distributed between the various sections of the province, though the gain recorded by the largest industry of lumbering would no doubt have been much greater had it not been for the unusual amount of fire risk prevalent during the summer months, which led to the suspension of many operations. The improvement of this condition in the early fall brought in its train a revival of the industry, and, largely owing to this, the month of October was the busiest period of the year for employment. This alone would be sufficient to make 1925 a notable year industrially, as the apex of employment is usually reached in July or August. The weekly wage rates show a small average decrease, but this is more than offset by the reduction in the average weekly working hours, brought about chiefly by the operation of the "Hours of Work Act" passed in 1923.

The total given above as representing the total amount of salaries and wages paid in the province during the year, namely $159,959,820, is made up of the wages paid by the 4,138 firms who furnished reports to the Department, supplemented by an estimate of the amounts paid by non-reporting firms, and further by wages paid in the province by the Transcontinental railway ($13,303,835); by Dominion and Provincial governments ($5,000,000); by wholesale and retail firms ($3,500,000); by delivery, cartage, warehouse, moving picture companies etc. ($4,500,000); by ocean services and express companies ($7,000,000); and by other undertakings.

The estimated payroll of the province in 1925 is divided by districts as follows:—Greater Vancouver, $56,065,917. Rest of Mainland, $73,469,545, Vancouver Island, $30,424,357.

The 4,138 returns received are divided into twenty-five groups, of which eighteen show an increased payroll over that of 1924, the increase amounting to $8,801,981.26 for the year. The remaining seven groups show a decreased payroll, the reductions amounting to $657,515.02; so that there is a net increase for the twenty-five groups of $8,144,466.24.

In building and contracting the year 1925 is referred to as the best since pre-war times, and, indeed, was hardly surpassed in any one year in the hectic period between

1909 and 1912. It is therefore not surprising that the figures for this industry went up by well over a million, and that the extra demand for builders materials also sent up the payroll there. All kinds of workers seem to have shared in this advance—the provision of new residences, bridge and dock building, industrial establishments, and, in the City of Vancouver, important extensions to stores, the general impression being that these operations were not so much in the nature of anticipating an expected demand as of meeting one that had already made itself felt.

Increases were recorded also in coast shipping, manufacture of food products, lumber, metal mining, printing, public services, etc. Two of the principal industries which showed a decreased payroll were coal mining and the manufacture of explosives and chemicals. The report states that the former has been going through a very critical period, one sign of which has been the acceptance of reductions of wages by the miners in the two chief producing areas of the province. The effect of this has been more constant employment and some increase in its volume, but a slight falling off in the amount paid in wages.

The following table shows the amount of wages and the numbers employed in the month of greatest employment in the several industries in 1925.

Industry	No. of Firms reporting	Number employed	Total pay-roll
			$ cts.
Breweries	27	365	607,093 14
Builders' materials	55	1,042	1,390,309 48
Cigar and tobacco manufacturing	6	71	57,085 07
Coal-mining	21	5,284	7,475,214 61
Coast Shipping	144	7,542	6,736,972 71
Contracting	982	9,531	13,343,560 02
Explosives and chemicals	19	481	564,630 16
Food products	378	8,097	9,110,298 75
Garment-making	79	619	703,383 97
House-furnishing	43	376	515,105 29
Manufacturing jewellery	10	74	220,705 69
Laundries, cleaning and dyeing	84	1,333	1,363,415 91
Manufacturing leather and fur goods	54	292	413,277 52
Lumber industries	990	26,584	32,015,830 90
Metal trades	522	3,355	5,849,903 31
Metal-mining	215	4,788	7,829,541 92
Miscellaneous	145	1,677	2,715,462 40
Oil-refining	8	582	774,587 52
Paint-manufacture	12	103	192,648 70
Printing and publishing	104	1,187	2,910,339 76
Pulp and paper mills	11	2,326	3,989,546 96
Ship-building	35	874	1,212,370 71
Smelting	4	2,401	5,037,966 16
Street-railways, etc.	101	5,733	8,984,065 58
Manufacturing (wood), n.e.s.	89	1,711	1,929,922 36
Totals	4,138	83,122	115,943,238 60

The accompanying table shows the number of employees by weekly wage groups in 1925:—

CLASSIFIED WEEKLY WAGE RATES (WAGE-EARNERS ONLY)

For week of employment of greatest number	Males		Females		Apprentices
	18 years and over	Under 18 years	18 years and over	Under 18 years	
Under $6.00	49	84	14	10	39
$6.00 to $6.99	45	81	6	7	83
7.00 to 7.99	37	70	14	16	54
8.00 to 8.99	158	108	38	63	97
9.00 to 9.99	139	113	46	40	69
10.00 to 10.99	297	140	94	64	84
11.00 to 11.99	382	64	93	48	96
12.00 to 12.99	1,249	224	410	58	241
13.00 to 13.99	867	90	672	105	109
14.00 to 14.99	1,454	57	1,058	41	27
15.00 to 15.99	1,635	100	935	43	52
16.00 to 16.99	2,695	57	522	6	10
17.00 to 17.99	1,796	30	283	11	22
18.00 to 18.99	3,806	42	419	27	17

20.00 to 20.99	2,699	17	412	4	10
21.00 to 21.99	5,736	36	213	5	15
22.00 to 22.99	4,813	7	125	1	13
23.00 to 23.99	3,091	2	58	2	7
24.00 to 24.99	8,219	9	43	3	5
25.00 to 25.99	4,188	4	85	1	2
26.00 to 26.99	2,883	1	28	.....	3
27.00 to 27.99	3,868	3	22	1	4
28.00 to 28.99	4,156	2	18	.....	2
29.00 to 29.99	3,241	.....	17	.....	13
30.00 to 34.99	12,664	1	50	.....	21
35.00 to 39.99	11,698	1	12	.....	8
40.00 to 44.99	4,491	.....	8	.....	1
45.00 to 49.99	2,348	.....	.....	.....	.....
50.00 and over	2,067	.....	1	.....	.....
Totals	95,441	1,374	5,924	563	1,115

The report notes a continued decline in the number of oriental employees in the Province, the proportion of 11.30 per cent being the smallest recorded in recent years. The reduction applies only to Japanese and Hindus, but the Chinese employees on the other hand increased slightly. An increase in the relative number of immigrant workers from Northern Europe is also noted.

Employment Service

The report states that the usefulness of the Employment Service in this Province is increasing as is shown by the fact that 10 per cent more persons were placed in employment in 1925 than in the previous year. The Service is now performing one of the functions formerly discharged by the Soldiers' Civil Re-establishment Board—that of endeavouring to find employment for handicapped ex-service men; and for this purpose special sections have been created in the Vancouver and Victoria offices.

Factory Inspection

The Chief Factory Inspector notes an increase in the number of employers of labour who voluntarily comply with all the rules relating to the safety and welfare of their employees.

The results obtained in preventing industrial accidents depend largely on the interest displayed by the management and foreman in charge. Experience has proved that when the responsibility for the safety of the workmen has been placed upon the shoulders of the foremen in charge of the several departments, the results has invariably been a reduction in the number of accidents. Every effort is made by this Department, when a problem in safeguarding presents itself, to assist the foreman in finding the best means of preventing accidents without decreasing production.

ASSOCIATION OF WORKMEN'S COMPENSATION BOARDS OF CANADA

THE Association of Workmen's Compensation Boards, which comprises all boards in Canada conducting operations on the collective liability plan, held its annual meeting in Toronto at the offices of the Ontario Workmen's Compensation Board, on August 23, 24, and 25. The following representatives were present:—

British Columbia.—E. S. H. Winn, K.C., chairman of the B.C. Compensation Board, and president of the Association; Dr. John Nay, chief medical officer of the B.C. Compensation Board.

Alberta.—J. A. Kinney, commissioner, the Alberta Compensation Board.

Manitoba.—C. Newcombe, chairman of the Manitoba Board; R. S. Ward, commissioner.

Ontario.—V. A. Sinclair, K.C., chairman of the Ontario Board; H. J. Halford, vice-chairman; G. A. Kingston, commissioner; N. B. Wormith, secretary; T. N. Dean, statistician.

New Brunswick.—J. A. Sinclair, chairman of the New Brunswick Board.

Nova Scotia.—V. J. Paton, K.C., chairman of the Nova Scotia Board.

Among the subjects discussed at the meeting were the following:—

Discussion regarding amendments to Acts since the last meeting and any amendments desired during the current year. (Ontario).

Discussion of any new forms or important changes in forms used by the different Boards during the past year. (Ontario).

Practice followed where claimants leave the province regarding the payment of compensation, choice of doctor, payment for medical aid, medical referees, etc. (Ontario).

Disability not due to accident, such as skin rashes, blisters, and troubles of gradual onset, including infection following such conditions. (Ontario).

Silicosis. (Ontario).

Double assessment of employers in two provinces. (Ontario).

Penalties for non-payment of assessment—should there be a maximum charge. (Ontario).

What penalties should be charged new employers for failure to file pay roll statements. (Ontario).

Minimum assessments. $200 minimum pay roll and $3 minimum assessment. Is this sufficient? (Ontario).

Payment of hospital accounts where injured workmen have been retained in hospital beyond period of convalescence. (Ontario).

Inspection of first aid box and equipment. (Ontario).

Artificial limbs and orthopedic appliances. Should this be looked after by men or by Board? (Ontario).

Discussion of claims—unusual cases involving principle. (Ontario).

What compensation should be granted when disability due primarily to senility is rendered immediate and permanent by a comparatively minor accident? (Manitoba).

How should "average earnings" be computed? (Manitoba).

"The Compensation Board and its Relations with the Railway Claims Agent". Address by Mr. W. H. D'Arcy, General Claims Agent of the Canadian Pacific Railway, of Winnipeg.

Practice used in paying compensation to residents of countries which were enemy countries during the Great War. (Manitoba).

Remarriage and mortality experience of all Boards. (Alberta).

Permanent and Permanent Partial Disability to workmen under the age of twenty-one years. (Alberta).

Temporary Partial Disability where workman has not returned to work. (Alberta).

Revaluation of pensions—disposal of deficits and surpluses. (Alberta).

Court decisions during the year—the effect of Privy Council judgment in Peter v. Yorkshire Trust.* (British Columbia).

Accident prevention regulations and their enforcement. (British Columbia).

First aid regulations and their enforcement. (British Columbia).

Merit rating. How is experience arrived at in (*a*) fatals; (*b*) total disability. (British Columbia).

Where workman covered in two provinces, how are claims dealt with and how are assessments adjusted. (British Columbia).

Payment to dependants residing in foreign countries in relation to what should be considered as conclusive proof of dependency. (New Brunswick).

Practice of enforcing penalties for delinquency in filing pay rolls and payment of assessments. (New Brunswick).

Advisability of uniformity of decision as to accidents to workmen occurring on the "premises" when going to and from work. (New Brunswick).

The advisability of having workmen who have met with fractures of the spine and other severe back injuries take course of physical exercises as a method of getting them back to work. (Nova Scotia).

* LABOUR GAZETTE, April, 1926, page 418.

Addresses were delivered by W. H. D'Arcy, Chief Claims Agent of the C.P.R. at Winnipeg, and also chairman of the Associated Railway Claims Boards of America; by Gerald A. Brown, Assistant Deputy Minister of Labour, Ottawa; Dr. C. B. Shuttleworth, of Toronto, and others.

In reviewing their activities for the year 1925 the different Boards reported the following amounts awarded for compensation and medical aid:—

British Columbia	$ 3,250,000 00
Alberta	928,212 27
Manitoba	731,773 34
Ontario	5 565,443 39
New Brunswick	615,144 78
Nova Scotia	978,444 75
Total	$12,069,018 53

The election of officers resulted as follows:—

President.—V. A. Sinclair, K.C., Toronto.

Vice-President.—J. A. Sinclair, St. John.

Secretary-Treasurer.—N. B. Wormith, Toronto.

Executive Committee.—E. S. H. Winn, K.C., V. A. Sinclair, K.C.; and J. A. Sinclair.

The next place of meeting of the Association will be at St. John, N.B.

WORKMEN'S COMPENSATION IN ALBERTA IN 1925

AFTER eight years experience in administering the Alberta Workmen's Compensation Act (Accident Fund), the Board, in their annual report for the calendar year 1925, declare that it has brought substantial benefits not only to workmen but to their employers "Employers need now have no fear of the personal liability which formerly existed, and the workmen are more secure under the protection of the present act. Litigation proceedings as between employers and workmen to determine the liability on account of an accident which formerly were so often resorted to are not now necessary." Practically all industries in the Province are now covered by the provisions of the act, with the exception of agriculture, and the operation of retail stores, offices and office buildings. The mining industry was the first to be included, but the operation of the act was extended in the following year. A further extension was made in 1925, when provision was made for the inclusion of the operation of freight and passenger elevators (including janitors in buildings where such elevators are operated). A further amendment made last year provided that when a workman is frost bitten in the course of his employment such occurrence shall be deemed to be an accident arising out of and in the course of his employment.

Results of 8 Years' Operation

Since the Act became effective on August 1, 1918 until December 31, 1925, there was paid to workmen compensation totalling $1,882,276. In addition to this sum there has been awarded and set aside in the Pension Fund on account of permanent disabilities and fatal accidents the sum of $1,718,130, out of which $554,275 has been paid to workmen to whom accidents resulted in permanent disabilities and to dependants of workmen to whom accidents proved fatal. The balance at the credit of this fund at the close of the year 1925, was $1,369,390, out of which 162 widows and 340 children of deceased workmen, as well as 210 workmen who met with permanent disabilities are receiving monthly payments.

Payments for medical services since the inception of the Act up to December 31, 1925, total $763,642. This cost is borne by the workmen, but it should be noted that in a large number of cases medical aid is provided under medical contracts so that the Board

is not responsible for the payment of medical aid in these cases.

Accidents in 1925

During the year 1925, there were 8,355 accidents reported to the Board, an increase of 972 or 13.16 per cent over the year 1924; of these 46 proved fatal, 76 resulted in some permanent disability and 8,233 were of a temporary nature.

The following table shows the number of accidents during the year in groups according to cause:—

CAUSES OF ACCIDENTS REPORTED DURING THE YEAR 1925

Cause	Fatal	Permanent Disability	Temporary Disability	Total
Burns and scalds	....	....	156	156
Burst bottles and broken glass	1	....	65	66
Electrical shock and burns	2	....	10	12
Explosions	5	1	27	33
Falling timber and poles	3	3	213	219
Falling from elevation and tripping	4	1	1,076	1,081
Falling rock, coal and clay	17	7	587	611
Flying and falling objects	2	11	1,319	1,332
Heavy lifting, loading wagons and trucks	....	1	307	308
Infections from handling meats and materials	....	1	93	94
Inhalation of gas fumes	1	....	20	21
Machinery, tools and equipment	2	30	1,130	1,162
Injured by horse, and in runaways	1	1	139	141
Protruding nails and spikes	....	....	146	146
Cranking automobiles	....	....	56	38
Struck by automobiles and trucks	1	1	36	38
Splashing of mixtures	....	....	52	52
Run over, struck by, or caught between cars	3	2	301	306
Derailment of mine cars	....	2	46	48
Slivers and splinters	....	7	142	149

Drowned	1	....	....	1
Miscellaneous	3	1	1,635	1,639
Totals	46	76	8,233	8,355

Of the workmen injured during the year 28.15 per cent were non-British.

The average time loss caused by accidents during the year was 119.17 days in permanent cases, and 25.85 days in temporary disability cases. The average age of the injured workmen was 34.98 years, and the average weekly wage was $24.72.

Industries under the Act

The number of employees within the scope of the act on December 31, 1925, was 3,442. Assessments levied during the year, together with those outstanding at December 31, 1924, totalled $854,275, of which amount $772,849 was collected, $53,298 was cancelled, leaving a balance of $28,128 unpaid at December 31, 1925.

The actual rates of assessment for $100 of payroll for the year ranged from $3 for the coal mining industry to 25 cents in the printing and certain other industries. The rate for coal mining, however, included a rate of 50 cents for mine rescue service. Other industries with a high rate of assessment were aeroplane flying, $10; road making (with blasting) $4; manufacture of wooden boxes, $3.50; sawmills, $3; natural gas and ice operations, $3; rolling mills, $3; steel building construction, $3; lumbering, $2.50; sand and gravel pits, etc., $2.50; teaming and cartage, $2.25; elevators, $2.50; sewer construction, $2.50; fishing, $2.25.

Of the total of 46 fatalities during the year 28 occurred in the coal mining group, in which also there were 25 cases of permanent disability out of a total of 76 cases in all industries during the year. Temporary disabilities were more widely distributed through the various industries.

Payrolls and Numbers employed

The payrolls and numbers of workmen employed during 1925 are given in the accompanying table:—

Industry	Payrolls	Number employed
	$	
In and about coal mines	11,782,787	8,861
Stripping pits	566,496	376
Lumbering, planing mills, furniture, etc	3,029,397	4,520
Gravel pits, glass, cement, oil, ice, paint and chemicals, etc	2,309,773	2,080
Garages, rolling mills, foundries, machine shops, farm implements, etc	2,364,995	1,707
Grain elevators, flour milling liquors, abattoirs, soap, etc	5,363,753	3,893
Warehousing, cartage, food products, wearing apparel, laundries, printing, leather goods, retail stores, etc	11,850,651	9,271
Building and construction, irrigation, fishing, water transportation, window cleaning, etc	4,161,424	2,507
Railway express companies	391,053	235
Municipalities	3,920,389	3,206
Canadian Pacific Railway	4,027,828	3,105
Canadian National Railway	2,551,000	2,100
E. D. & B.C. Railway	148,210	165
School boards, etc	791,950	727
Railways	243,709	202
Employment by Dominion Government	500,000	.....
Employment by Provincial Government	2,824,040	1,943

Amount of Compensation

During the year compensation totalling $312,990 was paid; $332,601 was transferred to the Pension Fund to cover awards in the case of permanent disabilities and fatal ac-

cidents, and $188,145 was paid to pensioners. In addition to this $48,000 was added to the disaster reserve and $128,528 was set up as a liability to cover pending claims.

Refunds for Disabled Veterans

The Department of Soldiers' Civil Re-establishment, under the authority of Privy Council Order No. 4432 is empowered to refund the full cost of accidents to workmen receiving a pension of twenty per cent or more, in respect of disabilities due to or aggravated by the Great War. The total amount refunded to the Board, under this Privy Council Order for the year 1925, was $20,426.

Medical Aid

Total receipts for the year on account of Medical Aid were $166,089, while payments for medical services amounted to $154,870.

MINIMUM WAGES FOR FEMALE EMPLOYEES IN SASKATCHEWAN

Increase of Wage Rates in (1) Shops and Stores; (2) Laundries and Factories; (3) Mail Order Houses

THE Minimum Wage Board of Saskatchewan has reissued Order No. 1 (Shops and Stores); Order No. 2 (Laundries and Factories); and Order No. 3 (Mail Order Houses). These orders supersede the existing orders which were reprinted in part in the LABOUR GAZETTE for December, 1924, page 1041. The order governing shops and stores was amended in 1925 in the section dealing with the rates of learners, the learning period having been extended from 18 months to two years (LABOUR GAZETTE, July, 1925, page 645). The orders now published provide an increase of one dollar in the minimum wage of adult employees in the three groups; the increase being from $14 to $15 in shops; and from $13 to $14 in laundries and factories and in mail order houses.

In the shops and stores group the learners' weekly rates are increased from $7.50 to $10 during the first six months of employment; from $9 to $12 during the second six months; and from $12 to $13.50 during the third six months. New provisions are made in regard to the payment of overtime work beyond 50 hours in any week. The working hours are reduced from 51 to 50 in the week, but special permits may be obtained under certain circumstances for a week of 56 hours, or for 59 hours during the Christmas season.

In laundries and factories the working week remains at 48 hours. A new clause provides for the payment of overtime wages beyond that limit. The same rule also applies to mail order houses. The clause relating to learners in knitting and hat factories is new also.

In the order governing mail order houses the learners' rates are increased from $8 to $9 per week during the first six months, and from $10 to $11 during the second six months.

The sections of the new orders which relate to hours and wages are given below:—

Order No. 1—Shops and Stores

2.—*Hours:* No person, firm or corporation shall employ or suffer or permit a female to be employed in any shop for a greater number of hours than fifty (50) in any one week, or if a special permit in writing has been obtained from the secretary of the board, fifty-six (56) hours in any one week or fifty-nine (59) hours in any one week during the period between December 15 and December 31.

3.—*Wages:* (*a*) No person firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a shop or store at a rate of wages less than $15 per week.

(An experienced female is one who has been employed in the industry eighteen months or more).

(*b*) Subject to the provisions of sub-clause (*f*) of this clause the rate of wages for learners may be less than the minimum rate prescribed for experienced workers; provided that learners shall be paid not less than $10 per week for the first six months, not less than $12 per week for the second six months, not less than $13.50 per week for the third six months and thereafter shall be considered to be experienced workers and shall be paid not less than the minimum rate of $15 per week prescribed for experienced workers.

(*c*) Wages not less than the minimum rate applicable shall be paid to employees whether experienced or inexperienced, for all work beyond fifty (50) hours in any one week.

(*d*) When a female whether experienced or inexperienced, is employed for a less number of hours than fifty (50) in any one week the minimum wages above set forth may be proportionately reduced.

(*e*) No reduction for statutory holidays shall be made from the minimum wage.

(*f*) *Millinery, Dressmaking, Tailoring, Fur Sewing and Florist.*—Excepting the provisions of sub-clause (*b*) of this clause, these regulations shall apply to all millinery, dressmaking, tailoring, fur sewing and florist establishments, whether situated in a shop or store or elsewhere.

A probationary period of three months for which no wages are stipulated is allowed, after which period an inexperienced female employee shall be paid wages at a rate not less than $3 per week for a period of six months, at a rate not less than $7 per week for the next 6 months, and at a rate of not less than $12 per week for the next 6 months and thereafter shall be considered to be an experienced worker and shall be paid not less than the minimum rate of $15 per week prescribed for experienced workers.

Order No. 2—Laundries and Factories

2.—*Hours:* No female shall be employed in any laundry or factory for more than forty-eight (48) hours in any one week; and the hours of working in any one day shall not be later than half-past six o'clock in the afternoon unless a special permit in writing has been obtained from an inspector under The Factories Act. (See The Factories Act, Section 11 (1)).

3.—*Wages:* (*a*) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a laundry or factory at a rate of wages less than $14 per week.

(An experienced female is one who has been employed in the industry for twelve (12) months or more).

(*b*) The rate of wages for learners may be less than the minimum rate prescribed for experienced workers; provided that learners shall not be paid less than $9.50 per week for the first 6 months, and not less than $11.50 per week for the second 6 months and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(*c*) Wages at not less than the minimum rate applicable shall be paid to employees whether experienced or inexperienced for all time worked beyond forty-eight (48) hours in any one week.

(*d*) When a female, whether experienced or inexperienced, is employed for a less number of hours than forty-eight (48) in any one week, the minimum wages above set forth may be proportionately reduced.

(*e*) No reduction for statutory holidays shall be made from the minimum wage.

(*f*) *Photographic Studios.*—Female apprentices in photographic studios and workrooms connected therewith shall be paid wages at a rate not less than $5 per week for a period of three months and for the twelve (12) months following shall be paid at rates of wages specified in clause (*b*) for learners.

(*g*) *Knitting and Hat Manufactories.*—Learners in knitting and hat manufactories shall be paid wages at the rate of not less than $8 per week for a period of three (3) months and for the twelve (12) months following shall be paid the rates of wages specified in clause (*b*) for learners.

Order No. 3—Mail Order Houses

2.—*Hours:* No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any mail order house for a greater number of hours than forty-eight (48) in any one week unless a special permit in writing has been obtained from the secretary of the board.

3.—*Wages:* No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in any mail order house at a rate of wages less than $14 per week.

(An experienced female is one who has been employed in the industry for twelve (12) months or more).

(*b*) The rate of wages for learners may be less than the minimum rate prescribed for experienced workers; provided that learners shall be paid not less than $9 per week for the first 6 months and not less than $11 per week for the second 6 months and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(*c*) Wages at not less than the minimum rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked beyond forty-eight (48) hours in any one week.

(*d*) When a female, whether experienced or inexperienced, is employed for a less number of hours than forty-eight (48) in any one week, the minimum wages above set forth may be proportionately reduced.

(*e*) No reduction for statutory holidays shall be made from the minimum wage.

MINIMUM WAGES FOR FEMALE EMPLOYEES IN MANITOBA

New Order governing certain Manufacturing Industries

ORDER Number 7 under the Minimum Wage Act of Manitoba was published by the Board on July 31 (Order number 6 was outlined in the last issue of the LABOUR GAZETTE, page 740). The new Order governs the occupation of female employees in the following industries: Artificial flowers, bedding, ladies' wear, hats, caps, embroidery, jewellery, regalia and garments which include all clothing trades—except dressmaking, millinery, custom tailoring and furriers—in all portions of the Province of Manitoba.

Hours.—In regard to hours of labour the Order provides that they shall not be more than nine hours in any day nor more than forty-eight in any week. These hours must be so arranged that each employee shall receive one afternoon half-holiday each week. No employee may work between 10 p.m. and 7 a.m., or on Sundays. There must be a period of not less than eleven hours between the close of one day's work and the beginning of the next.

Overtime may be worked only on permit from the Bureau of Labour, not oftener for any employee than 36 days in one year. No overtime may exceed three hours in any day or six hours in any week. No minor under seventeen years of age may work overtime. There must be extra pay at not less than the regular rate for all overtime worked.

At least one hour must be allowed for lunch. An employee waiting on the premises as required by the employer is to be paid for the time thus spent.

Wages.—The regulation in regard to wages, etc., is as follows:—"No experienced employee of eighteen years of age or over shall be paid wages at a less rate than twelve dollars ($12) per week. The minimum wage for experienced piece-work operators may be averaged over a period of three months. This average may be

computed over any consecutive three months' period.

"No inexperienced employee, except those employed in garment factories, shall be paid wages at a less rate than nine dollars ($9) per week for the first four months after entering the industry and ten dollars ($10) per week for the second four months, and eleven ($11) per week for the third four months, after which period of twelve months she shall receive the minimum wage of twelve dollars ($12) per week. No inexperienced garment worker shall be paid wages at a less rate than nine dollars ($9) per week for the first three months, and ten dollars and fifty cents ($10.50) for the second three months, after which period of six months she shall be considered an experienced employee.

"Wages shall be paid weekly and after each week's wages have been earned, they shall be paid within three days.

"After four weeks' employment one week's notice shall be required on the part of the employer in dismissing an employee, and on the part of the employee on leaving employment, except in the case of flagrant insubordination on the part of the employee or flagrantly unjust treatment on the part of the employer.

"No reduction shall be made from the Minimum Wage of time workers for statutory holidays. The number of inexperienced employees in any factory shall not exceed 25 per cent of the total experienced female employees. No girl under fifteen years of age shall be employed."

Conditions of Labour.—The Order makes the usual provisions as to cleanliness, drinking water, toilets, etc. Windows must be at least equal in size to one-eighth of floor space; for ventilation 400 cubic feet of air space must be allowed for each employee. "All windows and sashes, except show windows, shall open freely. Air shafts shall provide for a free circulation of fresh air. Storm sashes shall either be on hinges or have a portion at least eighty square inches in size which can readily be opened. In any workroom which cannot be ventilated by these means, mechanical appliances shall be installed." Temperature must not exceed 75 degrees Fahrenheit (except under natural conditions).

"All machinery and danger points shall be protected as far as possible by approved safety devices. All protection possible against occupational diseases shall be provided. Each establishment shall keep a First-Aid Kit to be approved by the Bureau of Labour, and at least one reliable member of the working force shall be trained in its use. A couch or stretcher shall be provided for emergencies, and where no dressing room or similar apartment exists, a screen shall be provided. Where employees remain for lunch, suitable provision shall be made for dining and rest purposes."

Model Apartments for Wage-Earners in New York

The plans of the new $1,250,000 Garden Apartments for wage-earners being built in the borough of the Bronx, New York City, by John D. Rockefeller, Jr., as a part of his effort to improve housing conditions have just been made public. This project was first conceived by a group of needle trades unions as an experiment in co-operative housing in which the welfare of the tenant owners should be the prime consideration and speculation for profit eliminated. But the undertaking proved too great for the unions to finance and Mr. Rockefeller took it off their hands.

The apartments are to be of four, five, six and (a few) seven rooms. Every apartment opens upon a great central garden which takes up more than half the block occupied by the building. Special provision is made in the plans for the comfort of mothers and children. On the ground floor there will be nursery rooms equipped with conveniences for the care of infants. There will also be a large indoor playroom for the older children's use in bad weather. This is to open directly upon the city playground on 159th Street. The rates at which these apartments can be rented with a reasonable investment return have not yet been determined. The experiment is being watched with much interest by both capital and labour interests. Details in regard to this project and other model tenements in New York are given in *The American City* (New York), July, 1926.

The thirteenth annual meeting of the International Association of Industrial Accident Boards and Commissions was held at Hartford, Connecticut, on September 14-17, under the chairmanship of Mr. F. M. Williams, of the Connecticut Workmen's Compensation Board. Mr. F. W. Armstrong, vice-chairman of the Workmen's Compensation Board of Nova Scotia, was among those who addressed the convention. Some account of the proceedings will be given in a future issue of the LABOUR GAZETTE.

MINIMUM WAGES FOR FEMALE EMPLOYEES IN ONTARIO AND BRITISH COLUMBIA IN 1925

Ontario

THE Minimum Wage Board of Ontario, in its fifth annual report, recently published, is able to announce the completion of the first part of its work, the female employees in practically all industries in the Province being now protected by basic minimum wage rates. The report points out that the second task—That of administration, "has grown with the accomplishment of the first, and will continue." The Board is now assisted in its administrative work by the chief factory inspector and his staff, who send in reports as to the observance in the factories of the various orders, and submit complaints on behalf of employees. Each year the Board gathers wage sheets from all the firms in the factory trades, thus securing material for the valuable statistical tables which appear in the report. The wage sheets are analyzed, and if any deviation from the minimum rate appears, the firm concerned is interrogated. Seldom has it been found necessary to resort to court action. A conviction was secured in one case last year, and the sum of $3,186, representing unpaid wages, was distributed among thirty-one women. The Board during 1925 collected arrears of wages amounting to $7,296.75 due from 33 firms to 165 workers. Under the provisions of the Act the Board has power to allow lower wages for handicapped workers or to permit variations or suspensions in exceptional cases. As only a few such permits have been granted the general wage standards have not been affected. On the other hand a number of girls who would have been otherwise without employment, have secured permanent positions in consequence of this arrangement.

The Board determines the minimum wage levels by studying the cost of living in the worker's place of residence. The "cost of living budget" of an average working woman at Toronto is first estimated as a basis for these calculations, the budgets of workers in other localities being adjusted in proportion to a recognized variation in the cost of living as between large and small cities, towns, villages and country districts. The budget for Toronto, as revised to October, 1925, allows $364 per year or $7 per week for board and lodging; $124.40 per year for clothing; $162 for sundries (including laundry, doctor, car fare, amusement, church, etc.), making a total of $650.40 for the year. The weekly budget for Toronto is therefore as follows:—Board and lodging, $7; clothing, $2.39; sundries, $3.11, making a total of $12.50 per week. The figure thus arrived at is taken as the minimum wage required to provide a female worker at Toronto with the necessities of living. The report points out that although the entire period of the Board's existence has been one of trade depression and falling wages, the minimum rates have prevented wages falling below the level of subsistence. Wage reductions have been halted at this point, and many working women have been enabled in this way to keep themselves in a moderate degree of comfort. Minimum wages, moreover, have resulted in preventing higher wages from falling; in the words of the report, "the underpinning of the basic wages has strengthened the entire column of the wage sheet." The tables published in this report contradict the forecast that the minimum would become the maximum wage. In most cases wages have either held their own or increased, while the recessions have been few and small.

The report contains statistical tables giving comparisons of wages before and after the issuing of orders by the Board. These tables show that subnormal wages, common up to 1921, have been cut off. "Further evidence of the most convincing kind," it is stated, "may be found by comparing present wages with those given in the vocational survey published by the Department of Labour of this Province in 1920. That survey, while not exhaustive, covered typical plants throughout Ontario. It reported a great many low wages. Of the 7,863 females included, 454 were earning less than $6 per week. In several industries a fifth of the women employed were below the $6 line.

The tables give particulars of wages, hours, and numbers employed in each of the industries covered by minimum wage orders for 1921, 1922, 1924 and 1925. They also show the number of employees in each wage group for each industry.

The following table gives some particulars concerning each industry for the year 1925:—

AVERAGE WEEKLY WAGES AND HOURS OF FEMALE EMPLOYEES IN VARIOUS INDUSTRIES IN ONTARIO

—	Firms	Female Employees		Average Weekly Wage		Average hours per week	Minimum wages (experienced adults)
		Over 18	Under 18	Over 18	Under 18

British Columbia

The eighth report of the Minimum Wage Board of British Columbia outlines its activities during the calendar year 1925. The Minimum Wage Act is among the acts administered by the Provincial Department of Labour, the report of the Board forming part of the Department's annual report for the year, reviewed on page — of this issue. The Board has been composed of the same members since its inception in 1918, and in consequence of the experience thus gained the work of the past year proceeded on well-settled lines. "There are signs," they state, "that one of the chief difficulties in the way of the Minimum Wage Board is gradually being removed —that female employees are showing more confidence in upholding their rights and in co-operating with the Board to secure the full observance of the law. With an ever-increasing number of personal investigations and interviews, with more telephone inquiries and calls, and correspondence with people in all parts of the Province, the benefits of the Minimum Wage law and regulations are becoming better known and more far-reaching in their effects. The advantages of the protection afforded by this legislation accrue to employers as well as to employees. The stan-

dard of efficiency is raised and unfair competition with firms who might be tempted to lower wages is eliminated."

The law provides that in cases where workers have been paid less than the amounts to which they are entitled they may recover by civil action the difference between what they were paid and the minimum wage, together with costs and solicitors' fees fixed by the court. With the help of the Board, and without recourse to legal proceedings, which are distasteful to employees, the sum of $2,887.82 was collected in arrears for 219 women workers in various parts of the province.

The majority of employers co-operated in the work of the Board, but it was necessary to take into court 14 cases in which the regulations had not been complied with. A fine was imposed in all but one case, which is outlined in this issue in the section "Legal Decisions Affecting Labour."

It will be recalled that the minimum rates for experienced workers in the various industries covered by the Act are as follows, the wages of "inexperienced" workers being graduated according to their length of actual service:—

Mercantile industry, $12.75 (hourly rate 26 9/16 cents).

Laundry, cleaning and dyeing establishments, $13.50 (hourly rate 28⅛ cents).

Public housekeeping, $14 (hourly rate 29⅛ cents).

Office occupation, $15 (hourly rate 31¼ cents).

Personal service occupation, $14.25 (hourly rate 29 11/16 cents).

Fishing industry, $15.50 (hourly rate 32 7/24 cents).

Telephone and telegraph occupation, $15 (hourly rate 31¼ cents).

Fruit and vegetable industry, $14 (hourly rate 29⅛ cents).

Manufacturing industry, $14 (hourly rate, 29⅛ cents)

The report for 1925 notes an innovation in the former practice by which employers were asked to supply statistics of their industry for a particular week designated in the return. On this occasion they were asked for particulars concerning the week of highest employment. To this change the considerable increase in the number of female employees is partly attributable, the advance being from 11,597 in 1924 to 13,899 in 1925.

From the actual figures supplied by employers the weekly average wage for the adult and skilled workers proved to be $17.38, representing a gain of 33 cents over the average for 1924. For the group of employees who had not completed their training the weekly average for 1925 was $10.34, as opposed to $10.18 for the prior year.

The Minimum Wage Act permits an employer to have 35 per cent of his female staff classed as inexperienced employees. The returns reveal that but 12.36 per cent appear in this category, so the statutory allowance would appear to be more than amply adequate.

Marital Status.—For the first time the report of the Board for 1925 shows the marital status of the employees. The result, it was found, "disproved the theory that girls are merely transients in the working world," nineteen per cent of the wage-earning women being married. In the laundry and dry-cleaning industry 31.1 per cent of the women recorded are married. The public housekeeping occupation has a percentage of 30.5 in its ranks. A somewhat higher ratio prevails in the fishing industry, where 39.1 per cent of the women employed are married, many of whom are Indian women. The fruit and vegetable industry, the most seasonal of any covered by Order of the Board, employed 44.8 per cent of married women during 1925. In the fruit centres (particularly in the Okanagan) when the rush is on it is customary for many to work who otherwise would not appear on the employees' lists. To save perishable products every available hand is needed, and if the response to the call for help is to be adequate it means many married women volunteer for this work.

The telephone and telegraph occupation has the lowest percentage of married workers—namely, 3.9. In comparison with other occupations there are relatively few married women in office positions. Out of the 3,482 employees reported in clerical work, only 282, or 8.1 per cent are classified as married. The occupational distribution of the married women in the other classes of employment covered by the Board is as follows:—Mercantile, 16.5 per cent; manufacturing, 17.5 per cent; personal service, 24.3 per cent.

Length of Service.—In the Office occupation practically 25 per cent of the employees have been in their present positions for periods of 5 years and upwards. In this connection reference to the table will show that 5 per cent were recorded as having actually been working for the one employer 10 years or longer. The telephone and telegraph occupation records a service of 5 years or more for 24.8 per cent of the employees. To qualify for positions in office or telephone work considerably more training is necessary than in the majority of the other classes, and this would seem to have a bearing on the duration of employment.

It is found difficult to analyse the figures in the fruit and vegetable industry. As the season lasts less than a year with most plants, over one-half the workers are shown to have been employed less than 12 months. Of this

number doubtless there are some who worked in the same establishment in former years, but all employers do not take this into consideration when making returns.

Many changes occur in public housekeeping occupations in the early stages of employment. With a total of 5,143 reported as remaining in their positions less than one year the employment problem is a vital one to employers.

The following table gives a statistical summary of all occupations covered by regulations of the Board:—

STATISTICAL SUMMARY, 1921-1925

—	1925	1924	1923	1922	1921
Number of firms reporting	2,804	2,287	2,195	2,135	1,923

*Experienced. †Inexperienced.

Canadian Council of Child Welfare

The postponed meeting of the Canadian Council on Child Welfare will be held at the Chateau Laurier, Ottawa, on October 29, 1926, beginning at 10.30 a.m. Every member of the Council is entitled to attend and to vote at this meeting. However, due to the postponement of the Conference, it will be a business meeting only. The agenda will include:—The adoption of the Minutes of the sixth annual meeting, 1925, and business arising out of these minutes; the secretary's report; the treasurer's report; the reports of the Ways and Means Committee, Child Hygiene Section; Child in Employment Section; Education and Recreation Section; Section on the Child in Need of Special Care, and the Section on the Ethical and Spiritual Development of the Child.

The Ottawa Trades and Labour Association published a handsomely illustrated "Labour Day Annual" in connection with the celebration of the forty-fifth anniversary of the day. This issue contains an appropriate message from President R. Carson and special articles by Messrs. Tom Moore, P. M. Draper, William Lodge, Donald Dear, Rod Plant, J. A. P. Haydon, J. R. Johnson, Matthew Woll and President William Green.

MOTHERS' ALLOWANCES IN ONTARIO

THE Mothers' Allowances Commission of Ontario, in their fifth annual report, note a continued increase in the amount expended for allowances during the fiscal year ending October 31, 1925. The number of beneficiaries at the end of this period was 4,185, and the sum distributed was $1,781,281, an increase of $73,387 over the previous twelve months period.

Under the provisions of the act one-half of the amount expended is chargeable to the municipalities concerned, provided the beneficiary and her family have resided within the municipality for at least one year; if, however, the beneficiary resides in a provisional judicial district, the whole burden is borne by the Province. The Commission administering the act is composed of five members, including two women. The Commission is assisted by local boards in each city, separated town, county and judicial district. Local boards have been appointed also for certain Indian Reserves, and in some cases the Reserve is represented by one member of the local Board in the adjoining municipality. All members of local Boards serve gratuitously, receiving payment only for travelling expenses and office supplies. The Commission in the present report express their appreciation of the work of the local Boards, stating that they are indispensable in the administration of the act. They also declare their indebtedness to the municipalities for their generous co-operation. The Commission has seventeen investigators who are distributed throughout the Province, all women, with the exception of one man in the northern territory. The report pays a tribute to the services rendered by these agents, who are the means of contact between the Board and the families. The reports of the agents to the Commission, some of which are outlined, prove that the allowances have already brought valuable social results, improving home conditions, creating opportunities for the education of children, enabling children in rural districts to remain on farms, and in many other directions. One supervisor notes that higher educational standards have been established through Mothers' Allowances, opening up the advantageous positions to which the children of a widowed mother never would have been able to aspire without such aid. Such children are not now obliged to accept any job that presents itself. They are "vocationally" placed, that is assigned to positions suited to their capacities, many students going into banks, Hydro-Electric and large financial corporations. Children between the ages of fourteen and sixteen are for the most part kept at school, with the result that they get one or two years in the extension schools or high school. "Of the many benefits to the family made possible through the payment of a Mothers' Allowance under the Mothers' Allowances Act," the report states, "none would seem more general or more marked than the increase in the regular school attendance of the children of school age, affording as it does an opportunity for attending school where the school attendance had previously been neglected or was impossible."

The cost of administering the Mothers' Allowances Act in 1924-25 was reduced to 4 per cent of the total expenditure. At October 31, 1925 there were 127 more beneficiaries on the allowance pay list than at the end of the previous year—an increase of 3.12 per cent.

The total number of families benefiting under the act during the year was 5,007, and the number of children in these families was 14,577. Some cases were cancelled, leaving the totals on October 31, 1925, at 4,185 families and 12,500 children.

The causes of the mothers' dependency was widowhood in the great majority of cases, but a considerable number were also due to insanity, desertion, or the death of both parents. More than 12 per cent of the cost of allowances were due to tuberculosis of the father, causing death or incapacitation. During the year there were on the allowance list forty-three foster-mothers of children whose parents or parent had died of tuberculosis (in twelve cases both parents, in eighteen cases the father, and in thirteen cases the mother). There were in all during the year 630 incapacition cases with 1,880 children. Details of these cases are given in the report.

The ninth annual report of the Department of Industries and Commerce of New Zealand gives the following statistics of employment and wages in factories in the Dominion in 1925. Establishments, 4,547; employees, 80,-327; wages and salaries paid £14,573,441; the wages paid to all males employed averaged £197 10s. for the previous year. The average wage of female employees was £95, compared with £95 10s. The general average for all employees in 1924-25 was £189 per annum, against £178 10s. in 1923-24.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Canadian National Railways First Aid Competitions, 1926

The winning teams in the First Aid Competitions held by the Canadian National Railways in 1926 are given below, as compiled by the Company's Department of Safety and First Aid. All the Dominion and regional competitions were conducted by Colonel C. A. Hodgetts, C.M.G., M.D., director-general of St. John Ambulance Association, and were under the general supervision of Vice-President W. D. Robb.

Dominion Trophies (St. John Ambulance Association)

Montizambert Cup, representing Championship of Canada, open for men. Winners, Fort Rouge Team, No. 1, Winnipeg.

Wallace Nesbitt trophy, representing railway championship of Canada, open to men. Winners, Canadian Pacific Railway. Team, McAdam, N.B.

Lady Drummond Cup, representing championship of Canada, open to women. Winners, Central Nursing Division, St. John Ambulance Association, overseas.

Ontario Province Shield, representing provincial championship, open to men. Winners, Border Cities Team.

Manitoba Province Shield, representing provincial championship, open to men. Winners, Fort Rouge Team No. 1, Winnipeg.

System Championships

Thornton Cup, representing championship, of Canadian National Railways System, open to men. Winners, Fort Rouge Team No. 1, Winnipeg.

Robb Cup, representing championship Canadian National Railways system, open to women. Winners, Edmonton General Office.

Regional Championships

Chamberlin Shield, representing championship central region, open to men. Winners, Montreal Car Shop Team No. 2.

Bowker Cup, representing championship central region, open to women. Winners, Toronto General Office Team No. 1.

Officers' Cup, representing championship Grand Trunk Western region, open to men. Winners, Port Huron Car Shops Team No. 1.

Officers' Cup, representing championship Grand Trunk Western region, open to women. Winners, Battle Creek General Office Team.

Officers' Cup, representing championship western region, open to men. Winners Fort Rouge Shops Team No. 1, Winnipeg.

Officers' Cup, representing championship western region, open to women. Winners, Edmonton General Offices.

Officers' Cup, representing championship Atlantic Region, open to men. Winners, Moncton, M.P. Shop Team.

Officers' Cup, representing championship Atlantic region, open to women. Winners, Moncton Shop Offices.

Officers' Cup, representing championship Telegraph Department, open to men. Winners, Toronto Headquarters Team No. 1.

Barber Cup, representing championship Telegraph Department, open to women. Winners, Toronto Headquarters Team No. 4.

Galloway Cup, representing championship electric lines, open for general competition. Winners, Montreal and Southern Counties Railway Team No. 1, St. Lambert, P.Q.

Local Trophies

Hutchinson Shield, representing Montreal and District, open to men. Winners, Montreal Belgo Building Team.

Bourne Cup, representing Montreal and District, open to women. Winners, Montreal Belgo Buildings Team.

Officers' Cup, representing Transportation Department only, open to men. Winners, Brantford Station.

Mine Rescue and First Aid in Alberta

The report of the Alberta Workmen's Compensation Board for 1925, reviewed elsewhere in this issue, contains a section on Mine Rescue and First Aid work in the Province.

During the year 1925 Mine Rescue Cars were in operation in the Edmonton, Drumheller, Mountain Park and Crow's Nest Pass districts, stations being operated at Lethbridge, Coalhurst, Diamond City, Nordegg, Canmore, Taber and Brule.

During the year Mine Rescue competitions were held at Edmonton and Cadomin under the auspices of the Canadian Institute of Mining and Metallurgy and The Workmen's Compensation Board. At Edmonton the team from the mine operated by the Fraser-McKay Coal Company, Limited, was successful for the third year in succession, obtaining 698 marks out of 750, and was awarded the shield presented by the Northern Alberta branch of the Institute with gold medals. This team was also awarded the shield donated by Honourable Herbert Greenfield for the

highest number of marks obtained in the Province to that date.

The second place in the Mine Rescue competition was obtained by the team from the Penn Mine Limited, with a total of 687 marks. This team was presented with silver medals; the third place being obtained by an all Edmonton team (unattached) with 676 marks.

At Cadomin the team from the mine operated by the Luscar Collieries Limited took first place with 705 marks out of 750, winning the shield with gold medals presented by the MacLeod-Athabasca branch of the Canadian Institute of Mining and Metallurgy, also becoming the holders of the Honourable Herbert Greenfield shield, having obtained the highest number of marks in the Province. Second place in this competition was obtained by the No. 1 team from the mine operated by the Cadomin Coal Company Limited, with 685 marks winning silver medals. The other teams competing were from the mines operated by the Mountain Park Coal Company, Limited; Cadomin Coal Company, Limited, and the Blue Diamond Coal Company Limited.

In the Mountain Park and Coalspur districts there were no accidents requiring the car to be put into active operation, although intensive mine rescue training was carried on throughout the year. In the Crow's Nest Pass district, Mine Rescue and First Aid training was carried on during the year, three teams being in regular training in Mine Rescue work. During the past year there were four classes taking courses on instruction in First Aid work. In the Drumheller district, Mine Rescue training was also carried on during the year. In the Edmonton district Mine Rescue training was also carried on.

Men training for mine rescue work are organized into teams of five and in the initial course of instruction the procedure is to reconstruct the conditions which may exist at an accident. The training is thorough, the men taking it having a knowledge of First Aid. They must also have a certificate in that work before presenting themselves for an examination in Mine Rescue Work. Instruction is given in the various gas testing instruments, the Pulmotor and the Carbogen Inhalation device.

The time occupied in taking a mine rescue course is ten days of three hours each, but the students before being able to obtain their Mine Rescue Certificates must be in possession of First Aid Certificates granted by either the St. John Ambulance Association, St. Andrew Ambulance Association, or an Industrial Certificate granted by the Workmen's Compensation Board.

Continued activity and progress is being made in mine rescue work and First Aid to the injured. No person is permitted to take mine rescue training or use the apparatus until he has undergone a medical examination stipulating that the applicant is physically fit to carry on that class of work.

"No Accident Week" in Quebec

The week commencing September 5 was observed in the Province of Quebec as a "No Accident Week." A programme was prepared by the Quebec Safety League for the purpose of demonstrating accident prevention methods, and in order to prove that 95 per cent of industrial and other accidents may be avoided by the general exercise of caution and deliberation. A comparative statement of accidents in the City of Montreal for 1924, 1925 and the first months of the current year shows that in 1924, 31 persons were fatally hurt, and 245 were injured; in 1925 fatalities as a result of accidents were 20 in number, and 187 persons were injured; so far in 1926 six have died victims of accidents, and 160 have been hurt.

The Province of Quebec Safety League has been organized for four years, and has a membership of 1,600, including representatives of large industrial and commercial companies and public utility corporations.

Protection of Work in Compressed Air in Ontario

With a view to protecting persons working in compressed air, 26 individual regulations and many sub-clauses were approved by the Ontario government by order in council early in September. The regulations, which go into force immediately in all caisson work, are the result of several fatalities recently in connection with this class of work in the City of Toronto.

The new regulations provide for the inspection of all caisson work equipment by government inspectors of the Ontario Department of Labour.

It is also provided that air locks must be used on such work in order that the men engaged might move from one air pressure to another without danger. Details concerning hours of work and pressures under which men are allowed to work are also set forth in the new regulations.

Safety Work of American Car and Foundry Company

The August issue of *Safety Engineering* describes the progress of accident prevention work at the Berwick, Pennsylvania, plant of the American Car and Foundry Company. This company for years has been increasing its accident prevention effort until it now stands from a safety standpoint as one of the best functioning large industrial concerns in the country. The safety department of the company was organized in July, 1911. The record which the Berwick plant has established stands as a real achievement in industrial safety. Such a result ten or twelve years ago would have been considered well nigh impossible.

The outstanding accomplishment at the Berwick plant of the American Car and Foundry Company was that this plant operated from July 14 to September 1, 1925, or 39 full nine-hour working days, with a daily average of 2,552 men or a total of 895,752 men hours worked, without one accident so serious as to cause the loss of time from employment. During the first six months after the inauguration of the safety movement, namely from July 1 to December 31, 1913, a monthly average of 17 plus lost time accidents per 1,000 employees was experienced. During the year 1925 the monthly average of time accident per 1,000 employees was 1.5—a reduction of 91 per cent. One of the chief factors in industry to-day is labour turnover. The safety engineer of the Berwick plant is quoted as saying: "The cause of the greatest percentage of accidents is brought about by daily placing new employees at a task they are not familiar with." The production manager says: "We cannot maintain maximum production, through having to break in new employees." The efficiency engineer says: "It costs from $40 to $500 for the breaking in and developing new employees to maximum efficiency." The small percentage of one and sixteen one-hundredths of one per cent average net labour turnover for the year 1925 was maintained at the Berwick plant.

Methods of Accident Prevention

Mr. Sydney W. Ashe, director of the Education and Welfare Department of the General Electric Company, Pittsfield, Massachusetts, describes the company's safety methods in the *National Safety News*, published by the National Safety Council. He points out that statistics show that 85 per cent of accidents in industry are due to the personal element. The workmen must be led to take an interest not only in avoiding accidents to themselves, but in safeguarding others. The methods used by the company to develop this dual interest are as follows:—

1. We educate the worker in the hazards of his task and of the tasks of others, by means of talks, rule books, posters, moving picture films, danger signs, house organs, safety plays, inspection work, departmental contests and active service on departmental safety committees.

2. Next we appeal to his personal interest through his sense of self-preservation and his love of his family; to his sporting instinct and pride through contests, and to his selfish side by offering cash prizes or other rewards and picturing the effect of his safety record upon his promotion.

3. And last, we use discipline. If he does not respond to any other appeal we may transfer him to another occupation where a minimum of danger exists or perhaps dismiss him from employment.

Study of Accident Prevention in United States

Twenty committees, with a membership of more than 200 leading engineers, are being formed in important industrial centres in the United States to aid in carrying on the safety and production study of the American Engineering Council, according to announcement by the president of the council, Dean Dexter S. Kimball of Cornell University.

Two thousand industrial plants will be investigated by the engineers under the direction of a main committee headed by A. W. Beresford of Detroit, with the aim, according to Dean Kimball, of getting to the bottom of the whole problem of accident prevention. Industrial accidents, despite fifteen years of organized safety effort, were declared to be increasing.

"The American Engineering Council," said Dean Kimball, "is making a thorough study of the relationship between industrial accidents and economy of production. Ten basic industries will be surveyed in order that the necessary factual data may be obtained. Two phases of the situation will be studied intensively. First, the accident rate and production rate will be measured from the experience records of plants over as long a period as records permit, and the trend of accidents and production will be studied and compared for individual plants, groups of plants and for each industry as a whole. The second part of the problem will be a study to determine exactly what takes place when industrial accidents occur and to measure the curtailment of production due to accidents."

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

Scholarships Awarded by C. P. R.

Three McGill University matriculation scholarships have been awarded by the Canadian Pacific Railway Company. These scholarships, which cover four years' tuition in architecture, chemical, civil, mechanical or electrical engineering, are open to apprentices and other employees under twenty-one years of age enrolled on the permanent staff of the company, and to minor sons of employees, by competitive examination. Ten students applied for scholarships this year in the examination, which is the regular entrance matriculation examination of the University. The awards are renewed from year to year, to cover a period not exceeding four years, if at the close of each session, the holder is entitled to full standing in the next higher year.

The Application of Vocational Guidance

The following is a summary of an article by Gordon N. Kennedy, Co-ordinating Officer, Central Technical School, Toronto, appearing in the August issue of "Social Welfare."

Few readers will find it necessary to go beyond their own experience in the search for an example of adjustments in industrial or economic conditions before the finding of the more or less permanent niche where one is at least partially satisfied with one's working environment. This is true of the labourer —true of the college president, and true of every scale in commercial, industrial or political life.

In short, at some time in our development, we have, each and every one of us, been a round peg in a square hole. Consider the employment history of friends and acquaintances—is not each one a series of applications of the trial and error method of determining what is suitable and congenial employment?

Such then, is the problem for nearly all. The most enthusiastic supporters of vocational guidance will scarcely be so sanguine as to hope for the elimination of the trial and error method, while the frankly skeptical critics of vocational guidance must admit that intelligent consideration of trials and errors will appreciably reduce the number of attempts at finding one's proper level.

In our technical schools, it has been felt that our youth of to-day suffers from lack of opportunity. Lack of opportunity to acquaint himself with life—the life of the shop, of commerce, of industry. It is also believed that it is this very lack of knowledge of industrial and commercial life that is responsible for the job changing, particularly of the young, but true also of those far beyond school age.

Modern business has little time for the onlooker; modern industry no time except for those engaged in work.

The Industrial Course of the Toronto Technical Schools was conceived as a remedy for this lack of opportunity. Dr. A. C. McKay, the Director, has spent nearly a lifetime preparing for this type of education, and the whole scheme, as he is fond of saying, is a "Preparation for Life." Shops representing almost all of our basic industries carry on work—identically as far as possible as do the industrial establishments of our city. Printing presses of three types, folding, stitching and cutting machines operate as in a regular publishing house. Two composing rooms are filled from hour to hour with boys who are not only learning type-setting, but who improve their punctuation, spelling, grammar, and composition at the same time. Woodworking shops teach the use of all tools, the making of all types of joints—the construction of furniture, the use of the turning lathe, the band saw, followed later in the course by the use of all types of modern woodworking machinery and the construction of increasingly difficult projects culminating in the framing of a building. In the machine shop the boys became acquainted with the lathe, the shaper, the milling machine and the grinder. In the forge and in the foundry, work is carried on in moulding and blacksmithing. Bricklaying, sheet metal working, auto mechanics and other shops are all part of the general scheme.

At the end of the second year each boy has in this way acquired much more than an idea of the work of all these branches of industrial life. During this two years of a general course he has been enabled to discover his own capabilities, his aptitude or fondness for some particular branch of work, and so, at the commencement of his third year is able to choose at which type he shall specialize. This third is the first of two years of specialization— where a boy may follow any one type of practical work and so fit himself to enter with confidence his particular branch of industry.

By this scheme, each boy becomes his own vocational guide. He has every opportunity to obtain information and practice in many lines of industry—from his own opinion make his choice, and then get further training in his chosen lines of endeavour. Principal,

department head, shop instructor and vocational officer are all available for advice or consultation.

A reasonable conclusion to this sketch might well be a few words about results. Like all other secondary schools, the leakage between first and fourth years is tremendous. Of the boys who finish the fourth year practically without exception every boy who can be recommended, finds himself well able to command an interesting, congenial, and worthwhile position very soon after he is ready to step out and make a living. From our records we find the labour turnover of such boys is almost zero—that is to say they are satisfied and they do not move from job to job. The employers are glad to have them, and prove their satisfaction by coming back for more. This is true in a slightly less degree of those boys who have finished their third year.

Vocational School, Saint John, N.B.

The prospectus of the new vocational school at Saint John, N.B., which opens on September 7, states that the school aims to serve:

(*a*) Persons who have passed high school entrance, but who do not expect to take up teaching or other professional occupations, requiring training beyond high school.

(*b*) High school graduates, or those who have completed two years of high school, who desire to take an intensive vocational course of one or two years to prepare for some job. They will spend full time in the practical subjects of the particular course they may choose.

(*c*) Boys and girls over 13 years of age, who have failed in the high school entrance, or who have never tried it, who desire to take vocational guidance and training while continuing their general education. These must have completed grade VI or furnish evidence that they can profit by the work of the school. They will devote two-thirds of their time to general subjects until they attain high school entrance standing or equivalent. The remaining time will be devoted to practical subjects.

(*d*) Workers over 16 years of age, who will be served through part-time, special and evening courses.

NOTES ON LABOUR UNION ACTIVITIES

American Federation of Labour.

THE forty-sixth annual convention of the American Federation of Labour will be held at Detroit, Michigan, beginning on October 4. The convention Call states that this meeting "presents a most excellent opportunity for study, research and the formulation of future policies. The officers and delegates in attendance at the convention can make a searching analysis of existing economic conditions, and they can plan for the future in a comprehensive and broad-visioned way. Through the adoption of a progressive and constructive program the organized workers everywhere will be inspired to put forth increased efforts in the work of organization and the unorganized workers will be attracted to our banner through the hope of the help and protection which we have to offer them. We earnestly hope that each and every organization entitled to representation will be represented. Let every affiliated organization be represented in the convention by the full and complete number of delegates to which the organization is entitled. We urge this because of the educational benefit which will come to those who may be privileged to attend and because the American Federation of Labour and the organized labour movement needs advice, assistance and the personal co-operation of the chosen representatives of all affiliated bodies. Therefore, the importance of our movement, the duty of the hour and for the future, demand that every organization entitled to representation shall send its full quota of delegates to the Detroit convention."

Ontario Council of Carpenters and Joiners

The Ontario Council of Carpenters and Joiners held their annual meeting at Belleville recently, when Mr. V. A. Sinclair, K.C., chairman of the Ontario Workmen's Compensation Board, gave an instructive address on the work of the Board. A resolution was adopted recommending "that the Old Age pension scheme be undertaken in its entirety by the Federal Government; that any person 65 years of age who has been domiciled in Canada for 15 years should receive at least $30 per month; that when a strike is in progress and the employer or employers advertise for men, they must publish the fact that

a strike is in progress at the plant where men are wanted."

A resolution was adopted protesting against military training in schools or colleges, and recommending a system of physical training instead.

It was decided to petition the Dominion Government to make some amendments to the fair wage policy of the government.

International Stereotypers and Electrotypers' Union of North America

The twenty-fifth annual convention of the International Stereotypers and Electrotypers' Union of North America was held in the Alexander Hotel, Los Angeles, Cal., on July 19-24, with fifty-six delegates present, representing thirty-seven local unions.

A review of the history of the international union was given by the president in his address. This review showed that prior to 1902 the stereotypers and electrotypers were a part of the Typographical Union, but that at the Birmingham convention in 1901 complete trade autonomy was provided for the craft. Since that time annual conventions had been held, following the example set by the Typographical Union. It was the president's opinion that these annual conventions had materially assisted in fostering the fraternal spirit within the local unions and this had made it possible to attain the necessary co-operation. The president urged the delegates to be satisfied with what has been accomplished thus far and with the personal contact afforded at the annual conventions, and to maintain harmonious relations within the ranks, which would enable the International union to make still greater progress in the future.

The following were some of the resolutions presented and adopted by the convention: (1) Instructing the representatives on the Board of Governors of the International Allied Trades Association to initiate a campaign for the purpose of inducing Life Insurance Companies to use the union label on all policies and printed matter issued by them; (2) Urging that every effort be made by the I. S. & E. Union to organize the salesbook industry; (3) Endorsing the establishment by the unions composing the American Federation of Labour of a life insurance company; (4) Authorizing the executive board to invest a sum not to exceed five thousand dollars in the stock of the Union Labour Life Insurance Company; (5) Empowering the international president to appoint a committee to be known as the Technical Educational Bureau.

The Officers elected were: Pres., W. T. Keegan, 78 Lincoln St., Jersey City, N.J.; Vice-pres., T. P. Reynolds, 3822 Sherman Ave., Omaha, Neb.; Sec.-Treas., Chas. A. Sumner, 3110 Olive St., Kansas City, Mo.

The next convention will be held in Pittsburgh, Pa., in 1927, while St. Louis was selected as the convention city for 1928.

Bakery and Confectionery Workers' International Union of America

The nineteenth triennial convention of Bakery and Confectionery Workers' International Union of America was held in New York city on August 9-18, 1926. In conformity with the laws of the International Union, the activities of the organization since the last convention was reviewed in the joint report of the Executive Officials and the General Executive Board. According to the latest available figures, there were 17,293 members employed in 5,176 union shops. During the past three years agreements had been submitted for approval by 521 local unions. The General Executive Board at their last meeting unanimously recommended to all local unions that they consider extending their working agreements wherever possible, for a term longer than one year, which is the period for which agreements are signed by most local unions. Attention was drawn to the fact that official recognition had been given to the International Union by the International Union of Organized Workers engaged in food producing industries and provision trades, an association composed of European bakery workers, at the second International Congress of which, held in Hamburg, Germany, in 1923, secretary Hohmann was elected to the Executive Board. Special stress was laid on the importance of having the finances of local unions, joint executive boards, state and district organizations properly insured and safeguarded. On June 1, 1926, the roster showed active business transactions with 233 duly chartered local unions located in cities of 38 states of the U.S.A., 8 local unions in Canada and one in Porto Rico. According to the report, there were approximately 50 local unions involved in strikes and lockouts where international benefits were legally authorized and paid during the period since the last convention of two years and ten months. There were 637 members in 152 shops affected, as compared with 2,742 members in 397 shops in the three year period preceding. From October 1, 1895 to May 31, 1926, considerably

over one million dollars was paid out by the International union for sick and death benefits. Statistics, as set forth in the report, gave the average weekly minimum and lowest contract wage for journeymen bakers for all local unions during each three year period from 1911, as follows: 1911, $16.36; 1914, $17.64; 1917, $19.77; 1920, $37.40; 1923, $37.58; 1926, $38.77.

During the convention three questions were featured: (1) The continuation and still further expansion of the fight against the non-union bread trust interests, with particular consideration of the Ward and Continental Bakery Corporations; (2) The paving of the way for the re-affiliation of the three independent bakery workers' unions of New York City; (3) The financial condition in which the various New York Hebrew locals find themselves as a result of their fight against injunctions, dual unions and hostile employing interests. The convention instructed the General Executive Board to render all help possible to the New York Hebrew locals, who also secured permission to circularize all locals within the international for assistance.

In concluding its report, the General Executive Board drew attention to the steady progress that had been made by the International union and was quite emphatic in stating to the membership that providing a sound constructive policy was maintained, future progress was assured.

American Federation of Musicians

The thirty-first annual convention of the American Federation of Musicians was held in Salt Lake City, Utah, on May 10, 1926, and was presided over by the president, Joseph N. Weber, of New York City. There were 260 delegates present, representing local unions in 39 of the 48 states of the Union, the District of Columbia and the Dominion of Canada.

The president in his address outlined the policies and principles of the federation, which are: (1) Absolute fairness and equity in the transaction of business between local members and locals; (2) Recognition of the principle of conciliation and collective bargaining; (3) Subordination of local to national interests; (4) Adherence to the recognition that the end of all law is to be justice; (5) Application of the rule of reason in all matters; (6) Adaptation to changed conditions not of our making and not within our control, and the changing of laws in conformity therewith. The president stated that the advent of picture shows, radio, travelling dance orchestras, etc., were beheld with considerable foreboding by the membership but that they had to adapt themselves to the ever changing conditions. In Mr. Weber's opinion it was unwise for the organization to attempt to influence the public's inclination toward any form of musical entertainment, as people's taste as regards musical attractions cannot be controlled by law. He stated that the nature of the music business was so complex, necessitated so many rules and regulations, offered such intricate problems and created such vexatious situations, that these difficulties should not be added to by attempting minute legislation to cover exceptions as if they were the rule but that the policy should be confined to the regulation of fundamentals.

In speaking of the proposed changes and modifications of existing laws, he cautioned the delegates not to be stampeded into making any alteration in laws which was the result of long experience but urged them to consider the first fundamental in any proposition, and that was, whether the thing proposed was possible and if possible, whether it was fair.

The report of the secretary gave in detail the number of cases considered by the National Executive Board and showed what disposal was made of each.

Some of the resolutions adopted by the convention were as follows;

Instructing the Executive Board to meet, confer and agree with the National Association of Theatrical Managers and other employers, as to the conditions and wages to govern members of the federation for the ensuing year;

Recommending the holding of an annual convention commencing on the third Monday in May, at such place as the delegates in convention may determine;

Recommending that the Executive Board meet semi-annually for the purpose of deciding appeals, trying charges referred to them and expediting the general business of the federation;

Instructing all locals of the Federation to do everything in their power to improve orchestra pits, the entrance thereto, and to have the management provide suitable rest rooms in theatres and other places where members of the federation render service.

The election of Officers resulted as follows: Pres., Jos. N. Weber, 1440 Broadway, New York City; Vice-Pres., Wm. L. Mayer, 212 Charles St., Mt. Oliver Station, Pittsburg, Pa.; Sec., Wm. J. Kerngood, 239-241 Holsey St.,

Newark, N.J.; Treas., H. E. Brenton, 1440 Broadway, New York City; Executive Committee; C. A. Weaver, A. C. Hayden, A. A. Greenbaum, Fred. W. Birnbach, D. A. Carey.

The city of Baltimore was chosen as the convention city for 1927.

International Brotherhood of Bookbinders

The International Brotherhood of Bookbinders held its nineteenth biennial convention at Des Moines, Iowa, on July 12, 1926, with 65 delegates present, representing 39 local unions. In his address to the convention, International President William Glockling of Toronto, spoke of the many difficulties with which the organization had to contend, and called upon the membership for greater co-operation in an effort to build up the brotherhood. The committee on Canadian affairs reported that since the last convention two local unions, London, Ont., and Winnipeg, Man., had ceased to function. In reviewing the activities of local unions in Canada, the Committee stated, in regard to local No. 91 of Montreal, Que., "That the International officers had deemed it advisable to keep a representative in the field to counteract in every case the activities of the National Catholic Syndicate." Before the report of the committee had been adopted, President Glockling called on International secretary, Felix J. Belair, who had been sent to Montreal in an endeavour to straighten out the difficulties existing there, to give an account of what transpired. Secretary Belair gave the delegates a review of the trouble which had arisen by reason of a printing firm deciding to employ only members of the National Catholic Syndicates.

Mr. George A. Carter, Public Printer at Washington, addressed the convention. During the course of his speech he outlined the manner in which the records of the government were kept.

Mr. J. J. Manning, secretary of the union label department of the American Federation of Labour also addressed the convention.

A large number of resolutions were presented to the convention, some of those which were adopted are as follows:—

Instructing the international officers to take concerted action for the establishment of the 44-hour week.

Favouring the five-day working week of forty hours.

Recommending same pay for women as for men when performing same work.

Authorizing the president to enter into any agreement with the other printing trades union heads which will provide for closer affiliation.

Instructing the international officers to provide for the holding of district conferences at quarterly intervals for the purpose of restoring the uniform wage scale.

Endorsing the national child labour amendment.

Instructing the president to appoint a committee of two to co-operate with like committees appointed by other international unions interested in the elimination of prison-made goods, when in competition with free labour.

San Francisco, Cal., was selected as the convention city for 1928.

International Federation of Trade Unions

The International Federation of Trade Unions (Amsterdam) has recently published its fourth Year Book, containing the names and addresses and membership figures of all the organizations affiliated with the Federation, and the International Trade Secretariats, and a list of their publications. It surveys the whole world trade union movement, and gives a particularly valuable list of all existing labour educational organizations. Information is provided on the sections of the Labour and Socialist International, the International of Youth, and other international bodies. The national trade union centres affiliated with the International Federation, including the Trades and Labour Congress of Canada, contribute detailed reports on their activities as do also the International Trade Secretariats together with their most important rules, etc.

The Year Book should prove invaluable as a work of reference not only for trade unionists, but for students of the international labour movement. It may be obtained direct from the Publication Department of the International Federation of Trade Unions or from the Publication Department of the Trade and Labour Congress of Canada, 172 MacLaren Street, Ottawa, Ontario.

Dates of Coming Conventions

American Federation of Labour, Detroit, Michigan, October 4.

International Brotherhood of Pulp, Sulphite and Paper Mill Workers, October 5.

International Alliance of Bill Posters and Billers of United States and Canada, New York, N.Y., December 6.

Benefits Paid by International Unions

According to a statement prepared by the Statistical Department of the American Federation of Labour, standard trade unions of the United States and Canada, the majority of which are in affiliation with the A. F. of L. distributed $20,516,312 among their members in 1925 in sickness, death, unemployment, old age, disability, and miscellaneous allowances.

The distribution of the benefits was as follows:—

Sickness, $1,842,292.
Death, $11,020,652.
Unemployment, $1,658,327.
Old age, $2,823,145.
Disability, $950,963.
Miscellaneous, $2,220,932.

Approximately $6,000,000 was paid by the Brotherhood of Locomotive Engineers, which was not affiliated with the Federation, and of this amount $3,004,223 was for death claims. The pension fund of the Brotherhood distributed $1,053,973.

Other unions paying large amounts in death claims were:—

Brotherhood of Carpenters and Joiners, $698,743.
Brotherhood of Locomotive Firemen and Oilers, $937,872.
United Mine Workers of America, $1,000,000.
Order of Railway Conductors, $1,520,176.
Order of Railway Telegraphers, $240,914.
International Typographical Union, $395,909.

Four unions distributed a sum exceeding $3,600,000 in old age pensions to their members. They were: Bricklayers', Masons' and Plasterers' International Union, $952,768; the Brotherhood of Locomotive Engineers, $1,053,973; Amalgamated Association of Street and Electric Railway Employees of America, $682,320; and the International Typographical Union, $1,007,650.

Average Weekly Wages.—The average weekly wage of the leading unions was:—

Boot and Shoe workers, $42.
Bricklayers, $55.
Carpenters, $50.
Diamond workers, $75.
Electrical workers, $55.
Elevator constructors, $65
Engravers, $55.
Fire-fighters, $37.
Glass workers, $36.
Hodcarriers, $42.
Horseshoers, $44.
Lathers, $60.
Sheet-metal workers, $49.
Mine workers, $27.50 to $40.
Papermakers, $49.50.
Patternmakers, $44.
Plumbers, $55.
Railway conductors, $49.50.
Tailors, $40.
Telegraphers, $200 a month.
Printers, $42.50.

The pay of the locomotive engineer is given as $7.50 a day, the working week at 56 hours in seven days, and his weekly wage at $52.50.

The Photo-Engravers' and the Commercial Telegraphers' Unions are the organizations which have succeeded in reducing their working day to seven and one-half hours.

Catholic and National Unions

The fifth annual convention of the Federation of Catholic Workers of Canada is being held this month at Sherbrooke, Quebec. Particulars of the convention will be given in the next issue of the LABOUR GAZETTE. The list of subjects to be discussed includes proposals for a provincial bonus for large families; amendment of the existing law regarding picketing; the enactment of old age pensions, and 8-hour day legislation. The new Workmen's Compensation Act, which is to take effect on April 1, 1927, is also the subject of discussion.

A bill to provide for the establishment of minimum rates of wages and maximum hours of labour in protected industries was introduced by labour representatives in the British House of Commons in July. The bill would provide that during the period in which a duty is chargeable under any enactment upon the importation of goods or articles of any description the manufacture of which is carried on in Great Britain or Northern Ireland, the rates of wages and hours of labour in the manufacture of such goods or articles in Great Britain or Northern Ireland shall, from the passing of this Act, be not less favourable than those prevailing in such manufacture on the date when the duty was first imposed, plus, in the case of wages, a percentage equal to twenty-five per cent of the rate of the duty upon the imported goods or articles.

The bill would further provide for the imposition of a fine of £100 on employers convicted of violating the provisions of the proposed act.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Hours of Work in Various Countries

THE question of hours of work has once more come into the foreground of industrial questions. The British Government has recently secured the adoption of legislation providing for a reversion from the seven hour day to the eight hour day in the coal-mining industry, while the Italian Government has issued a decree authorizing an extension of the normal working day in industry generally from eight hours to nine.

According to news from unofficial sources, the Swedish parliament has recently rejected a bill for the permanent establishment in Sweden of a limitation of working hours in accordance with the principles of the Washington Convention, and has extended for four years the operation of the temporary system which permits, in addition to a day of eight hours, the working of 350 hours of overtime per annum.

It is indicative of the tendency of opinion in some quarters in other countries that a committee of experts appointed to advise the French government on measures for restoring the financial position of the country reported on July 3 that it was the duty of the government to enlarge the possibilities of industrial production "not by a repeal of the eight hour act, but by a liberal application of it, enabling restrictive regulations of a kind likely to paralyze national work to be moved aside."

In Great Britain, also, a report on the situation in the iron and steel industry issued by the National Industrial Alliance—a body of employers and workers which claims to follow a conciliatory policy in regard to labour matters—expresses some doubt whether it will be possible to maintain the present working day in this industry if longer hours are worked in other countries.

Decision of World Court

At its Seventh Session, held in 1925, the International Labour Conference adopted a Draft Convention concerning night work in bakeries. This Convention contained, among others, the following paragraphs:

Subject to the exceptions hereinafter provided, the making of bread, pastry or other flour confectionery during the night is forbidden.

This prohibition applies to the work of all persons including proprietors as well as workers engaged in the making of such products.

During the discussion preparatory to the drafting of the Convention, and even earlier when the matter first came before the Governing Body of the International Labour Office for consideration, doubt was expressed by certain members of the Employers' Group as to the competence of the International Labour Organization to deal with the work of employers. However, the Governing Body, the Committee of the Conference and the Conference itself all agreed that it was within their competence to discuss such a question, and the Conference adopted the Convention by a large majority. This, however, did not satisfy the Employers' Group, and they asked that the Governing Body should take the necessary steps to have the question submitted to the Permanent Court of International Justice.

After further discussion the Governing Body, acting on this request, had the question submitted to the Permanent Court in the following form:

Is it within the competence of the International Labour Organization to draw up and to propose labour legislation which, in order to protect certain classes of workers, also regulate incidentally the same work when performed by the employer himself?

The Court at its eleventh (ordinary) session, after a careful examination of the relevant documents and memoranda submitted to it, and after hearing the oral declarations of representatives of the various organizations concerned, answered this question in the affirmative, thus upholding the competence of the International Labour Organization. The reasoning of the Court and its opinion may be briefly summarized as follows:—

The question as submitted to the Court is a general one and does not refer to any particular branch of industry, nor is the Court asked to deal with the work of the employer in general, but only in so far as such work is the same as that of the worker and its regulation is incidental to a regulation proposed in order to protect certain classes of workers and to assure such protection.

This question is clearly one of law, in that its answer depends upon the interpretation to be given to Part XIII of the Treaty of Versailles by which the competence of the International Labour Organization is defined. The relevant paragraphs of this part (XIII) of the Treaty are very general and give to the International Labour Organization a very wide competence in so far as it concerns the investigation and discussion of labour questions and the formulation of proposals for national legislation and international agreements, but do not give the Organization any

powers for the carrying out of these results unless the Governments themselves ratify the Conventions. Even this competence to investigate is limited in that, because of the composition of the Organization, Government, employers' or workers' representatives may criticize or object to any matter under consideration and also any Government may object to the inclusion of any item in the Agenda of a session of the International Labour Conference, and this objection is effective unless two-thirds of the delegates present at the Conference decide to include the said item in the Agenda for the following meeting of the Conference. In addition, before any Draft Convention or Recommendation is adopted it must be approved by a similar two-thirds majority.

Thus, quite apart from the reference of any question to the Court, the Treaty provides the means of checking any attempt on the part of the Organization to exceed its competence.

From the provisions of the Treaty it is clear that the High Contracting Powers intended to give to the International Labour Organization a very broad power of co-operating with them in respect of measures to be taken in order to assure humane conditions and the protection of workers, and it is not conceivable that they intended to prevent the Organization from drawing up and proposing measures essential to the accomplishment of that end.

Not only does the entire framework of Part XIII justify the inference that the International Labour Organization is not excluded from proposing measures for the protection of wage-earners, because they may incidentally regulate the personal work of the employers, but there are specific provisions of the Treaty in the application of which, as they are generally understood, it may be assumed that the incidental regulation of the personal work of the employers is potentially involved, e.g., the regulation of the hours of work (Part XIII Preamble) and the adoption of a weekly rest of at least 24 hours (to include Sunday wherever practicable) (Art. 427, Principle 5). There are numerous instances too, in national as well as international legislation, of the application of this principle—such as the closing of shops, factories and places of business at certain hours, the prohibition of the use of white phosphorous in the manufacture of matches and the prohibition of the use of white lead in painting.

It was also argued that measures for carrying out the principles laid down in Conventions fall within the domain reserved to the Members who ratify the Conventions, but the Court observed that Part XIII made no distinction between principles and provisions to ensure their application.

For these and other reasons the Court expressed the opinion:

That it is within the competence of the International Labour Organization to draw up and to propose labour legislation which, in order to protect certain classes of workers, also regulates incidentally the same work when performed by the employer himself.

Methods of Conducting Family Budget Enquiries

The latest addition to the Studies and Reports issued by the International Labour Office is entitled "Methods of Conducting Family Budget Inquiries." It may be recalled that at the Second International Conference of Labour Statisticians, held in Geneva in April, 1925, the following resolution was passed:

"It is desirable that in those countries in which no family budget enquiries have been held since 1920-1921, such enquiries should be undertaken as soon as economic conditions are sufficiently favourable, and if possible not later than the year 1928."

This resolution formed part of a series dealing with methods of calculating index numbers to measure changes in the cost of living. The information contained in family budget inquiries provides a valuable basis for the calculation of such index numbers by showing the relative importance in consumption of the different commodities included in the index. To ensure uniformity in the basis on which the cost of living index numbers are calculated, it is necessary that the same principles should be adopted in different countries in conducting family budget inquiries. As is indicated in the present study, the weights necessary for the compilation of cost of living index numbers may be obtained by a comparatively simple inquiry in which budgets for a small number of families are secured for a short period. Information obtained in family budget inquiries, however, is of value for other purposes also. By means of a somewhat more detailed inquiry, valuable information may be obtained with regard to the standard of living of the class or classes from which the budgets are secured. The present study, therefore, deals with the whole subject and not merely with inquiries where the sole purpose is to provide weights for the calculation of cost of living index numbers. It forms a continuation of the series of studies which the International Labour Office is making on the methods adopted in various coun-

tries with regard to different kinds of labour statistics.

The study has been prepared by Mr. J. H. Richardson, under the direction of Dr. Karl Pribram, Chief of the Statistical Section.

"International Labour Review"

The August number of the "International Labour Review," the monthly publication of the International Labour Office, contains the following special articles:—

"The Eight-Hour Day: 'Taking a Reckoning'," by Albert Thomas, Director of the International Labour Office.

"The Eighth Session of the International Labour Conference."

"Unemployment in 1925," by Henri Fuss, Chief of the Unemployment Service, International Labour Office.

"Trade Union Reform in Italy," by Gino Arias, Professor in the University of Florence.

"The Legal Minimum Wage of Women Home Workers in France," by Roger Picard, Professor in the Faculty of Law, Lille University.

Labour Conditions in Russia

The following note on labour conditions in Russia appears in the August 9th issue of *Industrial and Labour Information*, a weekly publication of the International Labour Office in Geneva:—

We publish in the present issue some extracts from a report presented by Mr. Kaplun, Chief of the Labour Protection Section of the Commissariat of Labour of the Union of Socialist Soviet Republics, to the Central Council of Russian Trade Unions, at a meeting held in June. The report, coming as it does from the head of the department chiefly responsible for seeing that the provisions of the Labour Code for the protection of the worker are genuinely applied, may presumably be regarded as an authentic description of the present situation, especially as regards overwork and accidents. Overtime, it is stated, is widespread, in spite of the fact that there are more than a million registered unemployed; the weekly rest is frequently not observed; and the number of accidents, both fatal and non-fatal, is steadily growing, owing mainly to "inattention", lack of safety appliances, and inefficient organization of labour.

The picture thus officially presented of conditions of work in Russia confirms in a striking manner the accounts of the situation which have been given in recent months at a series of trade union congresses. A reference to earlier articles which we have published on this subject will reveal a convincing unanimity of evidence, among the representatives of metal workers, building workers, railwaymen, miners and textile workers, of discontent with existing conditions. Complaint is made of overwork, inadequacy of wages, lack of housing accommodation, absence of safety measures, defective equipment, and insufficiency of inspection. It is intelligible that, in such circumstances, there should be some signs of resentment on the part of the workers at the continual pressure for greater individual output, and that the Central Council of Trade Unions should have declared, after hearing Mr. Kaplun's report, that individual output can only be increased by an improvement in the conditions of labour.

Strikes and Lockouts in Great Britain

Apart from the dispute in the coal mining industry there were during July no disputes in Great Britain which involved large numbers of workpeople. The general dispute in the coal mining industry, which began on May 1, involved about 1,050,000 workpeople, the aggregate number of working days lost up to the end of July being about 66 million.

The British Government recently decided to send a delegation to Canada and the United States of America, for the purpose of studying industrial conditions, in those countries, with special reference to the relations between employers and employed in their bearing upon industrial conditions in Great Britain. The delegation is constituted as follows:—

Sir William Mackenzie, G.B.E., K.C. (Chairman); Mr. Ernest Bevin; Mr. Michael B. Dewar; Mr. J. Kaylor, J. P.; Mr. F. W. Leggett; Mr. I. Haig Mitchell; Mr. Randolph Smith. Mr. H. C. Emmerson, of the Ministry of Labour, will act as Secretary to the delegation.

The annual report of the Bureau of Labour and Industry of the State of Virginia contains full industrial statistics for the year ending September 30, 1925. In the coal mining industry, 8,572 men were employed underground, and 2,141 on the surface (excluding office and coke-oven employees). The number of days operated during the year was 201, the average day being eight hours. The total capital invested in the coal mines was $44,248,000, and the value of production was $22,596,869. Forty-four men were killed through accidents in the mines during the year, thirty-three of the fatalities being due to "falls of roof," while four were attributed to electricity, four to haulage, two to machinery and tools, and one to explosives. Of 900 non-fatal accidents, 272 were due to haulage, 196 to falls of roof, 125 to machinery and tools, and the remainder to various causes.

THE EIGHT-HOUR WORKING DAY

Conditions in Certain Countries, Members of the International Labour Organization.

IN the August issue of the *International Labour Review* there appeared an article by Mr. Albert Thomas, Director of the International Labour Office, on the Eight Hour Day, in which he sums up the situation in the various countries with reference to action taken concerning the Eight Hour Draft Convention which was adopted at the First International Labour Conference at Washington in 1919. (The text of the Convention was given in the LABOUR GAZETTE, December, 1919, on pages 1440-1443). On March 15 a conference on this Convention met at London, attended by the Ministers of Labour of Great Britain, Belgium, France, Germany and Italy (LABOUR GAZETTE, April, 1926, page 365). Certain conclusions were reached, and an agreement upon the interpretation of certain clauses of the Convention was drawn up. Although some of these conclusions aroused criticism in various quarters on the ground that they altered the value of several clauses of the Convention, a resolution was adopted at the Eighth session of the International Labour Conference, recognizing the London Agreement as a progressive step (LABOUR GAZETTE, July, 1926, page 680).

In France, a bill authorizing the government to ratify the eight-hour Convention on condition that it would not come into force until Germany had ratified it, passed the Chamber of Deputies on July 8, 1925. Last June, the Minister's report approving ratification, subject to the ratification by Germany, was adopted by the Commercial Commission of the Senate.

In Belgium, a bill for ratification of the Convention without any condition or reservation passed the Chamber on June 4, and the Senate on July 28, 1926.

In Italy, the convention had been ratified by decree on March 29, 1923, and ratification had been registered on October 6, 1924. Its application, however, was made conditional upon the ratification without reservation or conditions by France, Belgium, Germany, Great Britain and Switzerland. Notwithstanding this ratification, a decree was issued by the Italian government on June 30, adding an hour to the normal working day. This decree is worded as follows: "until further orders and by way of exception to Decree-Law No. 692 of 15 March 1923, and of labour agreements based thereon, all industrial commercial and agricultural undertakings are hereby authorized to increase the hours worked by their employees and workers by one hour." It is stated that according to a recent announcement the head of the government is still discussing the scope and manner of application of the Decree with the chief trade organizations of employers and workers.

In Great Britain, an act was passed in July, extending the working day in coal mining from seven to eight hours at the option of the mine owners. (LABOUR GAZETTE, August, 1926, page 747). While in the opinion of Mr. Thomas the passing of this act does not make ratification impossible it is nevertheless calculated to arouse apprehension in all mining undertakings on the Continent, and perhaps lead by repercussion to a general increase in hours of work.

In commenting on the situation arising from these measures, the Director points out that no intervention on the part of the Labour Office is possible to secure the application of a convention by any state which has not ratified it, certain members of the Governing Body holding that it could not even enquire the reasons why any state had refrained from ratifying the conventions. The functions of the International Labour Office are to summarize and compare results, to judge them in relation to generally accepted principles, and in short to proclaim, in no uncertain terms and on all occasions that there exists an end which all the High Contracting Parties have promised to endeavour to reach, and that there are certain general principles in regard to the protection of the workers which they have undertaken to accept as a guide.

Another task of the office is the work of information and enquiry—to study the actual consequences of the measures initiated or the steps taken in the complicated conditions of industrial life and national economy. In this connection it is pointed out that while longer hours of work have been introduced with a view to increased production, supporters of legislation for the protection of workers have proved over and over again that long working days, or generally speaking arduous working conditions, do not give increased output.

The following statement is quoted from the Report of the Industrial Commission of the United States for 1902:—

"A reduction in hours has never lessened the working people's ability to compete in the markets of the world. States with shorter workdays actually manufacture their product at a lower cost than States with longer workdays."

THE EMPLOYMENT SITUATION AT THE BEGINNING OF AUGUST, 1926, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THERE was a further increase in employment at the beginning of August, according to statistics from 5,864 firms employing 854,604 workers, as compared with 849,565 on July 1. The index number rose from 103.7 on the latter date to 104.2 on August 1 as compared with 96.3, 94.7, 100.2, 93.1 and 88.9 on August 1, 1925, 1924, 1923, 1922 and 1921, respectively. At the beginning of August in the last two years curtailment in industrial activity was reported, partly on account of inventories and holidays, and partly owing to early harvest demands upon the labour market, factors which this year were more than offset by a more general expansion. Agriculture is not represented in these statistics, which, therefore, do not show the very important increases in employment in that industry during the summer and autumn.

Manufacturing, construction, services, trade, communication and transportation showed, on the whole, moderate improvement, while continued seasonal losses were indicated in logging.

Employment by provinces

Firms in the Maritime Provinces, Quebec and British Columbia recorded larger pay-rolls, but in Ontario and the Prairie Provinces a slight falling-off was indicated.

Maritime Provinces.—Employment in the Martime Provinces showed a further gain, 2,589 persons having been added to the staffs of the 525 co-operating firms whose pay-rolls aggregated 69,655 on August 1. Construction, particularly road work, transportation and iron and steel reported heightened activity, while coal mining was slacker and there were seasonal losses in fish canneries and logging. Large reductions were noted on the corresponding date last year, when the index was lower.

Quebec.—Manufacturing, mining, communication, trade and construction registered increases in the numbers employed, those in the last named being most pronounced. Logging and shipping showed the only marked declines, although some slackening was indicated in iron and steel textiles, partly owing to shutdowns for holidays and inventories. Statements were received from 1,282 employers having 249,147 workers, as against 247,454 on July 1. The situation was much better than at the beginning of August, 1925; smaller additions to staffs were then reported.

Ontario.—The most outstanding changes in employment in Ontario were the declines in iron and steel plants in railway construction. There were also further losses in logging. On the other hand, food, pulp and paper, rubber, textile and lumber factories showed improvement, as did mining, building and highway construction. The 2,646 reporting firms reduced their staffs by 556 persons to 342,419 on August 1. This decline was considerably smaller than that registered on the same date a year ago, when the index was about six points lower.

Prairie Provinces.—Railway construction work showed a slowing up, and there were also seasonal losses in logging and coal mining. Transportation, services and manufacturing, however, afforded more employment. A combined working force of 112,798 persons was employed by 747 firms making returns, compared with 113,328 in the preceding month. An upward movement had been noted on August 1, 1925, but conditions then were not so favourable.

British Columbia.—Improvement was again shown in British Columbia, where the 662 employers whose statistics were received increased their pay-rolls from 78,742 workers on July 1 to 80,585 on the date under review. Manufacturing, especially the canning and related industries, construction, services and trade recorded increased activity, while there were further seasonal losses in logging. Employment was much brisker than at the beginning of August last year, when expansion had also been indicated.

Table I gives index numbers of employment by economic areas.

Employment by Cities

There were increases in personnel in Montreal, Quebec, Toronto, Hamilton, Winnipeg and Vancouver, while in Ottawa and Windsor employment declined.

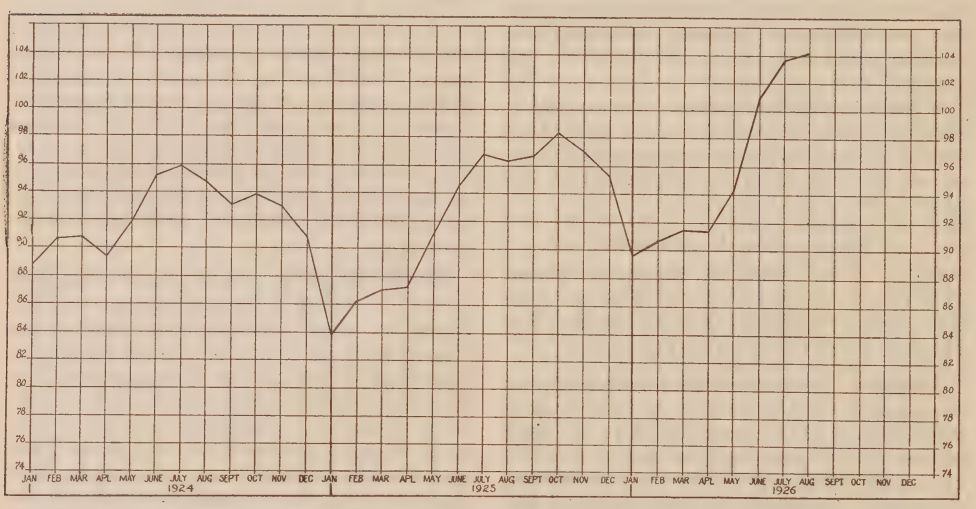
Montreal.—Another but smaller gain in employment was registered by the 697 co-operating firms, whose staffs included 118,752 persons, compared with 118,516 in the preceding month. Construction was considerably more active and manufacturing and trade were

somewhat more so. On the other hand, shipping was slacker than at the beginning of July. The increase was less than that recorded on August 1, 1925, but conditions then were not so favourable.

Quebec.—Manufacturing and building afforded more employment, while shipping showed a slight decrease. Statements were received from 86 employers with 9,113 workers, against 8,882 on July 1. The index was several points higher than on the corresponding date last year, when minor gains were indicated.

Toronto.—Employment in Toronto continued to expand, according to data from 745 establishments employing 96,810 persons, or 472 more than in their last report. Textile, printing and paper factories and construction registered the bulk of the increases, while activity decreased in work on telephones and in metal plants. General improvement was also reported at the beginning of August a year ago, but employment then was in smaller volume.

Ottawa.—A slightly downward tendency was noted in Ottawa, construction showing comparatively a small reduction. The 122 reporting firms had 10,478 employees, as compared with 10,572 on July 1.



Hamilton.—Further additions to staffs were indicated in Hamilton, where the situation was better than in any other month since the record for the city was begun in 1922. Manufacturing and construction were busier. Returns were tabulated from 200 employers, whose pay-rolls aggregated 30,119 workers, an increase of 387 over their last report. Reductions had been shown at the beginning of August, 1925.

Windsor and the Other Border Cities.—Automobile works were somewhat slacker, as is usual at midsummer, while little change was shown in other industries. A combined working force of 11,934 persons was reported by the 78 co-operating firms who had 12,055 in the preceding month. Much larger losses were noted on August 1 last year.

Winnipeg.—Employment again increased, chiefly in manufacturing, but also in communication; 262 persons were added to the staffs of the 275 Winnipeg employers making returns. They had 27,430 workers. The index was higher than on August 1 of the preceding year, when the movement was also favourable.

Vancouver.—There was a large advance in employment in Vancouver, according to statistics from 228 firms whose pay-rolls rose from 24,914 on July 1 to 26,923 on August 1. Food and tin can factories were seasonally active, while construction and trade also showed improvement. The total increase con-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January 1920, as 100.

siderably exceeded that registered on the same date in 1925; employment then was much below its present level.

Index numbers by cities are given in Table II.

Manufacturing Industries

In contrast with the downward movement that employment in manufactures showed at the beginning of August of the last three years, there was a moderate increase on the date under review, when 2,824 operatives were added to the working forces of the 3,789 manufacturers reporting, who had 470,603 persons in their employ. The index number, at 95.8, was higher than in any other month since 1920. The greatest gains on the date under review were in fruit and vegetable canneries, while pulp and paper, lumber, non-ferrous metal products, rubber, clay, glass and stone, tobacco, textiles and electric current were also busier. Employment in iron and steel declined, but the losses were considerably smaller than on August 1 in 1925 and 1924; fish canning also reported a seasonal falling-off.

Animal Products, Edible.—Fish canning, smoking and curing establishments recorded a seasonal falling off in employment, but dairies were busier. The result was a decline of 299 persons in the staffs of the 208 reporting firms, whose payrolls aggregated 16,303 persons on August 1. No change in the situation was indicated on that date last year, when the index number was practically the same.

Leather and Products.—The production of boots and shoes afforded employment to a larger number of persons than in the preceding month, but other branches of the leather group registered losses. The greater part of the gain took place in Quebec, while the reductions were reported mainly in Ontario. Statements were received from 192 manufacturers, having 16,621 employees, as compared with 16,541 in the preceding month. Employment was in greater volume than on August 1, 1925, when an increase of approximately the same size was noted.

Lumber and Products.—Further improvement was shown in rough and dressed lumber mills; wooden vehicle and other wood-using industries, however, released some employees. A combined working force of 58,473 persons was recorded by the 720 co-operating firms, who had 57,971 employees on July 1. There were additions to staffs in all provinces except British Columbia, where there was a comparatively small contraction. The gain shown on the corresponding date last year was not as large, nor was the index number then as high as on the date under review.

Plant Products, Edible.—Seasonal activity in fruit and vegetable canneries caused an important increase in employment in this division, of which other groups showed little change. The most extensive additions were in Ontario and British Columbia. The 298 co-operating employers had 29,254 workers, or 2,834 more than in their last report. The improvement greatly exceeded that indicated on the same date in 1925, when the situation was rather less favourable.

Pulp and Paper Products.—Pulp and paper mills afforded more employment, as did printing and publishing and miscellaneous paper products. The increase contrasts with a reduction recorded on August 1 a year ago, when the index number was nearly ten points lower. Reports compiled from 450 firms in the pulp and paper industry showed that they had enlarged their working forces from 55,810 persons on July 1, 1926, to 56,618 at the beginning of August. The greatest gains were in Ontario and British Columbia.

Rubber Products.—Employment increased in rubber factories, 31 of which added 327 workers to their staffs, bringing them to 12,452 on the date under review. Practically all the expansion was in Ontario. The trend was also favourable on August 1, 1925, the index number then being, in fact, very slightly higher.

Textile Products.—Seasonal activity in garment factories was partly offset by comparatively small losses in headwear and miscellaneous textile factories. Firms in Ontario and the Prairie Provinces registered improvement, while in Quebec there was a falling off. The 502 co-operating establishments employed 70,918 workers, as against 70,672 in the preceding month. Conditions were better than on the corresponding date last year, when smaller gains were recorded.

Tobacco, Distilled and Malt Liquors.—Partial recovery from the decreases indicated in the last two reports was noted in this group on August 1, 297 persons being added to the staffs of the 101 firms making returns, who employed 11,908. A large proportion of the increase was shown in Quebec. Improvement on a smaller scale took place at the beginning of August a year ago.

Clay, Glass and Stone Products.—The movement in building material factories continued to be upward, especially in the glass and stone divisions. Statements were received from 115 manufacturers with 10,829 operatives, as compared with 10,522 at the beginning of July.

NOTE.—The number employed by the reporting firms in Jan. 1920, is taken as 100 in every case. The "relative weight" in Tables I and II shows the proportion of employees in the indicated district to the total number of employees reported in Canada on the date under review.

Relative weight of employment by cities as at Aug. 1, 1926	13·9	1·1	11·3	1·2	3·5	1·4	3·2	3·1

Employment was very much more active than on the corresponding date in 1925, when there was registered the first of a series of declines that lasted until the end of the year.

Electric Current.—A further but smaller increase was reported in electric current plants, 84 of which added 189 persons to their payrolls, bringing them to 12,606. This gain was smaller than that recorded on August 1 last year and the index number then was higher.

Iron and Steel Products.—The trend of employment in iron and steel factories continued to be downward, but the losses were considerably smaller than on the same date in 1924 and 1925, in both of which years employment was in smaller volume. A combined working

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920 = 100)

—	Relative weight	Aug. 1 1926	July 1 1926	Aug. 1 1925	Aug.1 1924	Aug. 1 1923	Aug. 1 1922

NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

force of 125,874 persons was employed by the 635 reporting establishments, which had 128,546 employees at the beginning of July. The crude, rolled and forged, land vehicle, agricultural implement and some other divisions recorded curtailment, while in steel shipyards and boiler, engine and tank factories there was improvement.: The most pronounced contractions took place in Ontario, but there were also losses in Quebec, while in the Maritime Provinces gains were indicated.

Non-Ferrous Metal Products.—The most outstanding change in this division was the large increase in tin can factories, chiefly in British Columbia. The expansion repeats that usually indicated at midsummer, but was somewhat greater than the gain noted on August 1, 1925, when the index was lower. The payrolls of the 104 firms making returns totalled 15,030 workers, as compared with 14,573 in the preceding month.

Logging

Continued seasonal contractions were made in the personnel of logging camps, 207 of which reduced their staffs from 17,301 men on July 1, to 13,827 on August 1. Employment on the same date in previous years showed a decline, being usually at its lowest ebb for the year on that date. All provinces shared in the downward movement.

Mining

Coal.—Employment in coal mines in the Maritime and Prairie Provinces showed curtailment, according to 88 operators whose payrolls declined from 24,558 persons on July 1 to 24,132 in the following month. The situation was slightly less favourable than on August 1, 1925, when moderate improvement was noted.

Metallic Ores.—Quebec and Ontario recorded expansion in this division, while in British Columbia there was a small decline. Forty-nine mines employed 11,560 persons, as compared with 11,325 on July 1. Curtailment was indicated on the corresponding date last year, but the situation then was practically the same.

Non-Metallic Minerals, Other than Coal.—Further increases in personnel were reported generally in non-metallic mineral mining. A combined working force of 7,055 persons was recorded by the 71 firms furnishing data, against 6,786 in the preceding month. Rather smaller additions to staffs were registered at the beginning of August a year ago, and the index then was slightly lower.

Communication

Telegraphs and telephones both showed heightened activity, 259 persons being added to the pay-rolls of the 179 communication companies reporting, which had 24,790 workers on August 1. The index number, at 119.5, was rather higher than on the corresponding date in 1925, despite the fact that more pronounced gains were then noted.

Transportation

Steam Railways.—Continued improvement was reported on steam railways, according to 100 employers and divisional superintendents, who enlarged their pay-rolls by 834 persons to 77,759 on the date under review. Increases were recorded in all provinces except Ontario. The level of employment was higher than on August 1 last year, when gains were also shown.

Shipping and Stevedoring.—There was a falling-off in employment in shipping and stevedoring in Quebec and British Columbia, while in the Martime Provinces the trend was upward. Statements were tabulated from 59 firms employing 15,418 persons, or 584 less than at the beginning of July. Conditions were better than on the corresponding date in 1925, although additions to staffs were then registered.

Construction and Maintenance

Building.—Further marked improvement was reported in building construction, which was more active than in any other month since the record was begun in 1920. The gain largely exceeded that of August 1 last year. The co-operating contractors, numbering 331, had 37,283 employees as compared with 34,889 on July 1. All except the Prairie Provinces shared in the increase, that in Quebec and Ontario being most extensive.

Highway.—Continued gains were reported on highway construction work, in which 5,009 extra persons were employed by the 120 firms making returns. They had 26,071 workers on August 1. Employment increased in this division in all provinces except British Columbia. Curtailment was noted on the corresponding date last year, when the number employed was somewhat smaller.

Railway.—Railway construction in Quebec, Ontario and the Prairie Provinces showed a falling-off, while in the Maritime Provinces and British Columbia further increases were made. The 34 contractors and divisional superintendents whose statistics were tabulated,

reduced their working forces from 55,342 men on July 1 to 51,842 at the beginning of August. Conditions were more favourable than on August 1, 1925.

Services

Summer hotels continued to employ extra help, while little change was shown in other branches of the service group. Statistics were furnished by 166 firms having 16,165 workers, or 810 more than in the preceding month. The situation was better than on August 1, 1925, the improvement then having been on a smaller scale. Most of the additions to staffs on the date under review were made in the Prairie Provinces and British Columbia.

Trade

Further gains were registered in trade, in which both retailers and wholesalers shared; 563 establishments reported 58,412 employees, as compared with 57,964 at the beginning of July. On the whole, trade increased in all except the Prairie Provinces, where there was a minor loss. Employment was more active than on August 1 of any other year since 1920.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns for August 1, 1926.

EMPLOYMENT OFFICE REPORTS FOR JULY, 1926

THE volume of business transacted by the offices of the Employment Service of Canada during the month of July, 1926, showed very little change in the average daily placements over that of the preceding period, while an increase of over 17 per cent was registered when compared with the average daily placements effected during the corresponding period of 1925. As in the preceding month the gain over last year was general in all industrial groups, that in the manufacturing and the construction and maintenance groups being the most pronounced.

The accompanying chart shows the trend of employment since January, 1924, as represented by the ratio of vacancies notified and placements effected by each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curves of vacancies and placements remained on about the same level during the first half of July as that reached at the close of June, but showed an upward trend during the second half of the month. In both instances the ratios of vacancies and placements to applications were decidedly higher than those attained during July last year. The ratio of vacancies to each 100 applications was 85.8 and 91.0 during the first and second half of July, 1926, in contrast with the ratio of 76.5 and 82.6 during the same periods in 1925. The ratio of placements to each 100 applications during the period under review was 78.7 and 80.1 as compared with 70.6 and 74.9 during the corresponding month a year ago.

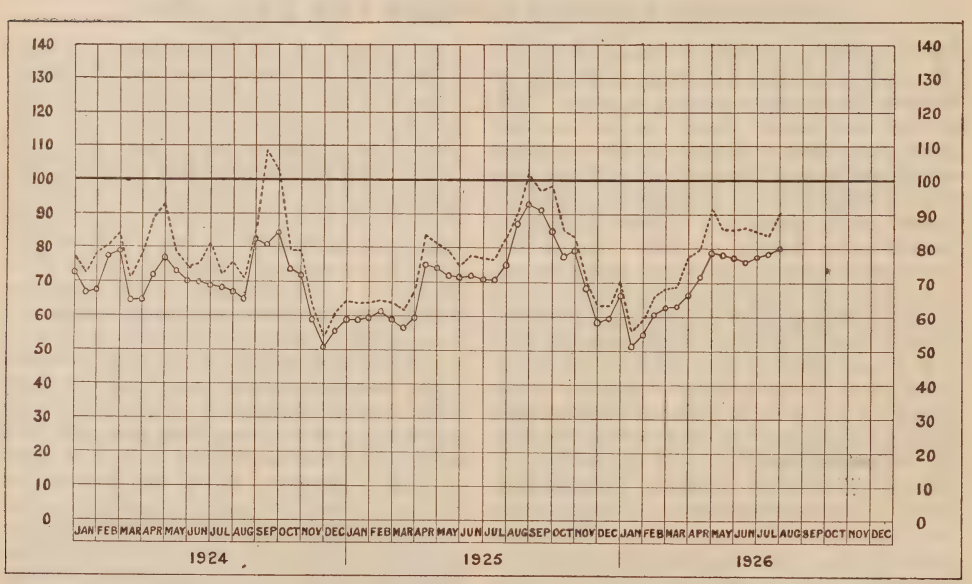
A summary of the reports from the offices shows that the average number of applications recorded during the first half of July, was 1,691 daily as compared with 1,616 daily during the preceding period and with 1,557 daily during the corresponding period in 1925. Applications for work during the latter half of the month registered 1,606 daily in contrast with 1,488 daily during the latter half of July a year ago. Employers notified the Service of a daily average of 1,451 vacancies during the first half and 1,461 during the latter half of the month under review as compared with a daily average of 1,192 and 1,230 vacancies during the month of July, 1925. Vacancies offered to the Service during the latter half of June, 1926, averaged 1,374 daily. The Service effected a daily average of 1,331 placements during the first half of July, of which 959 were in regular employment and 372 in work of one weeks duration or less as compared with a total average placement during the preceding period of 1,256 daily and with 1,100 daily during the first half of July, 1925. During the latter half of the month under review placements averaged 1,286 daily (947 regular and 339 casual) as compared with an average of 1,114 daily during the corresponding period last year.

During the month of July, 1926, the offices of the Service refered 35,137 persons to vacancies, and effected a total of 33,970 placements. Of these, the placements in regular employment numbered 24,755, of which 21,199 were of men and 3,556 of women, while placements in casual work totalled 9,215. Opportunities for employment reported by employers num-

bered 28,812 for men and 9,039 for women, a total of 37,851. The number of applications for work was 42,763, of which 32,813 were from men and 9,950 from women.

The following table gives the placements effected to date at the offices of the Employment Service of Canada.—

Year	Regular	Placements Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926 (7 months)	132,569	60,998	193,567



ments by industrial divisions during the month included logging, 57; farming, 61; construction and maintenance, 69; and services, 259. Regular employment was secured for 169 men and 96 women.

New Brunswick

There was a decrease of over 3 per cent in the number of orders received in New Brunswick offices during July when compared with the preceding month, but a gain of nearly 12 per cent in comparison with the corresponding month of last year. Practically the same number of placements were effected as in June, but nearly 15 per cent more than during July, 1925. The most noteworthy increase in placements over the corresponding

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - - - - - - - - - Placements o—o—o—o—o—o

Nova Scotia

During the month of July positions offered through offices in Nova Scotia were over 2 per cent less than in June, but there was a nominal decline only when compared with July of last year. Placements were nearly 23 per cent lower than in June and over 14 per cent below July, 1925. The reduction in placements in comparison with July of last year was due to decreased activity in the logging industry offset in part by gains in the services group. There were minor changes only in all other industrial divisions. Placemonth of last year was in the logging industry. Industrial groups in which most of the placements were effected during the month were logging, 140; transportation, 53; construction and maintenance, 75; and services, 415, of which 240 were of household workers. During the month 305 men and 99 women were placed in regular employment.

Quebec

The demand for workers as reflected by orders listed in employment offices in Quebec during the month of July declined over 8

*68 Placements effected by offices since closed.

per cent from the preceding month and increased nearly 58 per cent in comparison with the corresponding month of last year. Placements were 9 per cent higher than in June and nearly 36 per cent higher than in July, 1925. The most noteworthy gains over last year were shown in the manufacturing industries, logging and construction and maintenance, while the only decline of importance was in the services group. Placements by industrial divisions included manufacturing, 273; logging, 318; farming, 159; mining, 79; transportation, 67; construction and maintenance, 1,412; and services, 422. There were 2,423 men and 333 women placed in regular employment during the month.

ONTARIO

Ontario offices received orders for approximately the same number of workers during July as in June, but nearly 22 per cent more than in July, 1925. Placements during the month under review were nearly 7 per cent less than in June, but nearly 17 per cent higher than in July of last year. Gains in placements over July, 1925 were shown in all industrial groups except farming, transportation and trade, those in the manufacturing industries and construction and maintenance being the most pronounced. Placements by industrial groups were manufacturing, 1,972; logging, 744; farming, 1,633; mining, 176; communication, 50; transportation, 572; construction and maintenance, 3,809; services, 3,314; trade, 280; and finance, 58. Regular employment was procured for 8,067 men and 1,285 women during the month.

MANITOBA

Opportnities for employment as indicated by orders listed at Manitoba offices during July were over 24 per cent higher than in the preceding month and over 3 per cent more than during the corresponding month of last year. Placements were nearly 29 per cent above July and about 9 per cent in excess of July, 1925. Placements in farming and logging were slightly lower than last year, but were more than offset by gains in construction and maintenance, services and trade. Industrial groups in which most of the placements were effected during the month were manufacturing, 223; logging, 68; farming, 1,380; construction and maintenance, 325; services, 1,786, of which 1,157 were of household workers; and trade, 243. During the month 1,819 men and 623 women were placed in regular employment.

SASKATCHEWAN

Orders listed at Saskatchewan offices during July were nearly 20 per cent higher than in the preceding month and over 14 per cent higher than during the corresponding month last year. Placements were nearly 12 per cent higher under both comparisons. The gains over last year were for the greater part attributable to increased activity in the construction and maintenance group, although logging was the only division to show a noteworthy decline. Industrial groups in which most of the placements were effected during the month were manufacturing, 103; farming, 1,488; construction and maintenance, 832; services, 931; and trade, 87. Regular employment was secured for 2,384 men and 397 women during the month.

ALBERTA

There was an increase of over 9 per cent in the number of positions offered through Alberta offices during July when compared with the preceding month and a gain of over 17 per cent in comparison with the corresponding month last year. Placements were nearly 11 per cent higher than in June and over 18 per cent in excess of July, 1925. All industrial divisions except mining and communication participated in the gains over last year and the reductions in these were nominal only. Placements by industrial groups included manufacturing, 341; logging, 70; faring, 2,138; transportation, 88; construction and maintenance, 761; services, 891; and trade, 103. Placements in regular employment numbered 3,407 of men and 381 of women.

BRITISH COLUMBIA

Employment opportunities during July as indicated by positions offered through offices in British Columbia were over 3 per cent higher than in June and over 26 per cent higher than in July, 1925. Placements were over 13 per cent higher than in June and over 31 per cent above July last year. Logging and mining were the only industrial divisions to show declines from last year and in these the reductions were small. The most noteworthy gains were in the manufacturing industries, farming, construction and maintenance and services. Placements by industrial groups included manufacturing, 804; logging, 316; farming, 781; mining, 91; transportation. 287; construction and maintenance, 1,311; services, 1,490; and trade, 146. During the month 2,625 men and 342 women were placed in regular employment.

Movement of Labour

During July, 1926, the offices of the Employment Service of Canada made 24,755 placements in regular employment, of which 15,590 were of persons for whom the employ-

ment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,668 were granted the Employment Service reduced rate, 993 going to points within the same province as the despatching office, and 675 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of $4, is granted by the railway companies to *bona fide* applicants at the Employment Service, who may desire to travel to distant employment, for which no workers are available locally.

The Quebec offices issued certificates to 272 persons travelling at the reduced rate, 174 of whom were going to points within the province, and 98 to other provinces. Of the former, Montreal transferred 1 wood machinist, 63 saw-mill labourers and 76 bushmen, and Quebec 34 bushmen to points within their respective zones. The interprovincial movement from Montreal included 40 plasterers and 1 marble setter going to Winnipeg, 1 farm hand to Moose Jaw, and 2 boiler makers to Kingston, and from Hull 54 bushmen to North Bay.

Transfers from Ontario offices numbered 437, of which 214 were provincial and 223 interprovincial. Within the province 1 engineer and 1 rodman travelled to Fort William, 1 boiler maker to Kingston, 1 pipefitter, 1 rigger, 1 engineer and 1 moulder to Port Arthur, 2 carpenters and 1 painter to Timmins, and 4 linemen to Windsor, all from Toronto; from North Bay 10 lumbermen, 7 rockmen, 4 miners and 2 saw-mill labourers went to Cobalt, and 43 lumber workers and 4 construction labourers to Timmins, while from Sudbury 1 miner was despatched to Ottawa, 1 pulp cutter and 1 miner to Cobalt, 1 station worker to Timmins, 4 rockmen to Toronto, and 1 barber, 25 mill hands, 2 teamsters and 4 bushmen within the Sudbury zone. Cobalt received 8 power construction labourers from Timmins and Sudbury, 1 mill man and 1 sawyer from Ottawa. Fort William transferred 42 building construction labourers, 1 railroad construction labourer, 3 bushmen and 1 farm hand to points within its own zone, and 4 bushmen to North Bay, and from Port Arthur 17 loggers and 7 building construction labourers travelled to points within its own zone. In addition 5 shipbuilders were sent to Port Arthur, 3 from Hamilton and 2 from St. Catharines. Of those going to other provinces 137 were railroad construction labourers, 4 papermakers, 11 building construction labourers, 3 lumber workers, 15 miners, 6 station workers and 6 general labourers, all for the Hull zone transferred by the Hamilton, Pembroke, Toronto, Port Arthur and North Bay offices. The Winnipeg zone received 22 plasterers and 9 bricklayers, the majority of whom were sent by the Toronto office. The balance included 7 coal miners, travelling from Toronto to Sydney, N.S., 1 labourer from Sudbury to Montreal, and 2 miners from North Bay to Three Rivers.

The offices in Manitoba issued 454 certificates for reduced transportation, 255 to points in other provinces and 199 provincial. All the certificates were granted by the Winnipeg office, the Brandon zone receiving 1 ward maid, 13 farm hands, 1 blacksmith, 7 farm domestics, 1 cook and 6 hotel workers, Dauphin 5 carpenters, 11 bushmen, 2 plasterers, 1 painter, 1 baker, and 1 chamber maid, and the Winnipeg zone 1 cook and 4 bushmen. The remaining 144 provincial transfers were farm labourers for points throughout the province. Of the interprovincial transfers 105 were saw-mill labourers, 1 barber, 1 moulder, 2 cedar cutters, 4 lumber pilers, 3 cooks, 1 carpenter, 1 blacksmith, 11 pulp cutters, 1 planer man, 1 baker and 1 porter, travelling to Port Arthur, 3 concrete dam workers to Sudbury, 11 teamsters to Saskatoon, 5 carpenters and 1 farm general to Estevan, 1 waitress, 5 carpenters and 6 teamsters to Weyburn, 2 farm generals, 8 teamsters, 1 housekeeper and 2 hotel workers to Regina, 1 railroad construction labourer, and 5 rock drillers to Edmonton, 27 farm labourers to Alberta points and 45 farm labourers to employment in Saskatchewan.

The certificates issued in Saskatchewan numbered 96, of which 94 were for provincial points. Provincially Moose Jaw despatched 12 farm hands to various points in the province, 1 housekeeper and 1 cook to Swift Current, and 2 teamsters, 1 chamber maid and 2 road construction labourers to points in the Moose Jaw zone. From Regina 1 waitress, 1 housekeeper, 1 chamber maid, 1 cook and 2 telephone pole diggers were sent to Moose Jaw, 1 butcher to Saskatoon, 6 teamsters to Weyburn, and 21 farm labourers to points throughout the province. Saskatoon transferred 1 river driver and 2 cookees to Prince Albert, 7 teamsters to North Battleford, 4 labourers to Saskatoon and 23 farm hands within the province, while Weyburn sent 1 warden to Prince Albert, and Swift Current 1 farm hand to Moose Jaw. From Prince Albert 1 blacksmith and 1 river driver travelled to employment within its own zone. Interprovincial transfers were from Regina for 1 bricklayer travelling to Winnipeg, and 1 moulder to Medicine Hat.

In Alberta 294 special rate certificates were issued, 217 to points within the province and 77 to other provinces. From Calgary the interprovincial transfers were for 43 fire fighters

sent to Revelstoke, and from Edmonton 1 cookee, 1 maid, 15 teamsters, and 1 cook to North Battleford, 1 housekeeper to Saskatoon, 2 bricklayers to Winnipeg, and 13 farm hands for employment throughout the province of Saskatchewan. Provincially, Edmonton despatched 1 porter to Drumheller, 1 cook to Calgary, 2 iron moulders to Medicine Hat, 1 waiter, 6 bushmen, 2 firemen, 12 miners, 5 labourers, 15 teamsters, 6 mill hands, 1 chambermaid, 2 painters, 2 blacksmiths, 4 engineers, 3 cooks, 1 gardener, and 4 cookees within its own zone, and 72 farm hands to various points in the province. From Calgary 1 engineer went to Drumheller, 5 teamsters to Edmonton, 2 riveters and 2 carpenters to Lethbridge, 5 teamsters within the Calgary zone, and 62 farm labourers to employment in various parts of the province.

British Columbia offices granted certificates to 115 persons travelling at the reduced rate, 20 for points in other provinces and 95 within the province. Of the latter, Vancouver transferred 1 fruit picker and 4 carpenters to Nelson, 1 cook, 1 fruit picker, 22 labourers, 1 teamster, 2 lumber loaders and 1 chef to Penticton, 2 planer men and 1 engineer to Kamloops, 1 track foreman to Vernon, 2 engineers to Prince George, 6 miners and 3 muckers to Revelstoke, and 1 cement finisher, 1 miner, 15 labourers, 1 cook, 1 flunkey, 1 waitress and 1 dishwasher to points in the Vancouver zone. From New Westminster 1 miner and 1 teamster went to Revelstoke; from Victoria 1 cook general to Kamloops; from Nelson 3 sawyers, 2 bushmen and 2 miners to Revelstoke, and from Prince George 4 bushmen to Prince Rupert, and 7 bushmen within the Prince George zone. The remainder were 3 miners travelling from Prince Rupert, and 2 labourers from Penticton to employment within their respective zones. The interprovincial transfers included 1 farm hand going to Manitoba, 8 farm hands and 1 cook to points in Saskatchewan, and 8 farm hands and 2 cooks to employment in Alberta, the majority of these transfers being effected by the Vancouver office.

Of the 1,668 workers who benefited by the Employment Service reduced transportation rate 966 were carried by the Canadian National Railways, 630 by the Canadian Pacific Railway, 50 by the Temiskaming and Northern Ontario Railway, 19 by the Pacific Great Eastern Railway, and 3 by the Kettle Valley Railway.

BUILDING PERMITS ISSUED IN CANADA IN JULY, 1926

THE value of the building authorized during July showed a small increase as compaired with the preceding month, and a considerable gain over the corresponding month of last year; sixty-three cities issued permits valued at $18,717,028, compared with $18,672,238 in June and $12,812,603 in July, 1925. There was, therefore, an increase of 0.2 per cent in the former and of 46.1 per cent in the latter, more significant comparison. This is the first time in the record of the 63 cities, which covers the last seven years, that the July total has exceeded that for June. The aggregate was also higher than in July of any other year since 1920, being 18.9 per cent greater than the previous high level of $15,740,810 in 1922.

Some 45 cities reported that they had issued over 1,500 permits for dwellings valued at more than $7,000,000 and nearly 2,700 permits for other buildings at a proposed cost of approximately $7,000,000. An engineering project estimated at over $4,000,000 was also authorized by Vancouver. In June, authority was granted for the erection of over 1,800 dwellings and 3,100 other buildings valued at $8,000,000 and $9,800,000 respectively.

Nova Scotia, New Brunswick, Ontario and British Columbia recorded increases in the value of the building permits issued in July as compared with June, that of $2,452,755 or 73.8 per cent in the last named being most pronounced. The remaining provinces registered declines, of which that of $1,667,132 or 31.1 per cent in Quebec was largest.

As compared with July, 1925, all provinces except Quebec reported higher totals of permits issued, the greatest gain being in British Columbia, where authorizations were $4,531,383 or 363.4 per cent higher.

Montreal and Toronto recorded reductions in the value of projected building, as compared with June, 1926, and July, 1925; Winnipeg showed a loss in the former and an increase in the latter, while Vancouver registered gains in both comparisons. Halifax, Moncton, Belleville, Chatham, Fort William, London, Oshawa, Ottawa, Owen Sound, Peterborough, Stratford, Sarnia, Sault Ste. Marie, Ford City, Riverside, Brandon, St. Boniface, Moose Jaw, Edmonton, Lethbridge, Kamloops, South Vancouver and Victoria also reported higher building authorizations than in either the preceding month or the same month last year.

TABLE I.—ESTIMATED COST OF BUILDING WORK AS INDICATED BY THE VALUE OF BUILDING PERMITS ISSUED IN 63 CITIES,

Cities	July 1926	June 1926	July 1925

Cumulative Record for First Seven Months, 1926

The following table shows the value of building authorized by 63 cities during July and in the first seven months of each year since 1920. The January-July average index number of wholesale prices of building materials in those years is also given (1913=100).

Year	Value of permits issued		Average Indexes of Wholesale prices of building materials in first seven months
	In July	In first seven months	
	$	$	
1926	18,717,028	97,337,390	150·2
1925	12,812,603	78,712,320	154·1
1924	11,681,196	72,355,350	163·8
1923	13,078,547	86,126,043	166·7
1922	15,740,810	87,022,484	161·5
1921	10,965,891	66,737,575	194·5
1920	13,743,045	75,497,755	215·3

The January-July aggregate this year was greater by 23.7 per cent than in 1925, by 11.9 per cent than in 1922, when building authorizations were at their highest since pre-war days, and 45.9 per cent larger than in 1921, the year in which building was at its lowest ebb since the close of the war. Further, building costs, as represented by the index number of wholesale prices of building materials, were lower than in any other year since 1920.

The accompanying table gives the value of the building permits issued in 63 cities during June and July, 1926, and July, 1925. The 35 cities for which records are available since 1920 are marked with asterisks.

The ninth annual report of the Department of Industries and Commerce of New Zealand gives the following statistics of employment and wages in factories in the Dominion in 1925. Establishments, 4,547; employees, 80,327; wages and salaries paid £14,573,441; the wages paid to all males employed averaged £197 10s, for the previous year. The average wage of female employees was £95, compared with £95 10s. The general average for all employees in 1924-25 was £189 per annum, against £178 10s in 1923-24.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Pulp, Paper and Paper Products

FORT FRANCES, ONTARIO—FORT FRANCES PULP AND PAPER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCAL No. 92.

Agreement to be in effect from May 1, 1926 until April 30, 1927, and for another year unless 30 days' notice of change is given. A similar agreement is in effect in a mill of the same firm at International Falls, Minnesota, U.S.A.

Employees whose union has no local branch shall become members of the Pulp, Sulphite and Paper Mill Workers' Union.

Preference of employment shall be given to members of the organization when competent members are available. New employees shall join the union within 15 days.

Groundwood and sulphite departments shall operate six days per week, and six and one-half days when pulp is needed or when it is necessary to save water from being wasted or longer when necessary for operation of the paper machines.

Hours: day workers, eight hours per day, six days per week. Overtime, time and one-half. Overtime for repairs, not less than four hours' pay.

Tours shall be of eight hours' duration. Tour work between 8 a.m. Sunday and 8 a.m. Monday, time and one-half. Overtime other than tour work and necessary work on holidays, time and one-half. Holidays: (in Canada) Dominion Day, Labour Day and Christmas Day.

Rules governing mill employees shall become part of the agreement.

Company shall endeavour to retain employees at other occupations when their part of the work is shut down.

If employees are put out of work by the installation of labour saving devices, they shall be given preference of employment.

Grievances shall be adjusted by the Superintendent or by the presidents of the Company and the Union or referred to arbitration by a joint committee of one from each party, and a third selected either by them or by the Provincial Minister of Labour. Employees unjustly discharged shall be reinstated and paid for lost time.

Oldest man in point of service shall have preference, efficiency considered, in case of promotion.

Wages per hour: Wood room: oiler, 40 cents; wood handler, 40 cents; sawyer, 42 cents; sawyer's helper, 40 cents; drumbarkerman, 41 cents; drumbarker cleaner, conveyor man, 40 cents.

Groundwood: Head grinderman, 64 cents; repair men, 59 cents; grinderman, 45 cents; block handler, 44 cents; screenman, 45 cents; beaterman, 42 cents; oiler, 43 cents; groundwood lap chipperman, 45 cents; pulp handlers, 40 cents.

Boiler House: head fireman, 70 cents; fireman, 59 cents; log, fuel and ashman, 42 cents; steam engineers, paper machine, 70 cents.

Beater and mixing: broke beaterman, 43 cents.

Finishing and loading—weighers, roll finisher, loader, 45 cents; new men (minimum), 42 cents; door tender, 40 cents.

Yard: labourers, 40 cents.

Mechanics: minimum rate, 72 cents; helpers, 59 cents; coreman, 44 cents; rigger crew, 42 cents.

Storeroom: Storeman, 42 cents.

Construction: Buildings and Structures

BORDER CITIES, COUNTY OF ESSEX AND VICINITY, ONTARIO—ELECTRICAL CONTRACTORS AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, No. 773.

Agreement to be in effect from June 15, 1926 until June 1, 1927.

Both parties agree to no strikes, lockouts or stoppage of work without 48 hours' notice.

When help is required by the employers, the union shall be called upon first, and shall procure the required help.

No restrictions on the use of machinery and tools.

The parties agree to select a conference committee each year.

Wages per hour: foreman, $1.35; journeymen, $1.25; helpers, 1 to 2 years, 50 cents; 2 to 3 years, 60 cents; 3 to 4 years, 75 cents. Not more than one helper to three journeymen in any shop or job.

All car fares are to be paid for by employers except those between the home and the shop. Transportation and expenses outside the city to be paid for.

Members of the union may not make contracts for repairing or installing electrical work while employed under the agreement, or when not employed except when permitted by the contractors who employ union labour.

Hours, 8 per day; 4 hours on Saturdays. Overtime, double time.

VANCOUVER, BRITISH COLUMBIA—GENERAL CONTRACTORS' ASSOCIATION AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, No. 844.

Agreement to be in effect from July 8, 1926.

Hours, 8 per day, 4 on Saturdays. Overtime, double time except when concrete is being poured, when first two hours shall be paid at time and one-half, with double time thereafter. When there is only one shift, 8 hours per day. Overtime, time and a quarter. There shall be no rearrangement of hours nor evasion of the 8 hour day and 44 hour week. Men sent out of town shall have transportation and travelling time paid for.

Double time for holidays, overtime and Sunday work.

When engineers are required to raise steam before the regular work day starts, one hours' time shall be allowed.

Engineers shall receive scale of the union with which they are working, whether structural iron workers or pile drivers.

An engineer kept waiting for materials shall be paid full time.

No member may work with a non-union engineer or fireman.

A member leaving his engine to work in the gang shall be disciplined by the union. He shall not allow his engine to be meddled with.

If a member is discharged for enforcing union rules, union engineers may not work for the employer until the unions is satisfied.

In three shifts, 7½ hours per day shall be worked, with 8 hours pay.

Engineers leaving or taking positions must notify the business agent at once.

Engineers in camps are to be supplied with clean beds and blankets.

Wages per day, Derricks, Cranes and Pile Drivers: Engineers on clam shells, orange peel buckets, locomotive cranes, aerial cables, $9; derricks, $8.50; road rollers, tower hoists, snubbers, dinkeys, $7.50; unspecified work, minimum, $7. Firemen and oilers, 62½ cents per hour. On jobs when different classes of engines are to be operated, not including steam shovel or draglines, $1.12½ per hour.

Minimum scale for dredges, shovels and draglines, per month with board—engineers, $200; Cranesmen, $150; firemen, $110; watchmen, $95. When board is not furnished $45 is allowed. If daily rate is preferred it shall be: Engineers, $8; firemen, $6.50; watchmen, $5.

Ten hours' notice, or a full day's pay must be given when crews will not be needed for the following day.

VICTORIA, BRITISH COLUMBIA—VICTORIA BUILDERS' EXCHANGE AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, No. 1598.

Agreement to be in effect from June 25, 1926 until July 1, 1927, with three months' notice of change.

Wages per day, from June 25, 1926 until September 1, 1926, $6.50; until July 1, 1927, $7.

Hours, 8 per day; 4 on Saturday. Overtime, 1st four hours, time and one-half; thereafter and Sundays and holidays, double time.

No discrimination to be shown by either party.

CALGARY, ALBERTA—CERTAIN FIRMS AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCAL No. 838.

(See under Service, Public Administration).

Service: Public Adminisration

CALGARY, ALBERTA—CITY OF CALGARY AND VARIOUS FIRMS, AND INTERNARIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCAL No. 838.

Agreement to be in effect from January 1, 1926 until January 1, 1927.

Wages, per month, chief engineer, hospital, $179; shift engineers, hospital, $139.50; incinerator engineers, $147.25. Steam roller engineers, per hour, 85 cents; engineers in charge of, or operating derricks, locomotives, cranes, orange peels, clam shells, cable ways, draglines; setting steel, stone or other structural materials, 92½ cents per hour; engineers in charge of pile drivers, road rollers, tractors, hoists, stone crushers, 85 cents per hour; engineers in charge of portable boilers, concrete mixers and pumps, 75 cents; fireman, 65 cents.

Hours, 44 per week, except in cases of revolving shifts.

Overtime, first hour, time and one-quarter. Next three hours, time and one-half. Thereafter and Sundays and holidays double time. Revolving shift men called upon to work on their regular day off, or on a legal holiday, double pay.

MEDICINE HAT, ALBERTA—CITY OF MEDICINE HAT AND CANADIAN BROTHERHOOD OF STATIONARY ENGINEERS, FIREMEN AND HELPERS.

Agreement to be in effect from April 1, 1926 until December 31, 1926, with 60 days notice of cancellation.

The city council will appoint a committee, upon notice being given, to receive a grievance committee from the union.

No discrimination against union members.

Permanent employees, two weeks' holiday with pay each year after one year's service.

Hours for operators, 8 per day; 48 per week.

There shall be an interval of 16 hours between shifts, with overtime rate for work during intermissions. Employees working legal holidays or on their day off shall be given time off.

An employee incapacitated while in city service shall be granted pay less compensation not exceeding 60 days.

Employees in service one year, not more than one month's sick or quarantine pay.

Transportation shall be furnished by the City between the city hall and power house.

In case of permanent employees, one month's notice of leaving; when discharged, one month's notice or one month's pay.

Promotions to be made from the staff, if qualified. In promotions and reductions, seniority and efficiency to be considered.

Wages per month: 2nd class engineers, $170; relief engineers, $150; firemen, $125; senior waterworks operator, $135 to $150; relief fireman and waterworks operator, $125; junior waterworks operator, $135; boiler washers, $125; machinist, $170; blacksmith, $145; repairman, $125.

Service: Personal and Domestic

VANCOUVER, BRITISH COLUMBIA—BRITISH COLUMBIA HOTELMEN'S ASSOCIATION AND HOTEL AND RESTAURANT EMPLOYEES' INTERNATIONAL ALLIANCE AND BARTENDERS' INTERNATIONAL LEAGUE OF AMERICA, No. 676 (SOFT DRINK DISPENSERS).

Scale of wages in effect from July 1, 1926 until July 5, 1927, with three months' notice of change.

Hours, eight per day; six days per week. Hours not to be in excess of eight or spread over a longer period than thirteen except in cases of emergency.

Scale per week—tap men, $33; floor men, $27; combination men, $30.

Short shift men, 4 hours straight, $2.25; 75 cents per hour for work over four hours.

Extra men for floor, holidays and Saturdays, 8 hours, $5; 4 hours, $2.50. Over four hours, 75 cents per hour.

No shift is to be less than four hours straight.

Short shift man can work in more than one house on the same day, but not more than 8 hours on one day.

The Union cannot be responsible for help hired other than through the employment bureau of the union nor for supply of labour during the rush season.

Wage scale is based on the minimum and employees may receive higher wages.

VICTORIA, BRITISH COLUMBIA—CERTAIN LOCAL FIRMS AND HOTEL AND RESTAURANT EMPLOYEES' UNION, LOCAL NO. 459.

Agreement to be in effect from June 1, 1926 until June 1, 1927.

Six days' work per week.

Wages per week:

Cooks (eight hours per day, six days per week): chefs, $36; second fry, $30; night cook, $32.40; cook's helpers, $19.90; dish washers, $18.

Waiters (eight hours in twelve per day, six days per week): Waiters, $18; short shifts, first hour, 45 cents. Overtime over regular shift, time and one-half.

Waitresses (same hours as waiters) per week, $15; short shifts (less than 8 hours), 35 cents per hour. Overtime same as waiters.

White lunches, cafeterias, etc. (same hours as waiters); countermen, $16; countergirls, $12; pantry-girls, $12; busgirls, $9.

Hotels: waitresses—eight hour day, 6 day week, with room, $35 per month; same without room, $45 per month.

In hotel dining rooms open all day, catering to public, restaurant scale to apply.

All scales include meals while working. Fractions of an hour shall be paid for a full hour. Employee who, not having been notified that services are not required, reports for work shall receive one-half day's pay.

In a shortage of help, probationers may be employed, not more than one to each house, paid at rate of $15 per week for men and $12 per week for girls, for two months. After two months such help shall become members of union at regular scale.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING August, 1926, the Department received information regarding various contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed.

Three contracts were awarded in connection with works of construction, etc., ("A" group), the general fair wages clause being inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

DEPARTMENT OF PUBLIC WORKS

Paving portion of St. Patrick's Street, in front of the Government Printing Bureau, Ottawa, Ontario. Name of contractors, Standard Paving Limited, of Ottawa, Ontario. Date of contract, August 4, 1926. Amount of contract, $4,250.

Docking, cleaning, painting and repairing Departmental Dredge "No. 305" (King Edward). Name of contractors, Burrard Shipyard and Engineering Works, Limited, of Vancouver, B.C. Date of contract, August 17, 1926. Amount of contract, $6,280.

DEPARTMENT OF RAILWAYS AND CANALS

Construction and erection of the entire superstructure, including the approach spans, of the Vertical Lift Bridge on the Canadian National Railways, Wabash Division, over the Welland Ship Canal, known as Bridge No. 17, and the removal of the 124 feet rivetted through truss Swing Span which is at present carrying the railway traffic on a temporary diversion 150 feet south of the centre line of the new bridge. Name of contractors, The Canadian Bridge Company, Limited, of Walkerville, Ontario. Date of contract, August 25, 1926. Amount of contract, schedule rates (approximately $328,685, estimated from estimated quantities).

POST OFFICE DEPARTMENT

The following is a statement of payments made in August, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals	777 60
Making and repairing rubber stamps, daters, etc	89 22
Making up and supplying letter carriers' uniforms, etc	25,266 48
Stamping pads, ink, etc	385 24
Scales	751 75
Repairs, etc	34 55
Letter boxes, etc	450 85

PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being slightly higher, while the Dominion Bureau of Statistics index number of wholesale prices declined somewhat.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was $11.10 at the beginning of August, as compared with $11.07 for July; $10.84 for August, 1925; $10.19 for August, 1924; $10.53 for August, 1923; $10.44 for August, 1922; $11.44 for August, 1921; $16.42 for August, 1920; $16.92 for June, 1920 (the peak); $13.41 for August, 1918; and $7.68 for August, 1914. Potatoes showed a substantial seasonal advance, while there were less important advances in the prices of bacon, lard, fresh eggs, flour, beans and evaporated apples. Prices of beef, veal, mutton, fresh and salt pork, butter and cheese were slightly lower. Including the cost of fuel and rent with that of foods, the total budget averaged $21.32 at the beginning of August, as compared with $21.30 for July; $21.05 for August, 1925; $20.57 for August, 1924; $21.03 for August, 1923; $20.88 for August, 1922; $21.98 for August, 1921; $26.60 for August, 1920; $26.92 for July, 1920 (the peak); $21.20 for August, 1918; and $14.41 for August, 1914. Fuel was again somewhat lower, due to a decline in the prices of anthracite coal and wood. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, declined to 153.9 for August, as compared with 156.2 for July; 158.9 for August, 1925; 156.8 for August, 1924; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; 256.7 for May, 1920 (the peak); and 202.8 for August, 1918. Thirty-five prices quotations were higher, fifty-two were lower and one hundred and forty-nine were unchanged. In the grouping according to chief component materials four of the eight main groups declined, three advanced and one was unchanged. The Vegetables and their Products group declined, due to substantial decreases in the prices of grains, flour and other milled products, potatoes, coffee and foreign fruits. The declines in this group alone were more than sufficient to counteract the advances in the other groups. The Fibres, Textiles and Textile Products group and the Non-Ferrous Metals and their Products group declined slightly, the former due mainly to declines in the prices of cotton, jute, hessian and flax fibre, and the latter due to lower prices for silver and zinc, which more than offset the advances in the prices of copper, lead, tin and solder. The Chemicals and Allied Products group also showed a small decline. The groups which advanced were: Animals and their Products, due to higher prices for sheep, fish, eggs and butter, which more than offset the decreased prices for cattle, hogs and meats; Wood and Wood Products, mainly because of advances in the prices of pine and spruce lumber; and Iron and its Products due to higher prices for rolling mill products and scrap iron.

In the grouping according to purpose both consumers' goods and producers' goods declined, the former due to lower prices for flour, beef, pork, bacon, vegetables and foreign fruits, which more than offset the higher prices for eggs, mutton, veal and fish; and the latter due to declines in the prices of materials for the textile and clothing industries, for the milling industry, for the meat packing industry, for the chemical using industries, and for the metal working industries, as well as for miscellaneous producers' materials. Advances in the prices of some lines of lumber and in painters' materials caused an advance in the building and construction group.

In the grouping according to origin raw or partly manufactured goods were lower, because of declines in the prices of grains, cattle, hogs, beef, pork, vegetables, foreign fruits, cotton and smelted products. In this group raw sugar, eggs, wool and non-ferrous metals advanced. Fully or chiefly manufactured goods also declined, mainly because of lower levels for flour, smoked meats, mess pork and cotton yarn. Domestic farm products and articles of mineral origin declined, while articles of marine origin and articles of forest origin advanced.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, was again lower, being 170.4 for August as compared with 174.0 for July.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the

base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of August of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-1915 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption (next succeeding article) as follows: 1923, 73.8; 1924, 71.5; 1925, 69.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924 and

1925, the figures are substantially the same as those recently issued by the Bureau.

For index numbers of gas rates from 1913 to 1925 see the next succeeding article. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100 as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

(Continued on page 919)

Retail Prices

Beef prices which had advanced steadily from the beginning of the year showed a slight decline, sirloin steak averaging 30.8 cents per pound in August, as compared with 31 cents in July and 28.2 cents in January; rib roast 22.9 cents per pound in August, 23.4 cents in July and 21.1 cents in January; shoulder roast 16.8 cents in August, 17.2 cents in July and 15.3 cents in January. Veal was down from an average of 19.7 cents per pound in July to 19.3 cents in August, advances in some localities being more than offset by declines in others. Mutton fell from an average of 30.7 cents per pound in July to 30.3 cents in August. Both fresh and salt pork averaged slightly lower, the former at 32.2 cents per pound in August, as compared with 32.3 cents in July, and the latter at 28.7 cents per pound in August, as compared with 29 cents in July. Bacon was slightly higher in the average at 45.4 cents per pound. Ham was up from an average of 66.6 cents per pound in July to 67.8 cents per pound in August. Slightly higher prices were reported from most localities. In fresh fish cod steak advanced, while halibut and white fish were somewhat lower. Salt cod fish was up from 20.9 cents per pound in July to 21.3 cents in August. Finnan haddie was slightly lower at 20.5 cents per pound. The price of lard advanced from 24.9 cents per pound in July to 25.3 cents in August. Prices in most localities averaged slightly higher.

Fresh eggs advanced somewhat, averaging 39 cents per dozen in August, as compared with 38.2 cents in July. Cooking eggs were unchanged at an average of 34.7 cents per dozen. Dairy butter fell from an average of 37.2 cents per pound to 36.8 cents, and creamery from 42 cents per pound to 41 cents. Cheese was slightly lower at 31.3 cents per pound.

No changes were reported in the prices of bread. Soda biscuits declined from an average of 18.5 cents per pound in July to 18.3 cents in August. Flour was slightly higher at an average price of 5.4 cents per pound. Rolled oats and rice were unchanged. Canned vegetables showed a slight advance, tomatoes averaging 16.3 cents per tin, peas 17.4 cents per tin, and corn 16.3 cents per tin. Onions declined from 8.7 cents per pound in July to 7.8 cents in August, the decline being general. Potatoes showed a substantial seasonal advance, the price averaging $2.74 per ninety pounds, as compared with $2.58 in July. Higher prices were reported from practically all localities, being more pronounced, however in the prairie provinces. Evaporated apples were slightly higher at 20.1 cents per pound. Raisins were up from an average of 18.5 cents per pound in July to 18.7 cents in August. Raspberry jam declined slightly, averaging 83.8 cents per four-pound tin. Sugar was unchanged at an average of 7.9 cents per pound for granulated and 7.5 cents for yellow. Anthractie coal was down from an average of $16.99 per ton to $16.87. Lower prices were reported from Fredericton, Quebec, Thetford Mines, and Owen Sound. Bituminous coal was practically unchanged in the average at $10.15 per ton. Hardwood declined from $12.11 per cord in July to $12.04 in August, and soft wood from $8.94 per cord to $8.86. Coal oil was up from an average of 30.8 cents per gallon in July to 31.1 cents in August.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month, issued by the Dominion Bureau of Statistics.

Grain prices, for the most part, moved to lower levels during August, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaging $1.51 per bushel, as compared with $1.58⅘ in July. The high price for the month was $1.54¾, reached on the 4th, and the low $1.44⅞ on the 31st. Continued lack of export business, a substantial carry-over in Canada and a liberal increase in the United States visible supplies were said to be the factors contributing to the lower prices. Coarse grains moved in sympathy with wheat, western barley declining from 62¾ cents per bushel to 61¼ cents, and western oats from 49½ cents per bushel to 48½ cents. Corn advanced from 90½ cents per bushel to 93 cents and flax seed from $2.07½ per bushel to $2.10⅝. Flour at Toronto declined from $8.90½ per barrel to $8.79½. Bananas were down from $4.25 per bunch to $3.50, and oranges from $5.75-$6.50 per case to $5.75. Linseed oil advanced from 97 cents per gallon to $1.04. The prices of rubber continued to decline, a grade of Ceylon falling from 41 cents per pound to 38¾ cents. Raw sugar rose from $3.71 per hundred pounds to $3.83. Potatoes showed a general decline, Ontario grades at Toronto being down from $2.50-$2.75 per bag in July to $2.40-$2.60 in August; at Winnipeg from $1 per bushel to 90 cents; and at St. John, N.B., from $4 per barrel to $3.30. Turpentine advanced from $1.43 per gallon to $1.60. Rosin was up from $17.75 per barrel to $18.75. Western cattle at Winnipeg declined from $7.23 per hundred pounds to $6.53. Choice steers at Toronto declined from $7.37 per hundred

pounds to $7.29. The prices of hogs continued downward, the average price at Toronto being $12.69 per hundred pounds, as compared with $14.72 in July. Choice grades of sheep advanced from $6.60 per hundred pounds to $7.42. Meats followed the trend in live stock, hind quarters of beef at Toronto being down from $17.50 per hundred pounds to $16.87, and mess pork from $39.50 per barrel to $38. Mutton advanced $1 per hundred pounds to $12. Butter was steady at Toronto, but showed a tendency to advance at Montreal, finest creamery being 35 cents per pound, as compared with 33 cents in July. Lard was down from 18 cents per pound to 17½ cents. Fresh eggs rose from 37-39 cents per dozen to 40-44 cents. Raw cotton at New York declined slightly, averaging 18.5 cents per pound, as compared with 18.7 cents in July. Raw jute fell from $8.64 per hundred to $7.70, and hessian from $10.63 per hundred to $10.13. Raw silk was slightly higher at $6 per pound. Wool showed an advance of from 1 cent to 2 cents per pound. Foundry pig iron at Montreal declined from $28.20 per ton to $26.70, while scrap materials at Toronto advanced, iron being up from $8.50 per ton to $10. Pine lumber rose from $78 per M to $80, and spruce from $32 per M to $34. Non-ferrous metals, for the most part, avanced, copper being up from $16 per cwt. to $16.15; lead from $8.10 per cwt. to $8.25; tin from 65 cents per pound to 66¼ cents; and solder from 37 cents per pound to 39 cents. Spelter and silver declined, the former from $9.08 per cwt. to $8.90, and the latter from 65.1 cents per ounce to 61.9 cents.

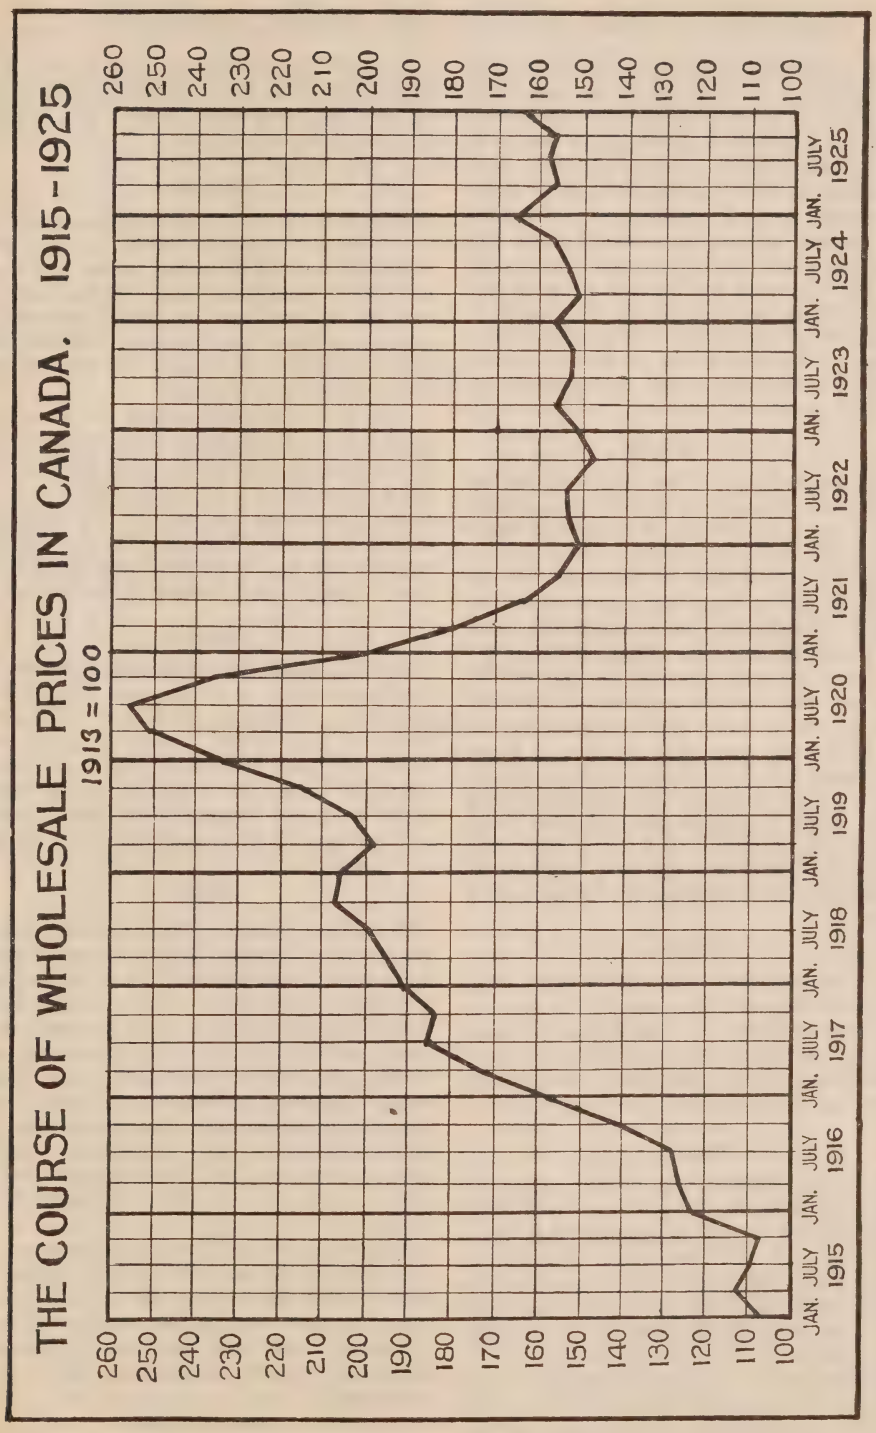
THE DOMINION BUREAU OF STATISTICS' REPORT ON PRICES AND PRICE INDEXES, 1913-1925

THE fourth report on prices in Canada, giving detailed statistics for 1925, with summary tables for previous years, issued by the Dominion Bureau of Statistics, in continuation of the series of reports on wholesale prices issued by the Department of Labour from 1910 to 1918, has recently been published. In addition to the features in previous reports it gives, for the first time, index numbers of changes in rates for telephones, gas, and electric light, thus enlarging the section on prices of services. The report for 1924 was noted in the LABOUR GAZETTE for August, 1925. The methods of calculating index numbers, etc., were described in dealing with the first and second reports in the series, in the issues of the LABOUR GAZETTE for June, 1923, and September, 1924.

The principal tables of index numbers of wholesale prices in Canada are given with a detailed analysis in a bulletin issued by the Bureau each month, and are summarized in the LABOUR GAZETTE. The principal tables in the annual report now issued appeared with the issue of the LABOUR GAZETTE for January as a supplement entitled "Prices in Canada and in Other Countries, 1925".

The report contains a section on retail prices in Canada, with tables compiled from the detailed statistics published monthly in the LABOUR GAZETTE, collected by the Bureau and by the Department of Labour, and also a section on prices in other countries, which gives a compilation of the index numbers of prices in the various countries and an account of the prices movement in each country during 1925.

The tables of statistics of the cost of gas include prices of manufactured fuel gas in eighteen cities and of natural gas in twelve cities, with index numbers based on prices in 1913 as 100, and average index numbers weighted according to consumption in each city. The statistics of electric light rates are for the years 1923, 1924 and 1925, and are index numbers for each province, weighted according to average consumption in households. For telephone rates, figures as to the cost of domestic and business telephones are given for each province for 1913 and 1925, with index numbers.



The accompanying tables summarize the figures for gas and electric light rates.

WEIGHTED INDEX NUMBERS OF DOMESTIC ELECTRIC LIGHT RATES
CHARGES 1913=100

—	1923	1924	1925
Canada	73·8	71·5	69·1

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. According to the latest information available there was no change in the cost of living in Great Britain, while a slight decline was noted in the United States and an upward tendency in various other countries. Wholesale prices showed an upward trend in Great Britain, the United States, and in the majority of European countries.

Great Britain

WHOLESALE PRICES.—The index number of the *Statist* (in continuation of Sauerbeck's figures), base period 1867-77=100, was 126.0 at the end of July, representing an increase of 0.9 per cent over that for the end of June. Foodstuffs rose 0.7 per cent, there being an increase in vegetable foods, while the other groups showed declines. Materials rose 0.8 per cent. Minerals showing an increase of 4 per cent while textiles and sundries declined.

The Board of Trade index number on the base 1913 = 100 was 148.7 in July, 1.6 per cent above the June level. The index for foods declined 1.2 per cent, cereals rising slightly while meat and fish and other foods declined. Non-foods rose 3.0 per cent, with sharp rises in iron and steel and other metals and minerals and declines in the remaining groups.

Austria

WHOLESALE PRICES.—The official index number of the Federal Statistical Office, on the base first half of 1914=1, was 18,144 in August as against 18,152 in July and 17,798 in June. Foods showed very little change during this period, and materials rose 2.5 per cent.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914 = 100, was 856 in July as against 754 in June, an advance of 13.5 per cent. Foods rose 8.8 per cent, with increase in all groups. Industrial materials rose 16.7 per cent, with very large increases in price in the minerals and metals and the textiles groups.

COST OF LIVING.—The index number of cost of living, Paris, on the base 1914=100, compiled by the committee of studies on the cost of living, rose to 485 in the second quarter of 1926, or 7.5 per cent. Food rose 7.2 per cent to 507; heat and light rose 1.1 per cent to 452; rent rose 13.4 per cent to 250; clothing rose 10.1 per cent to 577; and sundries rose 5.1 per cent to 520.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 127.4 in July, a rise of 2.2 per cent above the June level. Farm products rose 3.4 per cent, and industrial materials as a whole showed little change. Goods produced rose 3 per cent and goods imported declined about one per cent.

COST OF LIVING.—The official index number, on the base 1913-14=100, showed an increase for the fourth month in succession, being 142.4 for July, 1.4 per cent higher than in June. Foods rose 1.5 per cent and heat and light 0.6 per cent while rent rose 4.5 per cent reaching 104.4, thus rising above the pre-war level. Sundries and clothing declined slightly.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base respective months of 1913=100, declined 2 points in July to 148. Slight increases were shown by fuels, pulp and paper and chemicals, and declines by vegetable foods, animal foods, feed and forage, mortar, etc., lumber, and textiles. The remaining groups showed no change.

India

WHOLESALE PRICES.—The index number of the Bombay Labour Office of wholesale prices in Bombay, July, 1914=100, was 150 in June, a decline of one point from the May level. Foods declined 2 points or 1.4 per cent, there being advances in the groups cereals and pulses, and declines in sugar and "other foods." Non-foods declined one point, with advances in oil seeds, raw cotton and the miscellaneous group, and declines in textiles other than cotton, in hide and skins and in metals. Cotton manufactures showed no change.

COST OF LIVING.—The index number of the Bombay Labour Office, July, 1914=100, rose 2 points in July to 157. Foods rose 3 points or 2 per cent to 155; clothing declined 2 points to 160 and fuel and lighting and house rent showed no change at 164 and 172 respectively.

New Zealand

WHOLESALE PRICES.—The new index number of the Census and Statistics Office, on

the base 1909-13=1000, was 1636 in June, showing only a slight decline from the previous month's level. In consumers' goods, foodstuffs rose slightly to 1533 and non-foods showed a slight decline to 1681. In producers' materials all groups declined slightly, materials for farming industry being 1489, materials for building and construction, 2033, and material for other industries, 1663. The index number of imports declined and that of exports rose.

Cost of Living.—The official index number on the base July, 1914=1000 was 1622 in May, as against 1624 in February. There were slight declines in food and clothing, an increase in sundries, and no change in rent and fuel and light.

United States

Wholesale Prices.—Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was $12.6968 on September 1, as against $12.6441 for August 1, showing a slight upward trend for the month. Nine groups advanced, the only declines being in the cereals, live stock (except beef cattle) provisions, and vegetable oils. The chief strength was in textiles, hides and leather and miscellaneous groups.

Cost of Living.—The official index number of the Bureau of Labour Statistics, on the base 1913=100, was 174.8 for June as compared with 177.9 for December, 1925, a decline of 1.8 per cent. Foods declined 3.5 per cent to 159.7; clothing declined 0.7 per cent to 168.2; housing declined 1.0 per cent to 165.4; fuel and light declined 3.3 per cent to 180.7; furniture declined 1.8 per cent to 210.4. The miscellaneous group showed almost no change at 203.3.

The index number of the National Industrial Conference Board on the base July, 1914 =100 was 166 in July as compared with 167 in June. Foods declined 3 points to 157 and clothing declined one point to 173. Sundries rose 2 points to 174. Shelter and fuel and light remained unchanged at 176 and 158 respectively.

The index number of the Special Commission on the Necessaries of Life, of the cost of living in Massachusetts, on the base 1913= 100, was 161.9 in July, a slight decline from the June level. There were slight declines in the food and sundries section and a decline of 1.4 per cent in clothing. There was an increase in the fuel and light section due to higher prices of coal and kerosene. Shelter remained unchanged.

Handbook on Unemployment Insurance

A useful handbook on unemployment insurance, edited by Professor A. B. Forsberg, of Michigan State College, has been published recently ("Selected Articles on Unemployment Insurance" Handbook Series: New York: H. W. Wilson Company, 1926, Price $2.40). It is divided into four sections; the first analyses the problem of unemployment, estimates its extent, explains its significance and its causes, and gives a brief account of unemployment legislation in various countries; the second presents the arguments for unemployment insurance, and the third states the arguments advanced against such insurance. The fourth section deals with the numerous voluntary schemes that have been adopted by employers, mainly in the United States, for the purpose of stabilizing employment in their establishments.

The most recent developments in the history of unemployment insurance fix responsibility for insurance upon the employers of labour rather than on the employees or the state. The earliest system adopted at St. Gall, Switzerland, was based upon the principle of the workers' responsibility. Later, the Ghent system supplemented the wage earners' payments by a subsidy from the community or the state. The British Unemployment Insurance Act next added a third contributing class, namely the employers, and more recent developments have continued to increase the employers' responsibility. Some of the latest systems require the employers to pay the full cost of maintaining unemployment reserve funds, the theory being that employers will have an incentive to diminish unemployment if they are required to make good the losses in their employees' wages due to unemployment. By a similar process, it is pointed out, a reduction in the frequency of industrial accidents was obtained when employers were required to pay the cost of accident compensation. The possibilities of the science of management are emphasized in the handbook in this connection. However, employers' liability in regard to unemployment insurance has not been incorporated in any considerable legislation yet existing. The principal American experiment in this direction is the so-called "Wisconsin plan" in which unemployment is treated as a risk of industry similar to other "accidents." Bills on these lines have been introduced in Wisconsin, Minnesota, Pennsylvania, New York, Massachusetts and Illinois. Many employers, on the other hand, are promoting stabilization work through voluntary effort. Opinion differs widely in regard to the voluntary solution, and leaders of farm and labour organizations, economists, manufacturers, insurance companies and even radicals are found on both sides of the issue.

RECENT LEGAL DECISIONS AFFECTING LABOUR

No "Inexcusable Negligence" in employer's failure to provide safeguard of which he is ignorant

A boilermaker who had lost the hearing of one ear when at work, brought an action in the Superior Court of Quebec against his employer, claiming $4,086 on the ground that he had sustained a loss of 25 per cent of his earning capacity which he placed at $934 for the previous year. He alleged further that there had been inexcusable fault on the part of his employer in not providing ear guards, for which he claimed $1,000. The accident took place when the workman was lying on his back making holes for rivets in iron plates with the aid of an acetylene torch. Some molten metal dropped into his left ear and pierced the drum. He received first aid at the shop, and later the company for whom he worked provided medical treatment. The company alleged that the plaintiff's earnings for the previous year amounted only to $789, and denied the charge of inexcusable fault.

In delivering judgment the court found that while it appeared from the evidence that the plaintiff should have been provided with ear protectors for the special job he was working at, yet as none were in use or known to the parties at the time, the non-use of them could not be regarded as inexcusable fault. Inability to work was estimated by the court to have lasted for thirty days, which at $2.80 a day amounted to $64.40. The loss due to diminished earning capacity was placed at 25 per cent of $758 earned the previous year, making $189.50 of which one-half would form the basis of the annual rent. The cost of such annuity at the plaintiff's age of 41 years, was $1,563. Judgment for that amount was granted with interest and costs.

—(*Quebec—Wm. Deveney versus The Canadian National Railways.*)

Tuition Fees in Trade "Schools"

The report of the British Columbia Minimum Wage Board for 1925 contains an outline of several court actions brought by the Board during the year. In one case a manufacturer was taken to court for not paying the minimum wage. This case has some unusual features. A female employee was advised, when taken on, that no wages were paid, but a bonus of $10 a month was given to start, and a monthly tuition fee of $1 was payable. She paid this sum shortly after she commenced work. At the end of her first month she was given a cheque for $9 and a receipt for $1 for the next month's tuition fee, this being the general practice in the establishment. Defendant's counsel argued that his client was conducting a school. The magistrate replied that the employer's action was either legal or illegal, and the case had been brought into court to determine whether it was lawful to allow girls to work for below the minimum wage. After taking into consideration the evidence submitted, his judgment was that the defendant was guilty of an offence under the Act, and he thereupon imposed a fine of $25.

In another case, action was taken in Victoria against a so-called barber college which charged a high tuition fee, and allowed the girls a percentage of their earnings while learning. As the rates to the public were lower than in hairdressing-parlours employing skilled operators, the young lady upon whose evidence the Board relied received considerably less than the order governing the personal service occupation prescribed. The magistrate registered a conviction for infringement of the regulations and the manager was fined $25.

At the same time a case was pending in Vancouver against an allied concern there, the conditions being analogous. The magistrate, in his decision, said that while the accused's method of doing business was, in his opinion, a deliberate attempt to evade the act, he was not technically guilty, in that the relationship of employer and employee did not exist within the meaning of the Minimum Wage Act, and for that reason he felt he could not convict. The Board thereupon appealed his decision by taking a stated case to the Supreme Court of British Columbia. This was heard before the Chief Justice, who upheld the judgment of the police court magistrate. Prior to this decision the accused in the Victoria case had given notice of appeal, but in view of the result of the Supreme Court case in Vancouver, which would serve as a precedent, the Board consented to a withdrawal. For the sake of the girls who were considered to be receiving unfair treatment at these establishments the Board tried to obtain redress, but its efforts were not successful, and until the act is amended the Board has been advised the decision of the courts in all probability will be in favour of the "schools."

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] OCTOBER, 1926 [NUMBER 10

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

EMPLOYMENT as reported by 5,799 employers to the Dominion Bureau of Statistics showed a still further increase on September 1. These returns cover practically all employers having a minimum of fifteen employees in all industries other than agriculture and fishing. The employers reported that they had 859,738 persons on their payrolls, as compared with 855,002 in the preceding month. The employment index number (with the number employed by the reporting firms in January, 1920, as 100) rose from 104.2 on August 1 to 104.9 in September 1, this being higher than on any date since the year 1920. The index numbers for September 1, 1925, 1924, 1923, 1922 and 1921, were 96.6, 93.1, 100.0, 93.7 and 88.7 respectively. Reports received from the offices of the Employment Service of Canada indicated that the volume of business transacted in August was more than double that in the preceding month, owing to the demands for harvest workers, but a slight reduction is noted when comparison with August, 1925, is made. At the beginning of September the percentage of unemployment among members of local trade unions stood at 2.5 as compared with percentages of 2.3 at the beginning of August, 1926, and 4.4 at the beginning of September, 1925. The percentage for the month under review are based on returns received by the Department of Labour from 1,504 local trade unions with an aggregate membership of 139,345 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $10.94 at the beginning of September, as compared with $11.10 for August; $10.81 for September, 1925; $10.28 for September, 1924; $10.46 for September, 1923; $10.28 for September, 1922; $11.82 for September, 1921; $15.95 for September, 1920; $16.92 for June, 1920 (the peak); $13.31 for September, 1918; and $7.83 for September, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined to 152.5 for September, as compared with 153.9 for August; 156.2 for September, 1925; 153.9 for September, 1924; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; 256.7 for May, 1920 (the peak); and 205.0 for September, 1918.

The time loss caused by industrial disputes in September was less than in August, 1926, but slightly greater than in September, 1925. Fourteen disputes were in progress at some time during the month, involving 2,248 employees, and resulting in the loss of 20,687 working days. Corresponding figures for August were as follows:—fourteen disputes, 2,617 workpeople and 49,115 working days; and for September, 1925, fourteen disputes, 1,297 workpeople and 20,553 working days.

Industrial Disputes Investigation Act, 1907

During September the Department received a report from the Board of Conciliation and Investigation in connection with a dispute between the Canadian National Express Company and certain of its employees, members of the Canadian Brotherhood of Railroad Employees. The text of this report is given on page 939.

Three applications for the establishment of Boards were received during the month.

Combines Investigation Act, 1923

On page 945 of this issue will be found an outline of an interim report following an investigation into the Proprietary Articles Trade Association by the Registrar of the Combines Investigation Act.

Enlargement of C.N.R. Board of Adjustment No. 2

The establishment on September 1, 1925, of the joint board known as the "Canadian National Railways Employees Board of Adjustment No. 2", was noted in the LABOUR GAZETTE for November, 1925 (page 1054) and in the preceding issue. This Board was the result of an agreement between the Canadian National Railways and its clerks, station and baggage-room employees, freight handlers and labourers in stores, motive

power and car departments. In November, 1925, however, it was agreed to enlarge the scope of the Board to include the employees in the dining, sleeping and parlour car departments as represented by the Canadian Brotherhood of Railroad Employees. The purpose of the Board is to dispose of outstanding grievances or disputes which may arise from the application, non-application or interpretation of the schedule of wages and working conditions now in effect or hereafter established, which are not promptly adjusted between the officers of the railway in question and the representatives of the men.

Outlines of the cases coming before the Board are given in the LABOUR GAZETTE from time to time, together with the decisions of the Board in each case (July, 1926, page 646, etc.).

Weekly half holiday in stores in British Columbia

The Chamber of Commerce of Victoria, B.C., lately requested the Provincial Government to secure the repeal or amendment of the Weekly Half Holiday Act (Revised Statutes of British Columbia, 1924, chapter 273), which applies to shop employees in the Province. This act was passed in 1916, providing that premises where any wholesale or retail trade or business is carried on must be closed not later than one o'clock in the afternoon on one day each week, the day to be fixed by a referendum to the municipal electors. Certain classes of stores, however, such as bakeries, cigar stands, drug stores, restaurants, etc., are exempt from the operation of the act, unless the council of the municipality declares by bylaw, that they are to be included.

The director of the Chamber of Commerce, in a letter addressed to the provincial government in September, declared that the weekly Half Holiday Act hampered business and should be repealed, and suggested further that another measure should be enacted providing that the shop employees should individually retain the privilege of a weekly half-holiday, but that the half holidays should be spread over the week, allowing the establishments to remain open every week day. It is stated that the action of the Victoria Chamber is likely to be followed by a similar movement in Vancouver and other cities in the province.

On the other side, the retail clerks have declared themselves strongly opposed to such a change in the existing holiday system, fearing that it might eventually deprive them of their present privileges; and an organization has been formed at Victoria to resist any attempt to amend the Act as proposed by the Chamber of Commerce.

Wage survey in British Columbia

The August issue of the LABOUR GAZETTE noted that by the first order under the Male Minimum Wage Act a minimum wage of 40 cents an hour for employees in the lumbering industry in British Columbia would be enforced on November 1, 1926. This act is administered by the Board of Adjustment established under the Hours of Labour Act, 1923. The Male Minimum Wage Act applies to "all occupations other than those of farm labourers, fruit pickers, fruit and vegetable canners, and domestic servants." Accordingly the Board, having dealt first with the largest industry in the province, will now proceed to study conditions prevailing in other industries for the purpose of fixing a minimum rate suitable for each industry. The *Vancouver Province* states that soon the act will affect the wages of every male worker in the province, including hundreds of store clerks, office employees and labourers. By the early part of next year it is expected all branches of business will be covered by minimum wage regulations, the scale in each case depending upon individual conditions.

Prior to the publication of the order governing the lumber industry, a large delegation of lumbermen presented to the Provincial Government a memorandum making a final protest against the enforcement of the Male Minimum Wage Act, and outlining an alternative scheme that would enable them to accomplish voluntarily what was considered to be one of the chief objects of the Act, namely, the reduction of Asiatic labour. Under this alternative plan twenty-five per cent of the orientals now employed would be dismissed during the first year of the new law's operation; twenty-five per cent the second year and so on until only a few orientals were left in jobs which white men refuse to fill. The scheme would require the addition of six hundred new white men to the lumber payroll of the province in the first year in place of orientals, the lumbermen stated. The delegation was informed that the order of the Board must take effect but that if the Act should prove too difficult to administer it might be amended by the Legislature. The text of the new order is given on page 948.

Piece-work payment for logging camps

The *Canada Lumberman* is inviting the operators of lumber camps to state their opinion of a proposal to introduce the piece-work system of wage payments in the logging industry. This system, it is stated, has been adopted by the Hope Lumber Company, who operate mills at Thessalon and Benny, Ontario, as a remedy for the labour problem. "Realizing, no doubt,

that a shortage of bushmen would likely be felt this winter, this organization will try out the piece-work system of payment in their logging camps similar to the pulp operators. The company will permit the men who so desire to work on the piece-work plan and receive payment of so much per thousand feet. Or the men may, if they care, stick to the old plan of working for direct wages. The results of their experiment will be followed with considerable interest by logging operators generally as to the practical results of such a system in the lumber camps."

Experiments in five day week

Two years ago the Ford Motor Company began to experiment with a five day working week (Labour Gazette, October, 1924, page 870). According to an announcement in September the company has now adopted the five day week as a permanent policy for its employees. Such workmen as seem to deserve it will receive as much for the five-day week as they had been getting for six days, but this will depend solely on merit. Another feature of the policy is that eight hours will constitute a day's work and that there will be no extra labour, classified as overtime. The Saturday feature will not apply to the railroad owned by the Ford Company or to certain other continuous work, but this will affect only a small percentage of the total number of men now employed by the company. For the past four years 100,000 Ford employees have been working on an average of five days each week and have been paid accordingly. The experience thus gained shows, it is stated, that the plan now adopted can be successful financially both to the employer and the employees. A new scale of wages, it is stated, is also being considered by the Ford Company.

The annual report of the Chief Inspector of Factories and Workshops for 1925 shows that the five-day movement has made some headway also in Great Britain—"Although the system of working a 5-day week has been introduced into a number of factories," he states, "it is not possible to foretell at this stage whether it will become a permanent and general institution. In many works bad trade has been the reason for the adoption of the system, and a period of good trade is needed to show whether the firms intend to continue such an arrangement of hours.

"In cases where bad trade has not governed the situation, various reasons have been put forward as an explanation for its introduction. For example, a reduction of overhead charges, especially where preliminary processes required making up of fires or raising steam; opportunities for cleaning and repair of machinery and overhauling of plant. Then, the output on Saturdays has often been found unsatisfactory, due to distracted attention of workers; further, the fair distribution of work when Christians and Jews are employed in the same factory has been made possible.

"The workers are saved the time and expense of travelling, important items in large towns or isolated districts, where workers have to travel considerable distances to reach this work.

"That increase in output has resulted by the adoption of the system has not been generally claimed, but, on the other hand, there does not appear to be any evidence that output has been diminished.

"Where the 5-day week has been adopted the workers, and indeed the managers, seem to be almost unanimously in favour of it. Cases are recorded where girls preferred to work on Saturdays and leave work earlier on other days because their evenings were taken up with various engagements, and others where the girls preferred coming to the factory to helping with the housework at home—but these are isolated instances—in general, the system meets with approval. It is quite usual for managers to say that young workers seem much fresher when they have the long week-end holiday, and to married women it is a boon, as it gives them a free morning for domestic duties, while men appreciate it for work in the garden or allotment.

"One dressmaker in London stated that an advertisement including "no Saturday work" produced many more applicants than former advertisements had done.

"In the Midlands, in two factories employing together 9,000 workers, the system had been in operation for over six years. The workers are enthusiastic about it, and the output of the factories is stated to be most satisfactory. One free morning in the week gives workers opportunities for attending continuation classes, or pursuing a hobby, and may prove to be an effective means of combating the effect of monotonous work, which is undoubtedly on the increase as a result of the perfection in machine operations."

Rural Credit systems in New Zealand and Canada

The Parliament of New Zealand recently received the report of a Royal Commission appointed by the Government to study the operation of rural credit systems in other countries and to make recommendations as to a system suitable for New Zealand. In the course of their investigation the commissioners studied the methods

adopted in Canada, in regard to which they made the following comments:—

It is not considered that any one of the methods or modifications as tried out in Canada during the past nine years would prove suitable to New Zealand. If co-operative credit associations are established in New Zealand their success must necessarily depend upon some such system of independent close personal control as that which is maintained in Quebec and Alberta.

The method of providing capital by charging mortgage securities against the public debt is an unnecessary restriction upon the provision of capital, because of the disinclination to increase the volume of the gross public debt.

The operations of the Farm Loan Board of the United States are found to be satisfactory, but limited in their scope, the total loans made by the Board amounting to only about 15 per cent of the whole mortgage debt. The recommendations of the Commission are briefly as follows:—

(1) That long-term mortgage credit should continue to be administered by the State Advances Office, in which a special Farm Loan Branch would be constituted, under the control of a Farm Loan Board, consisting of the present State Advances Board supplemented by representatives of the primary industries, capital to be provided by the issue of securities charged directly against the mortgages, instead of the public revenues as at present; the limit of advances to be £7,000, based on ascertained productivity up to two-thirds of the value of the land.

(2) That intermediate credit should be provided which will enable the producer to make extended use of existing institutions with the assistance of the Farm Loan Board.

The expression "long term mortgage credit" as used by the commission means credit for terms of five years or over. Intermediate credit is credit given for a longer period than is contemplated in commercial banking transactions and of shorter duration than the usual mortgage term. Short term credit is the ordinary banking credit of not more than six months.

American and European industrial methods

Various delegations from other countries have recently visited the United States and Canada in order to study American business and industrial methods with a view to their application in Europe and elsewhere. Some of these visits have been noted in the LABOUR GAZETTE. An expert American opinion as to the causes of the differences in the methods followed on the two continents will be of interest in this connection. The chairman of the Board of Directors of the American Management Association, writing in the September number of the *Management Review,* says: "Europeans seem to think American methods a panacea for Europe's business and industrial troubles. They seek to adopt bodily American methods of scientific organization in their industrial operations, and are eager to introduce our labour-saving devices and our large-scale production methods. They are impressed not only with the scientific organization of our industries as to operating methods, but also with our methods of handling and dealing with the human problems that rise from time to time as a result of mass production. The aim, of course, is to increase the *per capita* production. The productive output of European factories is about what it was in the pre-war period. In that interval, however, the American *per capita* production has very greatly increased. Many things stand in the way of Europe's turning to mass-production methods. The most important of these is inability to get quickly the distribution necessary to justify quantity-production installations. It is often true that they cannot afford to take the gamble in the individual industries of organizing in a large way, for they have no assurance that they can work up rapidly the ramifying outlets for the product necessary to keep the plant operating at capacity once it is built.

"Europe's population is not accustomed to using standardized products. Even in the matter of tools, each nation has its own type of equipment; there are different requirements to be met in every country and the tastes are as numerous as are the various nationalities. Consequently, it is no easy matter to market a standardized product on a large scale.

"Europeans fail to realize how much our quantity-production enterprises depend for their success upon the great buying power of the American worker that has resulted from his high wage-scale and the high standard of living that he has attained with its accompanying interest in new comforts and devices as they are developed and brought before the public.

Medical Service in Industry

The Director of the Division of Industrial Hygiene of Ontario, in his annual report reviewed on another page of this issue, recommends employers to place physicians in a position of direct responsibility to their industry. "Infection of wounds," he says, "costs at least one million dollars a year in Ontario. A large percentage of this can be prevented with adequate first aid facilities, including personnel and equip-

ment, but particularly supervision, which is so often entirely lacking. The early return of injured men to work consistent with good recovery depends to a considerable extent upon the relationship between the industry and the physician. Where, as is generally the case, the physician has no responsibility to the industry beyond his responsibility to the employee as a patient, the subject is not likely to receive much attention. This matter has been considered by the Industrial Medicine Committee of the Ontario Medical Association. At their annual meeting in December the report of the subcommittee, dealing with the matter indicating the position of the physician in industry was submitted for consideration and approval of the profession as a whole. It was discussed and referred to county societies for further discussion and recommendations. This should help to clarify the situation."

During the year 1925 the trade associations of the lumber and pulp and paper industries took steps to enlist the co-operation of physicians, employers, and employees in an effort to reduce accident severity.

The Director further points out that an increasing number of industrial executives have shown an interest in the organization and development of means for supervising the general health of the men and women employed in their plants. The number of nurses employed in industry is increasing slowly. The arrangements with physicians in individual plants whereby the physician assumes responsibility for health work in the plant, and supervises the health of workers on a part-time basis for a nominal consideration, is also increasing. "It is in such an arrangement as this that the suffering and anxiety, the loss in time and money incident to sickness and accident in industry can be reduced."

Inadequate medical service in lumber camps

Mr. A. R. White, Chief Sanitary Inspector of Ontario, in his report for the year 1925, calls attention to the serious condition existing in the lumber camps owing to the inadequacy of the existing provision for the treatment of injured workmen. "Without going into detail," he says, "as to the cause of many of these accidents, a large percentage of these accidents and fatalities can and must be prevented. . . . The disability arising out of neglect to the injured man, which neglect extends the period of the incapacity of the worker and endangers his life, must also receive a new attention or the industries will still continue to turn out as a by-product the cripples and helpless wrecks which have been becoming more and more numerous during the last five years. . . . The medical statement compiled from the records of industrial physicians that 60 per cent of all open wounds seen by the doctor are infected when the wounded men come to him from the woods, means that life and limb are being thoughlessly endangered, much unnecessary suffering is being endured, and compensation costs to the industry are thereby increased at least five times what they normally should be. This in brief, is the result of such investigation as the inspectors have carried on."

Some figures showing the number of accidents in the woods in Northern Ontario in recent years, are given in the review of the annual report of the Provincial Board of Health, on page 987 of this issue. Proposals made recently by Mr. White for the reduction of forest casualties were outlined in the February issue, page 145. These proposals, if adopted whole heartedly, would in Mr. White's opinion, result in reducing the number of accidents and of the cost of compensation.

Accident compensation as aid to safety movement

The Workmen's Compensation Board of British Columbia in their annual report, reviewed on another page, states that compensation has given a marked impetus to safety work in the province. Accident prevention committees co-operating with the management have been active in many of the larger establishments and have been doing much real work in the interests of safety. The British Columbia Lumber and Shingle Manufacturers and The Shipping Federation of British Columbia have for over a year each had a full-time Safety Inspector organizing and directing safety-work along educational lines in the plants embraced in their associations. During the past year the Shingle Manufacturers' Association of British Columbia and the British Columbia Loggers' Association have taken a similar step. All four associations are now energetically endeavouring to maintain their plants to a greater degree of safety than heretofore. The periodical inspection of plants, machinery, and places of employment has been undertaken. Apart from the inspection work done by the Board itself, the inspectors under the "Boiler Inspection Act" and "Electrical Energy Inspection Act" now make their plant inspection and submit reports direct to the Board. The Board regards as promising this added service utilized for accident-prevention purposes in a broader field than heretofore.

The Board points out further that compensation laws have removed the previous conflict of interest between employers and workmen in regard to accidents. The former system of "liability according to negligence" had the tendency of dividing and dissipating rather than harmonizing and co-ordinating the diversified efforts of those striving for greater safety. By accepting in principle the postulate that industrial accidents are a common liability of modern industrial life and should be faced co-operatively there has evolved a better understanding of the problem and a more definite plan for reducing the needless waste of humanity which has so long continued.

In regard to first-aid the Board states that workmen are more and more finding it advisable to have scratches and bruises attended to promptly. In addition to forestalling infection and consequent long periods of lay-off, the first-aid man is becoming an important factor in applying what remedies are needed for those who, were it not for the first-aid man, would be obliged to seek out a doctor often at a distance from their camp or plant, thereby causing time loss for themselves and inconvenience for their employers.

Are industrial accidents decreasing?

The question whether industrial accidents are decreasing has been discussed in recent issues of the Labour Gazette. Mr. Ethelbert Stewart, United States Commissioner of Labour Statistics, recently stated that in iron and steel—the only industry in regard to which his Bureau has accurate accident statistics—the trend has been gradually and almost continuously downward (Labour Gazette, January, 1926, page 31). He attributes this result to the continued application of safety methods, backed by an intelligent survey showing what parts of industry are dangerous. Without such intensive effort Mr. Stewart says the improvement would not occur, and in fact he believes it has not occurred in industry generally. On the other hand, Mr. Richard H. Lansburgh, secretary of Labour and Industry of Pennsylvania, announces in *Labour and Industry* (August, 1926) that this state has a plan for industrial safety that has already brought about a downward trend in the general accident records. "Whatever the cause," he says, "during the first six months of 1926, there were 105 fewer accidents reported to the Department of Labour and Industry than during the first six months of 1925, and there were 5,112 less non-fatal accidents reported in the first six months of 1926 than in the corresponding period of 1925. Thus the trend of accidents in Pennsylvania is now downward and must be kept downward. It can only be kept downward by full utilization of each feature of the Pennsylvania plan."

Unless it can be counteracted by organized effort, the modern tendency, Mr. Lansburgh believes, is towards an increase rather than a decrease in accidents. The difference between the record of an industry (metal) in which there has been a systematic safety movement, and that of another industry (building) where such work has not been done, is shown in the following table:—

—	1916		1925	
	Fatal	Non-Fatal	Fatal	Non-Fatal
Metal trades	488	95,498	281	47,076
Building trades	186	14,960	245	20,008

Mr. Lansburgh estimates that from 60 to 75 per cent of industrial accidents may be prevented by developing a safety spirit in the individual workman. There are three phases of the "Pennsylvania plan" for which such success is claimed. The first consists of organized safety effort by each employing firm; the second is community organization for safety by representatives of all interests within the community which have safety at heart; and the third is co-operation between individual and community effort, on one side, and the State Department of Labour and Industry on the other side.

Longshoremen and Accident Compensation

A bill (the Cummins-Graham bill) to provide Federal accident compensation for longshoremen, ship repairmen and other harbour workers will, it is stated, be considered finally at the December session of the United States Congress. According to a recent statement by the American Association for Labour Legislation this measure will "close up a conspicuous gap in American accident compensation legislation." *The Monthly Labour Review* (published by the United States Department of Labour), contained in its issue for June an article explaining the position of longshoremen under existing legislation. Dr. Lindley D. Clark, the writer, stated that unless legislation intervenes, the work of loading and unloading vessels must remain, as it now is "a divided process," a line of distinction being drawn for compensation purposes between work done on board a vessel and work done on shore. The original maritime codes applied only to the seafaring man,

whose duties once included not only those connected with navigation, but those also of loading, stowing and unloading the vessel. A distinct group of longshoremen and other dock workers, however, has now taken over the duties of loading and unloading. Moreover, the work of maintenance and repair also has multiplied beyond the capacity of general craftsmanship, so that specialized workers are needed in many trades. These workmen live at home and are employed by corporations, many of which are within the sphere of local compensation acts. But when the workmen cross the gangway of a vessel they pass out of local jurisdiction, and "the antiquated and insufficient remedies of the maritime law become applicable."

According to a statement made by the president of a longshoremen's association in 1921, there were then in the United States some 250,000 harbour workers, the largest single group of these being in and about the city of New York. What fractional portion they constitute of the compensable workmen of the State is not known, but the same authority states that of the accidents annually reported to the New York compensation bureau, one-tenth were to longshoremen. Another labour official, writing at the same date, says that there were 15,000 ship repair men in New York alone. The men in all classes of such employment are likely to be called on for work under conditions of haste that involve serious hazard, increased by prolonged working hours, with the added hazard of weariness and inattention.

Dr. Clark, after a study of judgments and opinions on the question of jurisdiction, concludes that "it is within the power of Congress to legislate for stevedores, longshoremen, repair men, carpenters, riggers, caulkers, painters, etc., employed in or about whatever is done to aid a ship physically in the performance of her mission, i.e., loading and unloading and her preservation and maintenance as an operative factor in commerce."

Colonization and unemployment in Canada

The Trades and Labour Congress of Canada, at the recent convention at Montreal, adopted the suggestion that the Dominion Government should be asked to establish farms in Canada where Canadian people might be trained for farm work. Such camps have been conducted successfully in England for the training of prospective emigrants, and it was proposed that similar camps should be carried on in Canada "as a step towards assisting the unemployed and others in Canada desirous of doing so, to establish themselves on Canadian farms." President Tom Moore declared that labour had always held the view that the problem of peopling Canada was one of colonization rather than immigration, and he thought that the Canadian Government should follow the British example by providing farm training facilities near industrial centres in Canada.

Renewed efforts are being made by the various colonizing agencies in preparation for the next immigration season. The Colonization Department of the Canadian Pacific Railway Company has organized "Colonization Boards" throughout Alberta, for the double purpose of caring for settlers on their arrival and of assuring them, before they emigrate, of employment in Canada. The co-operation of farmers' locals, women's institutes and leading citizens is being enlisted by the new Boards.

The Colonization Department of the Canadian National Railways recently held a conference at Montreal, at which vice-president W. D. Robb announced that special efforts would be made to secure properly trained settlers during the coming season. "In our settlement work during the past two years," Mr. Robb stated, "one of the most valuable factors has been a special course in Canadian farming which we have carried on. Through this we have been able to get the settler into the proper attitude of mind to settle down and go to work on his arrival in this country. Out of the many hundreds who took the course, 60 per cent have come to Canada and have been placed without any difficulty whatsoever and have given an excellent account of themselves, no complaints having been received from the men themselves, or from those with whom they were placed."

Lord Clarendon, under secretary of State for Dominion Affairs, and chairman of the Overseas Settlement Board, during his recent visit to Canada, announced that the "3,000 family settlement scheme," in which the Canadian and British Governments have been co-operating, was likely to be extended in scope and continued for a further period.

Training courses for unemployed

The second report of the Ministry of Labour of Great Britain refers as follows to courses of training for young unemployed men at Birmingham, Wallsend, Claydon (near Ipswich), and Brandon (Suffolk), which were opened at various dates between October, 1925, and February, 1926.

"It is, of course, still too early to say how far this experimental scheme of training will achieve its objects, but the results obtained

by the end of the year were encouraging. By December 31, 1925, over 550 men had already entered training at the Birmingham centre, more than 150 who started the course on October 20 having already left in order to take up employment. The improvement in the morale and the general bearing of the men undergoing training has been most marked. They have taken most readily, indeed enthusiastically, to their work, and the regular hours and discipline, with the new hope of employment which the training opens up, have changed their outlook on life. There was no difficulty in obtaining an adequate supply of men likely to respond to the facilities offered to them and to give value for the money expended upon them."

The report also gives an account of the proceedings during the year of the Central Committee on Women's Training and Employment.

Unemployment Council recommended in Australia

A National Insurance Commission was appointed in 1923 in the Australian Commonwealth. A preliminary report was presented last year, containing the results of the investigation of the Commission on the problems of casual sickness, permanent invalidity, maternity, and old age. A second preliminary report, dealing with the unemployment problem, was issued recently. The final report will be published later, and will be outlined in a future issue of the LABOUR GAZETTE.

Briefly, the recommendations of the Commission in regard to unemployment are as follows:—

(*a*) That an unemployment council, comprising representatives appointed by the Government, the employers' organizations and the trade unions, be constituted:—

(i) To establish and supervise a national system of employment bureaus throughout Australia;

(ii) To regulate and supervise the existing private labour exchanges;

(iii) To collect, tabulate, and analyse detailed statistical data as to the supply of, and demand for, employment in the various industries throughout the year;

(iv) To conduct special inquiries as to the incidence and causation of unemployment in the various industries;

(v) To co-operate with private employers, Government departments, and local authorities in an endeavour to provide avenues of employment and to regulate the demand for labour;

(vi) To co-operate with the educational departments in an endeavour to institute an effective and extensive system of technical training;

(vii) To co-operate with the immigration departments with respect to the employment of immigrants;

(viii) To regularly furnish detailed information as to the trend of employment;

(*b*) That a system of insurance against unemployment be instituted to meet those risks which are found to be unavoidable and where assistance to necessitous cases if warranted.

A deputation from the Ontario Municipal Electric Association waited on the provincial government in September to ask for legislation to permit the establishment of a pension scheme for the employees of the association, the scheme to be similar to that now in force in connection with the Hydro-Electric Commission of Ontario (LABOUR GAZETTE, December, 1923, page 1345).

The Vancouver Trades and Labour Council recently requested the government of British Columbia to amend the Minimum Wage Act by adding a provision requiring employers of labour to keep a record of the number of hours of employment of each employee. Some employers were alleged to keep a record only of the wages paid but not of the time worked.

The Toronto Police Commissioners recently suspended the by-law governing the licensing of electrical workers in the city. The Electrical Contractors' Association, which is said to have had the bylaw passed in the first place, opposed its suspension on the ground that this would result in work by incompetent workmen, and increase the risk of accidents due to electricity. In Kitchener, Ontario, plumbers have asked the city council to improve the existing system of plumbing inspection in the city by appointing a qualified plumber as inspector.

The First Aid team from Weston shops, Winnipeg, recently won the annual competition for championship of western lines, Canadian Pacific Railway, the final giving the Weston team a total of 450 points. This victory qualifies the team to compete with the champion eastern lines team for Dominion championship. Calgary team came second with 384 points; Sutherland, Saskatchewan, 370 points; Nelson, B.C., 363 points. Members of the Weston team are: W. Reynolds, captain; C. J. Bull, H. Shaw, T. Mansbridge, F. Perkins and H. Hartley.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of September was as follows:—

With the harvesting of the various crops about completed in the province of Nova Scotia, the yields seemed to compare favourably with those of previous years. The fishing industry reported that receipts were good. Logging and lumber work were rather good with the number of placements increasing. Manufacturing was active in all branches except in the iron and steel industry, which could only be regarded as fair. Construction work was being carried out in Halifax in large volume, but elsewhere throughout the Province the amount going on was not very considerable. The coal mining industry was showing considerable activity, and large production was reported each week. The state of transportation and trade was commented upon as being fair.

From New Brunswick the crops, including potatoes, were reported on as being satisfactory. The fishing industry reported good catches. Work in logging camps was opening up with a good number of placements being made by the employment offices. The manufacturing industry could best be described by stating that its activity was about normal. The various kinds of construction work were proceeding with fairly large numbers employed. Trade was fairly good while transportation was rather active.

Demands for farm workers registered with the Quebec Province employment office were on the decrease. Orders for logging and lumber workers were increasing with the usual slight shortage of applicants at the beginning of the season reported. The asbestos mines in the vicinity of Sherbrooke were busy. In the manufacturing industries the boot and shoe and rubber industries were reported as quiet, while the metal, clothing and other lines were stated to be active. Activity in the building construction industry was very good. In the City of Montreal two large building contracts, one for $4,000,000 and the other for $5,000,000, were recently let, while the Municipality itself continued to carry on civic work on a large scale. Throughout the Province of Quebec transportation activity was good, while a similar report was received on the condition of trade. Demands for female domestic workers were still heavy.

Although requests for farm workers in the Province of Ontario registered with the employment offices were on the decrease, they were still quite general, and one or two points reported shortages. In this province construction and building work continued to be carried on in considerable volume, and it appeared that most tradesmen were employed. In some cases difficulty in securing construction labourers for such outdoor work as highway building was reported. Generally speaking, the condition of the manufacturing industries was favourable. Apart from canning factories and the divisions of the textile industry, the plants did not seem to be increasing their operations, but the increased working time and augmented staffs reported earlier in the year had been maintained. The metal mines of the northern section of the Province were operating normally, with a tendency toward a slight increase in staffs. The demands for bushmen and pulp cutters in the northern and northwestern sections of Ontario were heavy, with applicants as yet not very numerous. A strike of general bushmen in the Port Arthur-Fort William district complicated the logging situation to some extent. Navigation showed considerable activity, due in a large measure to the movement of the crops from the West. The demands for female domestic workers were still heavy, with the usual shortage in evidence.

From Manitoba it was reported that bad weather was depressing the employment situation. The outstanding feature of the situation in this Province at this time of year is the work afforded by harvesting operations, but around the end of September wet weather had caused a cessation of harvesting and threshing. However, in some districts work was being proceeded with, and other districts reported that an early resumption of operations was likely. In so far as the situation concerned the availability of harvest labour, it seemed to lack any noticeable feature, there being enough but not too many workers available. Quite an amount of building construction work was in progress throughout the province, and from Winnipeg it was reported that all tradesmen in the City were busy. The offices reported a large number of demands for labourers for jobs of short duration, but plenty of applicants were available to fill them. The condition of trade was fair.

Fair progress with threshing had been made in Saskatchewan up to the end of the month, although wet weather had caused considerable delay in some districts. By and large, there seemed to be enough threshers avail-

able, although there was no surplus of any proportions. Orders for farm workers at monthly wages, which had started to come in, were reported as difficult to fill. Construction was rather busy, and railways were hiring additional men in an effort to finish work before the coming of winter. Building tradesmen in the cities were rather well employed. Quite a number of casual jobs for labourers were easy to fill as there were plenty of applicants. Activity in the logging industry was commencing, and some placements were reported. Though the demands for women for domestic work, particularly those from the country, had fallen off, some offices still reported a shortage of these applicants.

Though harvest and threshing operations had been carried on only intermittently in Alberta, due to the interference of the weather, it was stated at October 1 that work was about to be resumed on a large scale. The initial result of the clearing of the weather was, therefore, a shortage of workers in some districts, although this shortage appeared to be of a temporary character, and was not considered as serious. Construction work of all kinds throughout this Province was reported as proceeding in considerable volume, with good prospects for the balance of the fall; building tradesmen seemed to

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics Except where Noted)

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending October 2, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

be practically all employed, while orders for general construction labourers were not easy to fill, owing to the fact that a number of those usually seeking such work were engaged for harvesting. Coal mines were increasing their activity, which was reported as fair, with some demands for men but plenty of applicants available. The demands for women for domestic work were diminishing in so far as the country was concerned, but in some of the larger cities local shortages still prevailed. Employment conditions, generally throughout Alberta, were looked on as being favourable.

In British Columbia increased activity in the logging and lumbering industry was reflected by some orders being placed in the employment offices, though there was not yet any general demand for workers of this class. Activities in the construction industry were fairly general, and most tradesmen appeared to be employed, except in Victoria, and to a lesser extent in Vancouver, where some were still available. Coal mining in the Nanaimo district was stated to be proceeding fairly satisfactorily. Normal activity in the metal mining industry accurately describes the situation in that line, but no expansions were noticeable. Generally speaking, the employment situation in this Province was good, with few unemployed, due in some measure to the efflux to the Prairies for harvesting.

Employers' Reports

Continued improvement in the employment situation was indicated at the beginning of September, according to returns from 5,799 firms employing 859,738 persons as against 855,002 on August 1. These data, tabulated by the Dominion Bureau of Statistics, show that the situation continued to be more favourable than at any time since 1920.

All provinces except Quebec registered heightened employment, the Maritime Provinces and Ontario recording the largest gains. Manufacturing, mining and construction afforded more employment in the Maritime Provinces. In Quebec, the first decline indicated since the beginning of the year took place; pulp and paper mills reported important increases, but iron and steel factories were slacker and a moderate contraction was shown in mining, communication, transportation and construction. In Ontario, manufacturing, especially of iron and steel products, registered marked improvement, as did logging, communication, transportation, building construction and trade. On the other hand, highway and railway construction showed a seasonal decrease. In the Prairie Provinces, coal mining, building and highway construction and transportation recorded the most pronounced gains, while in railway construction there were seasonal losses. In British Columbia, manufacturing (especially of food, lumber and pulp and paper products) and transportation registered heightened activity, while curtailment was reported in construction and logging.

Reductions in employment were noted in Montreal and Ottawa; in Toronto, Hamilton and Winnipeg there were substantial gains, while in Quebec, Windsor and Vancouver the situation was practically unchanged. Montreal firms reported the first general decline indicated since the beginning of the year. This was chiefly due to a recession in railway car shops, which have been very active all summer. Other manufactures, transportation and construction registered improvement. In Quebec, construction was rather slacker, while manufacturing was busier. In Toronto, employment in manufactures was decidedly more active, and communication and trade also showed improvement. In Ottawa, the most pronounced change was a decrease in construction, while transportation was rather busier. In Hamilton, manufacturing and construction afforded more employment. In Windsor and the other Border Cities, automobile factories showed moderate curtailment, while construction was considerably busier. In Winnipeg, the greatest improvement was in manufacturing and construction. In Vancouver, very little change in the general situation was indicated; canneries released some help, while transportation was rather brisker.

An analysis of the returns by industrial groups shows that further and larger gains were recorded in manufacturing, especially in pulp and paper, iron and steel, food, leather, electrical apparatus, non-ferrous metal, mineral product, tobacco, distilled and malt liquor and musical instrument divisions. The only significant losses were those of a seasonal nature in lumber mills. The seasonal increases in logging camps on September 1 were less extensive than is usual on that date. In mining, considerable improvement was noted in the coal areas, while in quarrying and asbestos mining there were decreases. The transportation group reported a general gain, that on steam railways being greatest. Telephones recorded heightened activity, but telegraphs showed a small decline. Building construction reported further improvement, while there was a seasonal falling off on highway and railway construction. In trade, improvement on a small scale was shown both in retail and wholesale establishments.

An article elsewhere in this issue gives in some detail the employment situation at the beginning of September, 1926.

TRADE UNION REPORTS

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The volume of unemployment among local trade unions at the end of August, as shown by the reports tabulated from 1,504 labour organizations, comprising 139,345 members, remained on practically the same level as in July, 2.5 per cent of the members being idle on August 31st, as compared with a percentage of 2.3 in July. A better situation prevailed, however, than in August of last year when 4.4 per cent of the membership were out of work. Nova Scotia, Ontario, Alberta and British Columbia unions were afforded slightly more employment than in July, while in the remaining provinces there were nominal declines. In no province, however, were the changes particularly noteworthy. When compared with the returns for August last year, slight contractions were registered in Alberta and British Columbia, but in all other provinces employment increased. The manufacturing industries reported a slightly less favourable situation than in July, the improvement among cigar makers, bakers and confectioners, printing tradesmen, wood, garment, and hat and cap workers being slightly more than offset by the reductions among textile, iron and steel, glass, brewery and leather workers, metal polishers and paper makers. Garment workers in Montreal continued to be on strike, and are, therefore, excluded from these tabulations. Much better conditions prevailed in the manufacturing industries, as a whole, than in August last year. Coal miners in Nova Scotia and Alberta were slightly more active than in July, while British Columbia miners again reported no unemployment. Returns received from 166 unions in the building and construction trades, with a membership of 13,344 persons showed a slight falling off in employment, the percentage out of work standing at 4.7 as compared with 3.6 per cent in July. Substantial reductions were indicated by steam shovel and dredgemen, bridge and structural iron workers, and tile layers, lathers and roofers, and declines of lesser magnitude among carpenters and joiners and plumbers and steamfitters. In comparison with the returns for August last year the situation in the building trades showed improvement, steam shovel and dredgemen, bridge and structural iron workers and carpenters and joiners alone recording lessened activity, while all other tradesmen in the group were busier. The transportation industry reported a nominal reduction in comparison with July. Workers in the shipping and stevedoring division were more fully engaged, but steam railway employees, whose returns constitute over 81 per cent of the entire group membership reporting, were rather slacker than in July. In comparison with August last year employment in the transportation group increased slightly. Retail shop clerks reported a small percentage of unemployment as compared with no idleness in July. Slightly less activity was registered by hotel and restaurant employees, but theatre and stage employees were busier. Stationary engineers and firemen reported the same percentage of idleness as in July but no unemployment was recorded among barbers. The situation as indicated by fishermen was more favourable, while lumber workers and loggers were fully engaged.

EMPLOYMENT OFFICE REPORTS.

During the month of August 1926, the offices of the Employment Service of Canada made 72,288 references to positions and effected a total of 70,980 placements. Of these the workers placed in regular employment numbered 61,736, of which number 57,636 were men and 4,100 women, and those placed in casual work were 9,244. Applications for work were received at the offices from 67,784 men and 10,735 women, a total of 78,519, while vacancies reported numbered 77,501, of which 67,183 were for men and 10,318 for women. A slight reduction is noted in the volume of business transacted during August this year in comparison with the same period a year ago but more than double the amount of business was effected when a comparison is made with the records of the preceding month, this increase being due to the active demand for harvest workers in the West. The reports for July 1926, showed 37,851 opportunities for employment, 42,763 applications made, and 33,970 placements effected, while in August 1925, there were recorded 81,886 vacancies, 83,777 applications for work, and 75,887 placements in regular and casual employment.

PRODUCTION IN CERTAIN INDUSTRIES

Some figures indicating the recent movements of trade and industry are given in the table on page 934.

The Dominion Bureau of Statistics reported that production of pig

iron in Canada during August totalled 58,780 long tons or more than double the output of 26,513 tons made in the same month a year ago, but 13 per cent under the 67,232 tons reported for July. Comparison with the previous month, by grades, shows that the output of basic iron at 29,882 tons was considerably below the 40,260 tons produced in July; foundry iron at 13,454 tons was 40 per cent below the 22,490 tons of July, while malleable iron advanced sharply to 15,444 tons from 4,482 tons in the next preceding month.

For the eight months ending August 31 the cumulative production amounted to 496,876 long tons, an increase of 47 per cent over 338,351 tons reported for the same period last year. This year's output to date consisted of 327,601 tons of basic iron, 129,267 tons of foundry iron and 40,008 tons of malleable iron. Most of the basic iron was produced for the further use of the reporting firms, while the bulk of the foundry iron and all the malleable iron was made for sale.

Blast furnace charges in August included 104,517 long tons of imported ore, 63,943 short tons of coke and 31,573 short tons of limestone.

No additional furnaces were blown in during the month and none were banked or shut down so the number of furnaces in blast at the end of August remained at 5 the same as on July 31. The active furnaces had a daily capacity of 2,075 long tons which represented about 41 per cent of the total capacity of all blast furnaces in the Dominion. Active furnaces were located as follows: one at Sydney, N.S., and two each at Hamilton and Sault Ste. Marie, Ont.

Production of ferro-alloys at 3,058 tons was slightly greater than the 2,931. tons reported for July. Production in August was composed mostly of the grade having a high manganese content, and a small quantity of ferro silicon was also produced.

Reflecting the lower output of pig iron the production of steel ingots and castings in Canada fell to 45,674 tons in August, a drop of 30 per cent from the 64.847 tons of July. Comparison with the previous month shows that this decline applied to both grades; steel ingots at 43,546 tons was 30 per cent under the 62,396 tons reported for July and direct steel castings were 13 per cent less at 2,128 tons.

Production for the first eight months of this year of 541,705 tons showed an improvement of 15 per cent over the 471,175 tons reported for the corresponding period a year ago. This year's output included 516,545 tons of steel ingots and 25,160 tons of direct steel castings.

Pig iron prices were again lower in August, No. 1 foundry at Toronto being quoted at $24.80 and No. 2 foundry at $24.30 as compared with $25.80 and $25.30 respectively in July. At Montreal No. 1 foundry was $27.20 and No. 2 foundry $26.70 as compared with $28.70 and $28.20 respectively last month. Basic pig iron at mill remained stationary at $21. The Bureau's index number for Iron and It's Products based on prices at the beginning of the month (1913 prices=100) was slightly higher at 144.2 as compared with 143.7 in July. The lower levels for pig iron were more than counterbalanced by advances in the price of scrap iron and steel bars.

Coal Production.—Full statistics of coal production during August are not yet available. The output of coal from Canadian mines during July was 4 per cent less than the production for the preceding month, and 47 per cent greater than the average for July in the past five years. The figures were 1,347,627 tons in July as against 1,395,955 tons in June and an average of 917,497 tons for the month during the five preceding years.

The coal-producing provinces of New Brunswick and Alberta showed a gain over the preceding month and the outputs of Nova Scotia and Alberta were greater than the average for the month in the five preceding years.

Men employed in the coal mines of Canada during July numbered 24,380, of whom 18,701 worked underground and 5,679 on surface, as compared with a total of 24,253, of whom 18,335 worked underground and 5,918 on surface. Production per man was 55.2 tons in July as against 57.1 tons per man in June. During July the production per man-day was the same as in June, being 2.4 tons. The tonnage lost was largely due to lack of orders.

External Trade

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in August, 1926, the merchandise entered for consumption amounted to $89,669,575, as compared with $82,074,474, in August, 1925. The domestic merchandise exported amounted to $90,621,419 in August, 1926, as compared with $110,325,650 in July, 1926, and $111,409,525 in August, 1925.

The chief imports in August, 1926, were: Iron and its products, $20,995,115; fibres, textiles and textile products, $16,376,383, and non-metallic minerals and products, $13,503,494.

The chief exports in the same month were in the groups of wood, wood products and paper, $25,955,919, and agricultural and vegetable products, mainly foods, $24,062,362.

In the five months ending August, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $180,536,214, and wood, wood products and paper at $117,386,991.

BUILDING PERMITS

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada during the month of August, 1926, amounted to $11,874,552 as compared with $18,717,028 in July, and $9,511,008 in August, 1925. This was a decline of 36.6 per cent as compared with the preceding month, but a considerable increase, namely 24.9 per cent over the corresponding month last year.

The *MacLean Building Review* estimates the total value of the contracts awarded in Canada in September, 1926, at $20,760,600, as compared with $31,696,500 in August, 1926. Of the contemplated new construction in Canada during September, 1926, $7,740,600 was for residential building; $10,517,000 for business building; $2,933,000 for industrial building and $3,504,700 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). By classification the construction contracts during September, 1926, were divided as follows:—residential building, $7,693,900; engineering, $6,653,800; business building, $5,304,900 and industrial building, $1,108,000. The apportionment by provinces was: Ontario, $8,627,900; Quebec, $6,937,600; Prairie Provinces, $3,249,600; British Columbia, $1,100,600 and the Maritime Provinces, $844,900.

Strikes and Lockouts

The time loss due to industrial disputes was less in September than in August, 1926, but slightly greater than in September, 1925. There were in existence during the month 14 disputes, involving 2,248 employees and resulting in a time loss of 20,697 working days, as compared with 14 disputes in August involving 2,617 workpeople and resulting in a time loss of 49,115 working days. In September, 1925, there were recorded 14 strikes involving 1,297 workpeople, and resulting in a time loss of 20,553 working days. Five of the strikes and lockouts commencing prior to September terminated during the month and two of the strikes and lockouts commencing during September also terminated during the month. At the end of the month, therefore, there were seven strikes and lockouts affecting 1,025 workpeople, not including those strikes and lockouts reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices declined somewhat during the month, due mainly to seasonal declines in the prices of potatoes. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was $10.94 at the beginning of September, as compared with $11.10 for August; $10.81 for September, 1925; $10.28 for September, 1924; $10.46 for September, 1923; $10.28 for September, 1922; $11.82 for September, 1921; $15.95 for September, 1920; $16.92 for June, 1920 (the peak); $13.31 for September, 1918; and $7.83 for September, 1914. Besides the substantial decline in the price of potatoes, less important declines occurred in the prices of beef, pork, bacon, lard, cheese, beans and evaporated apples. Slight seasonal advances occurred in the prices of eggs, milk and butter. Including the cost of fuel and rent with that of foods, the total budget averaged $21.15 at the beginning of September, as compared with $21.32 for August; $21.02 for September, 1925; $20.65 for September, 1924; $20.97 for September, 1923; $20.90 for September, 1922; $22.37 for September, 1921; $26.38 for September, 1920; $26.92 for July, 1920 (the peak); $21.11 for September, 1918; and $14.33 for September, 1914. Fuel showed little change, a slight decline in coal being offset by an advance in the prices of wood and coal oil. Rent was slightly lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined to 152.5 for September, as compared with 153.9 for August; 156.2 for September, 1925; 153.9 for September, 1924; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; 256.7 for May, 1920 (the peak); and 205.0 for September, 1918. In the grouping according to chief component materials, four of the eight main groups were lower, two were higher, while two remained unchanged. Vegetables and their products were substantially lower, mainly because of lower prices for grains, flour and other milled products, and potatoes. Fibres, Textiles and Textile Products also declined, due to lower prices for cotton. Wood and Wood Products, and Chemicals and Allied Products showed slight declines. The Animals and their Products group advanced, lower levels for cattle sheep and meats being more than offset by higher prices for milk and eggs. Iron and its Products advanced slightly. Non-Ferrous Metals and their Products, and Non-Metallic Minerals and their Products were unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF SEPTEMBER, 1926

DURING the month of September three applications for the establishment of Boards of Conciliation and Investigation were received, as follows:—

(1) From employees at Montreal of the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, being checkers and coopers, members of the Brotherhood of Railway and Steamship clerks, Freight Handlers, Express and Station Employees.

(2) From employees at Montreal of the Canadian National Railways, being checkers, coopers and porters, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

(3) From employees of the Canadian National Railways (Central Region) in parlour and dining car service (on former Grand Trunk lines), members of the Canadian Brotherhood of Railroad Employees.

Report of Board in Dispute between the Canadian National Express Company and Certain Employees

On September 13 a unanimous report was received from the Board of Conciliation and Investigation established to inquire into a dispute between the Canadan National Express Company and certain of its employees, being members of the Canadian Brotherhood of Railroad Employees. The application stated that the dispute grew out of certain appointments by the company which the employees contended to be in contravention of the terms of an agreement already in effect. An approximate estimate of the number of employees directly effected was given as 3,150. The Board consisted of the following members: Mr. E. McG. Quirk, of Montreal, Chairman, appointed on the joint recommendation of the other Board members, Messrs. U. E. Gillen, of Toronto, and David Campbell, K.C., of Winnipeg, nominees of the company and employees respectively. With the Board's assistance agreements were effected between the parties concerned, which disposed of the points at issue, and which were drafted with a view to obviating the occurrence of similar difficulties in the future. The agreements in question are embodied in the Board's report, the text of which follows.

Report of Board

MONTREAL, September 11th, 1926.

Hon. GEORGE B. JONES,
Minister of Labour,
Ottawa, Ontario.

SIR,—In the matter of a dispute between the Canadian National Express Company and certain of its Employees, members of the Canadian Brotherhood of Railway Employees, which dispute has been referred by the Minister of Labour to a Board of Conciliation and Investigation under the Industrial Disputes Act, 1907.

The Board, consisting of Mr. E. McG. Quirk, Chairman, Mr. U. E. Gillen, and Mr. David Campbell, K.C., has the honour to submit its report in the above connection. Hearings before the Board were held in Toronto.

There appeared before the Board on behalf of the respective parties:—

For the Canadian National Express Company:—
Mr. W. C. Muir, General Manager;
Mr. G. E. Bellerose, General Superintendent of Transportation.

Both Mr. Muir and Mr. Bellerose submitted the Company's representation and argument.

For the Company's Employees:—
Mr. N. L. Preston, General Chairman;
Mr. G. K. Holder, General Vice-Chairman;
Mr. V. Costello, General Secretary.

Mr. Preston presented the Employees' side of the dispute.

The Board consumed seventeen days during the months of July, August and September in hearing and carefully considering the elaborate arguments, the evidence submitted by the respective parties, and in patiently and earnestly endeavouring to conciliate between them.

The subject matter of the dispute consisted of the appointment to the Company's agencies at Timmins and Cobalt, in Ontario, and at St. John, in New Brunswick, and from the employees' point of view vitally concerned the great bulk of the employees of the company from coast to coast.

These appointments were contended by the employees to be in contravention of certain

rules regarding promotion adopted in an agreement made between the parties and executed by them on December 17th, 1921. To this the Company's officials dissented.

It appeared that similar disputes had arisen prior to the ones in question, but, for various reasons, had not been carried to a final settlement or satisfactory conclusion, but this had only served to accentuate the issues before the Board.

Lengthy arguments and a great deal of evidence were submitted by the respective parties, and it would appear that, although their first agreement dated back to 1917, each party contended and maintained an entirely different view upon the interpretation of that and all subsequent agreements. In fact, at the conference between them, which terminated with agreement referred to above as of December 17th, 1921, eleven weeks were consumed, the greater part of which was directed to the subject matter pertaining to such appointments as were here in dispute. Notwithstanding an apparent agreement having been arrived at, each party contended that the adoption of the rules governing promotion was in agreement with their respective views. Hence the lengthy and elaborate arguments, and the considerations and decisions of former Boards in support of these views were urged before this Board. While much of this might very well have been ruled out as irrelevant, yet to do so might add to the difficulties of effecting an agreement by conciliation.

Therefore, having regard to the importance of reaching an agreement, it was deemed advisable that the fullest latitude should be given to the parties. Moreover, if any settlement could be reached, it should be such that a disputed matter of such long standing and of such vital importance should be settled so that it would not only dispose of the particular cases in dispute, but should, if at all possible, go far enough to prevent recurrence of like trouble in the future. Having these things in view, the Board made every effort possible to this end, and is happy to report these desirable results.

The following agreements were prepared by the parties to the dispute and executed by them. They informed the Board that they regarded these agreements as full and complete settlement of their dispute before the Board.

TORONTO, September 3rd, 1926.

With respect to the three grievances submitted to the Board in regard to the appointments to the Agencies of Timmins, Cobalt and St. John. It is agreed by the Company and the Representative of the employees, that these three positions will be bulletined within thirty days from date in the same manner as if they were now vacant, and that the appointments thereto shall be selected from the applications made for each vacancy. The applications and data bearing upon each will be made available to a representative member of the General Committee before appointments are made in event the representative desires to co-operate with the Company's officers in arriving at a decision in respect to the appointments that shall be made. It is understood, however, the agreement in respect to making appointments to vacancies in Agencies, Depot Agencies, General Foremen and Masters of Transportation, effective as from September 3rd, 1926, will not apply when making appointments to the vacancies in the Agencies at Cobalt, Timmins and St. John.

For the Employees
(Sgd.) N. L. PRESTON.

For the Company
G. E. BELLEROSE.

It is jointly agreed:—

(*a*) That when a vacancy in the position of Agent, Depot Agent, General Foreman or Master of Transportation has been advertised in accordance with requirements as set forth in Article 7, Clause B, of existing schedule, the Company will select for the position, an employee who has submitted an application in the regular manner and who in the opinion of the Company's officers has the requisite qualifications to properly perform the duties of the position, based on ability, merit and seniority.

(*b*) That after an appointment has been made in accordance with the foregoing and advertised as set forth in Article 7, Clause D, of existing schedule, senior employees who desire to submit a grievance because of the appointment will be allowed five days from date of bulletin advertising appointment in which to submit grievance to the General Superintendent who issued the bulletin.

(*c*) That if no grievances are received in the time allowed, the employee appointed will be placed in the position within five days.

(*d*) That if a grievance or grievances are received, the General Superintendent will, on expiry of time allowed for receipt of same and without delay, place the grievance or grievances before the appointed representative of the Employees' General Committee located within the Express Company's District. The representative will then carefully and thoroughly investigate each grievance and determine as to the merits of same. For the purposes of the latter, the data in respect to each applicant as developed by the General Superintendent will be made available to the Committee's representative. The latter will be required to complete his investigation and advise his findings to the General Superintendent within 10 days from date of bulletin advertising appointment.

(*e*) That if in the opinion of the Committee's representative there are no merits to the grievance or grievances, the Company's appointee to the position will be placed therein without delay.

(*f*) That, if in the opinion of the Committee's representative, there is sufficient reason to warrant an aggrieved applicant being given a trial in the position in accordance with Article 7, Clause E, of existing schedule, the General Superintendent will immediately arrange for same. If the employee given the trial properly qualifies for the position within thirty days, he will be appointed thereto. If he does not, the Company's appointee will be placed in the position without delay. It is understood that during period of trial, the employee will be given every assistance consistently possible.

(g) That the foregoing shall become effective as from September 3rd, 1926, and continue in effect for six months and that there will be no change thereafter except on thirty days' notice in writing by either party.

For the Employees (Sgd.) N. L. Preston. For the Company (Sgd.) G. E. Bellerose.

The Board desire to commend the representatives of the parties for maintaining throughout an excellent spirit of good-will towards each other notwithstanding their opposing views and the long standing dissension between them on these matters.

Respectfully submitted,

(Sgd.) E. McG. Quirk, Chairman.

(Sgd.) U. E. Gillen, Member of the Board.

(Sgd.) D. Campbell, Member of the Board.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1926

THE number of strikes and lockouts in existence during September was 14, the same number as in August. The time loss for the month was slightly greater than during September, 1925, being 20,697 working days, as compared with 20,553 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
Sept. 1926	14	2,248	20,697
Aug. 1926	14	2,617	49,115
Sept. 1925	14	1,297	20,553

The Record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of the omission of a dispute of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Ten disputes, involving 1,225 workpeople, were carried over from August, and four disputes commenced during September. Six of the strikes and lockouts commencing prior to September, and two of the strikes and lockouts commencing during September terminated during the month. At the end of the month, therefore, there were on record six strikes and lockouts as follows:—Boot factory employees at Toronto, Ont.; hat and cap makers at Montreal, P.Q.; ladies' garment workers at Toronto, Ont.; men's clothing workers at Montreal, P.Q.; bush workers at Port Arthur, Ont.; and fur workers at Winnipeg, Man. A dispute involving a cessation of work during September by coal miners near Medicine Hat, Alta., has been reported but no particulars have been ascertained.

The record does not include minor disputes as described in the third paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet declared them terminated. In addition to the dispute involving bookbinders and pressmen at Montreal now added to the list, information is available as to five such disputes, namely: moulders at Galt, August 2, 1922; cigar makers at Montreal, March 24, 1925; upholsterers at Montreal, June 27, 1925; men's clothing workers at St. Hyacinthe, P.Q. (formerly of Montreal), March 19, 1926, and carpenters at Trenton, Ont., July 24, 1926. The dispute involving moulders at Guelph since June 2, 1924, carried in this list, lapsed during September, as did also the dispute of moulders at Owen Sound which commenced May 17, 1926.

Of the strikes and lockouts commenced during September three were for increased wages and one for shorter hours and recognition of union. Of the seven strikes and lockouts which terminated during the month, four were in favour of the employers, and three in favour of the employees. One of the strikes reported in the September issue as carried over from August terminated during August, the employees being partially successful, but this was not reported to the Department in time for publication in the September issue of the Labour Gazette.

The following paragraphs give particulars in regard to certain disputes in addition to information given in the tabular statement.

Coal Miners, Edmonton Field, Alberta.—This cessation of work occurred on July 1, 1926, on the termination of agreements between several operators and the Edmonton

and District Miners' Federation, an organization affiliated with the Canadian Federation of Labour. The union had become affiliated with the Mine Workers' Union of Canada, a new organization uniting the various coal miners' local unions in southern Alberta and some metal miners' locals in Ontario. The Edmonton coal operators refused to recognize the new organization, or to give the increases in wages of 14 per cent demanded. About 800 miners are employed in the winter months, but during the summer only about 200 are reported to be working owing to the small demand for coal. Some of the smaller mines were reported as not affected by the dispute. On August 9 one of the principal companies reached a settlement with its employees providing for a return to work at the rates of wages in force prior to July 1, and without recognition of the union. Later on other companies made a similar settlement, and on August 28 the union called off the strike.

Coal Miners, Stellarton, N.S.—In connection with the dispute involving coal miners at Stellarton, N.S., from August 26, in a strike called by the United Mine Workers of America to prevent the employment of non-unionists or members of another union, the management, on September 2, refused work to those who were not members of the United Mine Workers of America on the ground that it had been demonstrated that the majority adhered to that organization. It was reported that about one-third of the total had not belonged to this organization. A similar strike had occurred in the mines of the same operators in Cape Breton Island in August, 1926 (Labour Gazette, September, 1926). The United Mine Workers held that the Royal Commission of which Sir Andrew Duncan was chairman had recommended that the operators should recognize only one union as representing the employees (Labour Gazette, January, 1926, Supplement "Report of Provincial Royal Commission on Coal Mining Industry in Nova Scotia"). Work was partially resumed on September 2, and by September 7, it was reported that the resumption was practically complete, all employees having joined the union except four who were not permitted to do so.

Men's Clothing Workers, Montreal, P.Q.—In the dispute beginning July 28, 1926, work being resumed in various shops from time to time after August 9, in September several employers secured an injunction against picketing of their plants as a result of charges of intimidation, assault, etc. At the end of the month 130 persons were still on the strike roll of the union.

Men's Clothing Workers, St. John's, P.Q.—In the dispute which commenced July 28, 1926, in common with that at Montreal, on September 17 a settlement was reached by the employer and a committee of workers providing for the same hours as before the strike, but giving an increase in wages to a small number of the employees, further negotiations to follow as to wages and working conditions. There had been a return of the workers involved from time to time, the majority being reported to have returned in about ten days after the commencement of the strike.

Bookbinders and Pressmen, Montreal, P.Q.—This dispute, commencing March 9, 1926, was alleged to be a lockout owing to the refusal of the employer to employ members of the International Brotherhood of Bookbinders and International Printing Pressmen and Assistants' Union, a closed shop agreement with the National Catholic Unions having been made. At the end of September the unions reported that there were no longer any members involved, work having been secured elsewhere.

Structural Iron and Steel Workers, Winnipeg, Man., and other Points.—This dispute, beginning July 20, 1926, owing to a demand for an increase in wages, continued into August, there being a resumption of work at various localities from time to time without any change in conditions. In September an increase of 10 cents per hour was reported to have been given to workers in one locality subsequent to the resumption of work.

Moulders, Vancouver and New Westminster, B.C.—This dispute, beginning April 1, 1926, for an increase in wages, the demands being granted by some employers shortly afterwards, terminated during August being called off by the union. This was not reported to the Department in time for publication in the September issue of the Labour Gazette.

Fur Workers, Winnipeg, Man.—This dispute, commencing September 25, 1926, for shorter hours and recognition of union, was unterminated at the end of the month.

Bush Workers, Port Arthur, Ont., and District.—This dispute, commencing September 16, 1926, for an increase in wages from $35-$45 per month to $60 per month and corresponding increases in piece rates for cutting pulp wood, and for recognition of union, was unterminated at the end of the month. The number of workers involved is reported at various figures from 300 to 2,000, most of the reports giving 700.

Electrical Workers, Toronto, Ont.—This dispute, involving 162 employees in a cessation of work on September 1, 1926, occurred in connection with negotiations for an agreement between the union and the contractors. Electrical workers employed in light and power plants were not called out from work. Work was resumed on September 3, an agreement being signed providing for some increases in wages and giving preference in employment to members of the union.

Musicians, Windsor, Ont., and District.—This dispute, beginning on September 1, 1926, and lasting two days, arose over a demand for an increase in wages per week from $52.50 to $57.50 and a reduction in hours from 25 hours per week in the pit to 24 hours. The employers had proposed a reduction in wages of $5 per week and an increase in hours of 3 hours per week. Work was resumed on September 3, the demands of the union being granted and an agreement signed.

STRIKES AND LOCKOUTS DURING SEPTEMBER, 1926

Industry, Occupation and Locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Commencing Prior to September, 1926.			
Mining, Non-Ferrous smelting and quarrying—			
Coal miners, Edmonton Field, Alta.	.....	.....	Commenced July 1, 1926, for recognition of union and increase in wages. Settlement in one mine August 9, in others later, on employers' terms, strike called off August 28, 1926.
Coal miners, Stellarton, N.S.	900	3,600	Commenced August 26, 1926, against the employment of non-union workmen or members of another organization, work resumed September 7, 1926, when men concerned joined the union.
Manufacturing—			
Boots and shoes (other than rubber and felt):			
*Boot factory employees, Toronto, Ont	5	125	Commenced January 13, 1926, against changes in working conditions alleged to be in violation of agreement. Unterminated.
Clothing (including knitted goods):			
*Hat and cap makers, Montreal, P.Q	10	250	Commenced March 4, 1926, against violation of agreement. Unterminated.
*Ladies' garment workers, Toronto, Ont	25	625	Alleged lockout, commenced June 30, 1926, against enforcement of non-union conditions. Unterminated.
Men's clothing workers, Montreal, P.Q	130	3,250	Commenced July 28, 1926, for union wages and working conditions in non-union shops; partial resumption of work on August 9, 1926, under union conditions. Unterminated.
Men's clothing workers, St. John's, P.Q	150	3,000	Commenced July 28, 1926, for union wages and working conditions; partial resumption of work during August; work resumed Sept. 23, 1926, a committee to conduct further negotiations.
Printing and Publishing:			
*Bookbinders and Pressmen, Montreal, P.Q	5	45	Alleged lockout commenced March 9 of members of certain unions. Employment secured elsewhere partially and employment conditions no longer affected by end of month.
Iron, Steel and Products:			
Moulders, Vancouver and New Westminster, B.C.	.....	.....	Commenced April 1, 1926, for increased wages; demands granted by some employers. Called off August, 1926.
Construction—			
Buildings and Structures:			
Structural steel and iron workers, Winnipeg, Man., and other points	.....	.....	Commenced July 20, 1926, for increased wages. Terminated July 29, 1926.

STRIKES AND LOCKOUTS DURING SEPTEMBER, 1926.—*Concluded.*

Industry, Occupation and Locality	Number of employees involved	Time loss in working days	Remarks
(b) Strikes and Lockouts Commencing During September, 1926.			
LOGGING—			
Bush workers, Port Arthur, Ont. and District.....	700	9,000	Commenced September 16, 1926, for increased wages. Unterminated.
MANUFACTURING—			
Leather, Fur and Products:			
Fur workers, Winnipeg, Man...	150	375	Commenced September 25, for shorter hours and recognition of union. Unterminated.
CONSTRUCTION—			
Buildings and Structures:			
Electrical workers, Toronto, Ont.....	162	405	Commenced September 1, 1926, to increase and stabilize wages; terminated Sept. 3, 1926, on the signing of an agreement satisfactory to the strikers.
SERVICE—			
Recreational:			
Musicians, Windsor, Ont., and District.....	11	22	Commenced Sept. 1, 1926, for increased wages and shorter hours. Terminated Sept. 3, 1926, workers resuming work under new rates and hours.

*Reports indicate that the strikers had been replaced but there were still a number of employees out and on the strike or lockout benefit list of the union.

Welfare Work in Montreal in 1925

The Montreal Council of Social Agencies, a Federation of over forty Protestant and non-sectarian bodies engaged in philanthropic undertakings has recently issued a year book for 1925. The volume for 1924 was reviewed in the LABOUR GAZETTE for May, 1925, on pages 464-466, where a brief account was given of some of the principal agencies in the Federation.

A general campaign for subscriptions is carried on each year and the budget committee divides the sums collected among the members of the Federation, allocating fixed sums to each, to which the beneficiaries are requested to make their expenditures conform. The subscriptions last year were over $489,000, out of which $458,850 was allotted to agencies.

A confidential exchange is maintained for the purpose of showing where information about any family or individual may be found and making possible more effective social service.

Last year the Council took up the subject of provision for the better class of destitute and homeless men. In order to demonstrate the need of this social work the Executive of the Council secured the services of a competent part time worker, and carried on the work of helping this class from January 12 to April 26. A survey showed that while Montreal had four different agencies providing night shelter for men, there was nowhere for the better class of young man to turn, who had met with misfortune. In the four and a half months fifty young men who had been obliged to seek shelter were dealt with. These men were not of the confirmed vagrant type, and out of the fifty cases it was estimated that 28 were likely to make good, seven would make good under closer supervision, 8 men not so promising, and in the remaining cases there was not enough time for a definite estimate.

A survey on employment for the physically handicapped was undertaken by the hospital social service group. As a result of the survey 35 physically handicapped men were placed in work. A sub-committee was formed to study the desirability of the formation of a Bureau for Juvenile Employment. A sub-committee was also appointed to cope with distress among Protestant families through unemployment during last winter and emergency relief measures were adopted, an appeal being made to the generosity of private citizens.

COMBINES INVESTIGATION ACT, 1923
Inquiry into the Proprietary Articles Trade Association

AN interim report following an investigation into the Proprietary Articles Trade Association by Mr. F. A. McGregor, Registrar of the Combines Investigation Act, has been published under the authority of the Honourable Peter Heenan, Minister of Labour. Professor W. A. Mackintosh of Queen's University was associated with Mr. McGregor in the inquiry. The report is dated September 6, and was first submitted to Hon. George B. Jones, late Minister of Labour. Owing to the general elections, its publication has been delayed.

The Association is a tripartite organization of about one hundred and sixty manufacturers, twenty-eight wholesale, and 2,700 retail druggists, designed to fix and maintain minimum re-sale prices of proprietary medicines and toilet articles. The organization of the Association was begun early in 1925 when Sir William Glyn-Jones (the founder and, until recently, the secretary of the Proprietary Articles Trade Association of Great Britain, which was organized in 1896), made a tour of Canada at the request of certain Canadian wholesale and retail druggists, to explain the methods used by the British Association, and to encourage the formation of a similar organization in Canada. At the conclusion of Sir William's tour, on May 26, 1925, a joint meeting of manufacturers, wholesalers and retailers was held in Montreal, and a Provisional Committee was appointed to "organize for the prevention of price-cutting in Canada of proprietary articles." On March 15, 1926, the organization was completed and the following officers were elected:—

President—Leo G. Ryan (Wingate Chemical Company, Montreal).

Chairman of Council—Sir William S. Glyn-Jones.

Treasurer—Arthur Lyman (Lyman's, Limited, Montreal).

Vice-Presidents—

Manufacturers' Section: W. J. Fraser (Northrop, Lyman and Company Limited, Toronto).

Wholesalers' Section: C. W. Tinling (National Drug and Chemical Company of Canada, Limited, Montreal).

Retailers' Section: G. A. Lapointe, Montreal.

Executive Committee—

The above officers and the following:—

Manufacturers' Section: F. A. Blair (The Centaur Company).

W. G. M. Shepherd (Colgate and Company, Limited, Montreal).

W. M. Grant (Parke Davis Company, Walkerville).

Wholesalers' Section: W. A. Hargreaves Drug Trading Company, Limited, Toronto).

J. A. M. Charbonneau (Casgrain and Charbonneau, Limited, Montreal).

W. G. Noble (Lyman Brothers and Company, Limited, Toronto).

Retailers' Section: C. G. Whebby, Toronto; E. Vadboncoeur, Montreal; E. A. Rae, Woodstock.

The objects of the Association were declared to be:—

(*a*) The discussion of matters of common interest to the branches of the trades represented, with a view to decision, and if necessary, co-operation.

(*b*) The taking of such steps as the Association may be advised are legal and not detrimental to the interests of the public, whether consumers, producers or others, to deal with unreasonable and unfair cutting of prices, and to give advice and render assistance to its members in preventing substitution.

(*c*) The doing of such other things as are lawful and as may appear to be of benefit to the trade and not detrimental to the public interests.

Membership is reported to be open to "manufacturers and wholesalers and retail vendors who give evidence of their being in sympathy with the objects of the Association." Each manufacturer is required to pay an annual fee of $100 for the first article which he places on the Association's list, and $3 for each additional article; each wholesaler, $200 annually for each wholesale establishment operated; while retailers are assessed $5 annually for each store.

The management and control of the affairs of the Association are placed in the hands of a council consisting of all members of the manufacturers' section and of the wholesalers' section, and twelve retail representatives, three from Ontario, two from Quebec, and one from each of the other provinces. These twelve may elect three additional members.

Prices of more than 600 proprietary medicines and toilet articles are included in the Association's first price list, which became effective August 28 last. The object, the report states, is to extend operations until

the price of every proprietary article sold by the drug stores of the Dominion was fixed at an irreducible minimum under P.A.T.A. control.

The method used by the Association to maintain these prices, states the report, is to cut off supplies of all price-protected proprietary articles from any retail or wholesale druggist who sells any of the listed articles below the minimum price agreed upon. If, for instance, a retailer reduces the price on any article, it is pointed out, all the wholesalers and manufacturers unite in refusing to do further business with him so far as the proprietary goods represented in the Association's list are concerned.

The report emphasizes that the Association is not the outcome of a desire on the part of the manufacturers to have their articles price protected. Wholesale and retail druggists have taken the initiative and have confronted the manufacturer with a definite threat that, unless he joins, the sale of his articles will be obstructed by the trade. The manufacturer is thus forced into a policy of price-maintenance, and is subject to an organized boycott by the druggists of the Dominion if he does not yield.

The report deals with the enhancement of prices, and indicates that following the first P.A.T.A. price list substantial increases in the prices of many articles have been made by the chain and department stores and mail order houses. The regular unit drug stores have not been obliged to increase prices to the same extent; on many articles they have made no increase thus far. Further increases, however, are inevitable, it is pointed out, in view of the declared policy of the Association to bring prices to a level which will permit the retailer to enjoy a gross margin of 33⅓ per cent on sales and the wholesaler a gross margin of 16⅔ per cent.

The chief indictment in the report is based, not upon the enhancement of prices already effected by the combine, or upon the further enhancement contemplated, although in this instance the enhancement is regarded as a violation of the Combines Investigation Act, but on the effects upon the public of the artificial restraint which the P.A.T.A. system imposes upon the drug business. It means, states the report, a stereotyping of the distributive system which will not permit of lower prices to the consumer through reductions in the present admittedly excessive costs of distributing and selling goods.

Whatever economics individual retailers or wholesalers may effect in their business, the P.A.T.A. restrains them from passing on any advantage to the consumer. It thus penalizes all experiment in merchandising looking to a reduction of costs of operation and prices to the consumer.

"From the point of view, therefore, of the evolution of new and improved methods of merchandising, collective action resulting in the fixing, for the entire drug trade, of any irreducible minimum price, even though it be based on the operating costs of the most efficient, must be regarded as against the public interest."

The report draws attention to the fact that "costs of selling goods in every line of business have increased in recent years out of all proportion to production costs . . . more than half of the consumer's dollar is being used in persuading the consumer to buy, and in making the article accessible in convenient and attractive form." Prices are high largely because of excessive distribution costs. The national advertising campaigns of the manufacturer, the report declares, are in part responsible for this, his high-pressure salesmanship methods, the expensive containers, the multiplicity of brands, all this in addition to the selling expenses of the wholesale and retail distributors.

The functions of the wholesale house, it is pointed out, are in many instances being assumed partly by the manufacturer, partly by the retailers. It performs less service, but its operating costs have not been correspondingly reduced.

The retail trade has suffered seriously in recent years by reason of the modern revolution in merchandising methods.

"Mass-merchandising methods have been following in the wake of mass-production, and one of the effects . . . has been to confront the small retailer with severe competition in the form of price-cutting to levels on which many of them cannot profitably do business." There is justification, the report states, in the protest of the retailer against the occasional practice of the chain store in selling below cost. It declares, however, that "the practice is irritating in effect rather than fatal, even where competition is keenest; it is not as widespread in extent or effects as is alleged. After all, the fields of the chain and department store are strictly limited. They cannot operate apart from the large centres of population, which fact in itself suggests that the secret of their success lies in mass-merchandising and its economies, rather than in the 'tricky advertising' of 'price leaders' . . . The unit store, however, cannot be wholly displaced by the chain and department stores. It has been stimulated by the new competition to great efficiency, and can hold its own in the field even without any artifi-

cial protection designed to guarantee profits and to prevent price competition."

Some of the reasons for the high margins required by the retail druggists are discussed in the report. Slow stock turnover means higher prices. The druggist who takes a year to dispose of his stock requires a much higher rate of return than the merchant who can get rid of his in less than two months. The emphasis is placed, however, upon the related problem of the excessive number of druggists. "The retail grocery business and other branches of trade are suffering from the same plethora of distributors, both wholesale and retail. Canada as a whole has one retail merchant to every 72 people; the city of Toronto has one retail merchant to every 59 people, or about one to every 13 families (the proportion in Montreal is approximately the same).

"The number of distributors is excessive, and this excess means slower stock-turn, higher distribution costs, and therefore higher retail prices. The Canadian public of nine and a third millions is not purchasing enough in the way of patent medicines and toilet articles and drugs generally to provide for the upkeep of the 3,300 retail drug stores operating. The remedy has been, not to reduce the number of drug stores, but to change the character of the business to such an extent that the modern druggist is competing with the grocer, the hardware merchant, the florist, the confectioner, the stationer, the tobacconist, the restaurateur, and a host of others. In some Canadian towns the number of drug stores has doubled or even trebled in the past two decades out of all proportion to the demands made by increasing population . . . over the whole of Canada, the increase in the number of drug stores relatively to population is represented by the following:

In 1908 one drug store to every 3,297 people.

In 1914 one drug store to every 3,030 people.

In 1919 one drug store to every 3,152 people.

In 1925 one drug store to every 2,624 people.

"This kind of competition, the competition of excessive numbers, may be the death rather than the life of trade; certainly the public suffers from it more than it benefits."

The most vital competition in the drug trade, states the report, is provided by some of the chain and other drug stores of the modern type, which have introduced new buying and selling methods, have lowered operating expenses, and in many instances, selling prices. But it is this competition, it is declared, to which the orthodox dealers take exception and which they would like to see eliminated. Granted that some retailers have been suffering from this competition, and particularly from the cutting of prices below cost, the report points out that the public is much more seriously affected by a remedy which will establish prices in all stores at an irreducible minimum, or subject to an organized boycott druggists who sell at lower prices—a remedy which goes far beyond the cause for legitimate complaint. The whole distributive system is in a state of flux at the present time, but in the face of these changing conditions, the P.A.T.A. proposes a rigid system of price-fixing and price-maintenance which would keep trade to the traditional channels of "manufacturer to wholesaler to retailer to consumer, compel all dealers to charge the same prices regardless of variations in their operating costs, prevent the public securing advantage of improved methods of distribution, and render useless if not impossible further experimenting which might reduce the admittedly excessive costs of modern distribution."

The report concludes: "The operation of the P.A.T.A. may be to the temporary benefit of the wholesale trade and of a large proportion of the retail druggists: to the manufacturers who are members of the Association the advantages, if any, will be slight; to the non-concurring manufacturer the consequences may be disastrous. This inquiry, however, has been undertaken on behalf of the general public regarding the public not as separate from the drug trade, but as inclusive of its interests; and having in mind that whatever is to the real and permanent advantage of any branch of trade will ultimately be in the public interest. The result of the inquiry has been to disclose a tripartite agreement representing virtually a whole trade, initiated largely by one party, for the benefit of two, enforced by all three; but, unfortunately, to the disadvantage of a fourth party, namely, the public. The public interest in such matters, however, is safeguarded by legislation which cannot be said to be unduly repressive of business; the Combines Investigation Act simply declares that if any such agreement or combination operates or is likely to operate to the detriment of the public, it should be restrained. It is submitted that the evidence presented in this report is sufficient to show that the Proprietary Articles Trade Association has operated and is likely to operate to the detriment of or against the interest of the public, and that therefore it is a 'combine' within the meaning of the Combines Investigation Act."

MALE MINIMUM WAGE ACT OF BRITISH COLUMBIA
Order of Board of Adjustment Governing Lumbering Industry

THE first order to be issued under the Male Minimum Wage Act of British Columbia (Statutes of 1925, chapter 32) was published in the *British Columbia Gazette*, September 30, 1926. The Act provides (section 6) that "every order of the Board establishing a minimum wage shall be published in the *Gazette* and shall take effect after the date of publication."

The order is as follows:—

Order Establishing a Minimum Wage in the Lumbering Industry

Pursuant to the provisions of the "Male Minimum Wage Act," the Board of Adjustment, constituted under the "Hours of Work Act, 1923," having made due inquiry, hereby orders:—

1. That where used in this Order the expression "lumbering industry" includes all operations in or incidental to the carrying-on of logging camps, shingle-mills, sawmills, planing-mills, lath-mills, sash and door factories, box-factories, barrel-factories, veneer-factories, and pulp and paper mills, and all operations in or incidental to the driving, rafting, and booming of logs.

2. That, subject to the other provisions of this Order, the minimum wage for all employees in the lumbering industry shall be the sum of forty cents per hour.

3. That the number of handicapped, part-time, and apprentice employees in respect of whom a permit may be obtained pursuant to the said "Male Minimum Wage Act" authorizing the payment of a wage less than the minimum wage otherwise payable under this Order shall, in the case of each employer, be limited to ten per centum of his employees.

Dated at Victoria, B.C., this twenty-ninth day of September, 1926.

F. V. Foster,
T. F. Patterson,
J. D. McNiven, Chairman,
Board of Adjustment.

MINIMUM WAGES FOR FEMALE EMPLOYEES IN BRITISH COLUMBIA
Increase of Wage Rates in the Fruit and Vegetable Industry

THE Minimum Wage Board of British Columbia issued an Order on September 3, increasing the wages paid in the fruit and vegetable industry and replacing the Orders of February 28, 1920, and July 4, 1922. Following a petition to the Board by the employees under section 9 of the Minimum Wage Act, asking for a re-opening of the question of the minimum wage and hours of labour in this industry, a conference of representatives of all persons interested was duly held, and the new Order was issued in consequence of the recommendations of this conference, which were reviewed and approved by the Board.

By the new scale the minimum wage of an experienced female employee is increased from $14 to $14.40 for a week of 48 hours. Inexperienced female employees formerly received $10 per week for the first month, $11 per week for the second month, and $12 per week for the third. Under the new Order they receive $11 per week for the first two months, and thereafter rank as experienced workers.

The Order comes into effect sixty days after the date of issue.

The text of the Order is as follows:—

Interpretation

1. That where used in this Order the following expressions shall have the following meanings respectively:—

(*a*) "Fruit and vegetable industry" includes the work of females engaged in canning, preserving, drying, packing, or otherwise adapting for sale or use any kind of fruit or vegetable:

(*b*) "Experienced female employee" means a female employee who has worked in the fruit and vegetable industry for a period of two months:

(*c*) "Inexperienced female employee" means a female employee who has worked in the fruit and vegetable industry for a period of less than two months.

Experienced Female Employees

2. That, subject to the other provisions of this Order, the minimum wage for every experienced female employee in the fruit and vegetable industry (except women to whom a special license is issued under section 10 of the "Minimum Wage Act"), if on a time-rate basis, shall be the sum of fourteen dollars and forty cents ($14.40) for a week of forty-eight (48) hours; and if on a piece-rate basis shall be paid such rate per piece as will produce the sum of fourteen dollars and forty cents ($14.40) for a week of forty-eight (48) hours.

3. That the minimum wage for every experienced female employee in the fruit and vegetable industry (except women to whom a special license is issued under section 10 of the said Act), during the time of labour in any day in excess of eight (8) hours and up to and including ten (10) hours a day, if on a time-rate basis, shall be the sum of thirty cents (30c.) an hour; and during the time of labour in any day in excess of ten (10) hours a day, if on a time-rate basis, shall be the sum of forty-five cents (45c.) an hour for each hour in excess of ten (10) hours; and if on a piece-rate basis shall be such rate per piece as will produce the sum of thirty cents (30c.) an hour for each hour in excess of eight (8) hours and up to and including ten (10) hours, and during the time of labour in excess of ten (10) hours shall be such rate per piece as will produce the sum of forty-five cents (45c.) an hour for each hour in excess of ten (10) hours.

Inexperienced Female Employees

4. That, subject to the other provisions of this Order, the minimum wage for every inexperienced female employee in the fruit and vegetable industry (except women to whom a special license is issued under section 10 of the said Act), if on a time-rate basis, shall be the sum of eleven dollars ($11) for a week of forty-eight (48) hours during the first two months' employment in such industry; and if on a piéce-rate basis shall be such rate per piece as will produce the sum of eleven dollars ($11) for a week of forty-eight (48) hours.

5. That the minimum wage for every inexperienced female employee in the fruit and vegetable industry (except women to whom a special license is issued under section 10 of the said Act), during the time of labour in excess of eight (8) hours and up to and including ten (10) hours a day, if on a time-rate basis, shall be the sum of twenty-three cents (23c.) an hour; and during the time of labour in any day in excess of ten (10) hours a day, if on a time-rate basis, shall be the sum of thirty-five cents (35c.) an hour for each hour in excess of ten (10) hours; and if on a piece-rate basis shall be such rate per piece as will produce the sum of twenty-three (23c.) an hour for each hour in excess of eight (8) hours and up to and including ten (10) hours, and during the time of labour in excess of ten (10) hours shall be such rate per piece as will produce the sum of thirty-five cents (35c.) an hour for each hour in excess of ten (10) hours.

This Order shall come into force and be effective in sixty days from the date hereof, whereupon the Orders dated the twenty-eighth day of February, 1920, and the fourth day of July, 1922, above mentioned, shall be deemed to have become null and void.

Dated the third day of September, 1926.

J. D. McNiven, *Chairman,*
Helen Gregory MacGill,
Thomas Mathews,
Members of the Minimum Wage Board.

Each employer shall post a copy of this Order in each room in which employees affected by the Order are employed.

Unemployment Policy of South African Government

On June 22, the Minister of Labour, Mr. Boydell, outlined a scheme for checking unemployment by co-operation between the Government and local bodies on more economic lines than formerly. The first step was to classify the unemployed into those fit for employment on public works and those fit only for lighter work. In consultation with representatives of the provinces and municipalities, a scheme was worked out by which local representative committees should be responsible for this classification. A mass of information was also collected showing the various proportions of European and non-European labourers engaged in different classes of work in the larger centres. From this it was concluded that, if a standardised ratio could be worked out for certain classes of work, a much larger number of white workers could be absorbed in local activities.

The new policy is to work out roughly as follows: The provincial council will decide on new public works or extensions and estimate the cost on a native wage basis. The Labour Department, with the aid of the local classification committee, will then supply a sufficient number of selected white workers prepared to carry out the job at piece rates. If the final cost is higher than the estimates on the native wage basis, the excess will be shared equally between the provincial council and the Labour Department. The Labour Department will watch the various schemes in order to ascertain why costs are higher in some cases than in others, and endeavour to work up to a high standard of efficiency everywhere.

The use of white labour does not necessarily involve a higher total cost than that of works carried out entirely by native labour, if the white workers are efficient and well organized. Cases have already occurred in which picked white workers on piece-rates have done the work as cheaply as if native labour had been employed.

Undertakings of the kind covered by the new policy are not to be regarded as relief works, but as a national development works carried out on an economic basis. It is hoped by this means not only to check unemployment, but to build up a class of efficient unskilled white labourers.

For men not physically fit for work of this kind, the proposal is to employ them on lighter work in the municipal services. The provincial authorities, instead of paying poor relief, will make up the difference between non-European and European wages. It is stated that unemployed men classified as totally unfit for work, aged, etc., will be dealt with "by old age pensions, insurance schemes, alms villages and so on, in accordance with the ideal the Government has been studying for some time."

The report from the Workmen's Compensation Board of Manitoba for September, 1926, states that there were 946 accidents during that period, three of which were fatal. The causes given in regard to the fatalities were as follows: Crushed by load of lumber; crushed between truck and a lifting device; workman electrocuted by taking hold of control lever to start machine and received shock.

REPORT OF HOUSE OF COMMONS COMMITTEE ON LEGAL MINIMUM WAGES

REFERENCE was made in the issue of the LABOUR GAZETTE for July, 1926, p. 654, to the report of the Select Standing Committee on Industrial and International Relations, which was adopted by the House, the text of the report being given.

The following resolution, moved in the House on March 15 by Mr. J. S. Woodsworth, North Centre, Winnipeg, seconded by Mr. A. W. Neill, Comox-Alberni, was referred to the Committee: "That, in the opinion of this House, a wage sufficient to provide for a reasonable standard of living should constitute a legal minimum wage"; the mover stating that his object was to make statutory the guarantees of the Peace Treaty, especially that with reference to "the payment to the employed of a wage adequate to maintain a reasonable standard of life, as this is understood in their time and country."

The Committee recommended that a conference of Provincial and Dominion representatives intimately in touch with labour conditions throughout Canada be held in the near future to consult as to the best means to be employed of giving effect to the labour provisions of the Treaties of Peace. In accordance with a further recommendation of the Committee, 10,000 copies of the report with the minutes of proceedings and evidence have been printed and a distribution of the same is being made through the Department of Labour.

The Committee was established on March 16, 1926, consisting of: Messrs. Thomas Bell (St. John, N.B.), Edward J. Garland (Bow River, Alta.), Theo. Gervais (Berthier-Maskinonge, P.Q.), C. J. Hamilton (Stormont, Ont.), A. A. Heaps (Winnipeg North, Man.), Chas. B. Howard (Sherbrooke, P.Q.), L. W. Johnstone (Cape Breton North-Victoria, N.S.), W. W. Kennedy (Winnipeg South Centre, Man.), Leon Laflamme (Montmagny, P.Q.), (Miss) Agnes C. Macphail (Gray South East, Ont.), C. R. McIntosh (North Battleford, Sask.), A. W. Neill (Comox-Alberni, B.C.), Hon. S. F. Tolmie (Victoria, B.C.), L. A. Wilson (Vaudreuil-Soulanges, P.Q.), J. S. Woodsworth (Winnipeg North Centre, Man.). Mr. McIntosh became Chairman of the Committee.

At its first meeting the Committee was addressed by the Minister of Labour, the Hon. J. C. Elliott, who, in making reference to the decision of the Supreme Court of Canada that legislative authority on hours of employment belonged to the provinces (LABOUR GAZETTE, July, 1925, p. 671), and to the probability that wage matters also came within provincial jurisdiction, said:—

"It does seem to me that much good can come from the Dominion considering the matter in the way that the Department of Labour has been in the past considering questions of statistics, cost of living for various families, in various provinces, and the relation which wages in the various provinces bear toward the cost of living. What I have in mind is this; this is connected to a certain extent with the health of the people of the country. After all, comfort, health, decent living, and freedom from worrying about whether you will have enough to pay for your daily bread, are questions that involve very vitally the happiness of every human being, and that being so, I think we want to go into a discussion of the legal aspects of affairs. The Federal government at Ottawa, and its officials, might very well perform, irrespective of the question of jurisdiction altogether, a function similar to what the Federal Department at Washington has performed in regard to health matters. They keep the statistics from every state, in regard to matters relating to health. They consider what methods are being adopted, for instance, to reduce to the lowest possible extent such things as, say infant mortality. What are the steps that are being taken? What are the results that are being produced? How far do these steps contribute to these results? And then by advertising and disseminating this information among the various states, assistance very material in form is put into effect in each state, disseminating the condition that has produced the best results among all the states. It seems to me that a similar work could be done here, irrespective of what the decision may be as to legislative jurisdiction."

In conducting the inquiry the Committee took evidence from Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, as to the establishment of the International Labour Office of the League of Nations, the steps taken to give effect to the labour clauses of the Peace Treaty; the establishment of legal minimum wage rates for female workers in various provinces in Canada, and in British Columbia also the recent provision for the establishment of minimum wage rates for male workers in various industries;* also as

*On November 1st, 1926, the first order of the Board becomes effective establishing 40 cents per hour as the minimum rate in the lumbering industry. The text of this order is given on page 948.

to the information concerning wage rates and hours of labour published by the Department of Labour.

An opinion from Mr. W. Stuart Edwards, Deputy Minister of Justice, was given, as follows:—

I have the honour to reply to your letter of the 21st instant, signifying the request of the committee of the House of Commons on Industrial and International Relations for my opinion as to the authority of Parliament to enact legislation for the establishment of a minimum wage. You indicate the desire of the Committee that I should, in my reply, deal with this question (1) generally, having regard to the exclusive and concurrent legislative powers of the Parliament of Canada and the provincial legislatures respectively, and (2) particularly, as affecting the Dominion's own employees whether employed in the province or in the territories.

1. It is a general principle which has been frequently judicially affirmed, that, subject to such restrictions as the law may impose in the public or general interest, 'every person has a right, under the law, as between himself and his fellow subjects, to full freedom in disposing of his own labour or his own capital according to his will.' The establishment of a minimum wage to be paid to any specified class of persons employed in a particular trade or industry, seeing that it must operate to impose a restriction upon that freedom of contract which otherwise obtains between employees and employers, directly affects civil rights of those persons; consequently, legislative jurisdiction with relation to that matter is, subject to the qualifications to be mentioned, vested primarily in the provincial legislatures under either or both of the enumerative heads, "Property and Civil Rights in the Province" (sec. 92, ss. 13, B.N.A. Act, 1867) and "Generally all Matters of a merely local or private Nature in the Province" (sec. 92, ss. 16, B.N.A. Act, 1867).

In view, however, of various decisions of the judicial committee of the Privy Council, the general proposition above stated must be understood subject to two qualifications, viz.:—

First, with regard to such operations, works and undertakings as are within the exclusive legislative jurisdiction of the Dominion—for example, the classes of works and undertakings described in sec. 92, ss. 10 (a), (b) and (c), B.N.A. Act, 1867—it is no doubt within the competence of Parliament to fix and regulate minimum rates of wages to be paid to persons employed on or in connection with such operations, works or undertakings. Legislation enacted for that purpose would probably be sustained upon the view that it was an enactment which, though modifying civil rights of the persons affected, might be regarded as truly ancillary or necessarily incidental to, if not strictly within the inherent scope of, the enumerated classes of subjects in section 91 of the British North America Act, 1867. To the extent that such legislation may be merely ancillary or necessarily incidental to the exercise by Parliament of the powers conferred upon it, the effect of the legislation, if enacted, is that provincial authority in relation to the subject-matter thereof is superseded and remains inoperative so long as the Dominion legislation continues in force. But until Parliament so legislates, the primary authority of the provincial legislatures in relation to that subject-matter remains, subject to the qualification next mentioned, unimpaired and unrestricted.

Secondly, the Parliament of Canada has exclusive legislative jurisdiction to regulate and fix the rates of wages to be paid to the servants or employees of the Dominion Government, wherever they are employed, whether in the provinces or in the territories or outside of Canada.

2. The Parliament of Canada possesses exclusive legislative authority to enact minimum wage laws for those parts of Canada which are not within the boundaries of a province.

Answering a question as to what undertakings were exempted from provincial jurisdiction in sec. 92, ss. 10 (a), (b) and (c), B.N.A. Act, 1887, Mr. Edwards cited from the clause:—

(*a*) lines of steam or others ships, railways, canals, telegraphs, and other works and undertakings connecting a province with any other or others of the provinces, or extending beyond the limits of the province;

(*b*) lines of steamships between the provinces and any British or foreign country, such works as although wholly situated within the province, are before or after their execution, declared by the Parliament of Canada to be for the general advantage of Canada or to the advantage of two or more of the provinces.

Evidence was also given by Mr. C. W. Bolton, Statistician of the Department of Labour, and by Miss Margaret S. Gould, of the staff of the Canadian Brotherhood of Railway Employees, as to family budgets, their use in determining a living wage, minimum wages, etc., and as to wages and earnings received by various classes of workers. Mr. Bolton referred particularly to a minimum cost of living budget prepared in 1901 by Mr. Seebohm Rowntree, of York, England, costing 21s. per week, and to a classification of four standards of living, listed by Professor Paul Douglas of the University of Chicago, author of a study on Family Allowances for the International Labour Office, in his book "Wages and the Family", namely: Poverty Level, costing about $1,100 per year in the large cities in the United States; Minimum Subsistence Level, costing about $1,100 to $1,400 in the large cities in the United States; Minimum Health and Decency Level, costing from $1,500 to $1,800 in the large cities of the United States; Minimum Comfort Level, costing from $2,000 to $2,400 in the large cities in the United States.

The Committee asked for the compilation of family budgets for Canadian workingmen's families in these four categories, and two of these were submitted as an appendix to the evidence and were printed in the report: the "Minimum Subsistence Level" budget costing $1,396.92; the "Minimum Health and Decency" budget costing $1,710.23. Statistics of earnings for various classes of railway employees and as to changes in wages and in the cost of living in Great Britain since 1901 were presented and printed in the report.

YEARLY BUDGET OF EXPENDITURE FOR AN AVERAGE FAMILY OF FIVE WITH AN INCOME OF $1,400

SUMMARY	Cost per year
Food—	
Meats and fish	$126 00
Dairy products, etc.	199 65
Bread, cereals, etc.	53 45
Vegetables	35 58
Fruits	31 05
Sugar, etc.	21 95
Tea, etc.	17 70
Condiments, etc.	4 15
All	$489 53
Clothing—	
Man	80 65
Woman	77 50
Boy (11-13)	52 40
Girl (7-10)	38 19
Child (4-6)	24 60
All	$273 34
Fuel and light	119 05
Rent	240 00
Miscellaneous—	
Furniture and furnishings	60 00
Health, dentist, etc.	60 00
Insurance	40 00
Contributions, dues, etc.	30 00
Education, reading, etc.	20 00
Cleaning supplies, toilet articles, etc.	30 00
Other items	35 00
All	$275 00
Grand Total	$1396 92

YEARLY BUDGET OF EXPENDITURE FOR AN AVERAGE FAMILY WITH AN INCOME OF $1,750

SUMMARY	Cost per year
Food—	
Meats and fish	$156 50
Dairy products, etc.	208 40
Bread, cereals, etc.	53 45

Other items	50 00
All	$370 00
Grand Total	$1,719 23

Miss Gould gave information as to various family budgets and investigations made in the past, and particularly as to an inquiry into the cost of living in Canada made by herself, for the Canadian Brotherhood. For this inquiry the Brotherhood adopted a budget constructed by the United States Bureau of Labour Statistics showing the quantities of the various commodities required each year to maintain a "Minimum Health and Decency" standard for the average workingman's family. The quantities were ascertained by the Bureau from the study of the information secured in an investigation made during 1918 and 1919 in which figures for about 13,000 families in 71 large cities and 26 small cities and towns were compiled. This investigation showed the nature and the quantities of the food, clothing, fuel, etc., used by these families, the houses in which they lived, the miscellaneous items on which expenditure was made for furnishings, amusements, comforts, insurance, etc., and from the figures the investigators determined the standards required, the quantities of the various articles needed, etc., for living in health and decency according to the standards of the country. The Brotherhood adopted this budget on the ground that there was no official budget, Dominion or Provincial, for the various items in family expenditure and the only complete commodity budget for Canada, that prepared by Mr. Arthur Martel in 1921, then Vice-President of the Trades and Labour Congress of Canada, published in the *Canadian Congress Journal,* February, 1922, costing $1,744.38 in March, 1921, was regarded as deficient in some respects. It was held that "such variations as should be made in a United States budget to adapt it more accurately to Canadian use, (e.g. warmer clothing, and houses, more fuel, more heat-producing food) are principally variations which would increase rather than decrease the total cost of the budget in Canada." The cost of this quantity budget was found by ascertaining the prices of the commodities listed in certain selected localities in Canada and calculating the yearly cost of the items listed. These localities were Sydney, N.S., Truro, N.S.,

Moncton, N.B., Toronto, Ont., Belleville, Ont., Montreal, P.Q., Coteau Junction, P.Q., Winnipeg, Man., Saskatoon, Sask. and Kamloops, B.C. Prices were taken between March and November, 1925. The cost of this budget in these localities as ascertained by the Brotherhood was as follows:—

AVERAGE COST OF MINIMUM HEALTH AND DECENCY BUDGET IN CANADA

Summary of Family Budget for Worker's Family of Five Persons

I. Food		$ 639 04
II. Clothing:		
Husband	$118 70	
Wife	147 60	
Boy, 12 years	83 21	
Girl, 6 years	65 14	
Boy, 2 years	38 26	452 91
III. Household Equipment	$979 93	
7 per cent annual upkeep		68 59
IV. Rent, Light and Heat		565 30
V. Cleaning Supplies, etc		44 10
VI. Miscellaneous		432 43
Total		$2,202 37

Mr. Albert Hewitson, head of a department in the factory operated by Canadian Cottons, Limited, at Cornwall, Ont., gave evidence as to wages and living conditions in that locality, considered as a typical Canadian factory town. He stated that the minimum wage for adult female workers in a town of that size as fixed by the Ontario Minimum Wage Board was $9 per week for an inexperienced female worker during the first six months, $10 per week during the second six months and $11 per week thereafter. At piece work many of them made about $20 per week. Wages for adult married men averaged about $15 per week and the witness believed they were contented and happy; they paid about $15 per month for rent for a typical workingman's house with all modern conveniences. Young unmarried men paid about $8 per week for board and lodging. A large percentage of the men in the factory received no more than $17 per week and about fifty per cent of them only $15 per week. The overseers were paid $50 per week, the second hands $30, the section hands $15.50, and the machine tenders $15. In some of the families the wife was working in the factory also and in many daughters and sons. There were also a great many families where the children were going to high school or to business college. Employment was steady and there was absolutely no appearance of poverty in the town.

Dr. J. W. Macmillan, Chairman since 1920 of the Ontario Minimum Wage Board, gave evidence as to minimum wage laws and their administration. Prior to 1920 he was Chairman of the Manitoba Minimum Wage Board from 1917 to 1919. The Boards in the various provinces consist of representatives of employers and employees, appointed by the Government after consultation with organizations of employers and employees, with a Chairman. Dr. Macmillan said the principle of the minimum wage was the right of the worker to live from his work. There was provision for the minimum wage in seven provinces in Canada, there being none in Prince Edward Island, which was not an industrial province, and in New Brunswick a Commission had been appointed to study the question.

The minimum rates of wages for women had been based upon budgets of expenditure necessary to maintain a woman in decency and the rates were altered from time to time according to the cost of this budget. "..... the minimum wage should not be what is commonly known as a fair wage; the minimum wage should simply protect the cost of living. It should forbid the girls, as we say, from scrambling with each other for the crusts, but it should not forbid them competing for the prizes. I think this is very important, and there have been several illustrations in minimum wage administration .. .."

Dr. Macmillan stated it would be possible to work out a budget for a family. "Of course, any budget, like all human things, is complex, and there is room for argument pro and con, but there is also room for good sense and compromise, too. Family budgets have been worked out by a great many people, with a considerable amount of agreement, where the circumstances were similar. I see no reason why it should not be done .. .. As the student of wages works it out, he commonly takes as a typical family a man, his wife, and three children under fourteen years of age. Then they say—or at least the United States Bureau of Labour Statistics says—that that group of five requires three and a third times, as much, roughly, as an individual does. Now, on that basis, the man's family wage ought to be three and a third times the size of the woman's wage. As a matter of fact, however, throughout the United States, the male wages are just about twice what the woman's wages are, and the complaint is much more as to the lowness of women's wages than men's wages."

Speaking upon the possibility of increased costs of production the witness said: "It is generally understood, along the line upon which I am speaking, that minimum wages should never be set so as to be such as would

generally raise wages throughout the country; it should be a wage that would cut off the unsocially low wage, and protect the earner. Without doubt, one reason why we have been supported so strongly by supporters, is that we have protected them against a certain type of social competitor, who have tried to pay unwholesomely low wages. That being the case, the higher wages are not raised except as incidentally and indirectly they are in variation with the low. All that has been done is to cut off the unsocially low wage. We have not found any injury to any plant, but we have found, on the other hand, a great deal of assistance has been given to a great many plants. No doubt it tends to promote efficiency."

Dr. Macmillan also stated that he had complaints as to low wages now and then from people who were under the impression that the minimum wage laws applied to men and that this showed that there was the same variation in wages for men as there was for women, indicating unsocially low wages.

Unemployment Crisis in Germany

The unemployment crisis from which Germany has been suffering since the end of 1925 and which, with a few exceptions, extends to all districts in the country and to all branches of industry, appears to be more and more assuming a permanent character, according to *Industrial and Labour Information*, published by the International Labour Office at Geneva.

Despite the seasonal improvement which is generally felt in the summer months the number of unemployed in receipt of relief, which was 2,000,000 at the beginning of the year, fell at the end of June last no further than 1,750,000, of whom more than 200,000 were in Berlin. The only undertakings which showed a certain resumption of activity were cotton-spinning factories, wool factories, artificial silk factories and (thanks to the British coal crisis) the mines of the Ruhr. On the other hand, the number of unemployed is very high in the metal and building industries. In order to remedy the crisis the Government has drawn up an extensive program of relief work. The most important relief works will be undertaken by the railway administration, and this scheme is now under consideration by an inter-departmental committee under the chairmanship of the Minister of Labour. It is calculated that the scheme will directly, by means of the works themselves, and indirectly by means of its influence on the various branches of industry, allow of the employment of about half a million unemployed. At the present moment the actual number of unemployed engaged in so-called "productive" work is about 70,000 (4 per cent of the total).

The general causes of unemployment are admitted to reside mainly in the considerable reduction of the purchasing power of the masses and in the too rapid development of the process of introducing so-called "rational" methods in industry, which has been accompanied by dismissals of staff on a large scale.

Pending the introduction of the system of unemployment insurance, which has been under consideration for several years, the existing system of relief has been adapted to the particular requirements of the crisis, and the exceptional measures taken in February 1926 (namely, extension of the period of assistance to 52 consecutive weeks, allowances for partial unemployment, and increase in the rate of relief) have been prolonged until November 27, 1926, under Orders dated July (1 and 3) last. For unemployed persons who have exhausted their right to an allowance, special relief measures are contemplated in the municipalities, the expenditure on which will fall upon the public relief budget and 50 per cent of which will be borne by the State.

President Tom Moore, of the Trades and Labour Congress of Canada, writing in the *Alberta Labour News*, makes the following comment on the name of the International Labour Organization: "Attendance at a conference now impresses one that the one big mistake which was made in 1919 was to call this organization the International Labour Organization. It should have been the International Industrial Organization. Workers in every country have been misled by this name and encouraged by it to expect too much from their representatives there, who, after all, are only one-fourth of the delegation, whilst employers have an equal representation and governments as many as both together. It is therefore, strictly speaking, not a 'Labour Conference' where labour policies can be laid down, but it is an 'Industrial Conference' where labour has, by convincing argument, to win to its support sufficient votes to have the various proposals adopted."

SICKNESS INSURANCE

Outline of Voluntary Systems existing in Canada

At its Thirtieth Session held at Geneva in January last, the Governing Body of the International Labour Office decided to place the question of sickness insurance on the agenda of the Tenth Session of the International Labour Conference (1927). The problem of social insurance has been under consideration by the International Labour Organization since its foundation. At its earlier sessions the Conference dealt with certain special aspects of the problem (Draft Conventions on unemployment, employment of women before and after childbirth, unemployment indemnity in case of loss or foundering of the ship, workmen's compensation in agriculture). At its Seventh Session (Geneva, 1925) the Conference adopted a Draft Convention concerning workmen's compensation for occupational diseases, and also adopted a Resolution on the general problems of social insurance. In the same Resolution the Conference unanimously suggested that the question of sickness insurance should be placed on the agenda of a future session, and, if possible, of the 1927 Session.

Sickness insurance in one form or another is an integral part of the labour code in an ever-increasing number of industrial countries. Despite national differences, the International Labour Office considers that the law on the subject in the different countries contains on the whole sufficient common elements to warrant the taking of international action. Sickness insurance implies the creation and co-ordination of a system of national or local institutions by which close contact can be established between the insured persons and the insuring bodies. Its administrative services can, therefore, be put at the disposal of other branches of insurance for the collection of contributions, the payment of benefits and sick visiting, and its medical service can similarly be used to prevent invalidity or mitigate its consequences. Thus, the International Labour Office points out that sickness insurance forms a reasonable basis on which to build up a complete system of insurance, and that it would, accordingly, seem logical that international action in the matter of social insurance should first be taken in this particular branch of insurance.

Following the usual practice, the International Labour Office has sent out a questionnaire to the various governments, setting out the different aspects of the subject and asking for opinions as to the solution of the various problems involved, etc., in order to obtain adequate information on which to base its report to the Conference describing the laws and regulations in force on sickness insurance in the various countries.

Sickness Insurance in Canada

In Canada, there is no legislation establishing compulsory sickness insurance, except in respect of certain industrial diseases, but on the other hand voluntary sickness insurance has been developed to a very considerable extent. From replies received to a questionnaire recently sent out by the Department of Labour to nearly 150 Canadian firms who were known to have some form of such insurance in effect for the benefit of their employees, a great deal of valuable information was gathered, of which the following is a brief summary:—

Classes of Employees Admitted to Sick Benefits

In general, the benefit schemes in effect in Canada provide for the admission thereto of all classes of permanent employees. Returns from several firms, however, indicated that exceptions are made in the case of the executive staff, office employees and foremen, although usually these may become members also under different conditions. Exceptions are also made by some firms in the case of employees receiving more than a stated salary. Employees are not usually admitted to the benefit of these schemes until after they have been in the service of the employing company for a certain period, varying from three months to two years, and until they are in receipt of sufficient salary. In some instances admission to benefits is denied to those over a stated age and to those suffering from chronic disease, unless the latter sign a waiver with regard to any disability accruing therefrom.

Total Number of Employees admitted to Sick Benefits, indicating the Proportion to Total Number Employed

Firms in which sick benefit plans have been organized range from ordinary local businesses, with a comparatively small number of workpeople, to the largest industrial and transportation enterprises, extending throughout the entire country and employing thousands. For this reason, the number of employees coming under these plans varies greatly. The returns indicate that in the majority of cases, all employees are admitted, although some-

times there are a number who have not been in the company's service long enough, nor in receipt of wages sufficient to enable them to apply for membership. In a few instances, the proportion of members shown as participating was small.

Risks Covered

In six of the nine provinces of Canada, workmen's compensation laws have been adopted applicable to all classes of industries, in connection with which assessment is made on employing firms by a provincial government board to meet the cost of industrial accidents and certain specified classes of sickness. In two of the three remaining provinces, workmen's compensation is administered through the local courts; the other province is one in which no industrial undertakings have been organized.* Sick benefit schemes organized by employing firms, therefore, do not generally apply to industrial accidents, but extend to cases of non-occupational accidents and cases of sickness.

Replies received to the questionnaire indicated generally that the risks covered included all sickness or accidents lasting over one week, not compensable under the Workmen's Compensation Act, and not occasioned by strong drink or immoral conduct or participation in sports or contests of any kind. Cases of quarantine are also included. Exception is usually made in cases of illness arising from chronic ailments from which employees may have been suffering before entering company's employ. Many firms have adopted schemes of group insurance, by arrangement with insurance companies, which include sickness benefits. In such cases the sick benefits are paid by the insurance companies.

Contributions, if any, of Members—(a) Rate of Members' Contributions; (b) Annual Total Amount of Members' Contributions.

In a number of cases the entire cost of sickness insurance is borne by the employing firm, and in many cases jointly by the employer and the employees, but more generally it appears to be supported by the employees alone. In the latter case, the rate of employees' contributions is usually on a sliding scale based on wages and ranging from 20c. a month up to $1. The total amount contributed annually by employees varies from a few hundred dollars in the case of the smaller firms up to over $25,000.

Contributions of Employers—(a) Rate of Employers' Contributions; (b) Annual total Amount of Employers' Contributions.

As mentioned in the previous paragraph, in a number of cases the entire cost of sickness insurance is borne by the employer, while in others it is borne jointly by the employer and employees. In the latter case, the amount contributed often varies from one-third to the full amount contributed by the employees. Sometimes a certain percentage of the monthly due collections is added by the firm, or the firm may make a contribution of a lump sum annually to restore the fund to its original amount or to take care of any deficit. In a great many cases the employing firm merely furnishes the machinery for operating the club. The returns indicate that the total amounts contributed by the employing firms range from a few hundred dollars in the case of the small companies, to $12,000 in the case of a large lumber company, $17,000 in the case of a large electrical concern, $45,000 in that of a large insurance company, and $160,000 in that of the principal telephone company.

Benefits Granted—(a) Sickness Benefit Rules; Nature and Duration of Benefits (daily allowance, medical treatment and drugs, etc.); (b) Total Annual Amount of Benefits Paid; (c) Average Cost per Diem of Sickness.

Sickness benefits under plans adopted by representative Canadian firms are apparently graded generally according to salaries and also according to scale of contributions. Payments are not usually made for more than twenty-six weeks, but in individual cases are continued up to one year. There are also individual cases in which benefits are restricted to shorter periods. The benefits take the form of money payments, medical treatment, drugs, etc. In a great many cases, however, drugs are not supplied. The average cost per diem of sickness varies greatly. In the case of the large insurance company already referred to, the average cost for last year is given at $3.23 a day, with an annual total of $100,000. In the case of the railway company also previously referred to, the average cost per diem last year was $3, with an annual total of $121,000.

Organization of Medical Service—(a) Number of Doctors and Surgeons employed; (b) Method of Obtaining Services of Doctors; (c) Choice of Doctor by Patient; (d) Existence of Dispensaries, Clinics, Rest-rooms, Sanatoria, etc.

It would appear from the returns received that employees in many cases are free to choose

* A Railway Employees' Compensation Act was enacted this year in Prince Edward Island. (LABOUR GAZETTE, June, 1926, page 546.)

their own medical assistance, the Company paying the doctor's fees. The firms often have a yearly contract with a doctor, paying so much a month per employee, in return for which the employees are guaranteed free medical attendance for themselves and often for their families, except in cases of major operations and confinements. Most of the larger concerns employ one or more doctors for medical examinations and first-aid supervision. The usual method of obtaining the services of a doctor is by an order through the employer or the benefit society. In the case of almost every establishment of any size a first-aid room or hospital is maintained, with a qualified man or registered nurse or nurses in charge. These nurses are often trained in social service work and part of their duty consists in visiting employees absent through sickness or injury. Rest-rooms are maintained by most firms. Some of the largest employers have established dispensaries, and where their operations are carried out in remote districts, hospitals have been equipped. Two large industrial plants reported a special tuberculosis program, applicable to both wage-earners and salaried workers, each case being taken care of individually.

Conditions Imposed to Ensure Financial Stability.

The affairs of the benefit fund are usually managed by a board of trustees, elected annually, composed of officials of the company and representatives of the employees, who are responsible for financial stability. The treasurer is often bonded. The books are audited at regular intervals. When fees are charged, the revenue is usually sufficient, but many firms report that they stand behind the society and meet any necessary obligations. Sometimes an extra assessment is levied on the employees to make up any deficit. Surplus funds are usually invested in bonds and other securities, and a reserve fund thus provided for emergencies.

Results of Sick Benefit Plan, (a) In Improvement of Employees' Health; (b) Economic Benefits to Employer.

The returns from employing firms indicate generally improvement in employees' health. They state that the workers are relieved of anxiety as to their families in case of sickness and as a result they can put their whole minds to their work. It has been found that the periodic medical examination and enforced prompt consultation of doctors often prevented more serious or prolonged illness, particularly incipient tuberculosis. Another great advantage has been the improved industrial relations resulting from the closer contact between employers and employees, and the employers report increase in loyalty, and in production and a decrease in labour turnover. One of the companies paying the greatest amount of sick benefits reports that the economic benefits to themselves have more than paid for the amount expended.

Efforts made towards Avoidance of Sickness through Health Talks, etc.

The most general method taken in this regard appears to be by means of pamphlets or bulletins, which are often enclosed with the pay envelopes or posted in conspicuous places about the plant. Those firms who issue employees' magazines generally devote a column or more regularly to sickness and accident prevention. A number of firms report that health and safety talks are conducted regularly, usually during the noon hour, and that instruction is given in first-aid and home nursing. Quite a number reported that they did nothing along these lines. One of the large Canadian lumber companies has inaugurated a health program of preventive measures, including free physical and dental examination, first-aid and nursing service. A well known insurance company issues numerous pamphlets on health and hygiene from time to time which are placed in the hands of their clerks and field employees, millions being also distributed annually to their policy holders.

Employees of twenty-two representative corporations in the United States own stock in the companies employing them to the value of approximately $455,000,000, the largest available figures showing that 4,258,470 shares are owned by 315,497 employees, according to the index of the New York Trust Company.

Estimates of the value of stockholdings of employees throughout the entire country place the figures at more than $700,000,000.

A German regulation of July 1, 1926, issued under the Decree on Unemployment Relief of February 16, 1924, establishes equality of treatment in the matter of unemployment insurance for British workers resident in Germany and unemployed. Reciprocity previously existed in Germany with Switzerland, Austria, Czechoslovakia, Italy, Luxemburg, the Free City of Danzig, Denmark and Sweden. The countries are given according to the chronological order in which reciprocity was established.

OBSERVANCE OF SUNDAY REST IN PULP AND PAPER MILLS IN QUEBEC

Provincial Government will Enforce Observance of Lord's Day Act

A COMMISSION to study the problem of Sunday labour in the Province of Quebec, with particular reference to the pulp and paper industry, was appointed under an order in council signed by the Lieutenant Governor on March 3 (LABOUR GAZETTE, March, 1926, page 217). The order in council sets forth that the Federal Lord's Day Act (Revised Statutes of Canada, 1906, chapter 153) forbids Sunday work except under specified circumstances, but that notwithstanding this provision manufacturers, principally those in the pulp and paper industry, have continued to require certain of their employees to work on Sunday in spite of notices given to them to desist from this practice, claiming that the work on which these employees were engaged was urgent and necessary, and belonged to the class of labour exempted under section 12 from the general provisions of the Lord's Day Act.

The names of the Commissioners were as follows:—Judge Aimé Marchand, chief magistrate of the Province; Reverend A. Vachon, Quebec, Reverend A. G. Wilen, Kenogami, and François Faure, Shawinigan Falls. The Commission presented their report last May, having reached the conclusion that little of the work carried on in the pulp and paper mills on Sundays could be held to be urgent and necessary, within the sense of section 12 of the Act.

Accordingly the Honourable L. A. Taschereau, prime minister of the Province, in a letter addressed to the manufacturers in September intimated that the government, in accordance with the report of the Commission, would in future strictly enforce the observance of the provisions of the Lord's Day Act. The text of the report of the Commission, and of the letter of the Honourable Mr. Taschereau are given below.

Text of Report of Commission

To His Honour the Lieutenant-Governor of the Province of Quebec in Council.

The Commissioners appointed by the Order in Council dated March the 4th, 1926, and instructed to inquire into the nature and extent of the work permitted as being urgent and necessary in the pulp and paper mills by the Lord's Day Act of the Parliament of Canada, have the honour to report to you on their work and on the facts which they consider have been proved before them. They have visited the paper mills in the Province of Quebec on the following dates:—

On March 16, the Price Brothers & Company, Limited, mill at Kenogami, and on the 17th their mill at Riverbend;

On March 21, the Laurentide Company, Limited, mill at Grand'Mère;

On March 22, the St. Maurice Valley Corporation's mill at Shawinigan;

On April 12, the News Pulp & Paper Company, Limited, mill at St. Raymond;

On April 13 and 14, the Three Rivers mills: Canadian International Paper Company, Limited; the St. Lawrence Paper Company, Limited; the St. Maurice Valley Corporation (St. Maurice Division), and the Wayagamack Pulp & Paper Company, Limited;

On April 20, the E. B. Eddy Company, Limited, mill at Hull;

On April 21, the Canada Paper Company, Limited, mill at Windsor Mills, and the Brompton Pulp & Paper Company, Limited, mill at East Angus;

On May 11, the Donnacona Paper Company, Limited, mill at Donnacona.

They also met at Montreal on April 10th, Mr. Beck, secretary general of the Canadian Pulp & Paper Association.

They are happy to state that in all these mills they were readily given all the information they asked for. They had the opportunity of seeing themselves all the work being done there; they secured from the persons in charge all the information they required; and finally, in certain mills, and whenever they were requested to do so, they secured the opinion of the workers.

The Commissioners believe that, for a better understanding of the report they have to make, it is first necessary to briefly state the operations involved in the manufacture of paper:

In the first place, paper is nothing but a thin uniform coat of the fibres of certain woods, made resisting by pressure and heat. These fibres are transformed into pulp by two processes, one of which is mechanical and the other chemical. In order to obtain the pulp called mechanical, the wood is ground on grindstones; the product is washed and sifted, and a pulp is obtained which will constitute 80 per cent of the texture of the paper. In order to obtain the chemical pulp, the wood, previ-

ously cut into chips, is washed in a solution of sulphite of lime or of sulphite of soda, as the case may be; after the necessary washing, a product is obtained which will enter in the proportion of 20 per cent into the composition of the paper. The latter (chemical pulp) will be the woof; the former (mechanical pulp) will be the filler (bourre). From the properly proportioned mixture of these pulps the paper-making machines will draw the coat which they spread on layers of felt, press in rollers and dry up on enormous drums heated by steam.

One may form an idea of the power and activity of these machines when one realizes that they lay out every minute from 800 to 1,500 feet of paper woof; noting also the activity necessary on the part of the grinders (for mechanical pulp) and washers (for chemical pulp) which must provide without stopping the raw material upon which the machines work and which they finish.

The process which prepares mechanical pulp requires from 2 to 3 hours of work; washing the wood for chemical pulp requires from 9 to 12 hours.

From the viewpoint of the work carried on on Sundays in the mills of the province, the mills may be divided into two groups: A first group including the mills at Kenogami-Jonquière and Riverbend; and a second group including the mills on the St. Maurice river (Grand'Mère, Shawinigan and Three Rivers), on the St. Francis river (Windsor Mills and East Angus), and the mills at Donnacona and St. Raymond.

In the mills of the first group (Chicoutimi district) the machines used to make pulp and paper stop at 12 o'clock on Saturday night. The workmen in charge of these machines wash them before leaving the mill and work, some until 1 o'clock, and some until 3 o'clock in the morning.

On Sunday mornings, at about 8 or 9 o'clock, some workers return to the mill and during the day make such repairs as have become necessary during the week; these repairs, which may be called "maintenance repairs," consist in repairing transmission belts, pullies, pumps, and in any other repairs which cannot be made except when the machines stop, keeping the machines and mill generally in working order. The number of workmen employed on such repairs varies according to their nature and extent.

Production starts again at 12 o'clock on Sunday night; but in order to put the pulp and paper-making machines in motion, certain workers go into the mill at 6 o'clock, and others at 9 o'clock, the majority of the gangs entering from 11 o'clock in the evening until midnight. To go into more details: At 4 p.m. on Sundays a man engaged in making sulphuric acid starts his preparatory work and begins the manufacturing itself at 10 p.m. Between 6 and 9 p.m. the shift which has the duty of keeping the machines in good repair enters the mill, and the foremen make an inspection at 9 p.m. At 11 p.m. the men in charge of the grinders enter the mill. Finally all the other gangs enter the mill at 11.30 p.m.; they must start the machines and begin production at midnight.

In this group of the Chicoutimi district must also be included the Port Alfred chemical pulp mill, where the same system of keeping in good order, repairing and starting the machines on Sundays is in force.

In the group of mills on the St. Maurice, St. Francis and Ottawa rivers, as well as at Saint-Raymond and Donnacona, a different system has been adopted, which, according to the information given, seems to be the system in force in the United States mills and in the most important mills in Ontario (See note on page 9). There the machines do not stop at midnight on Saturdays, but at 6, 7 and 9 a.m. on Sundays, as the case may be. In some mills, the workers proceed to wash the machines, but in most of them they go away as soon as the machines stop. About 9 a.m., on Sundays, a repair gang comes to do the same repair work as that mentioned in connection with the first group. The work of starting the machines is done on Monday morning; production beginning about 7 or 8 a.m., as the case may be.

The Commissioners have come to the conclusion that the repair and maintenance work which is invariably done on Sundays in both groups could be done during the week, and they cannot see in this work the necessity or urgency which would justify exceptions to the general rule laid down by the Lord's Day Act.

Indeed, the exception provided by section 12 of said Act as to "repairs in cases of emergency" and of any other work "essential to any industry or industrial process of such a continuous nature that it cannot be stopped without serious injury to such industry, or its product, or to the plant or property used in such process" clearly does not include work such as that in question here, since, whatever time may be adopted in the factories, manufacturing is stopped completely everywhere for at least 24 hours each week without there appearing to be the least prejudice to the

industry, production, equipment or material resulting from the same.

But it is none the less true, and it is the opinion of the Commissioners, that if such repair work was done during the week the mills' production would be reduced considerably. Under the present system they produce during six full days each week. If they must stop their production during the time necessary, on a week day, to make the repairs now being made on Sundays, they must lose about twelve hours of production. And figures have been given the Commissioners by Mr. Creighton, Treasurer of the St. Lawrence Paper Company, Limited, showing that such a reduction of 12 hours in production would increase the cost of production by $2.50 per ton of paper. Therefore, the Commissioners feel justified in formulating this first conclusion.

The work of repair, maintenance and keeping in running order in the factories, which at the present time is being done on Sundays, is not necessary and urgent work as provided by the Lord's Day Act. Such work can be done on week days, but with the result that the machines, in this case, must be stopped for about 12 hours; that the output will thus be reduced by the quantity which would have been manufactured during these 12 hours; and that it is probably necessary to have this repair work done on Sundays, in order to insure production during six whole days in these mills, enabling them to compete with not too great disadvantages against foreign mills, and to continue an industry the importance of which cannot be denied.

Your Commissioners deem it fair to state that certain operations, however, have such a character of continuity that they could not be stopped or suspended without serious damage to the materials which are used.

They are the operations of retrieving the soda in the solution which was used to wash the wood in the sulphite of soda process, and of retrieving the resins in the solution which was used also to wash in the sulphite of lime process.

It is also fair to state that the work of putting the mills in motion, namely: heating the drums used to dry up the pulp in the paper-making machines, as well as heating the grindstones used in reducing the wood to mechanical pulp, could really be assimilated to the work of starting and maintaining the fires permitted by paragraph (*d*) of section 12.

Finally, in certain mills there have not been installed tanks capable of keeping a sufficient provision of chemical pulp and mechanical pulp to permit commencing and continuing the manufacture of paper before the shops where the pulp is prepared are able to furnish the machines with a sufficient quantity of the necessary material. And your Commissioners believe this question, whether the operations of these shops should not be permitted, must be considered. They understand, however, that the matter of the urgency and necessity of such work must be left ultimately to the decision of the Courts entrusted with the enforcement of the law in the case of complaints coming before them.

It cannot be doubted in the least that the system adopted by the great majority of the mills (all the mills in the second group) of continuing the manufacture of paper and the operations of the mills generally until 6, 7 and 8 a.m. on Sundays is clearly contrary to what is enacted by the law.

Paragraph "a" of section 2, chapter 153, Revised Statutes of Canada, says that "Lord's Day" means the period of time which begins at 12 o'clock on Saturday afternoon and ends at 12 o'clock on the following afternoon."

Your Commissioners have endeavoured to learn the reasons which have caused this system to be adopted by the mills. The manufacturers have represented to us that the interest they had in adopting such a system was twofold. In the first place, the great majority of the workers, as will be stated later, seem to be in favour of this system. And the manufacturers are satisfied to adopt it in order to be sure that their men will not be compelled to work under conditions which may lead to discontent, and will not be compelled to resume their work without the good will which their employers believe necessary to the full performance of their duties.

Moreover, the employers are of the opinion that the system under which the mill closes at midnight on Saturday to reopen at midnight on Sunday would, indeed, give the workman a full opportunity to rest before resuming his work; but that, as a matter of fact, the workman, having taken his weekly rest within the strict limit of Sunday, instead of taking it in reference to the hour at which he will resume work, and finding it difficult to secure rest on Sunday evening, comes in at midnight to take charge of machines of a vertiginous power and speed at a time when his strength has not been restored, when his vitality is at its lowest and his fatigue at its height only increasing during all the time he is working until morning. To take charge of such machines under such conditions, they say, is, for the worker, not only to risk his life and put him at the mercy of the possible reactions of a tired organism, but also to risk the lives of all his co-workers.

The workers, on the other hand (your Commissioners have heard them every time they asked for it), have given their opinion: They are in favour of continuing the system of closing on Sunday morning and reopening on Monday morning. This system, they say, allows them, as they come out of the mill, to attend Mass and then take advantage of the day to enjoy the pleasure of family life and to refresh themselves, through lawful recreations, from their labour of the week. It gives them the whole night of Sunday to rest themselves and enables them to resume work on Monday morning, not with the weight of the fatigue resulting from a restless day, but with their strength restored by the full rest of a night's sleep.

Your Commissioners also must say that the men at Kenogami, who at first had worked under the system of closing at 8 o'clock on Sunday morning and reopening at 8 o'clock on Monday morning, when the change which imposed upon them the rest period from midnight on Saturday till midnight on Sunday was put into force, started with a protest, then submitted themselves to it, became used to it, and now are satisfied.

Note

Your Commissioners come to this conclusion as to Ontario in spite of the almost contradictory information which was furnished them.

In a letter dated January 15, 1926, addressed by the Honourable the Minister of Labour to the Honourable the Prime Minister of that Province, it is stated that:—

(A) The general custom among the mills is, that they close down on Saturday night and remain closed until 12 o'clock Sunday night. However, there are times when anxiety to fill some particular contract necessitates working on Sunday, but this does not happen often. Sunday is the only day on which necessary repairs are made to such machines as have broken down during the week, but it may be said, without fear of contradiction, that the paper mills of the Province of Ontario do not make a practice of operating on Sunday.

On the other hand, on the occasion of the visit of your Commissioners on April 19, Mr. Beck, the Secretary General of the Canadian Pulp & Paper Association, communicated to them the following information and telegrams which he had just received:—

(B) *Abitibi Power & Paper Co. Ltd.,* Iroquois Falls, Ont., advise that their practice is to close their mills from 8 o'clock Sunday morning until 8 o'clock Monday morning, and to do only necessary repair work in the interval.

(C) *Ontario Paper Co. Ltd.,* Thorold, Ont., report, "We shut down our machines at 8 o'clock on Sunday morning and start at 8 o'clock Monday morning, when labour is required for repair and other work on Sunday we pay time and a half.

(D) *Spanish River Pulp & Paper Mills Ltd.,* operating mill at Sault Sainte-Marie, Espanola and Sturgeon Falls, Ont., report: "Our practice is to do only such work on Sunday as will permit the manufacture of paper six days a week. This implies the doing of certain mechanical work for which time and a half is paid, also the operation of the groundwood and sulphite mills if such work is necessary in order to provide sufficient stock to permit continuous operation of paper machines."

Letter of the Premier of Quebec

The Honourable L. A. Taschereau, Premier of Quebec, addressed the following letter during September to the pulp and paper manufacturers of the province.

Gentlemen,—You will remember that on May 21, 1926, the Provincial government received a report from a commission composed of representatives of the government, the pulp and paper manufacturers and the clergy, of the work done on Sundays in the different pulp and paper mills of the province.

The conclusions of the report are to the effect that Sunday work in the pulp and paper mills is neither urgent nor indispensable, except in a very few cases. It follows, therefore, that the government has no other alternative but to enforce the Lord's Day Act adopted by the Federal Government with which the duty of legislating on such matters lies.

I am convinced that the manufacturers of pulp and paper of the province will willingly conform to this law and comply with the Sunday regulations. Should any infraction of the Act occur, the government will deem it necessary to enforce its observance throughout the whole of the province.

The government feels that sufficient time has been given to the pulp and paper manufacturers to adapt themselves to the new conditions caused by the cessation of Sunday work.

We may further add, that certain manufacturers have already completely ceased Sunday work without any serious inconvenience following.

Sincerely yours,

(Signed) L. A. Taschereau.

End of Sunday Labour

Early in October a meeting of all the pulp and paper manufacturers of the Province of Quebec was held at Montreal, and an unanimous decision was arrived at that all Sunday work in this industry should cease on and after November 1, 1926.

WORKMEN'S COMPENSATION IN BRITISH COLUMBIA IN 1925

THE ninth annual report of the Workmen's Compensation Board of British Columbia, in a general estimate of the extent of the protection afforded to workmen in the province, notes that there were at the end of 1925 approximately 7,000 workmen and their dependents deriving benefits under the Act. There were on the pension list at that date 567 widows, 1,003 children under 16 years of age, 92 dependent mothers, 36 dependent fathers, and 28 other dependents, in addition to 832 permanently disabled workmen, making in all a total of 2,558 persons in receipt of regular allowances. The total of 7,000 also includes the dependents provided for in the permanent and temporary disability cases. It is estimated that about 160,000 workmen and their families are now protected under the Act. During the nine years the Act has been in effect 189,305 accidents have been dealt with by the Board. Of these accidents, 2,008 resulted in death and 4,180 others left workmen permanently incapacitated either totally or partially.

The report states that throughout the past year the Board enjoyed the fullest support from employers and workmen. "Without a mutual understanding among all concerned, including the medical profession, the work could not have been carried on without friction." The cost of administering the act was lower in 1925 than in any previous year. Out of every $100 collected in 1917, $95.06 was used in payment of compensation. For each succeeding year a more favourable showing was made possible, there being paid in compensation, in 1925, $97.25 out of every $100 collected, administration costing the difference, $2.75.

The payrolls of the industries covered under the Act amounted to approximately $160,000,000, as compared with audited payrolls of $155,410,227 for 1924, $153,548,944 for 1923, $130,592,502 for 1922, and $129,518,375 for 1921. There was a corresponding increase in the number of firms employing labour during those years. The number of active operators in business on December 31, 1925, was 7,197, as compared with 6,838 at the end of 1924, 6,524 in 1923, 6,524 in 1922, and 6,393 in 1921.

The optional protection made available by an amendment to the Act in 1919 to employers and employees engaged in industries otherwise outside the scope of the Act, was applied for and extended to 132 employers of labour engaged in farming, surveying, operating restaurants, retail stores, and construction of residences other than under contract. There was an increase during the year of 43 in the number of employers carrying optional protection.

Methods of Administration

The report explains some of the methods employed by the Board in administering the Act. The use of "reserves" is explained as follows:—

"The accidents which occur in any given year are required to be paid for in full out of funds collected from employers operating in that year. Employers commencing business in the years to come are therefore not required to bear any part of the burden of accidents occurring prior to the year in which they begin. Let us illustrate this point as it applies to fatal cases. A workman is killed on October 1, 1925, leaving a wife and four young children. The pension is computed for the widow, calculated on statistical tables to be exactly sufficient, using both principal and interest, to pay her a pension of $35 per month, until death or remarriage. A further sum is calculated for each child to pay it a pension of $7.50 per month until it reaches the age of 16 years, or previously dies. Those sums are added together, and the total amount of, say, $8,397.11 is forthwith taken out of current funds collected in 1925 and invested for the dependents in securities permitted under the Trustee Act. During 1925 the widow and children are paid $195, being three months' pension, and the balance of the moneys which belong to them remains in their Pension Reserve Account, to be paid to them as required by the Act in monthly instalments through the years to come. Similar procedure is followed to dependents and crippled workmen in respect of accidents which have already occurred. The exact cost of the year's accidents of course cannot be determined until the year is closed. Claims for compensation in the meantime require settlement. The funds needed for that purpose must necessarily be collected during the year on a tentative or 'basic' rate, depending on the probable hazard in each of the different industries. From past experience the basic rate for the ensuing year is arrived at for each of the classes of industry. Assessments are levied on the basic rate and collected usually in instalments based on one-quarter of the estimated payroll."

The accompanying table shows the receipts and expenditures for the several classes of employment for 1925:—

RECEIPTS AND EXPENDITURES FOR VARIOUS INDUSTRIAL GROUPS IN 1925

Industries	Received from employers, 1925 (including interest)	Compensation, expense and refunds paid	Transferred to reserve
	$ cts.	$ cts.	$ cts.
Lumbering, sawmills, shingle and lath mills, pulp and paper mills, creosoting-works, and logging-railways	899,202 26	593,567 52	426,186 91
Coal-mining	238,562 95	118,925 85	92,533 72
Metal-mining, reduction of ores and smelting, quarrying, brick manufacturing, etc.	142,479 36	69,729 98	91,909 12
Iron and steel manufacturing, rolling-mills, iron or brass products, machine-shops, etc.	36,661 49	27,956 08	10,271 02
Lighter forms of manufacture, paint, shoes, flour, power-laundries, warehousing, etc.	88,985 20	40,228 37	19,970 08
Building and construction generally, wooden or steel-ship building, pile-driving, dredging, etc.	192,163 24	135,103 00	103,270 58
Electric light and power plants, N.E.S; steam or electric railways, etc., N.E.S.; gasworks, N.E.S.; motion-picture machines, etc.	54,347 82	28,029 38	23,417 25
Navigation, stevedoring, wharf operation	125,097 54	87,796 82	68,972 87
Canadian Pacific Railways, and Consolidated Mining and Smelting Company of Canada and subsidiary companies	210,794 48	100,782 26	107,514 79
Grand Trunk Pacific Railways and their subsidiary companies	13,657 69	6,566 91	14,351 08
Canadian National Railways and their subsidiary companies	24,584 73	21,211 49	19,070 54
British Columbia Government	79,294 01	40,778 16	43,117 75
Municipalities	35,195 00	26,561 14	25,391 65
Canning or packing fish, fishing, fish oil and fertilizer manufacturing, kelp-collecting	22,839 97	21,267 61	10,604 96
Explosive manufacture, fireworks, fuses, chemicals, N.E.S.	1,297 76	197 78	1,045 38
Retail employees (on request) and delivery	41,994 66	25,391 25	9,484 77
Great Northern Railways and their subsidiary companies	1,414 79	1,279 30	981 38
Dominion Government	13,664 39	17,727 63	.....
	2,222,237 34	1,363,100 53	1,064,040 33

Accident Prevention

The report notes that the experience of each year has emphasized the importance of safety organization, which has made remarkable progress since the Act took effect. Accident prevention regulations have been put into effect. Warning placards and safety literature have been widely used. Trade journals have devoted more space to the subject. Individual plants have enlisted the interest and practical support of the wage-earners themselves. Educational campaigns under the joint direction of the management and workers are among the most hopeful manifestations of accident prevention work. Co-operation was introduced as the key-note to the safety movement when it became finally recognized that without that common element of co-operation among the parties concerned no successful safety work could be accomplished.

Accidents in 1925

There were 213 fatal accidents reported in 1925, as compared with 236 in 1924 and 268 in 1923. There was, on the other hand, an increase in the number of non-fatal accidents, the figures being 27,563 in 1925, 25,566 in 1924, and 24,184 in 1923. There were in addition each year upwards of 3,000 minor industrial accidents in which the workmen lost no time from work and required no medical attention other than first aid. There was an average of 98 accidents for every working-day in the year and a monthly average of 2,130.

Of the 27,563 accidents reported, 10,876 were of such a nature that the disability did not extend beyond three days. In those, medical aid only was given. In 14,252 cases disposed of in 1925 both medical aid and time-loss compensation were provided.

The lumbering industry by reason of its nature and magnitude was responsible for 44 per cent of all accidents; construction 10 per cent; coal-mining, 8 per cent; railroading 5 per cent; navigation, 5 per cent; metal-mining 5 per cent; and all other industries, 23 per cent. Of the fatal accidents, 46 per cent were in the lumbering industry; railroading, 18 per cent; construction, 8 per cent; metal-mining, 8 per cent; coal-mining, 5 per cent; and other industries, 15 per cent.

Time-loss compensation paid to workmen amounted to $1,277,473.70; and medical aid, including specialists, hospital care, artificial appliances, and drugs, cost $618,941.91. In addition the permanent total or partial impairment suffered by 671 workmen whose claims were disposed of in 1925 cost $811,043.76. Dependents of deceased workmen were awarded $568,929.02 in pensions. Funeral benefits took $16,088.70.

In only 561 claims made in 1925 were the claimants in possession of benefits other than those provided under the "Workmen's Compensation Act." Fifty-one per cent of those injured were married and 73 per cent gave their nationality as British or Canadian.

TRADES AND LABOUR CONGRESS OF CANADA

Summary of the Proceedings of the 42nd Annual Convention

THE 42nd annual convention of the Trades and Labour Congress of Canada was held in Montreal, Quebec, on September 20-25, the sessions being held in one of the assembly rooms of the Mount Royal Hotel. Mr. J. T. Foster, and Mr. Alphetus Mathieu, president and vice-president respectively of the Montreal Trades and Labour Council, were the joint chairmen at the opening ceremonies, the first named welcoming the delegates in English and the latter speaking in French. The civic welcome was tendered by His Worship Mayor Médéric Martin, and Ald. Léon Trépannier, leader of the City Council. Mr. Louis Guyon, Deputy-Minister of Labour of Quebec, representing the Honourable A. Galipeault, Minister of Public Works and Labour, spoke on behalf of the Province of Quebec. Mr. Alphonse Verville, a former president of the Congress, also addressed the delegates. A telegram was received from Mr. H. H. Ward, of Ottawa, Deputy-Minister of Labour, regretting being prevented from taking part in the opening ceremonies. Mr. Tom Moore, president of the Congress, replied to the addresses of welcome and thanked the local reception committee for the satisfactory arrangements made for the business of the convention.

The first order of business was the report of the Credential Committee, whose members had met previously to examine the certificates presented. The report showed 325 accredited delegates, 46 of whom represented international organizations which had affiliated the whole of their Canadian membership, 23 represented trades and labour councils, and 256 represented local unions. Besides these there were two fraternal delegates representing respectively the American Federation of Labour and the British Trades Union Congress.

Report of the Executive Council

After the appointment of an associate secretary, translator (all the business being done in English and French), sergeant-at-arms, messenger and the customary committees, the executive council of the Congress, which consists of the president, three vice-presidents and the secretary-treasurer, submitted a report of the matters which had engaged their attention during the year, together with a statement regarding the work of organizations with which the congress is either affiliated or holds membership. In the introduction to the report the executive council stated "Though there has been a noticeable betterment in industrial conditions during the past few months, there is still considerable unemployment, no doubt attributable, to some extent, to the disturbed political situation. This, coupled with the activities of those within Labour's ranks who still continue to advocate division on national, religious or other grounds, or seek disruption by constantly spreading propaganda aimed to destroy confidence in those elected to office in our movement, has retarded the growth in our membership which it otherwise would have been possible to report. These efforts at disunity have been partially counteracted by the active organization work carried on by the field representatives of a number of our affiliated international organizations, aided * * * * by the congress, its trades and labour councils and affiliated local unions."

The report was divided into sections, the first appearing under the head of "Legislative Program—1926." In this section were outlined the requests which were made on the Dominion Government for desired legislation, and which included (*a*) Amendments to the Criminal Code to clearly define the right of peaceful picketing and prevent misuse of injunctions in labour disputes, as well as repeal of the 1919 amendments to chapter 146 of the Statutes of Canada, 1906 (Criminal Code), so as to restore the provisions of the Criminal Code existing prior to that date respecting freedom of speech, press and assembly, sympathetic strikes, sedition, seditious utterances, etc.; (*b*) An Act to establish old age pensions, in which was outlined suggested provisions for such a measure; (*c*) Unemployment and unemployment insurance; (*d*) An act to provide for the registration of union labels; (*e*) National fuel policy with a view to securing the proper development of the coal resources of Canada, more regular employment in the industry, and greater distribution of Canadian-mined coal at reasonable prices; (*f*) Militia Act amendments, providing for the prohibition of industrial corporations maintaining armed forces designed for use during industrial disputes, as well as to give the Federal Government discretionary powers in regard to requisition for troops by municipal or provincial governments, and asking for discontinuance of grants for military training in public schools; (*g*) Federal Government

to give effect to draft conventions and recommendations of International Labour Organization; (*h*) Shipping Act amendments and Marine matters; (*i*) Conditions of employment in the postal service.

The program submitted to the Government also included reference to the following subjects; Fair Wage Regulations; Election Act Amendments; Immigration and Emigration; the establishment of a Tariff Board on which labour is given adequate representation; changes in income tax so as to increase exemptions for the small salary earner and those maintaining dependents; abolition of the sales tax; British North America Act amendments to allow of abolition of the Senate as a non-elective body; abolish appeals to Privy Council, and increase the power of the Federal Government to deal with labour legislation such as Industrial Disputes Act, etc.; action to give effect to the report of the Government Commission (1921) on prison reform; simplification of legislation relating to and for the encouragement of co-operative societies, action, national or international, to bring about the prohibition of manufacture or use of narcotic drugs; except for medicinal purposes; and the recognition of standard working conditions in all Government plants manufacturing uniforms or doing other similar commercial work.

The second section of the report under the heading of "Legislation" stated that at the previous session of the House of Commons there had been adopted a greater number of bills than usual which incorporated matters included in the program of the Trades and Labour Congress. These, however, were either defeated in the Senate or were nullified by the dissolution of Parliament.

Under the heading of "Provincial Executive Committees and Federation of Labour," the executive reported that these bodies had carried on the legislative activities of the congress in their respective provinces and had co-operated with the executive in an effort to secure the greatest possible degree of uniformity in labour legislation throughout the Dominion. The executive submitted a summary of the matters of more general interest, and stated that not only had existing provincial legislation been maintained, but that new legislation had been adopted making for a higher standard of economic and social life.

Section four, headed "Affiliations and Advisory Councils," showed that the congress had maintained affiliation with the International Federation of Trade Unions, the Women's Trade Union League of America, the American Association for Labour Legislation, the American Association of Political and Social Science, the Canadian Council on Child Welfare and the League of Nations Society in Canada. The list of the advisory councils on which the congress has representatives was mentioned, together with synopses of the proceedings of the meetings of such bodies.

Section five referred to the friendly relations existing between Congress and the American Federation of Labour and its affiliated international organizations, many of which maintain one or more Canadian representatives in the Dominion. Reference was also made to invitations which had been received during the year from European trade union bodies to have a representative of the Congress attend their annual meetings. Referring to the International Federation of Trade Unions the executive outlined some of the activities of the organization, and stated that there had been no change in the attitude of the federation toward the All-Russian Council of Trade unions in regard to the proposed unity conference. Report was made of the two 1926 sessions in Geneva, Switzerland, of the International Labour Organization, at both of which the Congress was represented, and the resolutions adopted thereat.

Dealing with the question of "Migration," the sixth section of the report gave a synopsis of the decisions reached by the Congress, on which its present migration policies are based. The executive recommended a re-endorsation of these decisions, being of opinion "that if given effect by the proper authorities they would materially assist in eliminating many of the abuses which are yet too prevalent in connection with immigration activities." The executive also recommended that the Dominion Government investigate the experiments being made by the British Government whereby youths and unemployed men are being given preliminary training in farm work with a view to establishing a similar plan in the industrial centres of Canada as a step towards assisting the unemployed and others who are desirous of establishing themselves on Canadian farms; under this heading a report was also given of the World Migration Congress held in London in June, 1926, and at which the Canadian Congress was represented.

The executive report on the official *Journal* of the Congress showed that from increased revenue from subscriptions and advertisements the financial position of the official publication had greatly improved. The members of the Congress were urged to give the *Journal* every assistance possible.

The executive council, under the heading of "Peaceful Picketing and Criminal Code Amendments," after pointing out that the law on peaceful picketing is very indefinite, and one on which legal authorities express considerable difference of opinion, recommended that past declarations of the Congress, along with information obtained from recent court decisions respecting peaceful picketing and from events which have occurred during the past year, be referred to a Special Committee, whose report, when adopted by the convention, would serve as a guide to the incoming executive in declaring the future policies of the Congress on this very important matter.

The executive submitted a copy of the manifesto which had been issued in connection with the recent Federal election in which the membership was urged to secure pledges from candidates on (1) abolition of the Senate as a non-elective body, (2) peaceful picketing, (3) repeal of the 1919 amendments to the Immigration Act and criminal code, (4) old age pensions.

Reference was made to the British strike and the action the executive had taken in connection therewith. Sums exceeding $2,000 had been received by the Congress and forwarded to the Miners' Federation of Great Britain.

The executive reported on the efforts put forth during the session of Parliament to secure legislation to provide for the registration of union labels, shop cards and union buttons with a view to give protection against infringement and misuse of such emblems.

Under the heading of "Minimum Wage" report was made of the success which had attended the efforts of the Congress in the matter of this class of legislation. Only two Maritime provinces have not yet adopted minimum wage laws. In this connection the executive asked for a pronouncement on the general application of minimum wages to men as well as women workers.

Referring to the Industrial Disputes Investigation Act the executive stated that the present situation is one lacking in uniformity, workers who come under its provisions in some provinces not being under its jurisdiction in others. The executive therefore recommended that previous requests be reiterated for amendments to the British North America Act which would restore the power of the Federal Government as it was previous to the decision of the Privy Council of January, 1925.

Another recommendation was that the executive co-operate with the officers of the Federated Association of Letter Carriers in their efforts to secure improvement in their salaries and working conditions.

Besides the reference of the executive council to the work of the provincial executive committees and federations of labour reports were submitted by the Provincial executive committees of Quebec, Ontario, Manitoba, Saskatchewan and British Columbia as well as by the federations in New Brunswick and Alberta, all of which outlined the demands made on the Provincial legislatures for desired legislation.

The fraternal delegate to the American Federation of Labour submitted a report of the work of the convention which he had attended in Atlantic City, N.J. The fraternal delegate to the British Trades Union Congress also furnished a report on the principal matters which had engaged the attention of the delegates at the convention held in Scarborough, England.

The portions of the above report referring to picketing and injunctions were submitted to a special committee, which the convention appointed, while the reference to the registration of union labels was referred to the Union Label Committeee, the remainder being handed over to the Committee on Officers' Reports.

Reports of Committee on Officers' Reports

In submitting the report of the Committee on Officers' Reports, Mr. J. W. Wilkinson, the chairman, commended to the delegates the various items appearing under the head of "Legislation," and reported approval of the establishment of a national research institute, suggesting that the Trades and Labour Congress present a resolution on this subject at the next meeting of the National Research Council of Canada, on which the Congress has a representative. On the question of old age pensions the committee recommended that the executive continue efforts to secure their establishment and that the labour unions give their support. The executive was urged to press for Federal unemployment insurance, the committee also approving of the efforts made to improve the conditions of the postal workers. The committee endorsed the recommendation of the executive council on migration which is designed to eliminate many of the alleged abuses connected with immigration, as well as approving of the training of youths and unemployed men in farm work. The committee commended the assistance of Messrs. J. S. Woodsworth and A. A. Heaps, Labour members of the House of Commons, in seeking changes in the Immigration Act as desired by the Congress.

Endorsation was given to the action of the executive in issuing the manifesto in the Federal election. In the discussion on this item several of the speakers stated that it was very necessary to have the Senate reformed in order to give effect to labour proposals, and with this in view the organized workers were urged to redouble their efforts to have the Senate abolished, or at least reformed. It was pointed out, however, that it was essential that there should be united action, so that "they would not be demanding abolition in one locality and reform in another."

The committee endorsed the action of the executive in regard to the British strike and presented, for the guidance of the executive, a recommendation that minimum wage laws be extended to provide an adequate minimum wage for male as well as female workers.

The executive was endorsed in (1) refusing a charter to the Mine Workers' Union of Canada as the United Mine Workers is the recognized coal miners' organization, (2) co-operating with the Workers' Educational Association of Ontario, (3) the president of the Congress accepting a place on the advisory council of the Union Labour Life Insurance Company, (4) endeavouring to secure release of prisoners in Nova Scotia. The committee approved of a half holiday on election days, and congratulated the executive on the increased circulation of the *Congress Journal* as well as approving of the contents of the magazine. The committee suggested that the reports of the provincial executive committees, and provincial federations of labour should be carefully perused by the delegates, and recommended the adoption of the reports as a whole. Before the report was adopted special reference was made to the lack of social legislation for women in the province of Quebec. There being no provincial and only a partial municipal franchise for women, it was decided that the executive committee for Quebec should endeavour to assist in securing complete franchise for the women of the province.

Picketing and Injunctions

To the special committee which was appointed to report on the question of picketing and injunctions in labour disputes were referred the resolutions which had been submitted as well as the references to the subject in the report of the executive council. The full report of this committee, which was presented by Mr. Jas. Simpson, the chairman, was as follows:—

Your committee has had referred to it the various resolutions dealing with the subject of picketing and injunctions, and following a survey of all the documents, including court decisions and legal opinions bearing upon the subject, we beg leave to submit to this convention the following information and conclusions:

By the British North America Act, 1867, Section 91, Clause 27, the Dominion Parliament has exclusive jurisdiction over the criminal law, except the constitution, of course, of criminal jurisdiction, but including the procedure in criminal matters. In pursuance of this power the Federal Parliament has enacted the Criminal Code, which contains Section 501 prohibiting watching or besetting certain places with certain objects therein set out. Since the Dominion Parliament had the legislative jurisdiction to enact this section, and it alone can repeal it, any alteration in the criminal law relating to picketing must be sought from the Parliament of the Dominion of Canada, and from it alone. On the other hand, by Section 92, item 13 of the British North America Act, 1867, each Province in the Dominion has the exclusive power to make laws in relation to property and civil rights in the province. The right to restrain, by injunction, any person or persons from picketing premises so as to create a common law nuisance or to restrain the publication in any manner of statements alleged to be defamatory is a civil right, and so is within the exclusive legislative jurisdiction of the province. Any representations to alter the present law in the province of Canada with reference to granting or refusing injunctions restraining alleged breaches of civil rights must be made to the legislatures of the Provinces. The practice of courts interfering with the right to peacefully picket, thus preventing strikers from doing what the organized labour movement maintains they have the legal right to do, still continues. Quite a number of cases have arisen during the past few years. The courts seem divided as to the interpretation of the law as it now exists. The effect, however, has been in the main to make the strike ineffective. The right to peacefully picket was defined and made legal by Section 12, Chapter 173 of the Consolidated Statute, 1886, but when the Criminal Code, 1892, Chapter 29, was compiled this provision legalizing peaceful picketing was omitted and has not yet been reinserted. In representations previously made to the Government the executive council of the Trades and Labour Congress of Canada has pointed out the necessity of amending the Criminal Code to adequately protect trade unions and trade unionists in their right to peacefully picket during strikes. In reply to these representations the executive council has been told that the provisions of the Criminal Code are adequate to afford the protection asked for despite the fact that these provisions lack the clarity of definition common to British law. Events of the past year only serve to strengthen the conviction previously expressed that the Criminal Code should be amended to prevent recurrence of the action of the courts in restraining trade unionists from peacefully picketing. Your committee could cite a large number of cases in which legal decisions, both favourable and unfavourable, have been rendered, but for the purposes of bringing this matter clearly before the convention we do not think it advisable to give a detailed recitation of all these cases which we have carefully reviewed. We feel, however, that reference should be made in this report to the recent decision of the Supreme Court of Canada and that of the Supreme Court of British Columbia, both of which decisions denied the right of peaceful picketing which the Government has so frequently stated is the right of the trade unions and trade unionists of this country. In this important matter we would like to make reference to an important decision given by the Court of Appeal of the Province of Ontario dissolving an injunction granted by the Lower Court restraining the striking moving picture operators of the city of Hamilton from peacefully picketing.

In rendering their judgment the Court of Appeal said,—

'Courts should not attempt to interfere and forbid by their injunctions that which has already been forbidden by Parliament itself, much less should the courts interfere when the thing complained of is not within the terms of the criminal law, although it may be rightly regarded as objectionable or even immoral for then the civil courts, by injunction, are attempting to enlarge and amend the criminal law. Government by injunction is a thing abhorrent to the laws of England and this province .....
The fact that the criminal law emanates from the Dominion and the civil law from the Province, and that our courts are created by the province only serves to manifest the desirability of refraining from any assumption by the civil courts of a power to regulate public conduct. The question of trade unionism, and of the open shop, and of how far those who advocate the one as against the other should be permitted to go in endeavouring to uphold and enforce their views, are essentially matters for Parliament and quite foreign to civil courts'.

Lord Camden, one of England's greatest legal authorities, dealing with the issuing of injunctions said.—

'The discretion of a Judge is the law of tyrants. It is always unknown; it is different in different men, it is casual and depends upon constitution, temper and passion. In the best it is ofttimes caprice; in the worst it is every vice, folly and passion to which human nature is liable.'

It is therefore obvious that so long as trade unions and trade unionists are left to the constitution, temper, passion and caprice of judges using their own discretion, and ignoring the stability of law, their rights will be repeatedly infringed and the work of destroying their organizations will be proceeded with. The right to strike must carry with it the right to persuade the unorganized to organize and join with the organized in strikes, and to employ those methods such as picketing without which the right to strike becomes ineffective and valueless. British law has always recognized that a strike must be effective to be of any service and therefore the British Parliament, from time to time, has amended its laws so as to safeguard certain necessary activities connected with strikes, such as the freedom of speech and assembly, the right to organize and peacefully picket, etc. In 1906 the Trades Dispute Act was passed by the Government of Great Britain. It repealed the clause of the 1875 Act legalizing picketing merely for the purpose of obtaining or communicating information and enacted the following section:—

'It shall be lawful for one or more persons acting on their own behalf or on behalf of a trade union or of an individual employer or firm in contemplation or furtherance of a trade dispute to attend at or near a house or place where a person resides or works or carries on business or happens to be. If they so attend merely for the purpose of peacefully obtaining or communicating information or of peacefully persuading any person to work or abstain from working. This statute therefore brings the law on this point back to that of 1859 which excepted peaceful persuasion from the offences of molestation and obstruction in the Act of 1825, a law which the Act of 1875 had been said to repeal. No change has been made in the British law on this point since 1906.'

John G. O'Donoghue, K.C., solicitor for the Trades and Labour Congress of Canada, in his extended legal opinion on the rights of trade unions and trade unionists to picket, said,—'that time has shown that the position taken in seeking the amendment by the insertion of the proviso which we have previously referred to was a wise one. Had this proviso been inserted in the Criminal Code there would have been no reason for any judge to say that the absence of the proviso deprived the workers of the right to picket peacefully. The remedy is to have this proviso legalizing peaceful picketing inserted in the code. You will, of course, distinguish between the criminal end of the subject and the civil while those who peacefully picket are not, in a proper interpretation of the law, subject to criminal prosecution, they lay themselves open to injunction proceedings, if they picket in such numbers as to constitute themselves a nuisance in the civil aspect of the law. For the information of all concerned Mr. O'Donoghue drafted instructions for strikers which, when followed, have enabled strikers and policemen to get along together and have avoided police prosecutions for picketing. These instructions are as follows:—

1. You have a perfect right to picket peacefully.

2. Do not have more than three pickets together, because more might constitute a nuisance or a menace.

3. If ordered by officers of the law to "move on" move on. But you may return, and may pass any particular point as often as you like, so often as you keep moving when ordered.

4. You are at liberty to speak to any one in order to give information or to obtain it concerning the dispute. If the strike breaker rejects your advances leave him alone. It is in his system and an appeal to his manly instincts will not move him. He probably hasn't any.

5. Let no threats be made to others. Those who take the places of strikers have a legal right to do so. The moral aspect of their conduct is another thing.

6. Do not condone violence or anything like violence. The striker who indulges in violence is no friend of his fellow worker. He may be a spy.

7. While giving every respect to the law and its officers do not let them impose upon you. But, do not take the law into your own hands in any case. Remember, that the officer has to do his duty and to follow his instructions, no matter how distasteful they may be to him.

Your committee are of the opinion that the questions of picketing and the issuing of injunctions to prevent picketing are merely different phases of the same problem and having regard for the jurisdictional limitations of the Federal Parliament to deal with changes in the criminal code and Provincial Parliaments to deal with injunction legislation, we would therefore recommend as follows:—

(1) That the incoming executive of the Trades and Labour Congress of Canada zealously press for the necessary amendments to the criminal code or pursue such other course as their legal advisers would recommend to adequately protect trade unions and trade unionists throughout this Dominion in their right to picket during industrial disputes.

(2) That the provincial executives of the Trades and Labour Congress of Canada make adequate representations to Provincial Legislatures to secure for the trade unions and trade unionists their rights to peacefully picket without the intervention of the Courts in the issuing of injunctions to restrain them from what they have a legal right to do.

This recommendation not only applies to the issuing of injunctions restraining trade unions and trade unionists from continuing picketing once it has been put in operation, but also from the issuance of injunction before trade unions and trade unionists have decided to picket in the event of an industrial dispute.

(3) That, with a view to supporting the executive council in carrying out the instructions of this convention all affiliated bodies be urged to bring their

influence to bear upon the Government and members of Parliament and Legislatures to promote the necessary legislation, and that in addition the executive council be instructed to prepare in the form of a pamphlet or document the necessary information for the guidance and advice of its constituents to make possible the realization of this objective.

(4) That, pending the enactment of legislation to adequately protect trade unions and trade uunionists in their right of peacefully picketing, the advice given by the Congress solicitor be the policy to be adopted, and that the widest publicity be given by the Congress Executive to the legal opinions rendered by Mr. O'Donoghue.

The recommendations of the committee were considered clause by clause. Delegate Tim Buck moved that the first clause be referred back to the committee, and in doing so stated that the only way to combat injunctions was to fight them. He claimed that all the resolutions asking for definite action had been evaded by the committee. The convention, however, voted against the motion and the first clause was adopted. Clause two was also adopted, but when clause three was reached Delegate John McDonald moved in amendment that the following demand as contained in resolution 41 be substituted:—

That in order to rally and crystallize this labour protest, to impress the workers further of the serious position that confronts them; and to impress the Government, if possible, with the determination of labour's demand, the Trades and Labour Congress of Canada name a day in the immediate future on which the trades unions throughout the country shall organize protest meetings and forward their demands to the Federal Government for the amendment of Section 501 of the Criminal Code, so that peaceful picketing in Canada may be regarded as legal.

After some discussion the amendment was defeated. On clause four Delegate Buck moved reference back to committee with instructions to report the following:—

Organized workers should on no account forego the right to picket, regardless of injunctions or court decisions. The life and strength of our movement is bound up with the right to strike, which involves the right to picket, and this right must be preserved at all costs.

Delegate Buck strongly supported his amendment. President Moore, however, declared the amendment mischievous and asked the convention to defeat it. Delegate McDonald said the amendment was advising the workers to refuse to obey injunctions. Only by militancy would they secure their rights from the courts. The chairman of the committee closed the debate, the amendment being defeated.

Report of the Secretary-Treasurer

Mr. P. M. Draper, the secretary-treasurer of the Congress, submitted his report showing that, including the balance from last year, the total receipts amounted to $23,100.84; the expenditure totalled 19,273.94, leaving a balance of $3,826.89.

In reporting the membership at 103,037, a decrease of 2,875, it was pointed out that only those members for whom *per capita* tax had been received were counted. If out of work members were included, and for whom no *per capita* had been paid, this membership would be about 25 per cent higher. The secretary stated that the secession in the ranks of the United Mine Workers and the Brotherhood of Boilermakers was responsible for some of the loss in membership. Five new federal unions had been chartered during the year. The secretary also submitted a report of the trustees of the headquarters building, the receipts and expenditures of which are included in the above figures, and which showed that the income had amounted to $1,620 and the expenses to $1,563, a balance of $56.96. The property was stated to be worth $35,000. The Audit Committee, to which this report was referred, reported having found the accounts correct in every detail and commended the work of the secretary. The report was adopted without any debate.

The Ways and Means Committee recommended that the fraternal delegate to the American Federation of Labour be granted $400 and the fraternal delegate to the British Trades Union Congress $800; also that the executive council be empowered to pay certain incidental expenses in connection with the convention.

Report of Union Label Committee

To this regular committee of the Congress was referred the section in the executive council's report bearing on the registration of union labels. The committee reported that much progress had been made since the previous convention in the matter of the registration of labels, shop cards and working buttons. It was suggested that all delegates familiarize themselves with union label legislation as printed in the officers' reports, and upon their return home that they interview their respective Federal members and endeavour to have them pledge themselves to legislation which will give union emblems legal status in Canada, and also that efforts be made to get support in the Senate for the proposed legislation. The committee made a plea for support for all union labels, and recommended that the executive council circularize all trades and labour councils requesting that a union label league be formed wherever possible for the education of the workers toward the patronage of union label articles. The suggestion was made that the Congress consider the advisability of placing a union label exhibition booth at the Canadian Na-

tional Exhibition in Toronto. The committee stated that uniforms made in the Government plant at Ottawa, as well as uniforms made in contract shops, do not bear the union label, and the executive was asked to interview the Federal Government with a view to having them made under union conditions. The report, after considerable discussion, was adopted.

At one of the sessions a letter was read from Mr. John Manning, secretary of the Union Label Trades Department of the American Federation of Labour, regretting absence from the convention and offering to assist in securing the desired amendments to the Canadian Trade Marks Act.

Internal Affairs

Among the four resolutions referred to the Committee on Constitution and Law was the following: "Whereas, the present conditions do not warrant the maintaining of the president as a permanent official; Be it resolved, that the constitution be amended as follows: The President shall devote such time to the work of the Congress as in the opinion of the executive council is necessary. He shall receive for his services the sum of $12 per day while employed, with all necessary expenses and transportation."

The committee reported against the adoption of the proposal, stating that there was sufficient work for such an official, and that to adopt the resolution would lessen the prestige of the Congress. The report of the committee was approved.

Following the adoption of the committee's recommendation it was moved that the resolution be expunged from the proceedings. Objection was raised to such a motion being accepted, and the ruling of the chairman in accepting it was challenged. The chair was sustained, but when the motion to expunge was submitted the convention decided to allow the resolution to remain in the minutes.

Another proposal to increase the number of vice-presidents from three to five was also defeated, as was also a resolution asking that the Federation of Women's Labour Leagues be given full representation in the Congress. Approval was given to a resolution instructing the executive council to require central labour bodies to expel all local unions that are not organized in conformity with the constitution of the American Federation of Labour, or one of its affiliated internationals, or being a subordinate union of the Trades and Labour Congress of Canada. The executive was further instructed to withdraw the charter of any central body which does not respect the foregoing decision.

Want Buses Designated Common Carriers

A resolution which was referred to the Committee on Resolutions, and which was recommended for adoption, sought to compel owners of motor buses to provide emergency exits. In the discussion which ensued reference was made to the competition of motor buses with steam and electric railways. It was stated that there should be regulations for such vehicles and that they should not be allowed to sap the resources of steam railways. The resolution was on motion sent back to the committee for amendment to cover the points raised, and as re-introduced and adopted read as follows:—

Whereas, the motor bus is now extensively used as a means of transportation, and that very few of them are sufficiently equipped with proper safety devices or with emergency doors in case of accident; and that except in a few instances where the men are organized no regard is given to the number of hours the operators of the buses work, thereby exposing the travelling public to great dangers, and very often without any hopes of financial compensation in case of accident. Therefore, be it resolved, that the Trades and Labour Congress, through its executive council and its provincial executive committees, take immediate action to have these bus owners and companies designated as common carriers and placed under the jurisdiction of the Federal and Provincial railway boards so that they will be compelled to safeguard the life and property of the travelling public and their employees.

Against Trade Schools

Two resolutions opposing the methods employed in barber schools were introduced and submitted to the Committee on Resolutions, both of which were recommended for adoption. The convention, however, sent the resolutions back to the committee with instructions to amend so as to cover all trade schools. The resolution on the subject subsequently presented by the committee and adopted, was as follows:—

Whereas, due to the unrestricted methods used by so-called trade schools teaching barbering, hair dressing, sign writing, bricklaying, auto mechanics, mechanical dentistry, electrical work, etc., flooding the industrial market with incompetents to the detriment of the various trades and the public in general, owing to the improper and insufficient training of the so-called graduates; and whereas, we believe that all such trade schools privately conducted should be under the supervision of the respective provincial governments and guidance of the educational departments, whereby fixed regulations could be made as to methods of teaching and period of apprenticeship, and proper regulations and supervision applied, therefore, be it resolved, that the various provincial executive committees be instructed to make part of their legislative programme provisions to seek protective legislation for exploited students, bona fide trades, and comfort and safety of the public, and to provide legislative enactment that all such students entering the trade shall serve an apprenticeship period of at least three years.

Desire Canada Shipping Act Amended

After a brief discussion a resolution was adopted requesting that the Government be asked to have the following provisions incorporated in the Canada Shipping Act:—

(1) That provision be made in articles for the repatriation of all members of crews to place or places of their engagement, after they have completed their duties. (2) Cancellation of the Masters' present authority to discharge any member or members of the crew under the jurisdiction of the chief engineer, without the sanction of the chief engineer. (3) After official discharge books are issued and in operation no man shall be available for re-engagement in any Canadian vessel until his discharge book has been duly stamped up to date of discharge from last engagement by the proper authority. (4) The chief engineer and his engine room staff to sign articles on separate sheets from the Deck Department. (5) In regulations for discipline Article 3 to be amended so as to specifically include ALL engineers, as a protection from insulting or abusive language, instead of the master and mate only as at present. (6) Articles to be published in both the English and French languages. (7) That a qualified marine engineer be appointed to sit as a commissioner with the wreck Commissioners upon all cases. (8) That a health inspector be appointed at each important port in Canada for the purpose of inspecting health conditions on Canadian ships. (9) That all mechanically propelled ships, of whatever capacity, plying for hire, either in the freight or passenger service, must carry certificated engineers. (10) That the system of computing the capacity of the power now used on steamships, and known as nominal horse power, be abolished and in its place the indicated or actual brake horse power be used, known as standard horse power; and for the purpose of accommodating our present laws and regulations to conform with this standard horse power, the ratio be calculated on the basis of 100 nominal horse power, equal 500 standard horse power.

Want Shipping Investigated

A resolution which was introduced and adopted declared (1) that many shipyards in Canada are closed down and thousands of mechanics and seamen are out of employment due largely to the unrestricted use of foreign ships in Canadian coastwise trade; (2) that owing to the inability of Canadian shipbuilders to secure contracts for the building and repairing of ships for use in Canadian trade, and (3) that this condition has assumed such an alarming aspect as to warrant the serious consideration of the Federal authorities. The resolution approved of the Federal Government appointing a committee to study and make recommendations in regard to the matters referred to.

Educational Matters

The convention approved of the following demands being made on the Quebec Legislature in regard to educational matters:—

1. Free and compulsory education.

2. Compulsory and uniform tuition of the French and English languages in all schools of the Province.

3. All text books to be issued by the Government, upon the recommendation of the Boards of Education, and to be sold at cost price, pending their free distribution to scholars.

4. All school books to be uniform throughout the Province, it being one of the principal requirements for proper education.

5. All courses in the Provincial Government schools, technical and others, to be given free of charge.

6. No person to be permitted to teach in any school who is not the holder of a Normal school diploma, except in the case of primary courses such as those given in kindergartens and similar institutions.

7. That all persons under the age of 21, working in factories, workshops or any other places of employment, who are not able to read and write one of the two official languages of this country fluently, be compelled to attend evening classes.

8. The laws governing education be amended by the Provincial Government to provide for a minimum salary for school teachers in keeping with the cost of living and to permit the prosecution of School Commissions who pay less than said minimum salary.

9. A Minister of Education to be appointed, whose duties should consist in supervising the proper administration of School Commissions, the enforcement of the programme of education adopted by the Provincial Catholic and Protestant Boards of Education, and all other rules and regulations pertaining to education.

Another resolution adopted was one asking for a change in the Quebec statute in regard to prize books purchased by the public schools with a view to having the books printed in Canada, the clause in the law to read: "To have the right to participate in the allocation of grants to public schools it is necessary that each school commission furnish proof that not less than one half of the sum granted for the purpose of buying prize books is employed in the purchasing of books written by Canadian authors, printed in Canada."

A resolution which the convention approved was one which stated that as school books are often changed and not good for more than one year, that where necessary the matter be submitted to the proper authorities with a view to having text books supplied free.

Minimum Wage Legislation

Three resolutions on the question of minimum wages were considered and adopted. One of them pointed out that "the Ontario Minimum Wage Board had not issued a schedule of wages for female help in restaurants, hotels, etc., outside the city of Toronto,"* and asked that efforts be made to have such a schedule enacted.

It was also decided to request that all Provincial Legislatures pass legislation to pro-

* The Ontario Board issued an order, effective September 15, 1925, governing female employees in restaurants etc., in cities of 30,000 population or over, excepting Toronto (Labour Gazette, Oct. 1925, p. 977).

vide for a minimum wage for all male workers, "such minima to be not less than that set out in the Labour Gazette as necessary to maintain a family in a decent standard of living, the wage to be based on an eight-hour day."

It was asserted in the remaining resolution that certain defects as to hours of labour, definition of factory age and wages, had been found in the Ontario Factory Act and the regulations of the Minimum Wage Board. The convention adopted a proposal calling for necessary amendments and additions to the Factory Act.

Workmen's Compensation

Four resolutions were presented on the subject of workmen's compensation and all were adopted. The first requested the Quebec Provincial Legislature to give effect to certain recommendations in regard to workmen's compensations, and that a commission be appointed with power to establish a system of compulsory insurance, fix and collect premiums, indemnify the victims and their dependents and regulate all other questions without legal intervention.

The next resolution stated that there were many amendments required in the Ontario Workmen's Compensation Act, and with a view to having representations made to the Provincial Government, the convention adopted a recommendation that a conference of representatives of international and national unions affiliated with the Congress be called to frame the desired changes in the law.

The other two resolutions asked (1) that employees of amusement parks and summer resorts be brought under the provisions of the Ontario Workmen's Compensation Act, and (2) that all licensed garages, irrespective of the number of men employed, be covered by the same statute.

No Restriction as to Language

One of the resolutions presented asked the "Congress to use every effort to have immigration restricted to English-speaking people as much as possible." The Committee on Resolutions recommended non-concurrence. The suggestion was made by a delegate that the resolution be expunged from the proceedings, not being worthy of a place in the minutes. The convention, however, took no notice of the proposal but very decisively voted in support of non-concurrence.

Hours of Labour

Under the heading of "Hours of Labour and Conditions of Employment" eight resolutions were introduced. Two of them being of the same intent, only one was considered, and that asked for legislation providing that where a strike exists and the employer advertises in the newspapers for labour he shall be required to state in the advertisement that a strike exists.

The other resolutions adopted requested (1) That employees in the mechanical departments of all theatres in the province of Quebec receive one day's rest of 24 consecutive hours per week. (2) that legislation be sought to safeguard young men and women employed in financial institutions against long hours of employment, and that the various provincial departments of labour investigate the system followed in such institutions which compels unlimited hours of work; (3) that guards and others employed in the Dominion penitentiaries be given an eight-hour day, the same as those employed in provincial jails; (4) that Federal office cleaners be paid on an annual salary basis, the same as permanent employees, and that they be granted privileges of sick leave and holidays with pay, and superannuation;

It was also decided to endeavour to secure a discontinuance of the practice of railroad companies farming out the handling of freight and to have the work performed by the regular employees, and also to press for the payment of wages every two weeks on a regular pay day.

The convention approved of an amendment to the Quebec Strikes and Lockout Act to provide that no municipality "may interfere with the right of every citizen employed in such municipalities to become members of any union or association that they see fit to join."

Fair Wage Regulations

The convention approved of requesting the Quebec Government to amend the Fair Wage resolution* so as to provide for the insertion in all future contracts of the scale of wages that should be paid to all classes of labour employed on the various jobs, such scale to be an integral part of each contract, and also that the recently appointed Minimum Wage Commission be charged with compiling and enforcing the scale of fair wages.

Endorsation was given to a resolution asking for repeal of the following clause in the Dominion fair wage regulations:—

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees

* The resolution which governs the payment of fair wages in connection with public works in the Province of Quebec was adopted by the Legislative Assembly on April 14, 1908 (Labour Gazette, Aug. 1925, p. 755).

where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

Concurrence was given to a request that the Dominion Government be urged to appoint a fair wage officer for the Maritime Provinces.

Trade Union Unity

A resolution submitted set forth that the employers of the Dominion "are solidly united, being bound together by a solidarity of interest and organization," and further stated that the principal weakness of the Canadian trade union movement "is the fact that our organizations are divided along sectional, national, international, independent, and even religious denominational lines." The Congress was asked to declare in favour of the convening of an all-in conference of Canadian trade union organizations for the purpose of considering the possibilities of the furthering of national trade union unity in Canada, the Congress to take the initiative.

The committee on resolutions recommended non-currence in the proposal. The discussion on the report of the committee was led by Delegate John McDonald who asked that the resolution be adopted. Delegate Tim Buck also spoke in favour of the resolution. The other seven speakers who took part opposed the proposal, the argument being that to agree to such a conference would be to encourage dual unions, a condition which the Congress had always opposed. The report of the committee was adopted by a large majority.

Another resolution requested the Congress to endorse the policy of the British Trades Union Congress in its efforts to have the International Federation of Trade Unions agree to an unconditional conference with the All-Russian Council of Trade Unions, and urged support for an all-inclusive conference representative of the trade unions of the world for the purpose of establishing a basis upon which all organized workers can be rallied into one trade union international. Delegate John McDonald opposed the report of the committee and urged the endorsation of one trade union international. President Tom Moore in reply pointed out that the Communist Internationals of Moscow, which favoured such a conference as that proposed, was a dictator and abused all who differed with it. Committee report was adopted.

Old Age Pensions

In regard to old age pensions the following resolution was submitted and adopted unanimously:—

Whereas, it was the intention of the Federal Government to institute an Old Age Pension Plan to be administered jointly by the Federal and Provincial Governments by each paying 50 per cent of the proposed plan, and whereas, this joint control would place the old people in some of the Provinces outside the provisions of the scheme through the unwillingness of some of the Provincial Governments to co-operate, and is even likely to kill the plan now that steps are being taken to place this very necessary legislation on the statute books. Therefore, be it resolved, that this convention place itself on record as in favour of the Old Age Pension law being undertaken solely by the Federal Government as the only logical way of ensuring its success and that at least $30.00 (thirty dollars) per month be allowed to each person reaching the age of 65 years, who has been domiciled in the Dominion for at least 15 years and whose income shall not exceed, including the old age pension, the cost of living as published in the official Labour Gazette of the Dominion Government, and be it further resolved, that if the Federal Government again bring forward the same scheme as that thrown out by the Senate, we would immediately petition the Provincial Governments to endorse and pass the necessary legislation to bring it into force forthwith.

A resolution was also adopted in favour of requesting all provincial governments which have not as yet established mothers' allowances to do so.

A proposal was approved that all Federal employees who were eligible for superannuation or pension under the Calder Act be made eligible for the same privileges under the Civil Service Act.

Election Act Amendments

Under this heading were three resolutions asking for amendments to the Election Act, the first of which seeks to do away with the provision for re-election of members of Parliament who may be appointed to Cabinet positions within two years subsequent to a general election. The two others were in favour of (1) the chief electoral officer having full control of all official election machinery in Federal elections and the appointment of the necessary officers, also that the provincial governments be urged to act along similar lines; (2) a compulsory half holiday, with pay, to all workers on Federal election day.*

Grouped with the three resolutions above mentioned was one asking that the powers of the Senate be curtailed or same abolished. All were adopted without debate.

* Labour Gazette, October, 1925, page 949.

Unemployment

The subject of unemployment has been discussed at previous conventions of the Congress, and as a result certain suggestions were adopted to relieve the situation. A resolution on the question, which was adopted, declared that as nothing of a concrete nature had been done by the authorities to put the proposals into effect that the executive council continue its efforts to have the government give immediate effect to the suggestions, which were as follows:—

(1) the fullest development of our natural resources and the exportation of products in the highest manufactured form; and the encouragement of the natural bent of our people;

(2) the carrying on of all public works possible and the purchasing of supplies during periods of depression, allocating same to districts where unemployment is most acute;

(3) the limitation of the work-day to eight hours and the elimination of overtime in government undertakings;

(4) unemployment insurance to be immediately instituted to take care of those unable to find employment, or those, who through reduction of hours, have not sufficient income to maintain a fair standard of living.

Local Autonomy for the Sale of Beer

The following resolution asking for amendment to the Ontario Temperance Act favouring local autonomy for the sale of beer and wines, with Government control of spirituous liquors, was adopted unanimously:—

Whereas, the enactment of the Ontario Temperance Act has failed to meet the approval of the general public; its drastic provision having aroused the people, especially the people of the urban centres, into action such as no other provincial law has ever done; efforts to enforce it at vast expense have utterly failed to obtain for it due and proper respect and obedience by the citizens of the Province of Ontario; and whereas, the rapid change in public sentiment sweeping the province favourable to modification of the Ontario Temperance Act, which has been demonstrated by the several plebiscites and referendums, held from the time of the passing of this Act, resulting in overwhelming majorities in urban centres voting in favour of modification; and whereas, the Trades and Labour Congress of Canada has gone on record at convention after convention in favour of modification of the Ontario Temperance Act, be it resolved, that this convention reaffirm the many former decisions in reference to this Act and again petition the Ontario Government to amend the Ontario Temperance Act by granting to each municipality local autonomy for the sale of beer and wines in licensed places for beverage purposes, and that spirituous liquors be procured from Government stores under proper regulations.

Defeat Demand for Credits for Russian Purchases

The convention without discussion voted down a proposal that Government credits be extended to Russia for purchases in Canada.

Whereas, the Government of Russian Workers has withstood for years all attacks launched against it, demonstrating that it has virility and strength to consolidate a workers' state in the face of bitter opposition from the Capitalist Governments of the rest of the world; and whereas, workers' delegations from all lands have published extensive reports stressing the tremendous strides forward being made, and the great possibilities for trade and further rapid improvement in the event of satisfactory commercial and financial arrangements being made; and whereas, the trade between Canada and the Union of Socialist Soviet Republics is seriously limited and handicapped by lack of financial credit facilities, therefore, be it resolved, that this Convention of the Trades and Labour Congress of Canada urges the immediate extension of government credits, by the Dominion Government, for the extension of Russian purchases in this country.

Other Resolutions Adopted

In addition to the resolutions previously recorded, the Committee on Resolutions dealt with those following; all of which were recommended for adoption and approved by the convention:—

Asking for legislation to prohibit the manufacture or making of clothing for commercial purposes in homes.

Requesting the provincial executive committees of the Congress to ask for legislation making the granting of automobile licenses more stringent and also providing that all motor car owners shall take out public liability insurance before having licenses granted.

Reiterating demand on the Quebec Government that the laws respecting the issuing of licenses to moving picture machine operators be amended to more fully cover the work of a picture machine operator.

In favour of amending the Ontario Factories Act so as to have its provisions cover garages employing less than four workers.

In favour of provincial laws that will require certificates of competency by persons employed in garages and other places, and whose work is to adjust, repair or otherwise work upon automobile engines.

Reaffirming the objection of the Congress to the unrestricted use of paint spraying machines, whether used on buildings or in factories, and in favour of legislation to provide protection to the operators of such machines. Another resolution which was adopted sought to have spraying machines declared illegal where they are detrimental to the health or safety of the operators.

In favour of provincial legislation to provide for medical inspection for caisson, tunnel and subway workers, and also to compel employers where air pressure of over eighteen pounds is used to provide locks where the workmen can upon leaving work undergo the regulation period of decompression.

In favour of street railway companies equipping their cars with proper safety feeders as

approved by the Dominion or provincial authorities.

In favour of all affiliated local trade unions supplying the Federal Department of Labour with accurate figures as to numerical and financial standing.

Asking that all national and international organizations affiliated with the Congress be asked to place as many organizers as possible in Canada.

In favour of giving claims of employees for wages or salaries priority over all other creditors where estates or insolvent concerns are wound up or liquidated under the Bankruptcy or Winding-up Acts.

Disapproving of the amusement tax where same exists, unless the proceeds are devoted to hospitals or charity.

Protesting against military training in schools and colleges and urging that a system of physical training be substituted.

In favour of asking the Quebec Government to completely abolish all private employment bureaus or agencies with the exception of those operated by trade unions.

In favour of amendments to the Ontario Municipal Act providing for appeal from decisions of the Boards of Police Commissioners.

Objecting to the Ontario provincial government substituting prison-made material for grants of money in aiding in the construction of buildings of a semi-public nature and asking that where inmates of prisons are required to produce manufactured articles which may be used in competition with free labour that said inmates be paid wage rates similar to those paid to free labour.

Asking for a Royal Commission fully representative of all classes, including organized labour, to be appointed to investigate the conditions under which the banking business is being transacted in Canada, and demanding full reimbursement of all depositors of the defunct Home Bank.

In favour of legislation for the regulation of the use of the pneumatic hammer in such manner that will safeguard the health and lives of the operators.

Asking the Post Office Department to suspend all delivery of mail by letter carriers on Christmas and New Year's Day.

Passaic Textile Strikers

During one of the sessions of the convention Mrs. Ella Reeves Bloor, field officer of the United Textile Workers, delivered an address on the Passaic, N.J., textile strike. The strike, which was continued for more than eight months, involved recognition of the union and abolition of night work for women. A statement was given as to the aid furnished by the various unions; the manner in which relief was distributed, and the efforts which had been made to break the strike. The delegates were asked when they returned home to urge that funds be subscribed to aid the strikers. At the close of the address a collection was taken up, $154 being subscribed to the strike fund, for which acknowledgement was subsequently received from Passaic local union No. 1603 of the United Textile Workers.

Fraternal Messages

The greater part of the Wednesday morning session was given over to hearing greetings from the fraternal delegates. Mr. Jas. B. Connors, assistant president of the Switchmen's Union of North America, fraternal delegate from the American Federation of Labour, congratulated the delegates on the manner in which the business of the convention was transacted. He referred to many of the difficulties confronting the trade unions in the United States, among which was the extremest element, who through their boring from within tactics, had created dissension in the ranks. He, however, thought that the tyrannical employers were a greater menace than all the "Reds" in America. Mr. Connors did not believe in setting wages and working conditions by law, preferring to see a strong labour movement. He informed the delegates that the Illinois Federation of Labour had established a radio broadcasting station in Chicago and suggested that the labour men with radios tune in and hear labour principles discussed.

Right Hon. F. O. Roberts, M.P. for West Bromwich, England, and a member of the Provincial Typographical Union, who was Minister of Pensions in the Labour Government, presented the fraternal message from the British Trades Union Congress. Mr. Roberts also congratulated the convention on the way business was transacted and paid tribute to the pioneers in the labour movement who had done so much to ameliorate the burdens of mankind. He hoped that the brotherhood of peace and goodwill binding the workers of Great Britain and Canada would be long continued by the fraternization afforded through the exchange of delegates. Mr. Roberts made reference to the general strike in Great Britain and what he termed the miners' lockout. The conditions in the mining areas were shocking, and in support of this statement he quoted passages of speeches of members of parliament. He justified the objection of the miners to an extension of the hours of labour, and dissented from the allegation that the miners' leaders had done nothing to end the deadlock. The miners, Mr. Roberts stated, were agreeable to

acceptance of the bishops' proposals for a settlement, and the whole responsibility for a settlement not being reached must be placed on Premier Baldwin, who with his ministers had refused the bishops' proposals. As to the appeals for relief for the strikers and their families, Mr. Roberts strongly criticized Premier Baldwin in stating there was no need of relief. Relief was urgently required to prevent starvation. In reviewing the circumstances in connection with the general strike, Mr. Roberts repudiated the claim that the strikers were usurping the powers of government. The call for the general strike had not been as generously responded to as was expected, but those who had gone on strike did so in the belief that they would be the next to suffer if the miners were defeated. He believed the general strike was justified and the general council of the British Trades Union Congress had called it off when they considered it had served its purpose. Mr. Roberts referred to what is commonly termed the "dole," explaining how the unemployment insurance fund was built up, and he hoped that hereafter the fund would be called by its proper name. Referring to extremists, he stated that he had no fear of them. If there had been no extremists 50 years ago he would not be enjoying the benefits of to-day. Mr. Roberts deplored the tactics of the "Reds"—they should fight inside the labour movement not outside. He believed in industrial and political equality of men and women and closed with a plea for loyalty in the labour movement.

At the same session Mr. W. D. Mahon, of Detroit, Mich., president of the Amalgamated Association of Street and Electric Railawy Employees, who has attended many conventions of the Congress as a visitor, addressed the delegates on the progress of the trade union movement on the North American continent.

Mr. Ed. J. Gainor, of Washington, D.C., president of the National Association of Letter Carriers, another visitor, also addressed the convention during which he referred to the letter carriers in the United States, who at the present time, he stated, had not one grievance.

Mr. A. O. Wharton, the newly appointed president of the International Association of Machinists, who addressed the delegates at one of the sessions, referred to the failure of the Railroad Labour Board of the United States, of which he was a member. He gave an outline of the new tribunal which had been established for the purpose of adjusting disputes in the railway industry, and which it was hoped would be of benefit to the railroad employees. Referring to the One Big Union, Mr. Wharton stated that far from conferring any benefit, such an organization weakened the labour movement and had played into the hands of the employers. Mr. Wharton pledged the support of the machinists in the work of the Trades and Labour Congress.

Mr. Joseph T. Marks, of Toronto, secretary of the Labour Educational Association of Ontario, spoke to the delegates of the delay in publishing *The People's Cause*, a proposed labour paper for Ontario, which was occasioned by the failure of the Home Bank, in which all the funds of the paper were deposited. The money lost has been restored by collections, and it is intended that the paper will make its appearance in a short time.

A letter was received from Mr. Robt. Livett, of Calgary, provisional president of District 18 of the United Mine Workers, tendering congratulations to the Congress in its efforts to stamp out dual unions, and in which he stated that many seceding coal miners were now returning to the parent body.

Greetings were received from Mr. Wm. L. Hutcheson, of Indianapolis, Ind., president of the United Brotherhood of Carpenters and Joiners.

Towards the close of the convention Mr. Jas. B. Connors, fraternal delegate from the A.F. of L., and the Right Hon. Mr. F. O. Roberts, fraternal delegate from the B.T.U.C., were presented with gold watches, President Tom Moore making the presentations on behalf of the delegates. The wife of the Hon. Mr. Roberts, who was present, was presented with a wrist watch.

The local reception committee presented Mr. Gus. Francq, of Montreal, who has been an active worker in the labour movement, with a diamond stick pin. Mr. Francq was recently appointed chairman of the Quebec Minimum Wage Board.

Election of Officers

The election of officers resulted as follows: President, Tom Moore, Ottawa; Secretary-treasurer, P. M. Draper, Ottawa; vice-presidents, Jas. Simpson, Toronto; J. T. Foster, Montreal; and R. J. Tallon, Calgary, the latter being the only new incumbent.

Provincial Executive Committees: British Columbia—W. H. Cottrell (chairman), Vancouver; the trades and labour councils of Vancouver, Victoria and Prince Rupert are each to appoint one member to complete the committee.

Saskatchewan—Alex. M. Eddy (chairman), Saskatoon; C. Green, Moose Jaw; H. D. Davis, Prince Albert; H. Perry, Regina.

Manitoba.—Harry Kempster (chairman), Winnipeg; Geo. W. Howard, Winnipeg; V. Armand, Winnipeg; T. J. Purdie, Findlay, Souris District.

Ontario—H. Mitchell (chairman), Hamilton; Frank Reid, North Bay; Rod. Plant, Ottawa; Wm. Varley, Toronto.

Quebec—Geo. R. Burnett (chairman), Montreal; J. Pelletier, Montreal; Omer Fleury, Quebec; Louis Morin, Montreal.

Nova Scotia—Committee to be appointed by executive council.

Fraternal delegate to American Federation of Labour—Richard Lynch, Montreal. Fraternal delegate to British Trades Union Congress—Geo. R. Burnett, Montreal.

Edmonton, Alta., was chosen as the convention city in 1927.

THE TRADES UNION CONGRESS OF GREAT BRITAIN

THE fifty-eighth annual Trades Union Congress was held at Bournemouth on the 6th September and the five following days. The president was Mr. A. Pugh, Chairman of the General Council.

The number of delegates appointed to attend the Congress, as shown in the Statistical Statement compiled by the General Council, was 697; the number of organizations affiliated to the Congress (including those organizations, with a membership of about 100,000, which did not appoint delegates) was 174, with a membership of approximately 4,365,000, composed of the following groups:—

Agriculture, 30,000; Mining and Quarrying, 832,641; Metal Engineering and Shipbuilding, 601,382; Textile, 414,434; Clothing, 167,798; Woodworking and Furnishing, 82,616; Paper, Printing, etc., 170,280; Building, Decorating, etc., 299,495; Railway Service, 454,786; Other Transport, 402,692; Commerce and Finance, 172,680; Public Administration, 159,677; Miscellaneous, 78,318; General Labour, 498,615.

The figures for 1926 show little change compared with those for 1925. In most of the groups there was a slight increase in membership, but in the metal, transport, and general labour groups there was a decline.

The proceedings of the Congress were opened by the address of the president. The General Council's Report was taken immediately after the address, and the business of the Congress was arranged so that resolutions on the agenda were taken in conjunction with the relevant sections of the report. Resolutions were adopted (i) calling upon the Government to extend the principle of Unemployment Insurance to the agricultural industry, and (ii) protesting against workers in one occupation being prevented from following other occupations, and, in particular, condemning "the attempts being made to keep farm workers on the land by refusing them employment in sugar beet factories, and the indirect encouragement which is being given to these attempts by the Ministry of Labour."

A composite resolution was also passed calling upon the Government to amend the Workmen's Compensation Acts so that every disease arising from an occupation, or in the course of employment, should be scheduled under the Acts, that the compensation payable should be at least 75 per cent of the average earnings, based on full weeks of normal employment, that the receipt of compensation should not disqualify for National Health Insurance benefits, and that compensation should not be reduced on the ground that the recipient is "fit for light employment," unless such employment is available at suitable rates of wages.

A resolution demanding that there should be no differentiation between the rates of unemployment insurance benefit paid to single men and to single women was lost, the previous question being carried by 2,345,000 votes to 1,304,000.

The principal discussions on the second day were concerned with (i) Trade Union organization; (ii) education; and (iii) the Emergency Powers Act.

The main resolution on the first question asked Congress to declare that any division of wage-earners into Trade Unions established on narrow industrial lines is unlikely to be more effective in the workers' interests than present-day organization on a craft basis; that organization upon a basis of occupation limits the workers' power of resistance; and that the amalgamation of kindred unions should be continued, "with the object of one big union being reached as the ultimate goal of working-class organization." Another resolution was taken as an amendment to the above, expressing regret for the little advance made in the direction of industrial unionism, and instructing the General Council to call conferences of the trade groups in order to arrange for the merging of the separate unions within these groups into industrial unions. Considerable discussion ended in the adoption

of the amendment on a card vote by 2,164,000 votes to 1,658,000.

On the subject of education, the General Council, in its report upon the proposed development of Easton Lodge as an educational centre, asked Congress to impose a levy of one penny per member each year for three years, and in the meantime empower the Council to raise capital by loan for the scheme. A motion to refer the matter back was carried by 2,441,000 votes to 1,481,000. There was some criticism of the scheme itself, but the main criticism concerned the inability of delegates to commit their members, and the present urgent need for economy in the unions.

As regards the Emergency Powers Act, an emergency resolution was accepted protesting "against the continuance of measures designed for use only in time of great danger to the State, as being a violation of the traditions of the country."

The Congress also carried a resolution protesting against the decision of the Minister of Labour to abolish the Grocery and Provision Trade Boards and not to establish Trade Boards in the meat distributive, catering, and drapery and allied trades.

A long discussion took place on the third day upon the section of the General Council's Report dealing with industrial disputes. There was a short reference in the report to the mining situation and the National Strike, the General Council having decided to defer consideration of the whole subject until their report is presented to a conference of executives of affiliated unions. After the defeat of a motion for the reference back of the report, on the ground that a paragraph dealing with the National Strike was inaccurate, there was a discussion on a long composite resolution (and an amendment thereto) dealing with the powers and duties of the General Council. The resolution called for an investigation to be instituted into the whole subject of the extension of the powers of the Council in relation to disputes; while the amendment asked Congress to decide that the time had come for definite powers to be given immediately to the General Council in regard to the direction and control of disputes. A strong section of Congress argued in favour of postponing consideration of the whole question, and suggested the rejection of both resolution and amendment. The amendment was rejected by 3,202,000 votes to 848,000, and the resolution by 2,573,000 votes to 1,404.000.

On the fourth day a motion to refer back the report of the General Council on account of the inadequacy of a paragraph relating to the mining situation and the National Strike was defeated by 3,098,000 votes to 775,000.

A resolution calling upon the Government to institute an International Convention for the purpose of fixing an international minimum wage standard as a necessary corollary to the 48 hours' convention, and, pending such convention, to prohibit the importation of goods produced abroad under unsatisfactory conditions, was lost by 2,134,000 votes to 1,067,000. An emergency resolution was passed expressing appreciation of national and international financial assistance given to the miners, and appealing for even greater efforts. Congress adopted resolutions calling upon the Government to appoint the Minister of Labour as one of the representatives to the annual conference of the International Labour Organization; urging ratification of the Washington Hours of Work Convention now that "five great powers have agreed to the interpretation to be placed" upon it; expressing satisfaction with certain aspects of the investigation work of the International Labour Organization, and recommending all constituent bodies to study the machinery and take advantage of the services of the organization.

Consideration of the report of the General Council was completed on Friday. An emergency resolution was adopted on the right of Civil Service organizations to affiliate with outside industrial and political bodies, pledging strenuous opposition to any new restrictions, and, in the event of such restrictions being imposed, pledging the industrial and political labour movements to work for such amendments of law and practice as might be necessary to remove them. Another emergency resolution protested against the Guardians Default Act, 1926.

On the subject of international trade union unity a resolution was passed to the effect that one united Trade Union International should be created for the trade unions of the world; but another resolution suggesting that the International Federation of Trade Unions should be asked to call a conference with the Red International of Labour Unions was defeated by 2,416,000 votes to 1,237,000. Congress adopted a resolution in favour of the ratification of the Geneva Convention of 1921 concerning a weekly rest day in industrial undertakings, and urging unions to endeavour to incorporate this condition in agreements with employers. A resolution admitting trades councils, as such, to affiliation was rejected by Congress, on the ground that it would lead to dual representation of unions. A proposal to discuss the embargo of the Home Office upon the Russian delegates was not accepted, the General Council having made a direct

protest to the Government. Congress also declined to adopt a resolution dealing with the establishment of a uniform national minimum wage.

The proceedings of the Congress on the sixth day included the adoption of an emergency resolution concerning the action of the British and Japanese Governments in China. and of a composite resolution asking for an examination by the General Council and the unions concerned into the question of nationalization of industrial insurance, for report to next Congress.

Among the other subjects with regard to which resolutions were moved at the Congress were the position of trade union staffs; the sanitary condition of shops, offices, and warehouses, decasualization, and the guaranteed week (with special reference to the building trades); the prevention of systematic overtime; the abolition of home work in the clothing trades; the payment for holidays for all workers; the ratification of the Night Work in Bakeries Convention, approved at the International Labour Conference of 1925; the reduction of the State grant under the National Health Insurance scheme; the postal cheque system; decimal coinage, and metric weights and measures.

The election of the General Council resulted in the return of all the old members, with two exceptions; and in one of these cases the sitting member did not seek re-election. Mr. W. M. Citrine, who had been acting as secretary since the death of Mr. Fred Bramley, was unanimously elected general secretary.

During the week the first annual conference of Trade Union women was held, when resolutions were passed urging unions with women membership to encourage women to take a larger share in the administration and control of the Unions; the formation of women's Trade Union Guilds, and the necessity for increased education in trade union principles among young people entering industry. A discussion took place on the system of family allowances, a memorandum on which was presented and referred to delegates for further consideration.

Duties of Saskatchewan Bureau of Labour and Industries

The duties of the Bureau of Labour and Industries of the Province of Saskatchewan are outlined in the *Public Service Monthly* (Saskatchewan) as follows:*—

In March, 1910, it became necessary to appoint an Inspector of Factories and Fair Wage Officer, and the Bureau of Labour became a branch of the Department of Agriculture in March, 1911. The Bureau of Labour and Industries, with Mr. Thos. M. Molloy as Commissioner, was erected in February, 1920, and placed on its own footing under another minister. The bureau secures and distributes farm, domestic, clerical and harvest labour, and has also conducted the Teachers' Exchange since February, 1922, when this work was transferred from the Department of Education. The bureau acts as a mediator in trade disputes, administers The Factories Act and the Minimum Wage Act, Elevator Act, inspects factories, and publishes labour statistics. Much has been done to make better known the natural resources of the province, especially in clays and coal, and exploratory investigations of the resources of the North have also been made under the auspices of the bureau.

In relation to the industrial development of the province the bureau conducts investigations and research into the utility of those resources which give promise of immediate industrial development. As a consequence of this work much valuable information is available in the bureau to capital interested in the coal, clays and sodium sulphate deposits of Saskatchewan. The resources of the province being within the administrative control of the Federal Government the bureau conducts but a limited amount of geological work, confining its activities to those localities where conditions seem to warrant the working out of local geological problems. But the time is rapidly approaching when the bureau will, in co-operation with the Federal Department of Mines, undertake a more general geological mapping of Saskatchewan. This work is becoming more pressing because of the numerous seepages of gas and oil being reported to the bureau and concerning which accurate information is becoming necessary, not only to insure the proper development of promising fields, but also to protect the investors of the province against unwarranted "wild catting" by unreliable or unjustifiable promotions.

*An account of the functions of the various Labour Departments and Bureaus in Canada was given in the Labour Gazette, April, 1925, page 353.

An interlocutory injunction was granted during September in the Superior Court at Montreal, enjoining the Amalgamated Clothing Workers of America from picketing employees of the International Tailoring Company, Samuel Hart and Company, and the Society Brand Clothes, Limited. The three clothing firms, in petitioning for the writ, alleged that since July 24 of this year, when a strike was organized among their employees by the respondents, the respondents have continuously endeavoured to prevent workmen continuing in their employ. They alleged further that the respondents had resorted to threats, intimidation and even assault to enforce their wishes upon the petitioners' employees. The respondents were ordered to furnish security in the amount of $500.

NOTES ON LABOUR UNION ACTIVITIES

Federation of Catholic Workers of Canada

THE fifth annual Congress of the Confederation of the Catholic Workers of Canada was held in Sherbrooke, Quebec, from September 18 to 21 inclusive. The delegates, in large numbers assisted on Sunday, September 19, at the mass celebrated in St. John the Baptist church, Sherbrooke. In the afternoon the delegates paid a visit to Monseigneur O. Gagnon, Bishop of Sherbrooke; later a civic reception took place at the city hall followed by addresses of welcome delivered by Messrs. J. K. Edwards, mayor of Sherbrooke; C. B. Howard, M.P. for Sherbrooke, and A. C. Crepeau, M.P.P. The addresses were responded to by Mr. Pierre Beaulé, president of the Confederation, and by Reverend Mr. Fortin, chaplain.

Communications were read from the Honourable G. B. Jones, then Minister of Labour, Ottawa; Honourable A. Galipault, Minister of Labour, Quebec, and from the Catholic bishops and prominent citizens of the province, expressing their regret at being unable to attend the Congress.

The report of the committee on credentials established the seating of the eighty-eight delegates representing eighty-six syndicates.

The following resolutions were passed:—

Requesting the provincial government to compel automobile owners to carry an insurance policy in order to protect the public against the damages caused by insolvent automobilists;

Recommending the establishment of a strike fund by the various federations, and that the executive board be authorized to call for a voluntary special assessment when required;

Requesting the federal government to establish an old age pension; and that the executive board interview the government with the view of submitting ways and means to that effect;

Requesting the provincial government to grant, after the birth of the fifth child, an allocation of $25 and for each subsequent birth;

Requesting the provincial government to control the installation and handling of the Duco and other types of paint spraying machines.

Requesting the executive board to bring pressure upon the school commissioners in each industrial centre, with the object of establishing evening classes for the benefit of working men;

Requesting the Provincial government to establish in the province a Superior Council of Labour;

Requesting the provincial government that the Quebec Trade Disputes Act be amended in such way, that there will be no misunderstanding as to its interpretation;

Requesting the executive board to impress upon the municipal councils the necessity of prohibiting the one-man street car in cities of a population of 50,000 or over;

Requesting the provincial government to abolish the tax known as the "workingmen's tax" in all municipalities of the province;*

Referring to the legal adviser of the Federation a further study of section 501 of the Criminal Code of Canada, with a view to placing the same along the lines of the English Trade Disputes Act, 1906, in regard to picketing;†

Requesting the provincial government to amend the Workmen's Compensation Act in order to permit civic firefighters (pompiers) to come under its scope;

Requesting the provincial government to amend the Arbitration law affecting disputes with firefighters (pompiers) and police, and extend the statute so that it will include all municipal employees;‡

Requesting both the federal and provincial governments to establish the eight-hour-day work in all industries where women are employed;

Protesting against the manner in which Roman Catholics are treated in Mexico;

Adopting a resolution from the Stationary Engineers of Quebec City, asking for the establishment of a provincial law to protect both Engineers and Public;

Requesting the appointment of a commission composed of Federal Government, industry, and labour representatives, to study proposed changes in regulations and by-laws at present in force regarding dry docks;

---

* A tax is levied by some municipalities in the Province of Quebec on workmen coming from other municipalities to work within their boundaries. (LABOUR GAZETTE, November, 1925, page 1608.)

† The provisions of the Canadian and of the British Acts are described in the report on *Reners versus the King*. (LABOUR GAZETTE, June, 1926, page 618.)

‡ The Municipal Strike and Lockout Act (Revised Statutes of Quebec, 1925, chapter 98) defines "employee" as including "policemen, firemen, waterworks employees and those in charge of the incinerator, removal and transportation of garbage."

Requesting the provincial government to establish the 48-hour week for women in textile mills; also to see that the machines stop running during the noon hour; and to place in operation as soon as possible, the minimum wage law for women;

Requesting the provincial government to prohibit the placement of workmen by Employment Bureaus at wages less than the current rate or working conditions;

Requesting the provincial government to appoint an inspector to enforce the sanitary conditions in lumber camps and the system of "one man one bed";*

Requesting the federal government to amend the existing registration law in such a manner as will permit the registration of union labels;

Requesting the government to enact a law compelling contractors to place prominently a "First Aid" outfit for immediate use in case of accident;

Authorizing the executive Board to inform the provincial government that the Workmen's Compensation Act, as adopted at the last session of the legislature,† does not meet with the requirements of organized labour of the province in so far as:—

(1) That the law does not protect all workers as it should.

(2) That the law is more favourable to the insurance companies than to the victims of accidents.

(3) It makes impossible to determine the annual salary.

(4) In many cases it prevents the victim of the accident from availing himself of the law.

(5) It should recognize collective responsibility of industry, and establish an insurance fund administered by a Commission with the right for the workman to appeal before a tribunal in case the claim of the workman is refused by the administrative Commission.

(6) That precedence should be granted by the Courts to these claims over others and without appeal.

(7) It deprives the workman of the faculty of using the capital income.

(8) It ignores the right of the collective contract.

(9) That it should indemnify the workman for the full amount of damages caused by non-observance of laws regarding the prevention of accidents.

Asking the attorney general to appoint a judge of the Superior Court to hear disputes that may arise between the syndicates incorporated, in accordance with the "Act respecting Professional Syndicates" of Quebec, and the employers, in the execution of agreement or other matter relative to the Act* and that before this judge, the disputes above mentioned will have precedence over other cases.

Several amendments to the constitution of the Federation were adopted. The reports of the organization committee and executive board were adopted.

The report of the label committee recommended that each Federation establish its own label.

During the Convention, Reverend Abbé Coté of Quebec, gave a lecture on the work accomplished to establish a mutual insurance to be known as: "Mutual Benefit Society of the Federation of the Catholic Workers of Canada." During the sessions of the congress, Messrs. P. Fontaine, Quebec, legal adviser of the Federation, and Mr. G. H. Robichon, Three Rivers, lawyer, gave lectures and discussed the Workmen's Compensation Act.

The report of the general secretary showed that 660 new members have been affiliated with the Confederation, forming a total of 26,110 members. Receipts during the year were: $9,729.32; expenses, $8,379.87; leaving a balance in hand of $1,349.45.

The election of officers resulted as follows:—

President, P. Beaulé, Quebec.
1st Vice-President, O. Filion, Montreal.
2nd Vice-President, A. Brulé, Sherbrooke.
General Secretary, F. Laroche, Quebec.
Treasurer, Jos. Comeau, Lachine.

A unanimous resolution was adopted thanking all who assisted in making the Congress a success, particularly, the religious and civic bodies of Sherbrooke, the federal Department of Labour, represented by Mr. T. Bertrand; the provincial Department of Labour, represented by Mr. A. Crowe; Mr. P. Fontaine, legal adviser of the Congress, Quebec; Mr. G. H. Robichon, lawyer, Three Rivers.

The next annual convention to be held at Lachine, Que.

* By-laws issued in 1924 under the Quebec Public Health Act, applying to lumber and mining camps, were outlined in the Labour Gazette, May, 1924, page 354.

† Labour Gazette, April, 1926, page 324.

* The Act respecting Professional Syndicates was outlined in the Labour Gazette, April, 1924, page 303.

Federation of Catholic Printing Trades

Previous to the meeting of the Federation of Catholic Workers the Federation of the Catholic Printing Trades held its first annual conference also at Sherbrooke, Quebec, Mr. A. Comeau, President, presiding. Attending the conference were fifteen delegates from Montreal, Sherbrooke, Hull, Chicoutimi and Joliette. Reverend A. Perrier, Chaplain, gave a lecture on the support that should be accorded Catholic Unions. A constitution was adopted, and other resolutions to be submitted to the fifth convention were adopted.

The result of the election for the officers of the Federation was:—

President, A. Comeau, Montreal.
Vice-President, A. Morin, Hull.
Secretary General, Jos. Comeau, Lachine.
Treasurer, A. Dery, Montreal.

International Union of the United Brewery, Flour, Cereal and Soft Drink Workers

The twenty-fourth convention of the International Union of the United Brewery, Flour, Cereal and Soft Drink Workers was held in the city of Cincinnati, Ohio, on September 13-17, 1926, there being present eighty-two delegates with twenty-four proxy votes, representing seventy-six local unions.

Among those who addressed the convention at the opening session was A. J. Kummer, president of the central labour council of Cincinnati, who reviewed the struggles of the international union and deplored the conditions that followed the adoption of the Eighteenth Amendment to the Constitution of the United States. He urged the delegates to continue their efforts to secure modification of the Volstead Law, thereby re-establishing employment for the membership of the organization.

General Secretary-treasurer Obergfell, on behalf of the general executive board, reviewed briefly the conditions that confronted the organization during the past three years and outlined the political activity as it related to the modification of the Volstead Law. He expressed the belief that this modification would soon be an accomplished fact.

General Organizer Kugler dwelt at length on "the changed sentiment sweeping the country on the modification of the Volstead Law" and reviewed the active support being received from the American Federation of Labour.

A review of the progress now being made by the State of Wisconsin in the protection of wage earners in respect to accident compensation and safety, and also in the matter of child labour regulation, was given by R. G. Knutson, member of the Wisconsin Industrial Commission, Madison, Wis.

J. P. Frey, personal representative of President Green of the American Federation of Labour, in addressing the convention, touched briefly upon the good accomplished by the creation of the Industrial State Commissions and urged that efforts be made to establish only state industrial insurance, thus eliminating private insurance companies. He spoke of the new basis of wages made at the Atlantic City convention of the A. F. of L., in which it is declared the workingman is not only entitled to a fair share of the labour created, but in addition to that he must receive a fair share of the profits derived from the natural resources, machinery and management of any industry. This, he stated, was the advanced wage philosophy of the American Federation of Labour. In speaking of internationalism, he informed the delegates that this is the only continent in the world in which the workers living in two countries (referring to the United States and Canada) have but one organization representing their interests.

John J. Manning, secretary of the Union Label Trades Department of the A.F. of L., expressed himself as being in full accord with the declarations contained in the report of the officers covering the policies of the organization.

The convention amended the international constitution to combine the offices of the three general secretaries into two, namely, a general secretary-treasurer and a general corresponding-financial-secretary.

Officers elected were as follows: Gen. Sec.-treas., Joseph Obergfell; Gen. Cor.-Fin.-Sec., John Rader; Gen. Organizer, Albert Kugler.

Chicago, Ill., was selected as the next convention city.

International Trade Union School

The International Trade Union School, organized by the International Federation of Trade Unions, held its summer session on July 19-31 at the Labour High School at Uccle, near Brussels. The courses of the school were followed by 68 pupils coming from Germany, Austria, Denmark, Spain, Great Britain, Japan, the Netherlands, Sweden

and Czechoslovakia. The various courses and lectures dealt mainly with the study of the co-operative and political trade union movement in the various countries.

German General Confederation of Labour

The report of the German General Confederation of Labour for 1925 contains the following information on the membership of the Confederation.

The hopes of development which were entertained at the beginning of 1925 have not been realized as the result of the economic crisis which led to ever-increasing unemployment. The total average number of members of the Confederation in 1925 was 4,156,451 (including 751,585 women), a number higher by 158,644 than that for 1924. The number of central federations fell from 41 to 40, since the Federation of Singers separated from the Federation in order to avoid becoming affiliated to the Confederation of Salaried Employees. The receipts of the Federations, which show a favourable development, reached, in 1925, 147,526,701 marks, as against 97,037,600 marks in 1924. Expenditure was 125,874,093 marks. The local committees, which group all the unions affiliated to the German General Confederation of Labour, have resumed their work. In 127 towns, they maintain trade union premises, of which 102 belong to the local committees. Further, they own libraries in 696 localities.

Charter for Trade Union Movement in the Balkan States

An account of the trade union movement in the Balkan States is given in the September number of the *International Labour Review*, a publication of the International Labour Office (League of Nations). In these States, where the political movement is often confused with the trade union movement, the divisions and disturbances produced under the influence of communist propaganda have seriously interfered with the normal progress of trade union organization. The Balkan workers, having little direct relation with western countries, have not been won over to take part in the positive campaign for realizing social reforms. The communists have taken advantage of this isolation, and have produced a state of confusion which has led to the isolation and indifference of the majority of the workers. It was not until quite recently, and in consequence of the disillusionment to which the communist propaganda has led, that re-grouping became possible, and an atmosphere favourable to the holding of an inter-trade-union conference could be created.

Such a conference was held at Sofia, Bulgaria, last April, under the auspices of the International Federation of Trade Unions (Amsterdam). The demands formulated at this conference constitute a "labour charter" for the trade union movement in the Balkan States, and will serve to guide its future policies.

Resolution on Social Policy

I. Action in favour of the enforcement and maintenance of the statutory maximum working day of eight hours in industry, commerce, and agriculture. Introduction of the six-hour day for young persons, women, and workers employed in unhealthy industries. Wherever a shorter working day has been obtained, this should be definitely established by law. The enforcement of the working day of eight hours or less should be effected by fixing the beginning and end of the work. As a general rule, the weekly rest of not less than 36 hours should fall on a Sunday. Ratification and enforcement of the International Conventions concerning prohibition of the night work of young persons and women, and in bakeries.

Extension of labour inspection to all occupations; appointment of labour inspectors selected from the trade union delegates.

Measures for protecting the health and safety of wage-earning and salaried employees. Campaign against occupational diseases.

Legal recognition of works councils and representatives of the workers.

Creation of labour courts to settle disputes arising out of contracts of employment; appointment of assessors with the assistance of the unions.

Creation of official employment exchanges with joint representation on the managing committees. Trade union exchanges and official employment exchanges to be on an equal footing.

Adoption of an Act making collective agreements legally binding, and governing the functions of arbitration offices.

The arrangements made for the workers' rest to be supplemented by legislation on holidays with pay.

Prohibition of the employment of children under 14 years of age, and of women during the two months preceding and the two months following confinement.

Compulsory education up to the age of 14 years. Vocational and continuation education for young workers to be adapted to the practical requirements of the day. Such training to be included in the statutory hours of work.

Equal pay for men and women.

Extension of labour legislation to workers in state and other public services, agricultural workers, and home workers, unless they are subject to more favourable regulations.

Creation of independent chambers of workers to secure the official representation of the interests of wage-earners.

Ratification of the draft Conventions and Recommendations of the International Labour Conference.

II. Introduction of a system of social insurance on modern principles, and covering the following branches; sickness insurance, accident insurance, invalidity and old age insurance, widows' and orphans' pensions, maternity insurance, insurance against death, unemployment insurance. Independent management by the insured of the organs of social insurance.

III. In virtue of the principle of the equality of treatment of all persons irrespective of nationality or religion, the trade unions should use every means to promote the international realization of the demand of the unions for the freedom of movement of the workers.

In countries where economic depression and unemployment have become so acute that the unemployed must be protected, transitional measures should be taken for temporarily keeping the influx of foreign workers within the limits of existing requirements, provided however that the foreign labour already engaged shall in no case be expelled.

With a view to the systematic distribution of emigrant labour between the different countries, the International Federation of Trade Unions should be requested to urge the International Labour Office to arrange for the conclusion of International Conventions.

Visas on passports should be abolished, pending the abolition of the passports themselves.

If it is impossible to abolish passports, uniform international passports, valid for three years, should be introduced.

Equality of treatment should be aimed at in economic, social and intellectual matters. Equality before the law is one of the fundamental demands of the labour movement. As under present legislation foreigners are entitled to equality of treatment only on condition of reciprocity, the establishment of uniform international legislation should be promoted.

THE MITTEN PLAN OF EMPLOYEES' REPRESENTATION AND MANAGEMENT

THE co-operative plan of management known as the Mitten Plan,* which has been in effect for the past fifteen years in the Philadelphia Rapid Transit Company, was renewed early in the present year by a vote taken at a convention of all the committee men representing the employees and the company. The Mitten Plan provides for class and group representation, and for a free and independent expression of the views of both parties through branch committees, departmental committees, and general committees. The resolution renewing the arrangement for another period sets forth that "under the Mitten plan employees are assured continuation of their present standard of living in good times and bad; are given opportunity to participate in the prosperity of the industry in which they work, and are further enabled to become owners as well as operators of the workshop in which they earn their daily bread."

At the close of 1910, the Philadelphia Rapid Transit Company was on the verge of bankruptcy. Serious strikes had occurred in 1909 and 1910, and the conductors and motormen were receiving a maximum wage of only 23 cents per hour. This rate, under an arbitration settlement, was to increase one-half cent per hour on July 1 each year until it reached 25 cents per hour. The rolling stock was in a state of great deterioration and accidents were numerous. Mr. T. E. Mitten was then placed in charge of the company with a view to its rehabilitation. Mr. Mitten invited the men to co-operate with the management according to a plan which he explained, promising if they did so that 22 cents out of every dollar received in fares would be used for the payment of wages to conductors and motormen. The co-operative plan was adopted by the company in August, 1911. The management then submitted the plan to the employees with the proposal that if two-thirds of the train force so voted, the co-operative plan would be introduced with the company dealing with the men through a union organization otherwise the company in carrying out the plan would deal with the men as individuals. A vote was taken but neither of the existing unions was able to poll the required two-thirds' vote. Consequently the plan was put into effect with the management dealing directly with the employees, but with the express provision that any man might belong to any union or organization without hindrance. This policy has been adhered to ever since.

Under the plan adopted in 1911 the basic hourly wage rose to 31 cents in 1916, and by July 15, 1918, the rate was 43 cents per hour. The company then voluntarily decided to base its wages on the average of the wages awarded by the National War Labour Board to street-car men of the four cities of the first class—Chicago, Cleveland, Detroit and Buffalo. This brought the wages to 48 cents per hour. In 1922 Buffalo was eliminated in wage determination, and the policy was established of paying employees an additional sum as a reward for exceptional co-operative effort, not to exceed 10 per cent of the employees' earnings for the year, to be paid after the stockholders had revised an amended form of the plan previously in effect.

It is provided in the plan that all matters relating to wages, working conditions and discipline shall be discussed and considered at joint meetings of committees on which the management and the men have equal representation. The company is organized in five departments, which are in turn divided into branches. The employees of each branch elect

* LABOUR GAZETTE, April, 1925, page 362.

annually two representatives who meet with two representatives of the management to consider, and so far as possible settle, all questions for that branch arising out of relations between employers and employees. At stated intervals the branch committeemen of each department meet in departmental committes which deal with all questions affecting the department as a whole, or affecting one local branch, or questions that cannot be settled by the branch committees. There are two departmental committees for each department, one composed of employee representatives and the other representing the management.

Each departmental committee of employees shall elect from among its members two representatives to the general committee for employees, and the management appoint two representatives from each departmental committee for employer to form the general committee for the employer. The general committees discuss matters affecting more than one department or such that cannot be settled by the departmental committees themselves. If any question cannot be settled by the general committees it is referred to arbitration, each committee appointing one arbitrator and the two arbitrators appointing a third. If they cannot agree upon the third arbitrator the chairman of the Public Service Commission of Pennsylvania is requested to act or to appoint his personal representative.

The committees meet in joint session, but act as independent units. Each side ordinarily discusses the business in the presence of the other, but a committee may retire to vote in secret caucus, the vote being taken by secret ballot. The majority of any committee is considered the voice of the committee. In no case do the employer and employee representatives vote as one body. Any employee is entitled to vote for branch committeemen, unless he has been with the company less than six months or occupies an official position.

PROPOSALS FOR STABILIZING BITUMINOUS COAL MINING INDUSTRY IN UNITED STATES

Giving evidence recently before the Committee on Interstate and Foreign Commerce of the United States House of Representatives, in connection with hearings on proposed coal legislation, the Honourable Herbert C. Hoover, Secretary of Commerce, recommended three forms of action with a view to preventing future industrial troubles in the bituminous industry, which might be acted on at the next session of Congress. He was not in favour of action at the late session, as it was his belief that the industry was approaching normal conditions through its own medium, and he did not favour legislation unless it becomes apparent at the next session of Congress that the industry has not stabilized itself, or set up machinery so to do. Mr. Hoover recommended:—

1. First, that Congress should be authorized to appoint, or should authorize the President to appoint, in times of emergency, a mediation board for the bituminous industry;

2. That the Interstate Commerce Commission should be given authority in case of such emergency to handle the distribution of coal;

3. That steps should be taken, in co-operation with the coal industry, for the systematic collection of statistics and essential facts.

Mr. Hoover expresses the belief that the greatest difficulty facing the bituminous mines, the over-expansion brought about by the war stimulation, which has been further stimulated to some extent by troubles in the anthracite fields. The great difficulty was that this over-expansion resulted in over-production and a consequent sharpening of competition which has led to price cutting until many mines have operated at a loss for a greater part of the time, and few mines are operated throughout the year.

Although not in favour of a coal trust, Mr. Hoover believed that many advantages would result from combinations in the industry. First of all, the high-cost mines would be closed and held as reserves, and the low-cost mines would be run continuously, with resultant better employment conditions, although the number of workers required would be less. Those retained would acquire the benefits of full-time employment instead of part-time employment, which is the lot of most miners in the bituminous fields today. The great benefit would be to the consumer. The distribution of coal in the United States, he pointed out, is an expensive process for the consumer, inasmuch as the product passes through several hands before it is retailed to the ultimate consumer. By a process of combination of mines under one ownership, the combinations would be financially able to in-

stall their own distribution system with retail agents in the various cities, and would thus obtain easier marketing conditions. The consumer would then be buying direct from the mine, and the now excessive distribution costs would be eliminated.

Coal Mining in Great Britain and the United States

On being asked to comment on the difference between conditions in the coal industry in the United States and in Great Britain, Mr. Hoover said that no comparison could be made because conditions were so different. He pointed out, however, that in Great Britain the costs have been increasing while production has been decreasing, which is the reverse of what has been happening in the United States. In the United States the tonnage per man per year obtained is, he stated, almost three and a half times that obtained in England. The wages of the British miner are only about 35 per cent of those of the American miner. This is the result of low production. In Great Britain it took 1,100,000 men to produce in the neighbourhood of 300,000,000 tons of coal, while 620,000 miners in the United States were producing 450,000,000 tons. He believed that to a certain extent conditions could be improved in Great Britain by the closing of high-cost mines, and by increased production in low-cost mines. He offered no solution for the question of employment of miners not retained, nor did he comment on the government relief which has been proposed, should such action be taken.

Mr. Hoover was unreservedly against the government taking over the control of the mines in case of industrial emergency. He believed that this would mean government ownership. He was of the opinion that the best way for the government to assist in the solution of industrial difficulties was through mediation.

Meeting of the U. S. National Fire Waste Council

New strategic moves in a national campaign to check the ravages of fire, representing in the United States a loss of upward of a billion dollars annually, were considered at a meeting of the National Fire Waste Council, sponsored by the Chamber of Commerce of the United States. The Council turned its attention to the problem of the forest fire, which accounted for an actual loss of $28,000,000 and an intangible loss of many times that sum last year. The Council also reviewed a plan of campaign to reduce the fire loss on farms throughout the country, estimated to have amounted to $150,000,000 last year, one item that goes to make up the $570,000,000 total loss covered by the actuarial records, in which forest fire losses are not included.

A test to determine a basis for estimating the extent of losses in the form of deaths and casualties by fire, was also given consideration by the committee. On a basis of incomplete statistical returns from eight states, covering a period of three months, the conclusion was reached that the average annual loss of life from fire in the United States approximates 3,500, a rate of 32.9 per million inhabitants. The average for injuries is 84.8 per million.

The committee conducting the test reported as follows:—"The summary reveals a number of significant points. Of the total of 249 deaths, 80, or 32 per cent were due to flammable liquids; 48 deaths were caused by open flames, 36 by burning structures; 24 by explosions and 14 by carelessness with matches. Of the 249, 114 were adult males, 51 adult females, and 69 were children. As to the type of occupancy in 40 deaths no building was involved. In dwelling houses there were 118 deaths; in apartments, hotels and rooming houses, 14; in schools and churches, 1; in industrial plants, 18; in mercantile structures, 2; in office buildings, 1; in garages, 3; in barns and other farm buildings, 5; in warehouse, 1; in automobiles, 13; in boats, 27; in railway cars, 1; in hospitals, 1; miscellaneous, 4."

It is the intention of the Council to continue the test in order that a more accurate basis may be obtained for estimating the loss due to deaths and injuries by fire.

The Indian Seamen's Union at a recent meeting at Bombay, passed a resolution condemning the system under which seamen are recruited through licensed shipping brokers, and asking the government to appoint a government officer, together with an advisory committee to consist of representatives of the shipping agencies of the Indian Seamen's Union.

INDUSTRIAL HYGIENE IN ONTARIO IN 1925

THE forty-fourth annual report of the Department of Health of Ontario outlines the work carried on during 1925 by the various divisions of the Department. These divisions are concerned respectively with Preventable Diseases; Industrial Hygiene; Child Hygiene; Sanitary Engineering; Vital Statistics; Dental Services; Laboratories; and Public Health Education.

The Division of Industrial Hygiene carries on important work for the purpose of reducing the suffering and loss in production caused by ill-health, physical defects and industrial accidents. This work is in three divisions, namely, statistics and publicity; research and study of industrial health problems; and organization of industrial health services. Under the first heading the situation regarding health of workers has been presented in numerous personal interviews with employers, this being the most fruitful means of communication. In addition to this work through personal contact the Division gives publicity to health and safety studies in the press and in scientific magazines, and maintains a lending library for use by persons working in the field of industrial relations, especially those engaged in behalf of the health of workers in industry.

The second phase of the work includes the study of individual problems connected with specific occupational hazards, ventilation, fumigation, and the reduction of the severity of accidents. Among the specific occupational hazards considered by the Division during the year were the influence of heat on the eyes of tin plate workers; the eye effects of wood alcohol in picture moulding and finishing; health hazards in bronzing; means for detecting the presence of blue water gas in the air as a warning; the hazard from benzol in "Duco"; the health hazards in electric welding; means for prevention of lead poisoning in hardening steel; oil dermatitis, etc.

Sixty-one cases of occupational disease have been brought to the attention of the Division. These cases have led to inquiries into various chemical problems such as analysis of floor dust for content of lead; collection and estimation of benzine, lead, carbon monoxide in air; arsenic and lead determinations in urine and saliva; rock and lung analysis for silica content; blood analysis for calcium and uric acid content.

Besides these inquiries arising out of special cases, the Division has conducted systematic investigations into conditions in certain hazardous trades as follows:—

In a storage battery where the employees are exposed to lead four cases of early lead poisoning were detected, and six additional men were removed following re-examination.

In an ore-smelting and refining plant examinations were made of men exposed to arsenic. Thirteen of these cases showed symptoms associated with exposure to arsenic, such as rashes, high blood count, high haemoglobin, low blood pressure, perforated septum. Five cases showed evidence of excessive bleeding and diminished haemoglobin, sometimes said to be associated with exposure to cobalt. These cases were exposed to cobalt dust. It is interesting to record that there were six cases of sugar in the urine in this group. With such an array of symptoms none of these men complained of ill health.

In quarries, 110 examinations were made of men exposed to silica dust. Of these men 58 showed no effect; 22 were suspicious of silicosis; 22 had definite silicosis; and 8 had silicosis plus tuberculosis or suspicious tuberculosis.

In mines, 236 examinations were made at Porcupine of men exposed to silica dust for at least five years. The results showed 98 cases with no effects; 47 cases of suspected silicosis; 45 cases with definite silicosis; 30 cases of silicosis with tuberculosis or suspected tuberculosis; and 16 with tuberculosis or suspected tuberculosis alone.

An inquiry into the means of controlling nickel rash was continued, and a report is in course of preparation.

In connection with the work on nickel rash where conditions of high temperature obtain, and in other processes where high temperature and humidity are incident to the operation, particularly in the pulp and paper industry, many observations were made with the kathathermometer to determine the "cooling power" of the air in various seasons and under varying outside atmospheric conditions in the same season, with a view to ascertaining exactly what ventilation conditions exist and in what way they may be improved. This question is closely connected with the problem of condensation of moisture in hot, humid processes, a very important economic consideration. One remedy, it is stated, may meet both conditions satisfactorily. About 4,000 katathermometer observations were made in the past year and from a study of these recommendations are being drafted.

Fumigation.—Cyanogen chloride has been used for fumigation by the chemist of the Division in bunk houses in the lumber indus-

try with good results. It will always be necessary to keep the use of cyanogen chloride in the hands of experts. A plan for its use widely had not yet been developed.

Special attention is called in the report to the serious losses resulting from the infection of wounds, and employers are advised to give more attention to the establishment of medical services responsible to the industry.

Conditions in lumber camps.—The report of the Chief Sanitary Inspector, Mr. A. R. White, forms part of the report. This year the feature of this section is the examination which was carried out of conditions in the lumber camps with respect to the provision of medical aid. "During the year," he states, "while carrying out the regular duties among the forest products industries, we had, on occasion, come across many injured workmen lying in the bunk houses when they should apparently have been provided for in some hospital. In dealing with these cases it became necessary to discuss the reason for this apparent neglect with the company physician and with the management itself, and at times deal with direct complaints from injured men. On investigating these cases the whole field of accident prevention and of the mitigation of accident severity, with the accompanying terrific cost of paying for these accidents through compensation assessment, appeared to be involved. It seemed proper, therefore, having the machinery at their disposal, that we should undertake a study of this whole question as far as it is related to the general lumberman of Ontario, and to the pulp and paper industry. The similarity of these two institutions is such that any solution to the problems of one must necessarily rebound to the benefit and advantage of the other.

"A study of the woods operations of both industries brings out the somewhat startling fact that up until the winter of 1925 no work whatever had been undertaken among the 30,000 men who labour in the wood cutting camps throughout Northern Ontario and from which, during 1923, came the astonishing record of 3,421 men injured and 46 killed. Then add to this the record of our saw mills which is 1,590 men injured and 6 killed. We have then for the year a grand total covering the lumber camps of Ontario, with the saw mills in connection therewith, of 5,011 men injured and 52 killed, with a cost to the industries of upward of $1,000,000, or as has been estimated by the industries themselves an added cost of 50 cents to every 1,000 feet of lumber produced and 30 cents added to every cord of pulp wood cut."

The inspector notes a marked improvement, however, in the organization of accident prevention. "The lumbermen of Ontario," he says, "have already reorganized and augmented their accident field forces, and have actually started work."

In regard to bunk houses Mr. White points out that "there is still some difficulty in inducing the lumberjack to fully appreciate the good effort which is being made by the employer to supply good housing conditions. One often finds beds wantonly destroyed, cuspidors upset and ventilators plugged up. The education of the employee is now considered of paramount importance for the future and our next step, but just how this may be accomplished is difficult because of the transient nature of the employee. Hopes are entertained, however, that as wages improve and living conditions become more attractive, men may stay longer and may even return to the camps year after year and thus begin to take an interest in their surroundings and in themselves."

There are throughout Northern Ontario 150 companies with 424 camps which give employment to 21,916 men. In addition to these, there are also the following mills in the unorganized territory:—

	Men
60 saw mills, employing	4,657
61 mines, employing	2,300
53 road camps, employing	1,725
83 extra gangs, employing	2,865
5 paper mills, employing	3,175
7 construction companies, employing	2,600
2 fishing stations, employing	175

There is therefore a grand total of 39,413 men employed in the 685 industrial camps throughout the unorganized territory.

A group insurance policy in favour of 2,000 employees in the pulp and paper mills of the Price Brothers Company has been completed and issued by the Sun Life Assurance Company of Canada. The policy involves the sum of nearly three million dollars. It differs from most group policies in that it carries accident and sickness clauses in addition to the customary death and total disability benefits, even though such accident or sickness may be occasioned by circumstances outside the control of the company. The provisions of the policy apply to all employees in the pulp and paper mills operated by the company at River Bend, Jonquières and Kenogami, and to salaried employees who receive less than two thousand dollars a year. It is understood the present policy is preliminary to a scheme under which all employees of the company will receive the benefits of group insurance.

METHODS OF INCREASING THE EFFICIENCY OF WORKERS

A BOOK on the techno-psychology of industrial work has recently been completed by Dr. Leon Walther, Director of the Department of Techno-psychology, Jean Jacques Rousseau Institute, Geneva. Extracts from this book upon which the present article is based, appeared in the July issue of the *International Labour Review.*

The first condition of a scientific organization of work, the writer declares, is the adaptation of the worker to his task by putting each man in the place where he will work under the best conditions and where he will give an optimum output with a minimum effort. Through individual psychology the scientific selection of workers may be effected with a high degree of certainty, the method and scientific study of the kind of work considered, and the capacities required for this work determined.

The writer gives an account of experiments actually carried on by him in two factories. In the first case, the work was that of making paper bags. Five tests of manual dexterity were applied to 100 women and eleven of these workers were finally selected and classified. Six months later these eleven were classified according to their individual output. A marked discrepancy in the order of the output as compared with the order of the tests was found in only one case, when the worker who ranked second in the tests was ninth in output. This difference was readily accounted for on questioning her, and other work was found for her where she could earn almost twice as much as in making bags.

In the second case the work investigated consisted in putting up coffee in paper bags. This work was not being done satisfactorily, and the reason had to be found. Separate operations were carried on by four different groups of workers, when these workers were submitted to psychological tests it was found that the different operations, which varied in difficulty, were not distributed among them in accordance with their abilities. On reclassifying them according to the results of the tests their output was more than doubled, increasing from a maximum of 43 to a maximum of 89 pieces per worker per hour without the necessity of dismissing any worker for incapacity. In this case there was perfect correlation between the order of merit according to test and the order assigned by the foreman.

In discussing vocational training the author arrives at the conclusion that all vocational industrial training should be functional training, "in other words, it should bring the learner into immediate contact with reality, with the actual work which he will have to perform later in the exercise of his trade."

A number of examples are given showing the practical importance of the application of motion study to industrial work for the purpose of eliminating unnecessary movements and modifying the usual movements. The results of applying motion study to skilled workers who had had vocational training and those who had not were identical, and proved that vocational education whether in the factories or in the school does not pay enough attention to the actual movements of apprentices. "Our vocational schools aim at training young persons to do work which is perfect in quality; the question of quantity does not concern them to the same extent. They thus train artisans, but not workers capable of producing, when on piece work in the factory, a quantity sufficient to enable them to earn their living."

An example is given showing the practical value of motion study. An analysis of the movements of a woman who was making paper-covered boxes disclosed two defects, although she appeared to be perfectly trained and familiar with her job. By teaching her to use pressure instead of stroking in making folds, and to apply a thin instead of a thick layer of paste, her output was increased from 86 to 150 boxes per hour, with less fatigue and with no change in her own rhythm. The training in the new movements took hardly half a day.

Interesting results were also obtained in the study of industrial fatigue. In this respect it was observed with the help of the ergograph that two different types of individuals might be distinguished. One type can work for a certain time with almost unvarying intensity, when fatigue appears very suddenly and they very rapidly lose their power of working. In the second type fatigue comes gradually, the intensity of the work diminishes slowly, and there is no sudden change. Workers of the former type remain tired for a certain time after stopping work and then quickly recover, while those of the latter type recover more gradually. In the opinion of the author "Individuals who differ in their susceptibility to fatigue cannot be subject to the same rhythm of production without grave injury to their

health and general output. An organization which fails to take account of these individual differences may enforce a uniform system on every one, but will not succeed in obtaining the best output from each worker."

In certain factories where an increased output was desired, experiments were made to ascertain the effect of modifying the length and frequency of rest periods. In the case of two women piece-workers on a stamping machine, their hourly output was increased from about 4,200 pieces when they arranged their own breaks to 4,767 when they took a five minutes rest each hour. In another factory, the daily output of nine pieceworkers was increased from 6,000 to 8,000 pieces by introducing a two-minute break every quarter of an hour, with some slight variations for different individuals. This rest period was introduced after a week's experiment, when various other breaks were tried without success. These examples are claimed to prove the extremely important effect of breaks on the worker's daily output and in conclusion, the writer states that "psychology and physiology, if applied to the study of industrial work, will provide other ways than that of speeding-up, which Taylor used so largely. These methods ensure not only an increase in output but at the same time a real saving in human energy."

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Methods of Hydro-Electric Power Commission of Ontario

Mr. F. A. Gaby, D.Sc., chief engineer of the Hydro-Electric Power Commission of Ontario, in a recent address, described the activities of the Commission in the direction of accident prevention. Up to 1917, he said, the Commission carried out accident prevention work as an ordinary part of the duties of the various departments, but during 1916 investigations were carried out, and it was found that it would be an advantage to have this work carried out in an organized manner, and by a separate Accident Prevention Department.

One of the most important functions of this department is to carry out investigation and research in accident prevention, and very close contact is kept with the work of other public utilities on this continent. Such investigations are also carried on by public utilities in Great Britain, the United States, France, Belgium and Australia.

As one of the major hazards in electrical work is the danger of electrical shock, a most comprehensive and exact investigation into the question of resuscitation from electrical shock has been carried out during the last ten years. A complete investigation has been made of all information printed in English on the subject, as well as some in foreign languages; and, with the co-operation of the Medical Department of the University of Toronto, original research has been carried out on the subject of electrical shock and resuscitation.

Another function of the department is to keep an accurate record of all accidents that happen to employees of the Commission; these are classified, carefully analyzed and deductions made from them. Every accident at all serious in its nature is thoroughly investigated, the foreman in charge of the work being required to make a very complete and analytical report in connection with the accident. A beneficial psychological result comes from the making of these reports, because, for one thing, the foreman has to advise as to what he considers to be the real cause of the accident and how such an occurrence can be prevented in the future.

Accidents which are chargeable to "Electrical Current" are low both in frequency and severity, being only 2.3 per cent and 5.6 per cent respectively, although responsible for two of the three fatalities occurring during the past year. The accidents due to "Slipping, Tripping, and Falling" are responsible for 10.1 per cent of all accidents and 25.7 per cent of all lost time. Those due to "Handling Tools" cause 19.7 per cent of all accidents and 9.8 per cent of all lost time, while those accidents chargeable to "Handling Material" are responsible for 21.5 per cent of all the accidents and 12.8 per cent of all lost time, thus showing that a public utility in general has the same variety of accidents as one would ordinarily expect to find in any industry.

The Commission's method of carrying out accident prevention work is, in the main, advisory and not executive. Close contact is maintained with the engineering departments and, in general, an effort is made to inculcate a realization of the fact that a design which is not safe to install, operate, or maintain, is poor engineering and very poor economy. During construction work representatives of the Department go out into field and regular conferences are held with the superintendents and engineers, when discussion of accidents, hazards, and methods of prevention, takes place. These conferences have been very suc-

cessful and have undoubtedly resulted in considerable reduction in time lost through accident. Many useful devices, plans and methods developed as a result of such gatherings, have become a regular matter of routine and are now hardly looked upon as a matter of accident prevention at all. After the project is complete, or has been partly completed, a careful survey and reports are made so as to ensure that no hazard has been overlooked.

The major part of the Commission's accident prevention work has been connected with the Operating Department, and, since the members of this Department are, in general, on a more permanent basis of employment than those of the Construction Department, it is possible to carry out a plan that is cumulative in its effect. A representative of the Accident Prevention Department periodically visits each group of men in the Operating Department, when talks are given on safe methods and discussions of operating rules are held; the men are also trained and examined in the work of resuscitation from electrical shock. Thus a close contact is maintained with the men and the reduction of accidents and loss of time have been very satisfactory.

The Commission has taken the rates established by the Workmen's Compensation Board as a basis and has applied them to its own various conditions. A careful account has been kept of the costs of all accidents. During the years 1924 and 1925 these costs have for each year been lower than the amounts set up according to the Workmen's Compensation Board by approximately $91,000. The cost of carrying out the accident prevention work for each year has been $19,000. The Commission fully realizes that the rates set by the Workmen's Compensation Board are as low as they are because of accident prevention being carried out in those utilities in Schedule 1.

Though the financial results are satisfactory, a still more important phase is apparent, namely, the saving of human life and the reduction in the number of maimed. To be successful the work of accident prevention must be part of a general policy, but even then only will success be assured if the plans receive the hearty co-operation of the executive and of the employees generally.

Civic "Safety Inspector" for Buildings in Vancouver

The city of Vancouver is appointing a new official who will be known as the Safety Inspector, to supervise scaffolding on building, sewer and other construction work in the city. Regulations to govern such work are to be published shortly. The civic building committee had the support of the Vancouver Building Trades Council in deciding on this policy.

Mr. A. J. Bird, the city architect, reported to the committee that the inspectors of his department already inspect scaffolding during construction, but he pointed out that construction work in the strict sense has usually ceased when painters' scaffolds are erected and that the latter work is therefore not under his supervision. He further stated that "should the council deem it expedient to appoint a person to inspect platforms, moving or stationary, derricks, slings, etc., painters' scaffolds should come under his control. As such a man must have a wide and practical experience, he should be capable of suggesting or drafting a set of regulations, part to be embodied in a by-law and part as to method of procedure." Mr. Bird further suggests that the man be named a "Safety Inspector," be detached from any department and be directly responsible to the council. He could then co-operate with any of the departments if necessary and control anything lying within the scope of his regulations, be it cribbing to sewers, scaffolding on a building under erection, or work in the park. In this connection, I would recommend that any building over two storeys in height come within his circle of activities. "It would complete the protection," he states, "if he were supplied with appliances for testing tackle, ropes, chains, hooks, etc., and any interested party could ring up "Safety Inspector" whenever in need of his advice or authority. A junior could be appointed to answer and register 'phone calls and keep in touch with the inspector. Health and building inspectors, fire wardens and police officers could all report in, whenever in their opinion work was being done which endangered the workmen. By periodically keeping in touch with the office when on his rounds, the inspector could pick up any calls."

The June issue of the Labour Gazette (page 531) contained a note on the recent action of the Vancouver Trades and Labour Council in regard to the protection of workmen on buildings. The British Columbia Executive of the Trades and Labour Congress of Canada has on more than one occasion recommended the enactment of provincial legislation for the same purpose.

Ford Safety League

Mr. J. McKinnon, assistant manager of the Ford Safety League, addressed the assistant foremen of the Ford Motor Company of Canada, Limited, at Windsor, Ontario, in September, his subject being the safety methods and accidents experience of the company. "Fortunately," he said, "serious accidents have been eliminated in the Ford factory, but the

careless handling of tools is responsible for a daily toil of mishaps. We cannot guard against such things except by appealing to the workmen to use just ordinary common sense in looking after themselves. Minor accidents in the Ford plant were greatly reduced during the past year, and further reductions would be possible if the employees took precautions to guard against them.

"Throughout the plant 800 pairs of goggles are in daily use" he said. "From the high-speed grinding machines to the lowly nail, danger lurks for the eyes, and the orders regarding the use of goggles are strictly adhered to in all departments. Many instances might be quoted of the part goggles have played in saving the eyesight of their wearers. Such safety devices do not only protect human life and limb; they inspire the workman to give his best work with the knowledge and confidence that injury of any sort is not possible unless he himself goes out of his way to find it. In the Ford plant the safety devices employed are of the latest and best designs, and all the men are encouraged to invent newer and better means of protecting themselves and their fellows."

With a view to reducing compensation expenditure to a minimum, 2,500 safety devices have been installed on machines in the Ford factory. Those devices include automatic switches on heavy presses, mechanically controlled safety gates on presses, and wire and metal guards on all cogs, gears, and other moving machine parts. The Ford plant is open at all times to safety managers who wish to make a study of the safety devices in operation there. Other firms are at liberty to copy any of the safety appliances that are used in the Ford factory.

Safety Devices on Pennsylvania Railroad

The Pennsylvania Railroad has announced its intention to spend over $8,000,000 in the installation of new automatic signals and train-control devices. By electrically operated mechanism, signals displayed at the side of the track will be duplicated in the engine cabs, two sets being installed, one on the engineer's side and the other on the fireman's. When the signal is unfavourable a warning whistle will be sounded. A train control system known as the "Stop and forestaller" device, has also been installed on various lines of this railroad. By means of this device, when a train passes a signal showing any indication except "clear," the air brakes will be automatically applied unless the engineer works the forestaller controlled by a small lever in the cab, which "forestalls" the automatic action of the brakes. The engineer will only do this of course when he has observed the signal and knows that the track conditions ahead willl permit him to bring the train under control.

The Practical Results of Employee-Representation

The vice-president in charge of manufacturing of the International Harvester Company states that step by step the company's works councils have advanced of and for themselves along the road of co-operation to a point where safety of workers and increased quantity and sustained quality of product are now among their primary aims.

The works council of to-day is a long way ahead of the grievance committee so familiar half a dozen years ago. Attention to safety by the heads of the works council of the Chatham, Ontario, works has brought about the result that in 1924, in 1925 and to date in 1926 the plant has not had a single lost-time accident. It takes employee co-operation to do it. Yet the majority of industrial corporations continue to overlook the possibilities which such councils offer, some perhaps through lack of interest; some through scepticism; many, no doubt because they do not realize what works councils are accomplishing and have no acquaintance with the new technique of management which is being developed by and through them.

As a form of the discussion of both management and employee problems, each of the works councils is discovering that quality is important from the employee standpoint as well as from the management standpoint.

"Make It Safe"

The National Safety Council, with headquarters in Chicago, Illinois, has issued a pamphlet under the title "Make It Safe," in response to a demand for a simple illustrated booklet suitable for distribution among workpeople. It contains a general introduction showing the need for thoughtfulness on the worker's part, and instructions as to the use of safe clothing, and suggestions and warnings in connection with falls, burns, electricity, explosives, poisonous substances, boilers and tanks, power transmission, metal working and wood working machines, hoisting apparatus, vehicles and railroads. Instructions are given also in the proper method of resuscitation from electric shock or drowning. The prices of copies of the pamphlet are ten cents each; two to 99 copies, eight cents each; 100 to 499 copies, 7 cents each; 500 to 999 copies, 6 cents each and 1,000 or over, 5 cents each. The extra charge for imprinting will be $4 for the first 1,000 and $3 per thousand for additional thousands.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Travelling School in Northern Ontario

That the travelling school which has been recently put into service by the Ontario department of education in co-operation with the Canadian National Railways, to provide educational facilities for children of railway employees and settlers in the smaller communities on the Ruel subdivision of the National system, has proved to be a success beyond expectation was stated recently by Dr. J. D. McDougall, chief inspector of the department, on his return from his first inspection of the school. When Dr. McDougall visited the school it was stationed at its first stop, Nandair, a settlement about five miles west of the Capreol division point, and so great was the interest shown by all settlements along the subdivision that it is anticipated at least two more stops will have to be added to the five already on schedule for the car.

Carpenters' Apprenticeship Classes at Hamilton

A new class has been commenced at the Hamilton Technical Institute for carpenters' apprentices. This class is confined to young lads who are apprentices at the trade and intend to become mechanics and make the trade their livelihood. It is recognized that to make a success of this effort there must be co-operation between the employer and the journeyman working at the trade, the employer being willing to give the apprentice the opportunity to learn. The majority of the lads attending the class are indentured to their employers for a period of four years, with a set scale of wages increasing every year. The carpenters' union is pledged, as a party to the agreement, that the interests of the apprentice shall be well looked after and opportunities given him to become a competent mechanic. The principle of apprenticeship has always been advocated by the organized labour movement, particularly in the carpentering trade. It is now felt that lasting benefit to the trade will accrue from the recently inaugurated indentured apprentice system.

The Provincial Institute of Technology and Art, Calgary

The following article by W. G. Carpenter, Director of Technical Education for the Province of Alberta, appeared in the *Alberta Labour News* for September.

As a direct result of the report of the Royal Commission investigating extension of educational facilities in Southern Alberta the Provincial Institute of Technology and Art was organized in 1916. After one year it was taken over by the Soldiers' Civil Re-establishment Board of Canada and conducted as a training institution for returned soldiers. This work continued until 1920 when the Institute was returned to the Provincial Government of Alberta. In 1921 the corner stone was laid for the magnificent buildings housing the Institute, and in 1922 work was begun in the new quarters. The growth of the Institute has been remarkable. In the school year 1920-21 there were given 40,685 student hours' instruction while in the year 1925-26 the student hours totalled 213,678, an increase of 425 per cent.

The whole setting of the Technical Institute is such as to form a fitting tribute to the dignity of skilled labour. The outlook of the organization is toward the great industrial class. The program of studies contains quite a large content of so-called academic studies such as English, mathematics and science, which, while of sub-university grade, is most easily related by those who have a high school education, although mature students with a good public school education can gain control of it without undue difficulty. The content of these subjects taught is selected because of its applicational value. The practical shop-work and other related material are designed to bring the most useful assistance to the young man or woman planning an industrial career. Every encouragement, however, is given students to secure as much high school training as possible before entering the Institute. A high school education is not a compulsory requirement but it is very helpful. A high school education to-morrow will be as essential as a public school education is to-day.

In the shop courses instruction is given, using actual, man-sized, industrial equipment. In the mechanical engineering department work is actually done on steam engines, steam tractors, steam pumps, etc. In the gas engine and gas tractor departments the engine that is to stand the strain of actual use is the material for instruction. The motor car, the automotive electric equipment, the electric motor, generator, transformer or commercial testing instruments all constitute the exercise work in their respective departments. The girls make dresses and hats that are actually worn. This principle is a very important one in an educational process because through its application all the work is motivated from beginning to end.

The shops of the Institute are excellently equipped to do effective work. The workshop building is 317 feet long and 100 feet wide. To this there is being made ready for fall occupancy a wing 150 feet by 70 feet. The shop building houses two shops for mechanical and steam engineering; three shops and a testing room for industrial electricity; three shops for automotive electricity; three shops for gas engines and tractors; two shops for building construction and a large shop 100 feet by 70 feet for motor service work, with which are associated a vulcanizing room and an excellently equipped lecture and demonstration room.

In addition to these facilities there is a splendidly equipped blacksmith shop, a warehouse and a modern service boiler and engine room. In the boiler room there are housed two 225 horse power high pressure water tube boilers equipped with mechanical stokers, overhead coalbunkers and the latest type of ash-conveying machinery. In the engine room a 150 kilowatt generator supplies light and power for the entire institution during the winter months. This unit with accompanying switch-board was completely erected by the students in the Institute. A hand-fired boiler driving a steam electric plant with a complicated switch-board furnishes an additional instructional unit in this department. A modern up-to-the-minute air compressor is being installed for next year's classes.

The interest in the work of the Institute has been very marked as evidenced by the large enrolment coming from a wide range extending over the province. In the term 1925-26 over 70 per cent of the enrolment came from points outside Calgary. Quite a large number of applications are received from Saskatchewan and British Columbia but in many cases it is necessary to refuse admittance because of lack of room. In fact there was not room in several classes for those who applied from points within the province. For this reason it is advisable to file an early application. The average age of the student body in the term 1925-26 was 20.6 years.

The main courses such as electrical, mechanical engineering, motor mechanics, long tractor, drafting, dressmaking and millinery are designed to cover about sixteen months' attendance. On successfully completing these courses a diploma is granted. Short courses are given in addition to these. Three six-week short tractor courses are run during the winter months. A farm construction course is offered farmers in which six weeks are spent in the carpenter shop, six weeks in the tractor shop, three weeks blacksmithing, one week on brick, cement and mortar, and three weeks on farm machinery. This is a popular course for young farmers. A three weeks' welding course is being offered, beginning December 1st. A full equipment for oxy-acetylene and electric welding is being installed. Special arrangements are made for workmen who may be free for a period, to come in as part-time students. Facilities are present for doing a service to the building trades in woodwork construction, in bricklaying and in heating and ventilating. The Institute is ready to co-operate when the time comes for it to make a contribution to those preparing to enter these trades. There is no desire to make courses merely manual training courses, they must have an industrial outlook to be included in the curriculum of the Institute.

A service particularly adapted to conditions peculiar to our province is the instruction given through the mail-correspondence courses. Two sets of courses are already being given with splendid results, three courses for steam engineering and three courses for overmen in the coal mining industry. The fees for these courses are nominal. With the co-operation of the Boilers' Department of the Provincial Government and the Mining Branch these courses have been made to meet the requirements of these departments. Without being clouded in a great mass of irrelevant material what is required for the examination tests as set by these departments is found in these courses. This work is in charge of competent engineers.

Plans are under discussion anticipating an expansion in this type of work. There is a persistent demand for courses in electricity and in internal combustion engines, also in dressmaking and millinery. By co-operation with the other provinces in Western Canada it is hoped that a complete program may be worked out at a minimum expense. These courses open to persons living remote from the Institute opportunities of an unique nature, comparable to actual attendance in classes. This is the most democratic type of instruction it is possible to organize and its significance is of great importance. The Institute is desirous of broadening its influence along these lines.

The time is close at hand when there has to be a closer co-operation between the employer, the employee and the school, making good the absence of an adequate apprentice

system. Young men must replace the older men trained under the old efficient apprentice system. Trade conditions, with their complexities and competitions, make it impossible for the young man to master a trade without some formal instruction in the theory and related data of his vocation. This theory cannot be successfully given on the job nor can it be given as it should be without trade equipment. It is here that the school must come in and make good the opportunity the industry cannot itself offer. In large industrial plants this is offered through privately organized schools. Alberta is in the van of progress in its Provincial Institute of Technology and Art which ever stands ready to co-operate on any constructive policy looking to the qualifying of Alberta men and women to profit by the great natural resources of their beautiful province.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Participation of Germany in the International Labour Organization

One of the outstanding features of the Seventh Assembly of the League of Nations, which assembled in Geneva in September, was the unanimous approval by the forty-eight States participating in the vote on the admission of Germany into the League and of her functioning as a permanent member of the Council of the League. Those who are acquainted with the history of the International Labour Organization will be aware that Germany has been a member of this Organization since October 30, 1919; that she was admitted by a resolution of the First Session of the International Labour Conference, in pursuance of a desire expressed by the Labour Legislation Commission of the Peace Conference, and a decision of the Supreme Council of the Allies. By that resolution Germany was admitted "with the same rights and obligations possessed by the other members of the Labour Organization". A few weeks later, when the first Governing Body of the International Labour Office was appointed, Germany was allotted a seat on that Body, and from that day until now has taken an active and equal part with other nations in the activities of the Organization.

Belgium Ratifies Eight-Hour Convention

The ratification by Belgium of the Eight-Hour Convention of the International Labour Conference was registered by the Secretary General of the League of Nations on September 6.

Hours of Labour in Japan

An Association known as the Japanese Association for International Labour Legislation issued recently a questionnaire in order to sound public opinion in Japan as to the expediency of the acceptance in that country of the Convention which was adopted at the First International Labour Conference limiting hours of work in industrial undertakings to eight in the day and forty-eight in the week. The questionnaire dealt with the following points: the probable effect upon Japan of the ratification and enforcement of the hours convention, the reasons for or against ratification, and the time and procedure to be adopted for its enforcement. According to newspaper reports the replies received up to mid-summer showed that generally speaking workers, scholars, social students and employers in engineering and kindred industries are in favour of limiting the working hours in accordance with the Convention, while Chambers of Commerce and employers in the textile industry are opposed. It should be noted, however, that many of those who opposed the Convention are unaware that it contains special provisions for Japan.

Statistics of Industrial Disputes and Collective Agreements

The International Labour Office has issued lately two small publications dealing respectively with methods of compiling statistics of industrial disputes and methods of statistics of collective agreements.

In an introduction to the former publication it is observed that in modern industrial countries, labour disputes have become a regular and important feature of the economic life. They affect not only the private economy of employers and workers, but the national economy as a whole. The fear of a stoppage of the productive activity alone exercises a considerable influence upon the regulation of industrial relations. Moreover, such disputes have important moral consequences, as the irritation and suffering caused by them often increase the antagonism between the different classes of the community. For these reasons, statistics of industrial disputes have acquired increased importance, and in fact, practically all the industrial countries have found it neces-

sary to publish such statistics. At the same time their character has changed. To-day they deal principally with the economic aspects of the disputes, and endeavour to present an index of changing industrial conditions.

It is further observed that in view of the above characteristics of the statistics of industrial disputes, it is evident that the improvement and standardization of the methods employed are of considerable practical importance. The fact that labour statistics generally are liable to be utilized and interpreted according to the various interests of the parties concerned holds good particularly in respect of the statistics of industrial disputes which imply acute conflicts of interests between employers and workers. In the second place, the statistics of disputes can serve a practical end from an international point of view: references are frequently made to the detrimental effect of disputes on the competitive power of a country on the international market. For this reason it is important to minimize as far as possible the existing differences in the methods of the statistics published in various countries.

Accordingly, the purpose of the report under discussion is to examine and compare the chief elements of the methods of compiling statistics of industrial disputes, and to outline where practicable the standards on the basis of which some degree of international comparability may be secured. The discussion is divided into four parts. In the first chapter, which serves as a basis for the detailed analysis, certain general problems of the statistics of disputes are concerned. In the next two chapters, disputes are considered from the point of view of the variations they present in their general character and the extent of their consequences, and the criteria of their classification are passed under review. The second chapter is thus concerned with classifications according to the "nature" of disputes, and the third with disputes according to their "importance". In the fourth chapter finally, disputes are regarded from the point of view of the risk to which productive activity is exposed, and the methods of calculating the "frequency" and "severity" rates are outlined.

With reference to collective agreements, the relating of conditions of employment by means of collective agreements is increasingly adopted in modern industrial countries. The principle of freedom of contract originally implied individual bargaining and the settlement of conditions of employment by means of individual labour contracts alone. According to this system, however, the high degree of inequality in the economic strength of the contracting parties worked one-sidedly in favour of the employers. Therefore the practice of individual agreements has been modified in the course of industrial evolution. First, the State passed labour legislation establishing a uniform minimum standard for the general protection of the workers. Secondly, having realized their common interests, workers have created organizations whose principal object is to introduce and apply the method of collective bargaining; the organization of workers, again, has often compelled employers to combine. As a consequence of the development of industrial organization, conditions of employment are at present regulated to a large extent by negotiations between employers and workers, the results of which take the form of collective agreements. Concluded for a given establishment or a group of establishments or industries for a limited period, collective agreements have, in fact, provided important standards for individual labour contracts and form an indispensible complement to the protection of workers by labour legislation.

It is evident therefore that the statistics of collective agreements may furnish valuable information as to the development of industrial life. The statistics are, however, of comparatively recent origin and in a somewhat undeveloped state. Before the war, only Austria, Germany, Sweden and France published statistics of collective agreements. Even at the present time the number of countries compiling regular statistics of collective agreements is small as compared with that of countries publishing other kinds of labour statistics. There is no doubt, however, that statistics of collective agreements, if their scope and methods are adequately defined, form an independent and indispensible branch of labour statistics. In view of the increasing importance of collective agreements in industrial life, it is both desirable and probable that the statistics concerned will develop rapidly in the near future.

The character of the statistics of collective agreements is not only social but also legal. An examination of the methods of the statistics concerned implies therefore some study of the legislation on collective agreements, which is of more recent origin than the statistics and is, moreover, still in a state of development. The report under discussion, however, does not enter into an examination of the legal aspects of collective agreements beyond what is strictly necessary for the understanding of the statistics.

The discussion of the subject is divided into three sections: the first of which is concerned

with general problems of the statistics. In the second section, the methods of recording the number of collective agreements and of measuring their importance are examined. The third section deals with the principles of the classification of collective agreements according to various criteria.

Bibliography of Unemployment

A bibliography of unemployment has just been issued by the International Labour Office from which copies may be obtained at a cost of fifty cents. In the compilation of this bibliography, the material is so voluminous that the strictest limitations as to subject, type of publication noted, and date are required. Limitation as to subject is perhaps the most difficult, since there is hardly a single economic or social question which does not in some way bear on the problem of unemployment, with its multiple causes, remedies, and reactions. The risk of confusion in so vast a field has, it is hoped, been avoided in the present instance by including, apart from works specifically devoted to unemployment, only those in which the connection with that subject is obvious and direct.

Restriction of the type of publication covered was less complicated. Articles in reviews and other journals are noted as well as books and pamphlets, but articles in the daily press have been almost entirely ignored, the few exceptions to this rule being due to the equally exceptional interest of the articles mentioned. Similarly no mention is made of the numerous annual reports of local bodies dealing with statistics, unemployment insurance, employment exchanges, etc., except where they include original studies of some particular subject in addition to the regular report of progress. These annual reports are of undeniable value to students of the problems with which they deal, but it is felt that their exsitence is sufficiently signalized by mention of this note.

Finally, the problem of the period to be covered was met by excluding all publications bearing a date prior to 1914. Many of these are still of fundamental importance, and it was originally intended to mention the more important of them. But the difficulty of selection led to the abandonment of this project, and for works prior to 1914 the reader is referred to bibliographies covering earlier periods.

Bibliography of Industrial Hygiene

During the past three years, the International Labour Office has been issuing a quarterly publication entitled "Bibliography of Industrial Hygiene" containing lists of published reports, books and articles dealing with matters affecting industrial hygiene and the health of workers in various respects. The section dealing with industrial hygiene covers various features such as: the ventilation and lighting of buildings, dust, gases, smoke fumes, temperatures, the medical inspection of factories, agriculture, the food industries, the handling of animal and vegetable products such as wood, textiles, clothing, etc., mines and quarries, the metal industry, stone and earthenware, glass, chemicals, paints and varnishes, the printing trades, compressed air, transportation by land and water, aviation, sanitary services, sundry professions. The section dealing with health of workers includes references to publications dealing with personal health, vocational guidance, scientific management, mental hygiene, food, medical examination, welfare. There is also a section dealing with physiology and pathology, which makes reference to publications dealing with statistics, fatigue, high altitudes, temperatures and humidity, poisonings, infections and other cases of industrial diseases, accidents, legislation, etc.

Since September, 1923, there has been published with the bibliography a list of cinema films dealing with labour. This publication has been very well received and in response to numerous requests it was decided later to include a selected list of important works on industrial medicine.

Accident Record in Ontario in 1926

The total benefits awarded under the Ontario Workmen's Compensation Act during the nine months ending September 30 amounted to $4,198,477.58, as compared with $4,107,339.34 during the corresponding period of the year 1925. The total number of accidents reported during the nine months was 48,424, as against 43,982 during the first nine months of 1925, being an increase of 4,442. The fatal accidents numbered 281, as against 244 during the first nine months of 1925. The average daily number of accidents reported during the first nine months of 1926 was 215; the average amount of benefits awarded daily was $18,660, and the average number of cheques issued daily was 685.

The number of accidents reported during September this year was 6,180, and the benefits awarded $490,128.24, as compared with 5,507 accidents and $480,268.31 benefits during September a year ago.

ANNUAL CENSUS OF INDUSTRY OF CANADA

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census, covering statistics of fisheries, mines, forestry and general manufacture in Canada. The annual census is in addition to the Bureau's decennial census and the statistics of population, finance, education, etc. Preliminary reports on various industries have been reviewed in previous issues of the Labour Gazette. The Bureau has issued summary figures for all manufacturing industries in Canada for 1924.

Manufacturers of Canada, 1924

Establishments.—The number of individual establishments reporting in 1924 was 22,178, a decline of 464 from the number reported in 1923. The animal products group shows the largest decrease having 262 fewer reports than in 1923, of which dairy factories 73, fish canneries 102, harness and saddlery 34, and fur goods 17 were the principal industries showing decreases. The next largest decrease was in the miscellaneous group of 181, but here the decrease is due to the dropping of 125 establishments making signs and the transfer of 21 sporting goods establishments to the wood and paper group. The industry showing the largest decrease in this group was that of musical instruments with 14.

Capital investment.—The total capital invested in Canadian manufacturing industries rose from $3,380,322,950 in 1923 to $3,538,813,460 in 1924, an increase during the year of $158,490,510 or 4.69 per cent. Fixed capital, comprising land, buildings, machinery and tools, amounted to $2,310,298,012 and working capital, including materials and supplies on hand, finished products, stocks in process, and cash, trading and operating accounts, etc., to $1,228,515,448.

Employment.—The number of persons employed in the manufacturing industries of Canada in 1924 was 516,177, of whom 76,230 were salaried employees and 432,273 were wage-earners and 7,674 were piece workers employed outside the establishments. Of the salaried employees 59,412 were males and 16,818 were females and of wage-earners 33,156 were males and 99,117 were females. Compared with 1923 there was a decrease in the number of salaried employees of 2,043, in wage-earners of 14,721 and in piece workers of 968.

Salaries and wages paid.—The total payments for labour and service in 1924 amounted to $561,369,467, of which $139,614,639 was paid for salaries, $420,269,406 for wages and $1,485,422 to outside piece workers. Compared with 1923 there was a decrease in the amount paid for salaries of $3,124,042, in wages of $8,461,941, and in payments to outside piece workers of $141,633.

Materials used.—The total cost of all materials, whether in the raw or partly manufactured condition used in the various processes of manufacture during 1924 was $1,438,409,681. Compared with the preceding year there was a decrease in the cost of materials of $31,730,458 or 2.16 per cent.

Value of products.—The gross value of manufactured products at the point of production amounted to $2,695,053,582 in 1924 which was a decrease of $86,111,932 when compared with 1923. Of the nine groups, three show increases in value of production, viz., the vegetable products, non-ferrous metals and miscellaneous groups, whilst the six remaining groups all show decreases ranging from $95,870,873 in the iron and steel group to $3,026,919 in the chemical products group. A comparison by provinces shows that decreases prevailed in the older provinces and increases in each of the western provinces, Alberta's increase being $10,907,560; British Columbia's, $5,779,305; Manitoba's $4,917,482, and Saskatchewan, $1,976,120.

The net value of production or the value added by manufacture, which is obtained by deducting the cost of materials from the gross value of products, was $1,256,643,901 in 1924. This added value represented 46.6 per cent of the gross value in 1924 and 47.1 per cent in 1923 or a variation of one-half per cent.

Fuel consumption.—The cost value at the works of the various classes of fuel used in Canadian manufacturing industries in 1924 amounted to $57,068,214 as compared with an outlay of $58,736,938 in 1923. Bituminous coal was the principal fuel of which 5,518,255 tons valued at $34,438,554 were used during the year being 73.5 per cent of the total cost of all fuel. Oil occupies second position with a total cost of $5,780,752 or 10 per cent. Anthracite and lignite coal ($5,270,149), coke ($2,250,232), and gasoline ($776,292) were the remaining principal fuels.

Power installation.—The total available h.p. installed in the manufacturing plants of Canada in 1924 was 5,556,087 of which steam engines and turbines accounted for 944,267 h.p.; internal combustion engines for 72,491 h.p., hydraulic turbines or waterwheels for 3,283,146 h.p. and electric motors driven by purchased power 1,256,183 h.p. In 1923 power used in manufactures totalled 4,720,320 h.p. of which 827,870 was developed by steam, 2,869,738 h.p. by water, 64,020 by internal combustion and 958,692 h.p. by electric motors driven by purchased power.

Comparative Summary of Recent Manufacturing Statistics

A comparative study of the principal statistics of the manufacturing industries of Canada in recent years is afforded in Table 1. The years for which these statistics are presented, are the three last annual censuses and show the increase or decrease by percentages of the principal items.

The Rubber Industry in Canada, 1925

A preliminary report on the rubber industry in Canada for the calendar year 1925 has recently been issued. Statistics of the rubber tire and rubber goods section of the industry are incomplete, there being several returns outstanding. The number of individual concerns included in the report is 37.

The total value of production in the rubber industry in 1925 was $77,595,762, which sum comprised rubber tires, etc., $47,530,786; other rubber goods, $5,207,471; and rubber footwear, $24,857,505. The production of tire and other rubber goods, shows an increase in value over 1924 amounting to $15,277,019, rubber footwear of $4,907,297, or a total increased production for the entire industry in 1925 of $20,184,316.

Capital invested in 1925 amounted to $65,207,335 which was an increase over 1924 of $9,046,405.

The number of persons employed in the rubber industry in 1925 was 13,173, as compared with 10,778 in 1924, an increase of 2,395 or over 22 per cent. The amount paid for salaries and wages in 1925 was $14,058,513, an increase of $2,644,881 over 1924.

Imports of rubber and gutta percha goods increased in quantity from 32,299,840 pounds worth $8,199,734 in 1924 to 44,407,421 pounds worth $25,810,949 in 1925. The importation of rubber in other forms brought the total imports to $30,694,511 in 1925. Exports of the principal manufactured rubber products increased from a value of $10,173,882 in 1924 to $17,477,338 in 1925.

Fur Production of Canada, season 1924-25

The report of the raw fur production of Canada for the season 1924-25 states that the market value of pelts was $15,441,564, compared with $15,643,817 for the season 1923-24 and $16,761,567, for the season 1922-23. These amounts comprise pelts of animals taken by trappers and pelts of ranch-bred animals, the value of the latter constituting approximately 4 per cent of the total value in 1924-25; 5½ per cent in 1923-24; and 3½ per cent in 1922-23. The total number of pelts of fur-bearing animals taken during the season 1924-25 was 3,820,326, a decrease of 387,267 from the preceding season. Of the principal kinds, the number of beaver pelts declined by 17,259 or 10 per cent; muskrat pelts by 470,253 or 16 per cent; mink by 53,310 or 24 per cent; martin by 4,903 or 11 per cent, and silver fox, 1,232 or 14 per cent. White fox, red fox and coyote or prairie wolf show increases respectively of 28, 25 and 38 per cent.

Among the provinces, Ontario takes first place in order of value, with a raw fur production in 1924-25 valued at $3,406,868. Quebec comes next with $2,272,095, followed by Alberta with $2,030,974, Saskatchewan with $1,804,052, the Northwest Territories with $1,780,666, Manitoba with $1,589,078, and British Columbia with $1,403,769. The fur production of the Maritime Provinces had a total value of $844,513, and that of the Yukon Territory a value of $309,549. Increases in total value are shown for Nova Scotia, Quebec, Alberta, British Columbia and the Northwest Territories and decreases for Prince Edward Island, New Brunswick, Ontario, Manitoba, Saskatchewan and the Yukon Territory.

TABLE I.—PRINCIPAL STATISTICS OF MANUFACTURING INDUSTRIES FOR 1922, 1923 AND 1924

Items		1922	1923	Increase (+) or decrease (−) p.c. 1922–23	1924	Increase (+) or decrease (−) p.c. 1923–24

INTERNATIONAL ASSOCIATION OF PUBLIC EMPLOYMENT SERVICES

Fourteenth Annual Convention held at Montreal, September, 1926

IN line with its past policy of convening in Canada once every few years, the International Association of Public Employment Services this year held its annual meeting at the Mount Royal Hotel, Montreal, on September 16-18. The meeting was well attended, the United States and Canadian Federal Departments of Labour and several of the individual State and Provincial employment services sending delegates. In addition, representatives of several organizations, who, though not actively connected with an employment service are nevertheless interested in the public employment office, were in attendance and participated in the discussions. Among these latter organizations mention might be made of the Canadian Manufacturers' Association and the Trades and Labour Congress of Canada.

The proceedings were initiated on the morning of September 16 by short addresses of welcome on behalf of the Province of Quebec by Mr. Louis Guyon, Deputy Minister of Labour, and His Worship, Mayor Médéric Martin of Montreal. The President, Mr. R. A. Rigg, Director of the Employment Service of Canada, followed, and in speaking dealt with the valuable future contribution which the Association could make in the public employment service field. At the afternoon session a paper submitted by Mr. Walter Smitten, Commissioner of Labour for Alberta, entitled "The Harvest Labour Problem in Western Canada" was read. Mr. A. C. Manbert, Director, Canadian Lumbermen's Safety Association, Toronto, delivered a paper on "The Lumber Industry and the Problem of Labour Supply." The concluding paper for the day was read by Mr. Adam Wilkinson, of the American Writing Paper Company, Holyoke, Mass., on the topic of "The Paper and Pulp Industry and the Problem of Labour Supply." In each case the paper provoked a very interesting discussion, which was generally participated in by those present.

The morning and afternoon sessions of September 17 featured the following papers:—"Publicity for the Employment Service," by Mr. B. C. Seiple, Superintendent, State City Employment Office, Cleveland, Ohio; "The History and Theory of the Placement of Handicapped Workers," by Mr. W. S. Dobbs, Superintendent, Employment Service of Canada, Toronto; "The Practice of Placing Handicapped Workers," by Mr. J. F. Marsh, Handicapped Section, Employment Service of Canada, Toronto; "Organized Labour and the Public Employment Service," by Mr. J. T. Foster, Vice-President, Trades and Labour Congress of Canada, Montreal; "Cycles of Unemployment in Canada," by Prof. Gilbert E. Jackson, University of Toronto; "Some Present-day Problems of Women in Industry," by Miss Ethel M. Johnson, Assistant Commissioner, Department of Labour and Industries, Boston, Mass.; "Employment Problems of Children in Industry," by Miss Mary Stewart, Director, Junior Division, U.S. Employment Service, Washington; and "Evolution of the Employment of Children in Industry," by Mr. J. M. Wyatt, Assistant Supervisor of Juvenile Immigration, Departmeent of Immigration, Ottawa. As was the case the previous day, each of the papers was followed by a general and extended discussion on the subject under consideration. These discussions proved to be of a very interesting character.

The concluding session was held on the morning of September 18, and opened with a paper on the theme "Relations of a Municipal Public Assistance Department to Unemployment," which was delivered by Mr. Albert Chevalier, Director, Montreal Municipal Assistance Department. After the conclusion of the discussion which followed Mr. Chevalier's paper, the meeting proceeded to a consideration of business.

The Association reaffirmed its stand, taken at previous meetings, (*a*) in opposition to private, fee-charging employment agencies; (*b*) in favour of the attendance at the annual meetings of representatives of workers, employers, and others interested in public employment offices; (*c*) in favour of the promotion of public employment services; and (*d*) in favour of a uniform procedure for American employment services.

A motion providing for the appointment of a committee to study the matter of some scheme of union with the Association of Governmental Labour officials of the United States and Canada was adopted.

The election of officers for the ensuing year resulted as follows:—

President—R. A. Rigg, Ottawa, Ont.

Past president—Charles J. Boyd, Chicago, Ill.

First vice president—A. L. Urick, Des Moines, Iowa.

Second vice president—F. I. Jones, Washington, D.C.

Third vice president—J. Ainey, Montreal, Que.

Secretary-treasurer—Miss Mary Stewart, Washington, D.C.

Executive Committee at large—Mrs. M. L. West, Richmond, Va.; Thomas M. Molloy, Regina, Sask.; Otto W. Brach, Columbus, Ohio; Miss Lilla Walter, Chicago, Ill.; and E. Koveleski, Rochester, N.Y.

The matter of time and place of the next annual meeting were left to the executive for decision.

The Department of Labour proposes to publish the detailed proceedings of the meeting, as a special bulletin, and expects to have it available for distribution in the course of a few weeks.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF SEPTEMBER, 1926, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THERE was continued improvement in the employment situation at the beginning of September, according to information received from 5,799 firms whose staffs aggregated 859,738 persons, as compared with 855,002 in the preceding month. This increase greatly exceeded that noted on September 1 last year, while in 1924 and 1923 declines were recorded on that date. The index number at the beginning of September, standing at 104.9 continued to be higher than in any other month since 1920; on August 1, it was 104.2 and on September 1, 1925, 1924, 1923, 1922 and 1921, it was 96.6, 93.1, 100.0, 93.7 and 88.7, respectively. If employment follows the trend usually indicated during the autumn, further gains may be expected in the next report.

Moderate expansion was shown on the date under review in manufacturing, logging, mining and transportation, while there were seasonal losses in highway and railway construction.

Employment by Provinces

With the exception of Quebec, all provinces registered increased employment, Ontario and the Maritime Provinces showing the largest gains.

Maritime Provinces.—Manufacturing, mining and construction afforded more employment in the Maritime Provinces, according to data received from 499 firms with 71,039 employees, compared with 69,694 in the preceding month. On September 1, 1925, a considerable reduction in activity was indicated, and the situation was not as favourable.

Quebec.—For the first time since the beginning of the year, there was a decline in employment in Quebec, where 1,492 workers were released from the staffs of the 1,239 reporting employers, whose payrolls aggregated 247,198 on September 1. Pulp and paper mills recorded important increases, but iron and steel factories were slacker, causing a loss in the manufacturing group as a whole. Mining, communication, transportation and construction also showed moderate curtailment. A slight gain had been noted on the corresponding date last year, but the index number then was nearly 12 points lower.

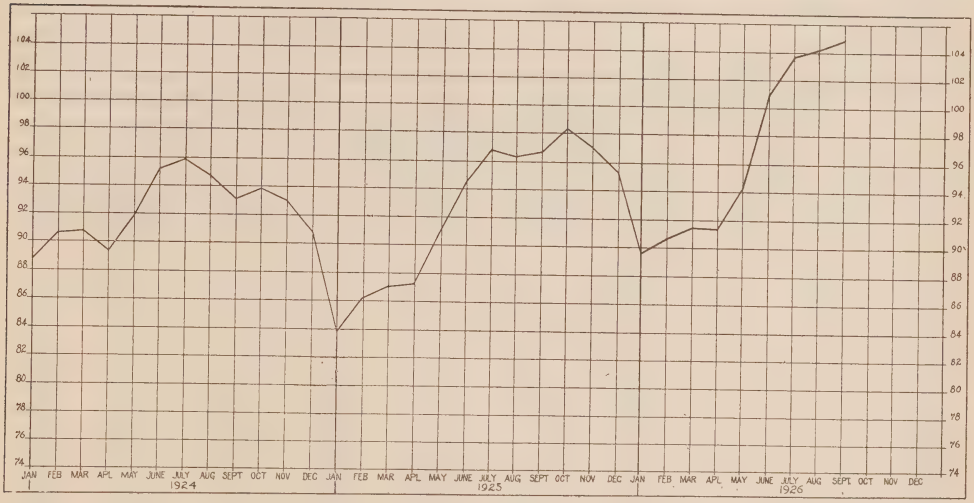
Ontario.—Manufacturing, especially of iron and steel products, reported marked improvement, as did logging, communication, transportation, building, construction and trade. On the other hand, highway and railway construction showed a seasonal decrease. Statements were tabulated from 2,640 firms with 346,980 employees, or 4,057 more than on August 1. Smaller additions to staffs were indicated at the beginning of September, 1925, when employment was in less volume.

Prairie Provinces.—There was a comparatively small increase in the personnel of the 751 co-operating employers, whose staffs rose from 112,679 persons in the preceding month to 113,088 on September 1. On the same date last year, a considerable contraction in employment had taken place; the general index then was nearly 11 points lower. Coal mining, building and highway construction and transportation recorded the most pronounced gains on the date under review, while in railway construction, there were seasonal losses.

British Columbia.—Further increases in employment were noted in British Columbia; manufacturing (especially of food, lumber and pulp and paper products) and transportation

registered heightened activity, while curtailment was reported in construction and logging. A combined working force of 81,433 persons was employed by the 670 firms making returns, as compared with 81,016 on August 1. Although greater improvement was indicated at the beginning of September, 1925, the situation then was much less favourable.

Table I gives index numbers by economic areas.



Employment by Cities

Reductions in employment were noted in Montreal and Ottawa; in Toronto, Hamilton and Winnipeg there were substantial gains, while in Quebec, Windsor and Vancouver the situation was practically unchanged.

Toronto.—Employment in manufactures in Toronto was decidedly more active, while communication and trade also showed improvement. The increase, which is the eighth recorded so far this year, considerably exceeded that indicated in the same date a year ago, when conditions were not as good. The 754 firms making returns had 98,730 persons in their employ, or 1,384 more than at the beginning of August.

Ottawa.—The most pronounced change in Ottawa was a decrease in construction, while transportation was rather busier. An aggregate working force of 10,359 persons was reported by the 124 co-operating employers,

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January 1920, as 100.

Montreal.—For the first time since the beginning of the year, employment in Montreal declined, 216 persons having been released from the working forces of the 669 co-operating firms, who employed 118,161 on September 1. The decline was chiefly due to curtailment in railway car shops, in which great activity has prevailed all summer. Other manufactures, transportation and construction registered improvement. Although gains were noted on the corresponding date of 1925, the situation then was much less favourable.

Quebec.—Construction was rather slacker, while manufacturing was busier. Statements, were tabulated from 85 employers with 8,968 workers, as against 9,013 in the preceding month. The index number was higher than on September 1 last year.

who had 10,512 on August 1. The index number was practically the same as at the beginning of September, 1925.

Hamilton.—Manufacturing and construction afforded more employment in Hamilton, where the 197 firms furnishing data had 30,485 employees, compared with 30,033 in the preceding month. The index number continued to be higher than in any other month since the record was begun in 1922.

Windsor and Other Border Cities.—Automobile factories in the Border Cities showed moderate curtailment, while construction was considerably busier. The payrolls of the 77 reporting establishments totalled 11,796 as compared with 11,817 at the beginning of

August. Employment was much more active than on September 1 last year.

Winnipeg.—Continued improvement was noted in Winnipeg, chiefly in manufacturing and construction. The general increase greatly exceeded that registered on the corresponding date in 1925, when the index was much lower. Data were received from 280 firms employing 28,300 workers on the date under review, while on August 1 they had 27,485.

Vancouver.—Very little change in the general situation was indicated by the 230 reporting Vancouver employers, whose payrolls included 27,114 persons. Canneries released some help, while transportation was rather brisker. Employment was in greater volume than at the beginning of September a year ago.

Index numbers by cities are given in Table II.

Manufacturing Industries

Continued and larger gains were recorded in manufacturing; the pulp and paper, iron and steel, food, leather, electrical apparatus, non-ferrous metal, mineral, product, tobacco, distilled and malt liquor and musical instrument divisions reported the greatest improvement, while the only significant losses were those of a seasonal nature in lumber mills. The payrolls of the 3,739 manufacturers making returns aggregated 475,428 as against 471,035 operatives on August 1. An increase of almost the same size was noted on the corresponding date last year, when the level of employment was much lower.

Animal Products, Edible.—Employment in the meat slaughtering and preserving and fish canning industries showed considerable improvement, while dairies were slightly less active. The greatest gains were made in British Columbia; there were moderate increases

Note.—Number employed by the reporting firms in January, 1920=100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

in Quebec, Ontario and the Prairie Provinces, but in the Maritime Provinces there were seasonal losses. A combined working force of 16,645 persons was employed by the 181 firms making returns, as compared with 16,225 in the preceding month. Considerable reductions were noted on September 1, 1925, when the index number was over four points lower.

Leather and Products.—Continued and more extensive additions to staffs were made in the leather industry. Tanneries, boot and shoe and other leather goods afforded more employment than in the preceding month, or in the corresponding month a year ago. Statements were tabulated from 190 manufacturers with an aggregate payroll of 16,977 persons, or 349 more than on August 1. The largest increases were in Ontario.

Lumber and Products.—Seasonal losses on a scale rather smaller than on the same date in previous years of the record were indicated in rough and dressed lumber mills. On the other hand, other divisions of the lumber group showed slight expansion. The staffs of the 722 firms making returns declined from 59,003 on August 1 to 58,656 at the beginning of September. All provinces except British Columbia shared to some extent in the reductions. Activity was greater than on September 1 last year.

Musical Instruments.—Employment in musical instrument factories showed the seventh consecutive increase recorded in 1926, the situation being considerably more favourable than on the same date in 1925. Data were received from 38 establishments with 3,292 workers, as against 3,102 in the preceding month. The bulk of the gain took place in Quebec and Ontario.

Plant Products—Edible.—Further improvement was noted in the edible plant group, in spite of curtailment in fruit and vegetable canneries. The sugar, chocolate and biscuit divisions showed the greatest gains. In Ontario, there were reductions, in British Columbia no change, while elsewhere the movement was favourable. The 298 employers making returns reported 29,606 workers compared with 29,400 in their last report. The index number, standing at 107.3, was a few points higher than on September 1, 1925.

Pulp and Paper Products.—The pulp and paper industry continued to advance, 1,161 persons having been added since August 1 to the payrolls of the 449 firms making returns,

who employed 57,935 on the date under review. The majority of workers taken on were employed in pulp and paper mills, while printing and publishing was rather slacker. All except the Prairie Provinces shared in the increase. Less extensive gains were reported on the corresponding date last year and the index number then was nearly 11 points lower.

Textile Products.—There were considerable fluctuations in the different divisions of the textile group, accompanied by no general change; woollen and miscellaneous textile mills added to their staffs, while garment and personal

[1]NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

furnishing manufacturers released some help. Returns were tabulated from 496 manufacturers, with 70,878 workers, or 8 more than on August 1. The situation on September 1 last year was not so favourable, although a slight gain was then recorded.

Tobacco, Distilled and Malt Liquors.—The trend of employment in this industry continued to be favourable, chiefly in Quebec and Ontario. The working forces of the 98 co-operating establishments aggregated 12,023 persons, as compared with 11,787 on August 1. There was a somewhat smaller increase on the same date of 1925, when the index number was a little higher.

Electrical Apparatus.—Employment in plants producing electrical appliances showed an expansion that brought it to a higher level than at any time during 1925. Statements were compiled from 37 firms employing 9,884 workers, or 327 more than in their last report. Quebec and Ontario reported the bulk of the gain.

Iron and Steel Products.—The crude, rolled and forged, automobile, heating appliance, structural iron and steel, tool, foundry and machine shop divisions of the iron and steel industry recorded increased activity, while there were losses in railway car, agricultural implement and steel shipbuilding works. The result was an increase of 1,154 persons in the staffs of the 620 manufacturers making returns, who had 126,618 workers. The Maritime Provinces, Ontario and Prairie Provinces reported recovery, but in Quebec there was a falling off in employment. Additions to staffs were also noted on September 1, 1925, when the index at 71.0, was over 11 points lower than on the date under review.

Non-ferrous Metal Products.—Smelters and refineries and lead, tin, zinc and copper factories showed increased activity; 107 manufacturers in this division enlarged their staffs from 15,115 persons on August 1 to 15,495 at the beginning of September. This increase, which was considerably larger than that noted on the corresponding date last year, caused the situation to be better than in any month since 1920. Firms in Ontario and British Columbia reported practically all the gain.

Mineral Products.—The production of gas, petroleum and other commodities coming under this heading, showed an increase in all provinces. Statements were tabulated from 74 employers with 9,950 workers, as against 9,702 in the preceding month. Employment was in slightly smaller volume than on September 1, 1925, although reductions were then indicated.

Logging

The seasonal improvement in logging was less extensive than is usual at the beginning of September, and the index number was slightly lower than in the early autumn a year ago. A combined working force of 14,615 men was employed by the 210 firms making returns, compared with 14,063 on August 1. Practically all the gains were in Ontario, while in British Columbia the tendency was downward.

Mining

Coal.—An important increase was noted in the number of employees in coal mines in both the Maritime and Prairie fields. According to statistics from 87 operators, their staffs rose from 24,045 persons on August 1 to 25,076 at the beginning of September. These additions, which are the largest recorded during the present year, caused the index number to be nearly eight points higher than on September 1 a year ago, when pronounced decreases were reported.

Non-metallic Minerals.—A seasonal falling off involving approximately the same number of workers as on the corresponding date in 1925 was shown in this division. Data were tabulated from 69 firms having 6,848 workers, or 213 less than in the preceding month. A large part of the decline was in Quebec, but there were also reductions in the Prairie Provinces and British Columbia.

Communication

A minor gain took place on telephones, while telegraphs afforded slightly less employment. The staffs of the 181 communication companies furnishing returns aggregated 24,950 persons, as compared with 24,824 in the preceding month. The situation was better than on the corresponding date last year, when curtailment was noted in the communication group.

Transportation

There was a considerable increase in employment on steam railways, and smaller gains in local and water transportation The greatest gains were in Ontario and the Prairie Provinces. The 265 transportation companies making returns employed 114,700 workers, as compared with 112,795 in the preceding month. This advance was very much larger than that noted on September 1 last year, the index number then was over four points lower.

Construction and Maintenance

Building.—Employment in building construction made its sixth consecutive gain; the index number rose from 108.3 on March 1 to 199.4 at the beginning of September, the highest point reached since the record was begun in 1920. Three hundred and thirty contractors employed 38,195 workers, an increase of 842 as compared with their last report. This expansion is practically the same as that indicated on September 1 last year. Firms in Ontario and the Prairie Provinces registered practically all the improvement.

Highway.—A slight contraction in employment on highway construction and maintenance was noted at the beginning of September, according to statistics from 118 firms with 25,460 workers as against 26,057 in the preceding month. Gains were recorded in the Maritime and Prairie Provinces but elsewhere the tendency was unfavourable. This seasonal loss was smaller than that registered on the corresponding month of 1925, 1924, and 1923.

Railway.—A further reduction in activity was noted on railway construction and maintenance, 3,441 persons being released from the staffs of the 35 co-operating employers, whose staffs aggregated 48,401 workers. All provinces shared in the recession, which was most pronounced in the Prairie Provinces. The falling off indicated on the same date last year was rather larger and employment then was in much smaller volume.

Services

Additions to staffs in the personal service and professional divisions of the service group were offset by seasonal reductions in summer hotels there being only a small general change in the payrolls of the 171 establishments making returns, which had 16,311 workers. Conditions in the service group were better than at the beginning of September, 1925.

Trade

A slight increase was shown in trade, according to 548 firms, with 58,197 employees, or 138 more than in the preceding month. Retail and wholesale houses both registered slight improvement, particularly in Ontario and the Western Provinces. The level of employment was rather higher than on September 1 last year, when the trend was also upward.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns for September 1, 1926.

EMPLOYMENT OFFICE REPORTS FOR AUGUST, 1926

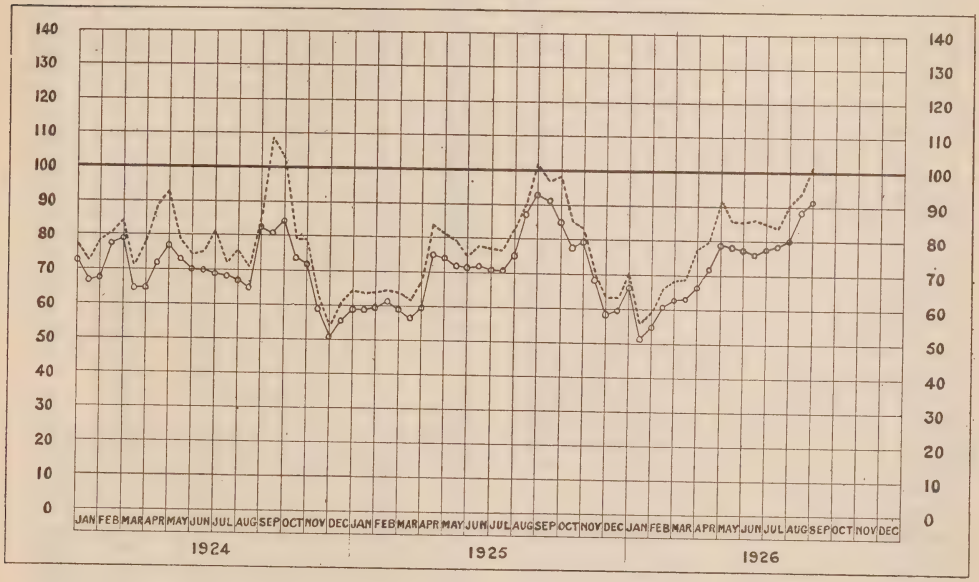
DURING the month of August, 1926, the reports from the offices of the Employment Service of Canada showed an increase of 108 per cent in the average daily placements over that of the preceding period, while a decline of 6 per cent was registered when a comparison is made with the average daily placements effected during the corresponding month a year ago. This loss was entirely due to decreased farm placements, but gains, general in all other divisions, reduced the net loss to 6 per cent for the whole of Canada as indicated above. The most noteworthy increases over August of last year were in manufacturing, logging, transportation and trade.

The accompanying chart shows the trend of employment since January, 1924, as represented by the ratio of vacancies notified and placements effected for each one hundred applications for work registered at the offices of the Service throughout Canada, the computations being made semi-monthly. It will be noticed that the curves of vacancies and placements in relation to applications rose rapidly throughout the period, the marked expansion shown during the latter half of the month being mainly in the Prairie Provinces where harvesting and threshing operations created an active demand for workers, which in some parts of the West exceeded the supply. The calls this year, however, were slightly less than those recorded during August of last year, though the ratios of vacancies and placements during the first half of the month were on a slightly higher level than those shown during the first half of August, 1925. The ratio of vacancies to each hundred applications was 93.8 and 101.5 during the first and second half of August, 1926, in contrast with the ratio of 90.2 and 102.0 during the same periods in 1925. The ratio of placements to each one hundred applications during the periods under review was 88.6 and 91.5 as compared with 86.9 and 92.7 during the corresponding month a year ago.

The offices reported that an average of 2,414 applications for employment were received daily during the first half of August in comparison with 1,606 daily during the preceding period and with 2,344 daily during the cor-

responding period of 1925. During the latter half of August applications for work averaged 3,540 daily in contrast with 4,101 daily during the same period of last year.

The average number of vacancies reported by employers to the Service daily was 2,265 during the first half and 3,595 during the latter half of the month, in comparison with 2,115 and 4,185 daily during the corresponding periods of August, 1925. During the latter half of July, 1926, the average number of vacancies registered daily was 1,461.



The average number of placements made daily by the offices of the Service during the first half of August was 2,139, of which 1,794 daily were in regular employment and 345 daily were in casual work. This is in comparison with the daily average of 1,286 during the preceding period and with 2,037 daily during the corresponding period a year ago. During the latter half of the month placements averaged 3,238 daily (2,873 regular and 365 casual) in contrast with 3,801 daily during the same period a year ago.

During August, 1926, the offices of the Service referred 72,228 persons to vacancies and effected a total of 70,980 placements, of the latter 61,736 were in regular employment and 9,244 in casual work. Placements in regular employment numbered 57,636 men and 4,100 women. The Service received notification of 77,501 opportunities for employment, of which 67,183 were for men and 10,318 for women workers. Applications for employment numbered 67,784 from men and 10,735 from women, a total of 78,519.

The following table gives the placements effected to date by the offices of the Employment Service:—

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ———— Vacancies - - - - - - - - - - - - - - Placements o—o—o—o—o—o

Year	Placements

1926 (8 months)	194,305	70,242	264,547

NOVA SCOTIA

There was a decrease of over 2 per cent in the number of orders received by employment offices in Nova Scotia during August, when compared with the preceding month, but a gain of over 20 per cent in comparison with the corresponding month last year. Placements, however, were higher under both comparisons, being nearly 4 per cent

above July and nearly 11 per cent in excess of August, 1925. Increased placements in the transportation group were mainly responsible for the gains over last year, the changes in other industrial divisions being small. Placements by industrial groups included manufacturing, 54; logging, 78; transportation, 79; construction and maintenance, 55; and services 241. Regular employment was secured for 249 men and 78 women during the month.

NEW BRUNSWICK

The demand for workers as reflected by orders listed by officers in New Brunswick during August was nearly 15 per cent greater than in the preceding month, and over 22 per cent higher than in the corresponding month last year. Placements were over 2 per cent higher than in July, and more than 15 per cent above August, 1925. Increases over last year were recorded in all industrial groups except services and trade, the most noteworthy gain being in the logging industry. Industrial divisions in which most of the placements were effected during the month were manufacturing, 56; logging, 130; construction and maintenance, 77; and services, 394, of which 246 were of household workers. Placements in regular employment numbered 311 of men and 110 of women.

QUEBEC

During August, officers in the Province of Quebec received orders for nearly 11 per cent less workers than in July, but over 20 per cent more than during August last year. Placements were nearly 5 per cent lower than in July, but nearly 22 per cent higher than in August, 1925. Substantial gains in the construction and maintenance division were mainly responsible for the increases over August last year, but were offset in part by decreased placements in the logging and services groups. The changes in all other industrial divisions were small. Placements by industrial groups included manufacturing, 289; logging, 270; farming, 66; transportation, 86; construction and maintenance, 1,426; services, 429, of which 268 were of household workers; and trade, 62. During the month under review 2,208 men and 376 women were placed in employment.

ONTARIO

Opportunities for employment as indicated by orders listed at Ontario offices during August were over 5 per cent better than in the preceding month, and nearly 11 per cent above the corresponding month last year. Placements were on practically the same level as in July, but were more than 11 per cent higher than in August last year. Farming and trade were the only groups in which less placements were made than last year, substantial increases being recorded in the manufacturing industries, logging, mining, transportation and construction and maintenance. Industrial divisions in which most of the placements were effected during the month included manufacturing, 2,135; logging, 1,031; farming, 1,359; mining, 176; transportation, 583; construction and maintenance, 3,318; services, 3,505, of which 1,958 were of household workers; and trade 337. Regular employment was procured for 7,914 men and 1,167 women during the month.

MANITOBA

Orders listed at Manitoba offices during August called for about 155 per cent more workers than in July, but about 3 per cent less than in August last year. Placements showed approximately the same percentage of gain as vacancies over July, and were also nearly 16 per cent higher than during August last year. Increased placements over the corresponding month last year were shown in all industrial divisions except construction and maintenance and services, the declines in the latter being small. Placements were considerably higher in the manufacturing industry and farming. Industrial groups in which most of the placements were effected during the month were manufacturing, 415; farming, 7,300; construction and maintenance, 477; services, 1,705, of which 1,325 were of household workers; and trade, 305. There were 7,708 men and 661 women placed in regular employment during the month.

SASKATCHEWAN

There was an increase of over 563 per cent in the number of positions offered through offices in Saskatchewan during August, when compared with the preceding month, but a reduction of over 12 per cent when compared with the corresponding month last year. Placements were over 501 per cent higher than in July, but over 18 per cent less than in August, 1925. Farm placements were considerably less than last year, and were mainly responsible for the reduction under this comparison. Placements by industrial divisions included manufacturing, 155; farming, 19,298; transportation 88, construction and maintenance, 410; and services, 1,016, of which 600 were of household workers. Regular employment was secured for 19,779 men and 559 women during the month.

ALBERTA

Employment opportunities during August, as indicated by positions offered through offices in Alberta, were over 195 per cent better than in the preceding month, but nearly 15 per cent below the corresponding month last year. Placements were about 165 per cent higher than in July, but were over 12 per cent less than in August, 1925. The declines from last year were due to decreased placements in the manufacturing industries, farming and mining, offset in part by gains in logging, transportation and trade. Placements by industrial groups included manufacturing, 279; farming, 9,287; transportation, 108; construction and maintenance, 909; services, 864 of which 585 were of household workers; and trade, 240. During the month under review 10,689 men and 537 women were placed in regular employment.

BRITISH COLUMBIA

During the month of August positions offered through offices in British Columbia were over 9 per cent less than in July, but approximately the same as in August last year. Placements were over 114 per cent higher than in July, but over 14 per cent less than during August, 1925. Most of the placements effected during the month were transfers of harvesters to the Prairie Provinces, but the number was not so great as in August, 1925, which accounted for the decline in placements under this comparison. Placements in the manufacturing industries, transportation and trade were higher than last year, but declines were recorded in logging, mining, construction and maintenance, and services, in addition to farming as mentioned above. Industrial groups in which most of the placements were effected during the month included manufacturing, 924; logging, 362; farming, 7,034; mining, 133; transportation, 378; construction and maintenance, 924; services, 1,260, of which 668 were of household workers; and trade, 205. Placements in regular employment during the month numbered 8,778 of men and 612 of women.

Movement of Labour

During August, 1926, the offices of the Employment Service of Canada made 61,736 placements in regular employment, of which 52,202 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 4,831 were granted the Employment Service reduced transportation rate, 3,238 going to points within the same province as the despatching office, and 1,593 to other provinces.

Quebec offices issued 103 transportation certificates, 52 of which were granted to sawmill labourers and one to a blacksmith despatched by the Montreal office to points within its own zone and the balance were interprovincial transfers. Of the latter 2 were for plasterers going to Winnipeg, and one for a cook sent to Timmins from the Montreal office, while from Hull 36 bushmen travelled to Sudbury and 11 bushmen to North Bay.

Of the 690 persons who benefited by the Employment Service reduced rate in Ontario, 544 were going to points within the same province as the despatching office, and 146 to other provinces. Of the latter, Hull received 50 station men and 15 railway construction labourers from Port Arthur, and 10 railway construction labourers and 2 bushmen from North Bay. Fort William transferred 58 farm hands to employment in the Winnipeg zone and one farm hand to Regina, and Toronto 10 plasterers to Winnipeg. Provincially, Fort William sent 77 construction labourers, 9 bushmen, 2 farm labourers, 3 engineers, 6 groundsmen, 2 cooks, 2 teamsters, one station worker and one carpenter to points within its own zone and Port Arthur, 71 farm workers, 9 bushmen, 25 construction labourers and 5 miners within its zone. From North Bay, Timmins received 99 bushmen, 5 painters, 13 carpenters, 14 labourers, and 3 mill hands, Cobalt, 9 miners, and Sault Ste. Marie one paper maker. From Toronto 77 bushmen travelled to points in the vicinity of Sudbury, one lineman, 2 bakers and one welder to Port Arthur, 5 carpenters to North Bay, and 3 linemen to Fort William while Sudbury transferred 9 highway construction labourers and 2 miners to Cobalt, 4 miners to Kingston, one station worker to Timmins, and 45 mill hands, 6 teamsters, 11 bushmen and one maid to points within the Sudbury zone. Ottawa sent 4 carpenters, London 3 construction labourers and 4 papermakers, and Kitchener one labourer, all to points in the North Bay zone. Of the remainder, Timmins transferred 2 miners to Kingston and 2 labourers to Cobalt, and St. Catharines one miner to Kingston, and 2 moulders to Port Arthur.

Special rate certificates granted in Manitoba numbered 2,156, of which 1,094 were for provincial points, and 1,062 for other provinces. The provincial movement was for the most part to the farming districts of the province, all business being transacted through the Winnipeg office. From this office 1,070 farm hands, 15 farm domestics, and 2 hotel workers travelled to various points in the province, 5 carpenters to Brandon, and 2 building tradesmen within the Winnipeg zone. Of those going to other provinces, Winnipeg sent 86 sawmill labourers, 43 bushmen, 4 fire-

men, 3 hotel workers, one surface man, 4 quarry labourers, one deck hand, one miner, 2 hoisting engineers, one stationary engineer, and 2 cooks to the Port Arthur zone, one lineman to Toronto, one confectionery worker to Moose Jaw, one painter to Saskatoon, 44 farm hands to Alberta points and 855 farm hands, 9 farm domestics and 2 hotel workers to various points in Saskatchewan. From the Brandon office one marble polisher went to Port Arthur.

Special transportation certificates granted by Saskatchewan offices numbered 644, of which 7 were issued to farm workers, 5 going from Regina, one from Moose Jaw and one from Prince Albert to points in Manitoba, and 2 from Saskatoon to Alberta farms. Of the 635 provincial transfers, 595 were farm hands and harvest workers, 382 of whom travelled from Regina, 108 from Moose Jaw, 99 from Saskatoon, and 6 from Prince Albert to employment in the surrounding districts. From Saskatoon also 17 railroad construction teamsters were despatched to North Battleford, one sawmill labourer and 2 cooks to Prince Albert, and 2 farm housekeepers to points in the Saskatoon zone, while from Regina one painter, one chambermaid, and 2 female cooks went to Moose Jaw, 2 household workers to Saskatoon, one waitress to each of the Weyburn and Swift Current zones and one housekeeper to Regina. In addition, Prince Albert transferred 8 bushmen and one blacksmith to points within its own zone.

In Alberta 1,034 special rate certificates were issued, 708 provincial and 326 interprovincial. Provincially 644 transfers were for farm labourers and harvest hands, 459 going from Edmonton, 180 from Calgary and 5 from Medicine Hat to harvest areas in the province. Edmonton also transferred 6 trackmen, 26 labourers, 5 miners, one housemaid, 2 engineers, 7 bushmen 2, mill labourers, one machinist and one blacksmith went to employment in the Edmonton zone, and Calgary one auto mechanic to Drumheller and one iron moulder to Lethbridge. The remaining 11 were hotel workers for various points in the province. The interprovincial movement was entirely of harvest workers, 323 going to Saskatchewan points, the majority of whom were sent from Edmonton, and 3 farm hands going from Calgary to Manitoba points.

British Columbia officers granted certificates to 204 persons, all going to points within the province. From Vancouver 109 fruit pickers and cannery workers went to employment in the Okanagan Valley. The balance of the movement from Vancouver included 2 cooks, one sawmill labourer, 3 miners, one blacksmith, one painter, one farm hand and 4 general labourers travelling to Penticton, one barber and one planer man to Vernon, 4 miners, 2 labourers, 2 bolt cutters, 2 blacksmiths, one teamster and 2 flunkeys to Kamloops, one cook to Kelowna, 6 station men, 3 miners and one flunkey to Revelstoke, 7 carpenters and 4 labourers to Nelson, one planer man and one miner to Cranbrook, one farm worker to Prince George, and 24 labourers, one miner, 2 flunkeys, and 4 hotel and household workers to points in the Vancouver zone. Nelson transferred one mucker to Revelstoke, 2 miners to Cranbrook and one bushman within its own zone, Penticton one railway construction foreman to Revelstoke, Prince George 4 bushmen to points within its own zone and Prince Rupert one hotel clerk to Prince George, and one miner within the Prince Rupert zone.

Of the 4,831 workers who benefited by the Employment Service reduced transportation rate, 1,768 were carried by the Canadian National Railways, 2,884 by the Canadian Pacific Railway, 134 by the Temiskaming and Northern Ontario Railway, 24 by the Edmonton, Dunvegan and British Columbia Railway, and 21 by the Pacific Great Eastern Railway.

In addition to the transportation facilities afforded the workers through the 2.7 cent per mile rate referred to above, the railway companies during August grant special harvest excursion rates to the Prairie Provinces. The fares to Winnipeg for harvesters are $15 from points in Ontario and Quebec and $20 from the Maritime Provinces, the return journey being $5 higher in each instance. Holders of excursion tickets can secure transportation beyond Winnipeg at a rate of one half cent per mile. All such reduced transportation is secured by direct application to the agents of the railway companies, although employment office officials meet all excursion trains at Winnipeg in order to inform workers where employment is available. The movement of harvest workers to the Prairie Provinces from British Columbia is recruited entirely by the Employment Service and a special rate is granted by the railway companies to all applicants upon presentation of a certificate furnished by the Employment Service. Such certificates entitle the holder to a rate of $11 from Victoria, and $10 from Vancouver or other British Columbia offices to Calgary or Edmonton, beyond which points the fare is one-half cent per mile. Certificates were issued by employment offices in British Columbia to 7,315 workers, of whom 2,769 were destined for farms in Alberta, 4,510 in Saskatchewan, and 36 in Manitoba. Of the harvester workers transported from British Columbia to the Prairie Provinces on the Special harvest rate, 2,363 were carried by the Canadian National Railways and 4,952 travelled on the Canadian Pacific Railway.

BUILDING PERMITS ISSUED IN CANADA DURING AUGUST, 1926

THERE was a seasonal decline of 36.6 per cent in the value of the building authorized by 63 cities during August as compared with July, but in the more significant comparison with August of last year there was an increase of 24.9 per cent. The aggregate for the month under review was $11,874,552, while in the preceding month it was $18,717,028 and in the corresponding month of 1925 it was $9,511,008.

Some 50 cities furnished detailed statements showing that they had issued nearly 1,250 permits for dwellings valued at practically $5,000,000 and over 2,500 permits for other buildings estimated to cost almost $6,500,000. In July, permits were issued for over 1,500 dwellings and nearly 2,700 other buildings valued at approximately $7,000,000 in both cases. Authority was also given for an engineering project estimated to cost over $4,000,000.

Prince Edward Island and Saskatchewan registered increases in the value of the building permits issued as compared with July; in the latter, the total of $2,053,020 reported by the three co-operating cities, was $1,535,060, or 296.4 per cent higher than in the preceding month. Of the declines elsewhere, those of $4,266,434 or 73.8 per cent in British Columbia and $2,945,409 or 36.4 per cent in Ontario, were greatest. As compared with August, 1925, all provinces except Nova Scotia and Quebec reported increases in the value of the building authorized. Saskatchewan reported the largest gain of $1,850,725.

Montreal and Toronto registered declines in the permits issued as compared with the preceding month and the corresponding month of last year. In Winnipeg and Vancouver there were losses in the former and increases in the latter comparison. St. John, Shawinigan Falls, Three Rivers, Fort William, Galt, Peterborough, Riverside, St. Catharines, Welland, Woodstock, Brandon, Regina, Calgary, South Vancouver, and Victoria reported higher totals of building authorized than in either July, 1926, or August, 1925.

Cumulative Record for First Eight Months, 1926.—The following table shows the value of the building authorized by 63 cities during August and in the first eight months of each year since 1910. The January-August average

1922	18,158,932	105,181,416	161·8
1921	10,928,039	77,665,614	192·1
1920	10,805,846	86,303,601	214·6

index number of wholesale prices of building materials in those years is also given (1913=100).

The January-August aggregate this year was greater by 23.8 per cent than in 1925; it was also 3.8 per cent higher than in 1922, the previous high level since the war, and 40.6 per cent above the 1921 low mark. The average index numbers of wholesale prices of building materials were, at the same time, lower than in any other year since 1920.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Foods, Drink and Tobacco

Lethbridge, Alberta.—Lethbridge Breweries Limited and International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, Local Union No. 354.

Agreement to be in effect from June 1, 1926, until May 31, 1927, with 30 days' notice of change.

Should union be unable to furnish help from April 1 to October 1 extra help may be employed, preference to returned soldier, and Canadian citizens, if no lay-off is caused to union men. Permit cards for such help shall be good for one month only, and be renewable except when union members report for work. Permit card men shall receive minimum wages of union men.

No member shall be discharged or discriminated against for upholding union principles or for working on committees. No discrimination against permit card men on account of stagnation of business.

Hours per week, from April 1 until October 31, 48; for first five days of week, 8½ hours with one hour for dinner; Saturdays, 5½ hours. From November 1 until March 31, hours per week, 44. First five days, 8 hours with one hour for dinner; Saturdays, 4 hours.

Six men shall work 8 hours per day with one hour for dinner under a 48 hour week and 7 hours 20 minutes under a 44 hour week. They shall have every alternate Saturday afternoon off.

Work before 6 a.m. and after 6 p.m. (Saturdays, 2 p.m.), overtime.

Second soaker operator shall be excepted from overtime on Saturday afternoons and night shifts.

Overtime and holidays, time and one-half.

Engineering Department: Wages, operating engineers, 79 cents per hour. Not less than 8 hours per shift, 7 days per week. Not less than one week's holiday per year with pay.

Machinists, not less than 78 cents per hour. Machinists, and pipefitters' helpers, not less than $30 per week.

Brewing and Bottling Department: Wages per week, first cellar and brew-house men, $39 for 48 hour week; $35.75 for 44 hour week. First wash-house men, 48 hour week, $36; 44 hour week $33. Cellars, brew-house and wash-house helpers, 48 hour week, $34.50; 44 hour week, $31.65. Tight barrel coopers, 48 hour week, $37.50; 44 hour week $34.35. Slack barrel cooper, 48 hour week, $36; 44 hour week, $33. Packers, headers-up and pasteurizer men, 48 hour week, $33; 44 hour week, $31.25: Men starting work, first six months, 48 hour week, $27; 44 hour week, $24.75; after, 48 hour week, $30; 44 hour week, $27.50.

Special regulations: two men to work in racking cellar in racking off ½ barrels or putting them twice high or over. Employees in water or damp, suitable boots and aprons free. Employees in cellars shall not be sent to a warm place to work and then back to the cellars. Employees shall have time to change to suitable clothing. When bottle filler is speeded, an extra wrapper man and packer shall be put on. When two men work on shifts they may change weekly.

Wages for beer drivers, $140 per month, 48 hours per week. Teamsters shall be responsible for stable work exclusive of 48 hours excepting every other Sunday. Not less than one week's holiday with pay after one year's service.

Soft Drink Department: Men's wages, per week, 48 hours, $24; 44 hours, $22.

Apprentices: the company may put apprentices in each department. Apprentices, not over 20 years, to serve 2 years, minimum rate, first year, $18 per week; second year $21.

Sickness shall be no excuse for discharge.

In lay-off, men shall be laid off in rotation, no one longer than six days or less than one day at a time. Extra help to be laid off two days previous to union men.

In slack seasons during winter, men may apply for leave not exceeding four months without losing position or seniority.

The firm agrees on special prices for beverages sold to employees for their own use.

Differences shall be referred to a board of arbitration of two from each side, and, if these fail to agree, a fifth, decision of the majority to be binding.

Materials shall be of union make if possible.

Union label may be used by firms under the agreement.

Calgary, Alberta.—Calgary Brewing and Malting Company, Limited, and International Union of United Brewery Flour, Cereal and Soft Drink Workers of America, Local Union No. 124.

Agreement to be in effect from March 1, 1926 until June 1, 1927, with 30 days notice of change.

Any competent man in his branch of work, member of the union, may be employed as engineer, fireman truckdriver, general purpose man or cooper provided he has passed the required examination. All employees shall join the union within two months.

None shall be discharged or discriminated against for union principles, or for working on a committee.

From March 1 until November 1, hours, 9 per day for 5 days and 5 hours on sixth day. From November 1 until March 1, hours, 8 per day for 5 days and 4 hours on sixth day.

Engineers and firemen, six days (8 hours) per week. Overtime, time and one half. Only a certified engineer may supply on 7th day of week.

Stablemen, 6 days a week, Saturday afternoon off; one week's holiday per year with pay. All truck drivers shall be paid same rate; other teamsters shall be classed as assistants. Elevator men, two weeks' holiday per year with pay, if working 7 days per week.

General mechanics, 78 cents per hour; overtime, 1½; Sundays and after midnight if working 16 hours previously, double time. Mechanics' helpers shall take turns at firing.

Free beer shall be served once in the morning, at noon, and once in the afternoon.

Sickness not to be reason for discharge.

Extra men engaged during the busy season shall not be counted as permanent men. Company may hire extra help from April 1 until September 30, giving preference to returned soldiers, under a permit card system provided no union men are out of work. Temporary men shall receive 6 cents per hour less than rate for the department.

Employees shall receive beer at special prices, for their own use.

Company shall supply boots for work in cellars and wash-house in water.

In lay-offs on account of stagnation of business men shall not be off longer than a week, lay-offs to be in rotation.

Overtime, time and one-half. Sundays and holidays, double time.

If new men are wanted, and no union men are available, company may hire as they see fit.

Differences shall be referred to a board of arbitration of two from each side, and a fifth if necessary, majority decision to be binding.

One boy may be employed for every six men, but must not perform the work of a man. Age to be 16 to 19 years, but each must work three years to be classed as a man.

Preference is to be given to union made materials and machinery.

Wages per hour—general mechanics, 78 cents; pipe fitters, 75 cents; tight coopers, 73 cents; coopers (slack work), wash house helpers, 64 cents; 1st man in brew house and in fermenting cellars, 75 cents; 1st man in wash house, cellarmen, elevator, brew house man, 66 cents; 1st bottler, 65 cents; special man in bottle house, 69 cents; 1st labeller bottlers, 64 cents; machine men—1st men on soakers, 62 cents; labourers, 59 cents; new men, 53 cents; boys, 39 cents; extra boys, 42 cents; truck drivers' helpers, 60 cents; engineer, 73 cents; firemen, 66 cents; town truck drivers, $150 per month.

Construction: Buildings and Structures

Ottawa, Ontario.—Certain Contractors and Contracting Plasterers and Operating Plasterers and Cement Finishers' International Association, Local No. 124.

Agreement to be in effect from August 23, 1926, until August 22, 1927, and thereafter unless on 3 months' notice of change.

Wages, 90 cents per hour from August 23, 1926 until April 30, 1927 and $1 per hour from May 1, 1927 until a new agreement is made.

Hours 8 per day (except Saturday), 44 per week.

Overtime, until 10 p.m., time and one-half; thereafter and Sundays and holidays, double time. No work on Labour Day.

Foremen must be members of the local and will receive 10 cents extra per hour.

On work outside city limits 8 hours must be worked on the job. Travelling time to be paid at ordinary rate.

Only one apprentice is to be employed, he not being over 18 years of age at starting. Apprenticeship term to be four years.

Agreement is to be operative except where it infringes on rights of other locals.

Minimum wage per hour, within city limits, $1.10; outside city limits, $1.20.

Hours, 8 per day (except Saturday); 44 per week. When working two shifts or more, no more than eight hours to be worked by men; on three shifts, 8 hours pay for 7 hours work.

Overtime and holiday work only in emergency, such as preservation of life and property; overtime, double time.

For work outside city limits, walking time at rate of 3 miles per hour. For out of town work, transportation to be paid to job and back, except when member leaves of own accord.

The shop steward shall inspect all scaffolds.

Regina, Saskatchewan.—Master Painters' Association and Brotherhood of Painters, Decorators and Paperhangers of America, Local No. 509.

Agreement to be in effect from September 5, 1926, until June 1, 1927, and thereafter until amended, with three months' notice of change prior to June 1 in any year.

Hours, eight per day (except Saturday); 44 per week.

Overtime, until 8 p.m., time and a quarter; until midnight, time and a half; thereafter, double time. Saturdays, from noon until midnight, time and one-half. Sundays and holidays, double time; no work on Labour Day.

On country work, travelling time and railway fare to be paid for going to job and returning. Board and expenses to be paid on all out-of town work. (This does not apply to sub-contracts).

Wages per hour, painters, decorators, paperhangers, and glaziers, 82½ cents.

Work necessitating night shifts, time and one-quarter with a ten hour limit.

Employers to cover workmen by insurance under the Workmen's Compensation Act.

An arbitration board to be appointed of three from each party to settle disputes.

Vancouver, British Columbia.—General Contractors' Association and United Brotherhood of Carpenters and Joiners.

Agreement to be in effect from May 11, 1926, until May 1, 1927.

Wages per eight-hour day, $7.50. Days per week, 5½.

A meeting of representatives from both sides to be held on March 1, 1927 to discuss wages and working conditions for the following year.

Carpenters to be employed as far as possible through the carpenters' union.

Victoria, British Columbia.—Victoria Builders' Exchange and United Brotherhood of Carpenters and Joiners, Local No. 1598.

Agreement to be in effect from June 26, 1926, until July 1, 1927.

Wages per day, until September 1, 1926, $6.50; from September 1 until July 1, 1927, $7. Hours, 8 per day, 4 on Saturday. Overtime, 1st 4 hours, time and one-half; thereafter and Sundays and holidays, double time.

No discrimination to be shown by either party.

Employers agree to meet a committee of employees 3 months' previous to conclusion of agreement to discuss working conditions.

Service—Recreational

Windsor, Ontario.—Capital Theatre and American Federation of Musicians, Local No. 566.

Rules and regulations attached to contract, for season from September 1, 1926, to September 1, 1927.

For continuous music, from 2.30 p.m. to 11 p.m., six days per week: when three or more vaudeville performances are played, orchestra shall be relieved of all picture playing after supper show. The following scale for six or more men: Minimum weekly salary, pictures and vaudeville: Class A, leader, $77.50; side men, $57.50; organist on regular shift, $60. A one-half hour relief shift to be played by regular orchestra pianist for $1 per afternoon. Extra men for day to day engagements, afternoons, evenings, $7; afternoons and evenings, $12. Extra men for one week or more, $2 more than the regular men.

Six days per week not later than 11 p.m. Maximum working hours: afternoons, 3; evenings, 3. Actual time in pit, 4 hours per day. Between afternoon and evening performances 2½ hours must elapse.

Reasonable relief must be provided when there is continuous music, or an additional $2 per day will be charged.

Two hours per week allowed gratis for rehearsals in Class A to C houses when orchestra is employed afternoon and evenings. Musicians employed evenings only shall not be required to attend rehearsals, but on request they shall receive $1.50 per hour or less. Overtime on free rehearsals, 75 cents per half hour or less. Special rehearsals, $5 per man for not more than 3 hours. Extra holiday matinees, pro rata. For any member featured as a soloist, not less than $2 extra.

In case of disagreement, matter shall be referred to arbitration, of one member from each party and a third agreed upon.

If theatre is unable to continue in business, agreement may be terminated.

Special provisions are made for broken weeks.

Number of men contracted for may be reduced if so agreed.

Members of orchestra may be discharged for certain causes.

Ottawa, Ontario.—Certain Local Theatres and International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators, Local No. 257.

Agreement to be effective from September 1, 1925, to August 31, 1927.

Only operators supplied by the union to be employed.

Scale, per week, (not more than 48 hours), matinee and evening performances, 6 days, one journeyman operator employed, $40; all theatres operating 6 nights (not more than 28 hours) and one matinee, $30; theatres operating matinee and evening continuous performances for 6 days employing two journeymen operators, $40 per shift.

Extra matinees and Sundays, pro rata.

Overtime, $1 per hour. Sunday concerts, $5. Screenings, 50 cents per reel. Assembling or dissembling machines $5. Extra performances, not more than 4 hours, $5. In theatres operating more than eight hours, two operators to work split shifts. No operator to work more than 5 hours without 2 hours relief.

Two weeks' notice of dismissal to be given except in case of drunkenness or dishonesty.

Employees to obey rules and directions of employers not conflicting with the agreement.

The union will furnish competent men.

Union members employed by the week shall give two weeks' notice of leaving employment (except for non-payment of salaries).

Toronto, Ontario.—Moving Picture Theatres and International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators, Local No. 173.

Agreement to be in effect from September 6, 1926, until September 1, 1927, and for an additional year unless 30 days' notice is given.

In dismissal, two weeks' notice or two weeks' salary to be given except in case of drunkenness or dishonesty. Employees to obey rules and directions of employers not conflicting with the agreement.

Union to furnish competent men.

Members employed by the week shall give two weeks' notice of leaving employment (except in non-payment of salaries).

A projectionist required to work other than operating or caring for "minor mechanisms" must be paid extra.

Differences between Manager and projectionist must be reported to business agent and projectionist must continue at work pending adjustment.

Hours of work and wages are specified, varying with seating capacity of theatre.

Work after specified hours, time and one-half; Sunday work, double time.

Screening pictures, 50 cents per reel.

Changing films shall be optional with the union.

Special shows or matinees, pro rata.

Midnight shows, overtime rate, minimum of $5.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding various contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed.

Four contracts were awarded by the Department of Public Works in connection with the works of construction, etc. ("A" group), the general fair wages clause being inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Three contracts for interior fittings ("B" group), were also awarded by the Department of Public Works. These contracts contained the general fair wages clause and other conditions for the protection of the labour employed in their execution, as sanctioned by the Fair Wages Order in Council, as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workpeople, the foregoing fair wages clause for the protection of the workpeople employed.

The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by each workman and the books and documents containing such record shall be open for inspection by the Fair Wages Officer of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

The Contractor's premises and the work being performed under this contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose; all such premises shall be kept by the Contractor in sanitary condition.

With a view to avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited unless the approval of the Minister is obtained; contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of contractors; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workpeople, or, except as specially provided for under legislative authority, by inmates of penal institutions.

All workmen employed upon the work comprehended in and to be executed pursuant to this contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that special circumstances exist which would render it contrary to the public interest to enforce this provision.

The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed in the office of the Minister in support of his claim for payment a statement attested by statutory declaration showing: (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish to the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

In the event of default being made in payment of any money owing in respect of wages of any workman

employed on the said work, and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amount so paid shall be deemed payments to the Contractor.

Department of Public Works

Contracts in "A" Group

Erection of a laboratory at the Research Station, Hull, P.Q. Name of contractor, Alex. I. Garvock, Ottawa, Ont. Date of contract, July 10, 1926. Amount of contract, $91,500.

Stamping pads, ink, etc	250 97
Scales	771 45
Repairs, etc	23 60
Letter boxes, etc	2,515 29
Bag fittings	6,780 37

Piece-Work Recommended to Pressmen's Union

The chairman of the Publishers' Association of New York City, Mr. F. A. Walker, in an address delivered at the recent annual convention of the Pressmen's Union, expressed the opinion that within a few years the rate of individual production would be the determining factor in the wages received by each workman, "personally," he said, "I do not think there is any fairer way to fix the amount which shall be paid to a man than to measure what he does, and pay him accordingly. I know that unions in general are opposed to piece work, to the determination of wages upon individual production, but the determination of wages by the product of the least efficient workman works a hardship to the employer by the establishment of a low standard and works a hardship to the more efficient workman, since he may not command for his efforts any better wage than his less productive fellow."

Mr. Walker, in discussing the terms of contracts between employees and employers, said that the contract should contain "the stipulations not only of the amount of money that the employer is to pay, but as exactly as possible it should state what the employee has to give in return for the wages received."

PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slightly downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly lower, due mainly to seasonal influences.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $10.94 at the beginning of September, as compared with $11.10 for August; $10.81 for September, 1925; $10.28 for September, 1924; $10.46 for September, 1923; $10.28 for September, 1922; $11.82 for September, 1921; $15.95 for September, 1920; $16.92 for June, 1920 (the peak); $13.31 for September, 1918; and $7.83 for September, 1914. Potatoes showed a substantial seasonal decline, while the prices of beef, mutton, pork, bacon, beans and evaporated apples were also lower. The prices of eggs, milk and butter advanced. Including the cost of fuel and rent with that of foods the total budget averaged $21.15 at the beginning of September, as compared with $21.32 for August; $21.02 for September, 1925; $20.65 for September, 1924; $20.97 for September, 1923; $20.90 for September, 1922; $22.37 for September, 1921; $26.38 for September, 1920; $26.92 for July, 1920 (the peak); $21.11 for September, 1918; and $14.33 for September, 1914. Fuel showed little change, declines in both bituminous and anthracite coal being offset by advances in the prices of wood and coal oil. Rent was slightly lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, declined to 152.5 for September, as compared with 153.9 for August; 156.2 for September, 1925; 153.9 for September, 1924; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; 256.7 for May, 1920 (the peak); and 205.0 for September, 1918. Thirty prices quotations were higher, forty-six were lower, and one hundred and sixty were unchanged.

In the grouping according to chief component materials four of the eight main groups declined, two advanced, and two were unchanged. The Vegetables and their Products group, and the Fibres, Textiles and Textile Products group, both declined, the former mainly because of lower prices for grains, flour and other milled products, and potatoes, and the latter mainly because of a decline in the price of cotton. The Wood, Wood Products and Paper group, and the Chemicals and Allied Products group also declined slightly. The Animals and their Products group advanced, lower levels for cattle, sheep and meats being more than offset by the higher prices for milk and eggs. The Iron and its Product group was somewhat higher. No change occurred in the level of the Non-Ferrous Metals group, declines in the prices of silver and lead balancing the increases in the prices of tin, spelter and solder. The Non-Metallic Minerals and their Products group was also unchanged.

In the grouping according to purpose both consumers' goods and producers' goods declined; the former due to lower prices for flour, meats and potatoes, which more than offset the advances in the prices of milk, milk products, eggs and fish; and the latter due to lower prices for building and construction materials, materials for the textile and clothing industries, for the meat packing industries, for the milling and other industries, as well as for miscellaneous producers' materials, and in spite of advances in materials for the fur industry, for the leather industry, and for the metal working industries.

In the grouping according to origin raw or partly manufactured goods were lower, the higher levels for milk, eggs, rubber, jute, furs, scrap iron, tin, spelter and antimony being more than counterbalanced by lower levels for grains, potatoes, cattle, sheep, meats, cotton, silver and lead. Fully or chiefly manufactured goods declined, because of lower prices for flour and milled products, meats, lard, butter and linseed oil. Domestic farm products and articles of forest origin were lower, while articles of marine origin and articles of mineral origin were slightly higher.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, was practically unchanged in September at 170.6, as compared with 170.4 for August; 177.0 for September, 1925; 247.4 for September, 1920; and 116.6 for September, 1914. The index of food stuffs declined, while that of manufacturers' commodities advanced.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance

of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the Labour Gazette for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the Labour Gazette for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of September of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the Labour Gazette.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the Labour Gazette resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the Labour Gazette was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossiblity of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the Labour Gazette since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adapted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-1915 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 71.5; 1925, 69.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924 and 1925, the figures are substantially the same as those recently issued by the Bureau.

27692—7½

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics:—Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6;

(Continued from page 1022)

1924, 156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows:—1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

The seasonal decline in the prices of beef continued in most localities, sirloin steak being down from an average of 30.8 cents per pound in August to 30.1 cents in September; round steak from 25.3 cents per pound in August to 24.5 cents in September; rib roast from 22.9 cents per pound in August to 22.1 cents in September; shoulder roast from 16.8 cents per pound in August to 16.1 cents in September; and stewing beef from 12.9 cents per pound in August to 12.6 cents in September. Mutton was slightly lower at an average price of 30.2 cents per pound, increases in some localities being more than offset by declines in others. Both fresh and salt pork were lower, the former averaging 31.4 cents per pound in September, as compared with 32.2 cents in August, and the latter 28.5 cents per pound in September, as compared with 28.7 cents in August. Bacon was generally lower, averaging 45.1 cents per pound. In fresh fish cod steak, halibut and white fish were higher, while salt herrings and salt cod fish were slightly lower. Lard declined from an average of 25.0 cents per pound in August to 24.9 cents in September.

Eggs showed a general advance, fresh averaging 41.4 cents per dozen in September, 39 cents in August and 38.2 cents in July; and cooking averaging 37.1 cents per dozen in September and 34.7 cents in July and August. Milk averaged 11.3 cents per quart in August and 11.5 cents in September. Higher prices were reported from Sherbrooke, St. Hyacinthe, Montreal, Oshawa, Toronto, Hamilton, Medicine Hat, Edmonton and Calgary. Dairy butter rose from an average of 36.8 cents per pound in August to 37.3 cents in September. Cheese was slightly higher, averaging 31.2 cents per pound.

Bread was unchanged in the average. Soda biscuits, flour and rolled oats were steady. Tapioca averaged slightly lower at 12.7 cents per pound. Canned vegetables declined slightly, tomatoes averaging 16 cents per tin; peas 17.3 cents; and corn 16.2 cents. Beans were down from 8 cents per pound in August to 7.8 cents in September. Onions showed a general decline, averaging 6.2 cents per pound in September, as compared with 7.8 cents in August. Potatoes also were substantially lower in most localities, averaging $2.23 per ninety pounds in September, as compared with $2.74 in August. Evaporated apples and prunes declined slightly, the former averaging 19.8 cents per pound and the latter 15.8 cents per pound. Raisins and currants were unchanged in the average. Raspberry jam continued to decline, averaging 83.4 cents per four pound tin, as compared with 83.8 cents in August. Marmalade advanced from 68 cents per four pound tin in August to 68.5 cents in September. Sugar was again unchanged in the average. Coffee and tea were steady.

Anthracite coal declined in the average from $16.87 per ton to $16.82. Lower prices were reported from Sherbrooke, Belleville, St. Catharines, Port Arthur, and Fort William. Slight increases, however, were noted in Montreal and Toronto. Bituminous coal averaged $10.11 per ton in September, as compared with $10.15 in August. Hardwood advanced, in the average, from $12.04 per cord in August to $12.11 in September, and soft wood from $8.86 per cord in August to $8.93 in September. Coal oil rose from an average of 31.1 cents per gallon in August to 31.3 cents in September. A decline in rent was reported from Brantford.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month, issued by the Dominion Bureau of Statistics.

Grains, for the most part, moved to lower levels in September. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, was $1.44 in September, as compared with $1.51 in August. The high price for the month was $1.47⅝ reached on the 16th, and the low $1.39¾ reached on the 18th. Advances and declines alternated, the movement said to be governed largely by the weather. Western oats rose from 48½ cents per bushel to 52½ cents, and Western barley from 61¾ cents per bushel to 63 cents. American corn declined from 93 cents per bushel to 88⅝ cents, and flax seed from $2.10 per bushel to $2.05. The price of flour, following the downward trend of wheat, declined from $8.80 per barrel to $8.29. The price of potatoes declined generally, Quebec grades at Montreal being down from $2 per ninety pounds to $1.50, and Ontario potatoes at Toronto from $2.40-$2.60 per bag to $1.90-$2. At Winnipeg the price fell from 90 cents per bushel to 81 cents, and at St. John from $3.30 per barrel to $2.75. Ceylon rubber advanced from 38¾ cents per

pound to 41 cents. Linseed oil was down from $1.04 per gallon to 96 cents. Turpentine was lower at $1.47 per gallon. Raw sugar advanced from $3.83 per hundred pounds in August to $3.96 in September. Prices of cattle continued to decline, western grades at Winnipeg being down from $6.53 per hundred pounds to $6.28, and choice steers at Toronto from $7.29 per hundred pounds to $6.96. Hogs were steady at $12.70 per hundred pounds. The price of sheep fell from $7.42 per hundred pounds to $6.94. Meats declined, following the trend of live stock, beef, hindquarter, being down from $16.87 per hundred pounds to $15; mutton from $12 per hundred pounds to $11; bacon from 37 cents per pound to 36 cents; ham from 33-37 cents per pound to 32-36 cents; and mess pork from $38 per barrel to $36. Seasonal advances in the price of milk occurred at both Montreal and Toronto, the price in the former city rising from 21 cents per gallon to 25 cents, and in the latter from $1.70 per eight-gallon can to $1.95. Raw furs advanced, mink being up from $12 per skin to $14, and muskrat from $1.35-$1.85 per skin to $1.55-$1.85. Fresh eggs advanced substantially, being up from 40-44 cents per dozen to 50-55 cents. The tendency of cotton was downward, due, it was said, to favourable weather conditions and increased crop estimates. The average price at New York was 17.1 cents per pound in September, as compared with 18.6 cents in August. Jute rose from $7.70 per hundred pounds to $8.95. The price of scrap iron continued to advance, being up at Toronto from $10 per ton to $11. In non-ferrous metals spelter advanced from $8.90 per cwt. to $9; solder from 39 cents per pound to 40¼ cents; and antimony from 16 cents per pound to 16½ cents. Silver continued to decline, the price being 61⅓ cents per ounce, as compared with 62 cents in August. Aluminum was down from 24 cents per pound to 23½ cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

The following note on "The Future of Prices" is from the letter issued monthly by the National City Bank of New York for October, 1926.

Before the war all countries, with the exception of China, were on a gold basis, and as this situation had been arrived at gradually it can be assumed that the general price-level then existent was the normal result of the free-play of economic forces under the gold standard. Prices were inter-related everywhere through their common relation to gold. The amount of currency or bank credit which any country could issue was limited by the policy of keeping the currencies at par with gold. The price-level varied to some extent in different countries with fluctuations in the volume of credit, but if prices rose higher in one country than in others the exports of that country tended to decline, the balance of trade turned against it, gold had to be exported, credit was contracted and the international equilibrium in prices and trade was restored. The war violently disturbed this situation, nearly all countries being obliged to abandon the gold standard for the time, and a great expansion of currency and credit occurred without regard to gold values. Now the world is getting back to the gold standard, and to more definite restrictions upon the use of credit, and there naturally arises the question as to what the effect will be upon prices.

The question, of course, relates to gold prices only and not to prices in the depreciated currencies, which in most cases will be scaled down to current gold values. In the cases of Great Britain, Denmark, Norway, and Japan, the currency movements back to or towards the gold basis in the past two years have caused a lowering of currency prices, but these have been internal adjustments and do not present the fundamental question. This is best presented in the United States, where there has been no difference between gold and currency prices, but where the price level is fully 50 per cent higher than before the war, and including wages and retail prices much more than that. Evidently more credit and currency must be used to carry on the same volume of business on this basis than at the pre-war price-level. Will the increased amount be available with all the world back on the gold basis?

In this connection it should be considered that prior to the outbreak of the war prices had been rising, for more than a dozen years, as a result of the rapidly increasing production of gold. From 1900 to 1913, according to the Bureau of Labour index numbers, the average of wholesale prices rose 25 per cent. They probably would have continued to rise, and might have reached a level as high as the present one, even if there had been no war. It does not therefore follow from the fact that prices were raised by the war that they must go back to the pre-war level. The trend of prices in the future will be related to future conditions, rather than to the war-time rise.

Present Trend of Prices

The general trend of prices the world over has been downward during the past two years.....

The currency of Great Britain was raised to par with gold in April, 1925, and the decline of prices in that country has been due in part to this appreciation.

....

Evidently the trend has been downward, but various influences have been operative. There is more reason for believing that it is due to the disorganization of trade and price relations and the restrictions upon business from this influence than to a general insufficiency of gold reserves, although the unequal distribution of gold doubtless is a factor. In certain countries the scarcity of capital and credit is a restrictive influence which makes itself felt not alone within those

countries, but through all their trade relations. This, however, is not the only factor in the bad industrial situation. Trade is hampered in many ways, and with industries running light competition is very keen. Furthermore, the competition of the four countries whose currencies have been depreciating has been demoralizing to the price situation.

There are numerous reasons aside from any arising from the direct influence of gold why gold prices should tend to be lower after the period of inflation which the world has experienced. During the boom times interest centered upon volume of production and trade, but since then has centered upon prices and production costs. During the period of expansion, it was easy to make profits, as rising prices of themselves created book profits while goods were being handled. Under these conditions, methods often were unduly costly, and the number of independent operators multiplied, probably to an unnecessary and uneconomic extent. With a normal state of competition restored, the tendency for the most economical methods to dominate produces lower prices. Moreover, the higher costs being mainly due to higher wages, the stimulus thus given to labour-saving methods and machinery produces results. So much as to the decline of the last two years. The gold question is independent of these influences, and relates to the future rather than to immediate conditions.

Great Britain

Wholesale Prices.—The *Statist* index number (in continuation of Sauerbeck's figures), base period, 1867-77=100, declined 0.8 per cent in August to 127.0. Foodstuffs declined 0.1 per cent and industrial materials rose 0.8 per cent. Owing to the coal strike and the very small amount of business transacted, a number of quotations in the minerals section were purely nominal.

The Board of Trade index number, on the base 1913=100, was 149.1 in August, 0.3 per cent higher than in July. Foods rose 0.4 per cent, with increases in cereals and meat and

fish, and a decline in other foods. Non-foods showed a rise of 0.3 per cent with increases in all groups except textiles other than cotton.

The *Times* index number of wholesale prices, on the base 1913=100, was 150.7 for August, a rise of 3.4 per cent over the previous month. For the first time since the coal strike began the higher prices being paid for coal were included in the index number, which accounts for the rise in the general level. No quotations were available for English coal, and prices ruling for foreign material, this being used in increasing quantity, were substituted for home qualities. The index number of the group "metals and minerals other than iron and steel" was 25 per cent higher. This included a rise in the price of tin. Foods declined 0.9 per cent.

Belgium

Wholesale Prices.—The index number of the Ministry of Industry and Labour, on the base April, 1914=100, was 876 in July, compared with 761 in June, 621 in April, and 583 in March. Foodstuff prices were 15.4 per cent higher in July than in June and 61.2 per cent above the average for 1925. Considerable increases were shown in July index numbers for all groups of industrial materials excepting glass, the index for which remained unchanged.

Denmark

Wholesale Prices.—The index number of the Department of Statistics, on the base 1913=100, rose 4 points in August to 162. The index for fuel and light rose 16.4 per cent to

163. Animal foods and chemicals also rose, and slight declines were shown by fodder, pulp and paper and textiles and clothing. Other groups showed no change.

France

Wholesale Prices.—The index number of *Statistique Générale,* on the base July, 1914=100, was 785 in August as against 854 in July, a decline of 8.1 per cent. Foods declined 4.7 per cent and industrial materials declined 10.1 per cent. The index since the beginning of July has been compiled weekly at the end of each week. During the period the general index showed a rising tendency each week during July, and a considerable reaction (from 854 to 775) during the first week of August, followed by slight fluctuations to the level 786 at the end of August.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office showed a slight decline in August to 127.0 (1913=100). The recovery which had been noticed since May made some progress however in the first half of September. The index number for textiles, from August 18 until September 1 rose 3.1 per cent. In the same period the index of industrial materials rose 1.4 per cent. The index of farm products re-

ceded on September 1 owing to declines in grain and potato prices.

Cost of Living.—The official index number (on the base 1913-14=100) on the new extended basis (Labour Gazette, April, 1925) was originally calculated to February, 1925. The revision has now been carried back to December, 1923. The new series is higher throughout than the older one owing to the higher standard of living taken as a basis and to the inclusion of the sharply rising items for cultural necessity (in the group "sundries"). The average of the new index number in 1925 was 9.1 per cent higher than its predecessor whilst the new index without the group sundries was for the same period only 5.6 per cent higher than the older one. Other causes of the higher level were the change in the food budget and the inclusion of clothing of a better quality.

In August, 1926, the index number was 142.5 as compared with 142.4 for July, thus showing scarcely any variation.

Italy

Wholesale Prices.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 691.35 in August, showing the fourth successive monthly rise, and being 2.2 per cent above the level for July. In

end of 1920; beginning of month thereafter. *(e)* Beginning of month. *(f)* Base is average for six capital towns. *(g)* 15th prices hereafter, 1914=100. *(m)* From Jan., 1925, end of previous month. *(n)* No figures published.

August the maximum height was reached by the index numbers of the groups—vegetable foods, chemical products, and minerals and metals and the miscellaneous group. The levels of the other groups were all slightly above those for July.

Netherlands

Cost of Living.—The cost of living of workingmen's families has been calculated for March and June, 1926, compared with the mode of living and the level of prices during the period October 1, 1923-September 30, 1924=100. The budget includes 15 foods and clothing, boots and shoes, rent, fuel, gas and electricity, toilet and laundry materials, upkeep of furniture, insurance, subscriptions, tobacco and cigars, amusement, railroad and street railway fares, and sundries. The index number for March was 95.7 and for June 96.8, although an increase was shown in June by various foods such as bread, miscellaneous groceries, potatoes, vegetables, and fruits, and by boots and shoes, rent, and tobacco and cigars.

By means of previous series of index numbers, the new series has been related back through the old series on the base March, 1920=100, to the still older series on the base 1911-13=100 (mode of living in 1911). Thus the index number for June, 1926, was 170.9 (1911-13=100).

Sweden

The index of the Department of Commerce, on the base respective months of 1913=100, declined one point in August to 147. Declines were shown by vegetable foods, textiles, rub-

ber goods and chemical products, and slight advances by animal foods, feed and forage, mortar, brick, etc., and hides and leather. Other groups showed no change from the previous month.

United States

Wholesale Prices.—The *Annalist* weekly index number of wholesale commodity prices, 1913=100, was 151.7 in May; 151.8 in June; 149.6 in July; and 147.0 in August, these figures being averages of weekly index numbers. The index number as on September 14 was 147.8. Throughout the first eight months of the year the general trend was downward, with declines particularly evident in the groups farm products (12.9 per cent), textile products (12.2 per cent), and the miscellaneous group (16.5 per cent). Food products, fuels, metals, building materials and chemicals showed fluctuations with a slight net decrease.

The index number of the Bureau of Labour Statistics, on the base 1913=100, was 149.2 in August compared with 150.7 in July, a decrease of one per cent.

"Farm products averaged somewhat lower than in July, due mainly to declines in grains, cattle, hogs, lambs, live poultry, and onions. Foods also averaged considerably lower than in the month before, and minor decreases were reported for chemicals and drugs, house-furnishing goods, and miscellaneous commodities. On the other hand, clothing materials, fuels, metals, and building materials showed slight increases for August over July."

Retail Prices.—"The retail food index issued by the Bureau of Labour Statistics of the United States Department of Labour shows for August 15, 1926, a decrease of practically one per cent since July 15, 1926; a decrease of nearly three per cent since August 15, 1925; and an increase of a little more than fifty-four per cent since August 15, 1913. The index number (1913=100) was 160.4 in August, 1925; 157.0 in July, 1926; and 155.7 in August, 1926.

"During the month from July 15, 1926, to August 14, 1926, 20 articles on which monthly prices were secured decreased as follows: cabbage, 16 per cent; onions, 13 per cent; potatoes, 12 per cent; pork chops, leg of lamb, and hens, 3 per cent; bananas, 2 per cent; rib roast, chuck roast, plate beef, bacon, lard, rolled oats, rice, baked beans, and prunes, 1 per cent; and sirloin steak, round steak, ham, and coffee, less than five-tenths of one per cent. Nine articles increased: strictly fresh eggs, 7 per cent; oranges, 2 per cent; fresh milk, butter, canned peas, and granulated sugar, 1 per cent; and canned red salmon, cheese, and tea, less than five-tenths of 1 per cent. The following thirteen articles showed no change in the month: evaporated milk, oleomargarine, vegetable lard substitute, bread, flour, cornmeal, corn

(a) Quarter beginning in specified month. (b) Average for year. (c) Figure for previous month. (d) Following month. index number (38 commodities) and all converted to base 1913=100. For 1920 and 1921, 76 quotations are included, and from

flakes, wheat cereal, macaroni, navy beans, canned corn, canned tomatoes, raisins."

Cost of Living.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 166 for July a decline of one point for the month. Foods declined 3 points to 157 and clothing declined one point to 173. Sundries rose 2 points to 174 and shelter and fuel and light showed no change at 176 and 158 respectively. The index for August was 165, food, shelter and sundries each having fallen one point, while fuel and light rose one point and clothing showed no change.

The index number of the Special Commission on the Necessaries of Life of the cost of living in Massachusetts, on the base 1913 =100, was 160.9 in August, a decrease from July of about 0.75 per cent. The food index declined 1.3 per cent showing lower prices for meats, fish, butter, cheese, lard, tea, coffee, flour, bread, rice, potatoes, onions, canned goods and dried beans, with slight increases in the prices of eggs, milk, sugar, molasses, corn meal, evaporated apples, prunes and oatmeal. The fuel and light index showed a slight increase, due to higher prices of coal and kerosene.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Provincial Lord's Day Act Prevails over Dominion Statute

The sporting editor of the *Canadian Daily Racing Form,* a newspaper published at Toronto daily (except on Sundays) during the racing season, was engaged at the office in connection with his editorial duties on Sunday, February 28, 1926. Being charged under the Lord's Day Act (Consolidated Statutes of Upper Canada, 1859, chapter 104) he was convicted by a police magistrate at Toronto of profanation of the Lord's Day. It was contended on his behalf that the work he was engaged in on the date named was a work of necessity, and therefore fell within the list of activities exempted from the general provisions of this Act. The defendant further contended that his work was of the kind exempted by subsection (p) of section 12, of the Federal Lord's Day Act (Statutes of Canada, 1906, chapter 154), namely:

> Any unavoidable work after 6 o'clock in the afternoon of the Lord's Day, in the preparation of the regular Monday morning edition of a daily newspaper.

On appeal being taken in the First Division Court of the County of York, the appeal was allowed and the conviction set aside. The judgment found that the work done by the appellant was not a "work of necessity" within the meaning of the Statute, the early publication of news of sporting events taking place on Saturday or Sunday not being of vital importance. Where a conflict between the Dominion Act and a valid provincial act existed, the provisions of the latter should prevail, and it followed that the exemptions found in the Dominion legislation could not avail the accused in these proceedings. Upon another ground, however, the conviction must be set aside. The classes of persons covered by the provincial Act are "merchant, tradesman, artificer, mechanic, workman, labourer, or other person." According to the usual canon of interpretation, the general terms are to be applied only to persons of the same class with those specifically named. The defendant could not be properly described as coming within any of the classes enumerated or within any similar class. The defendant, not belonging to one of the classes of persons covered by the Statute, was improperly convicted.

—(Ontario—Rex versus Daniels)

Employees' pension rights are determined by bylaws of Pension Society

The Banque Nationale ceased to exist in 1924, when its assets were assigned to La Banque d'Hochelaga. In 1915 a contributory pension fund for the employees had been formed and incorporated under the name "La Société de la Caisse de Retraite de la Banque Nationale." When the assignment was made, an order was issued for the winding up of the pension fund society. In the distribution of the society's assets a question arose as to the rights of the different classes of contributors. This question concerned the wording of the bylaws of the Pension Fund Society, which were found to be ambiguous, among other particulars, in regard to the respective claims of the prospective pensioners, i.e. those who had contributed to the fund for ten years, and those, on the other hand, who had not completed the required ten years as members of the Society. The bylaws declared that in the event of the winding up of the society, both these classes were to have their rights as provided, but the bylaws contained a doubtful expression which seemed at first to imply that all the members of the Society were to have the same rights as if they were qualified pensioners ("Comme si a ce moment tous les sociétaires étaient alors pensionnaires"). Action was taken by one of the members to obtain his alleged right to a pension under this provision. The Judicial Committee of the Privy Council, however, sustained the judgment of the Supreme Court of Canada, in ruling that the clause could not mean that a member was to be treated as if he were a qualified pensioner, but that the words should be interpreted as meaning "as if they like the pensioners were at that moment entitled to draw money from the fund." It resulted that in the distribution the only persons who could claim to be paid as pensioners were, according to the bylaw, those who had participation in the fund for ten years, and those who by reason of mental or bodily infirmity were at the winding up of the Society entitled to pensions; also those who before the winding up had after 25 years of service been forced to give up their work by reason of the abolition of their posts by the bank, provision being made in the bylaws for the payment of pensions to all these classes. All others were held to be entitled only to the returns of their contributions with 4 per cent interest, or, if they should fall within certain categories named in the bylaws, to the return of their contributions without interest.

The decision establishes the principle that when a bank ceases to exist, on account of winding up or merger, and there is an incorporated pension fund society for the employees, the rights of the members, ex-members and pensioners must be determined under

the bylaws of the Society to the exclusion of the general law, unless a case should arise which is not provided for in the bylaws.

—*(Judicial Committee of the Privy Council —Audet versus Trudel.)*

Injured Workmen may alter Amount of Compensation claimed without forfeiting Right of Further Action in Quebec

An employee of a township council in the Province of Quebec sustained injuries in the course of his employment in July, 1923, causing total incapacity for over two months, during which period he received half pay from the employer, in conformity with the requirements of the Workmen's Compensation Act. Later he brought an action against the township alleging that his earning capacity had been permanently reduced by 20 per cent, and claiming compensation amounting to $1,979. The defendant corporation denied that the accident was of a kind provided for under the terms of the act; it admitted having paid money to compensate the workman, but explained that this had been done in error; the defendant further claimed that the man had since completely recovered from the effects of his injuries. The Superior Court of the District of Chicoutimi, which first tried the case in November, 1923, held that the accident was within the scope of the act, but that at that stage it could not be known definitely whether the workman's incapacity, estimated at 20 per cent, was of a permanent or temporary character. Judgment on this point was suspended accordingly, the parties being required to appear before the same court in October, 1925, two years after the date of the first trial, in order to ascertain the exact extent of the workman's incapacity. In the meantime, in March, 1925, the plaintiff made a statement to the court to the effect that his disability had become permanent, and that he was able to perform only the lightest kind of work. Allowing for the amounts already received from the defendant he therefore raised the amount of his claim to $2,340 with interest. The Superior Court disallowed this claim, on the ground that it differed from the claim made in the original action.

On appeal, the Court of King's Bench at Quebec reversed the decision of the lower court, judgment being to the effect that when the victim of an industrial accident brings an action against his employer for compensation he may, during the course of the legal proceedings, alter the amount claimed without forfeiting his right to further action.

—*(Quebec—Larouche versus the Corporation of the Township of Chicoutimi).*

Definition of Contributory Negligence

The question of alleged contributory negligence on the part of a street railway company in connection with an accident sustained by a person making use of the railway was decided recently by the Judicial Committee of the Privy Council in an appeal from a judgment of the Supreme Court of Canada. The action was taken by the husband of a woman who had received serious injury by slipping on ice-covered steps on a slope leading to the street car line. The steps had been constructed by the railway company for the convenience of its passengers and were used by 700 or 800 passengers every day. The defendant company maintained that it had no duty with regard to the steps, and therefore had exercised no care of them, maintaining on the other hand that the woman had been herself guilty of negligence in using the steps in preference to a somewhat longer way of approach.

The case caused a wide diversity of opinion in the Canadian Courts. The Superior Court which tried the case awarded the plaintiff $4,607, and this judgment was confirmed by a majority of the Court of King's Bench for Quebec. On a further appeal to the Supreme Court of Canada these judgments were reversed, one judge however dissenting. Finally the Privy Council restored the judgments of the Court of King's Bench and the Superior Court. The Court held that the woman must be regarded as having been "invited" by the company to make use of the steps provided by them for the use of passengers. No negligence on the woman's part could be established, it was held, unless the company, who had invited the woman to use that means of access to the line, and were accordingly bound to keep it safe, could establish that she had fully known and understood the nature and extent of the danger and had resolved voluntarily to undertake the risk.

—*(Judicial Committee of the Privy Council— Letang versus Ottawa Electric Railway Company.)*

Railway Employee Not Responsible for Passenger's Negligence

A farmer who was travelling as a passenger on a train fell asleep, and on awaking found that the train was moving out of the station where he wished to alight. He asked the

brakeman to pull the cord and let him off. The brakeman pulled up the trap and let him through the door, saying: "Hurry up, you can make it," but he did not pull the cord to stop the train. In jumping off, the passenger received injuries to his head and arm. He brought action against the railway company, and the jury which tried the case found that the company had been guilty of negligence, as their servant had not pulled the cord when requested to do so, but had raised the trap, opened the door of the car and otherwise encouraged the passenger to jump off a moving train.

An appeal taken by the defendant company was allowed by the Saskatchewan Court of Appeal, which denied the allegation that the company had been guilty of a breach of duty towards the passenger. The judgment affirmed that the brakeman was not guilty of negligence in not pulling the cord at the passenger's request, "as every farmer along the line would have a similar right, and would demand that the train stop opposite his farm." The raising of the trap and the opening of the door would constitute negligence only if the plaintiff understood such acts as an invitation to alight, which invitation he accepted without being aware of the danger. Under the circumstances the plaintiff's request to be allowed to get off was impliedly a request to raise the trap and open the door. The brakeman's advice to the passenger to "hurry up" was interpreted by the court to mean that if the plaintiff did not delay too long he would probably land safely. It was held that the plaintiff by his own recklessness was the author of his own injuries, and that the railway was not responsible for the action of an employee in giving advice to a passenger about to alight from a moving train.

—(Saskatchewan—Rogers versus Canadian Pacific Railway Company.)

Peaceful Picketing Permitted

Judge Owen, in the Court of Common Pleas at Charleston, West Virginia, recently refused to enjoin union printers from persuading non-unionists to leave the employment of two plants where strikes existed. He distinguished between intimidation and strong argument by earnest-minded men. The printers suspended work on failure to secure wage increases, following months of negotiations.

"You gentlemen who have charge of this strike," said Judge Owen, "will realize that you can use persuasion, but this persuasion must come within the limits and within the meaning of these words. You need not limit your persuasion to drawing-room talk or language. You are entitled to use vigorous, forceful, strong and convincing language. Convincing argument and language is never abuse."

Salary of Manager-Director must be fixed by Company Bylaw

The three directors of a quarrying company in Manitoba distributed the main business of the company among themselves as follows:—the first became president and general manager, the second did the office work, and the third was appointed mill manager or foreman, and, later, eastern representative of the firm. The latter brough action against the company, claiming $2,146, with interest, alleged to be due for salary in his two-fold capacity, including also the price of stone sold by the plaintiff in the east. The plaintiff's remuneration was paid fairly regularly and was increased by arrangement between the directors to $250 a month, but funds were not always available for payment of the full amount earned. The defendant pleaded that the plaintiff was himself a director of the company, and that any services rendered were rendered by him as a director of the company. The Court of King's Bench found that whatever merits there might be in the plaintiff's claim he had no legal claim, as no by-law had been passed by the company authorizing the payment of the remuneration claimed by the plaintiff for his services. Such a by-law is required by section 32 of the Companies Act of Manitoba, under which the company was incorporated. The judgment pointed out that the other directors also, on the same ground, were not entitled to the remuneration they had received. "The Company appears to have been managed without any regard to the interests of the shareholders, other than the three directors."

(Manitoba—Menzies versus Tyndall Quarries Company).

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] NOVEMBER, 1926 [NUMBER 11

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

There was a further moderate increase in employment throughout Canada at the beginning of October. The statement is based on a compilation of returns received by the Dominion Bureau of Statistics from some 5,900 employers with a minimum of fifteen employees in all industries other than agriculture and fishing. The staffs of these firms rose from 862,782 persons at the beginning of September to 865,013 on the date under review. The employment index number (based on the staffs employed by the reporting firms in January, 1920, as 100) stood at 105.2 on October 1, as compared with 104.9 on September 1 and with 98.3, 93.9, 99.5 94.6 and 90.2 on October 1, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada indicated a decline of about 24 per cent in the average daily number of placements in September as compared with the corresponding number in August, a decline being noted also in comparison with September 1925. The declines are mainly attributed to unfavourable harvesting conditions during the month throughout the West, but manufacturing, logging, mining, construction, and services were all also somewhat less active than last year. The decrease in placements in these groups however were offset in part by gains in the trade group. At the beginning of October the percentage of unemployment among members of local trade unions stood at 3.3 as compared with percentages of 2.5 at the beginning of September and 5.7 at the beginning of October, 1925. The percentage for the month under review is based on returns received by the Department of Labour from 1,540 local trade unions with a total membership of 146,202 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $10.93 at the beginning of October, as compared with $10.94 for September; $10.89 for October, 1925; $10.31 for October, 1924; $10.65, for October, 1923; $10.23 for October, 1922; $11.48 for October, 1921; $15.83 for October, 1920; $16.92 for June, 1920 (the peak); $13.54 for October, 1918; and $7.99 for October, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined to 151.1 for October, as compared with 152.5 for September; 156.0 for October, 1925; 157.0 for October, 1924; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak); and 206.9 for October, 1918.

The time loss caused by industrial disputes in October was greater than in September, 1926, and greater than during October, 1925. Nine disputes were in progress at some time during the month, involving 2,138 employees and resulting in the loss of 26,425 working days. Corresponding figures for September were as follows:—fourteen disputes, 2,248 workpeople and 20,697 working days; and for October, 1925, eight disputes, 8,023 workpeople, and 12,142 working days.

Industrial Disputes Investigation Act, 1907

During October the Department received the report of the Board of Conciliation and investigation in connection with a dispute between the Canadian Pacific and Canadian National Railways and their conductors, trainmen and yardmen, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen. A new application for the establishment of a Board was received during the month, and three Boards were appointed for which applications had been made before October. The text of the report and particulars of the proceedings under the Act are given on page 1058.

Death of Major Thomas Robb

The death occurred on November 8 of Major Thomas Robb, Manager and Secretary of the Shipping Federation of Canada, Montreal. Major Robb had for many years been associated with the shipping interests of the port of Montreal and had on two occasions (in 1920 and in 1926) attended the International Labour Conference as employers' delegate from Canada when questions affecting seamen were under consideration. He had

also been honoured with membership in an international maritime commission which had been established in connection with the International Labour Office in Geneva, to advise the International Labour Organization on labour questions connected with shipping.

New Bulletin on Vocational Education

The Technical Education Branch of the Department of Labour issues from time to time bulletins dealing with various problems and phases of vocational education in secondary schools. Two of these bulletins were mentioned in the LABOUR GAZETTE for June, 1926, page 530.

The latest publication, Bulletin 17, deals with commercial education in Canada. An analysis is made of the purpose of education in general and of secondary commercial education in particular. The objectives of commercial education are described and reasons given showing why the various subjects have been included in the courses of study. An outline is given of the courses of study given in the vocational day classes in the provinces of New Brunswick, Ontario, Alberta and British Columbia, together with a table showing courses comparatively. An article on evening commercial classes, dealing specifically with the evening classes offered by the Toronto High School of Commerce is also included. Finally the bulletin contains a list of text-books used for commercial day courses in New Brunswick, Ontario, Alberta and British Columbia, indicating by a series of asterisks those text-books which are used in several provinces.

Technical education in Quebec

An order in council has been issued in the Province of Quebec proclaiming the Technical or Professional Schools Act, enacted at the last session of the provincial legislature, as being in force from and after November 1, 1926. The provisions of this act were briefly outlined in the April issue of the LABOUR GAZETTE, in a summary of the labour legislation of 1926. It provides for the establishment of a "Corporation of Technical Vocational Schools" for the province, consisting of the provincial secretary; the director-general of technical education; the principal of the Montreal School of Higher Commercial Studies; a representative from the schools of Fine Art of Quebec and Montreal, a representative of industry and commerce, and the mayors of Quebec, Montreal and Hull. These members are to be appointed for a period of five years, and will serve without remuneration, except for travelling expenses. The corporation will have complete financial control of the Montreal School for Higher Commercial Studies, the Quebec, Montreal and Hull technical schools, the Schools of Fine Arts of Quebec and Montreal, and any other schools entrusted to it. The Corporation will receive annually $75,000 from Montreal, $30,000 from Quebec, and $15,000 from Hull, for their respective technical schools. The Corporation will be provided by Order in Council with the necessary staff. It will have powers to make by-laws for the administration of the various schools, these by-laws to have the force of law. The expenditure incurred under these arrangements will be defrayed out of amounts to be voted annually by the Legislature.

The act contains provisions for the organization of Quebec, Montreal and Hull technical schools. Each is to have an "improvement board," a consulting body consisting of seven members serving gratuitously, appointed for three years, the provincial secretary and director-general of technical education being *ex-officio* members. A board of patrons is also to be appointed for each school to promote its development. The immediate direction of each technical school will be entrusted to a principal, assisted by a staff of professors.

A school of Higher Commercial Studies may be organized, under the control of the Provincial Secretary. A council of improvement is to be established as a consulting body in connection with the school. The expenses of the school will be paid by the Corporation. Students will be examined by a jury of seven members before diplomas are awarded.

Insurance under Quebec Workmen's Compensation Act

The Quebec provincial government recently asked insurance companies in the province to state the rates which they intended to charge for industrial insurance. It will be recalled that the new Workmen's Compensation Act, which will replace the present act on April 1, 1927 (LABOUR GAZETTE, April, 1926, page 324), provides, among other changes, that employers are compelled to take out insurance against industrial accidents. Some difficulty has been experienced in obtaining the desired information from the employers, and if this should not be forthcoming, according to the Montreal *Gazette*, "the government will be faced with the issue as to insurance via government channels." Manufacturers are anxious, the newspaper states, to know what sums they must set aside for meeting the insurance feature of the act.

In addition to the compulsory insurance feature the new Workmen's Compensation Act increases the rates of compensation for death or disability; substitutes pensions for lump sum payments in death cases; and extends compensation so as to include payments for medical aid; insurance remains as before in the hands of private companies, and the settlement of compensation claims is left with the courts. Industrial diseases are not specifically provided for under the act, and no special encouragement is offered for accident prevention organization.

Challenge to Male Minimum Wage order in lumber industry

According to reports in the press the British Columbia Lumbermen's Association intends to seek a court decision in regard to the validity of the recent order under the Male Minimum Wage Act, establishing a minimum wage of 40 cents per hour for employees in the lumbering industry, which became effective on November 1 (Labour Gazette, October, 1926, page 948). The Association alleges, it is stated, that the Board of Adjustment which administers the Act has no power to enforce minimum wages in one industry only, and that the Act was intended to be universal in its scope. It is understood that the Board intends by means of future orders to apply the provisions of the Male Minimum Wage Act to other industries, but such orders can only be made after careful study of the special conditions existing in the various occupations in the province. The lumber industry was chosen as the subject of the first order because it employs, directly or indirectly, a large proportion of the population, and is by far the largest industry in British Columbia.

The first conviction under the Act was secured in the police court at Vancouver on November 9, when a sawmill company was fined $10 for paying less than the minimum rate of wages to its employees. The magistrate stated that he realized that this was a test case and imposed the minimum fine. Notice of appeal was given by counsel for the defence.

Inquiry into lumber industry in New Brunswick

The government of the province of New Brunswick has appointed Mr. Justice Grimmer of the Supreme Court, and Mr. F. C. Beatteay, of St. John, to act as a commission to investigate the lumbering industry in the province, including the cost of operation, market conditions, and other matters. The Honourable John B. M. Baxter, Premier of the province, stated recently that the government expects to obtain useful results from the investigation, which will be carried on by a non-partisan tribunal of men who are eminently qualified by experience to go at the very root of the matter. It is hoped that this inquiry can be concluded in reasonably short time.

Nova Scotia Department of Labour suggested

The suggestion was made in a recent issue of the *Halifax Herald* that the provincial government of Nova Scotia should establish a labour department connected with either the Department for Natural Resources or the Department of Works and Mines, and that it be in charge of a secretary of labour, a union labour man, subject of course to the minister. "There is an agricultural department, an educational department, a health department, why not also a labour department? There should be such a department, and each year it should issue a report, complete in information respecting provincial labour, information that would be instructive, and otherwise useful to the public. The only government report respecting labour is that contained in the mines report. It is all right as far as it goes, but could contain a great deal more in regard to mine labour than it does. There is no official information respecting lumber, steel and iron, manufacturing, and many other industries. The magnitude of all industries, number employed, wages paid, hours worked per day, should be set forth each year in a government report, and too the prospect for the ensuing year in each line of industry should be dealt with. It would indeed be of value to labour as it would give some idea at least of the outlook for employment."

Resolutions of Canadian co-operators

Among the resolutions adopted at the recent convention of the Co-operative Union of Canada was one which called the attention of the Federal Government to the organization of a Dominion-wide scheme having for its object the signing of contracts by retailers, under pressure of a trade combination, to sell at not less than fixed minimum prices, declaring this to be a combination in restraint of trade and calculated to put the consumers under what was virtually a system of taxation on purchases for the benefit of the traders, and urging the government to protect the interests of the consuming public therefrom.

The organization mentioned in this resolution is the Proprietary Articles Trade Association, whose operations were the subject of a recent report of the Registrar of the Combines Investigation Act (Labour Gazette, October, 1926, page 945).

Other resolutions adopted at the Co-operative Congress were as follows:—

(1) Urging the Federal Government to introduce a Bill to provide for the incorporation of distributive, productive, marketing, and credit societies;

(2) Asking the Federal Government to review the decision of the Commissioner of Taxation, who has given a ruling which does not make any difference between capitalist and co-operative trading concerns as to net trade revenues, and which has defined the purchase dividend as a discount allowed off selling prices, the effect of which is to make taxable all net revenue not distributed as such;

(3) Pressing upon the Provincial Governments the desirability of procuring, publishing, and circulating financial and business statistics as to Co-operative Societies within their jurisdiction;

(4) Urging the Co-operative Wholesale Society (England) to exhibit suitable merchandise at the Provincial Exhibitions in Western Canada next year.

Use of injunctions in labour disputes

Numerous resolutions have been adopted recently by labour unions protesting against the use of court injunctions in connection with industrial disputes. Vice-president Gerald Murphy, of the International Moulders' Union, in a recent address at Montreal, suggested that an authoritative statement should be secured as to the actual state of the law in Canada in this respect, and to what extent the privilege of the injunction can be invoked by employers. President Joseph Masson of the Montreal local of the same union, alleged that employers in Canada were following the example of employers in the United States in making unreasonable applications for injunctions against their employees on strike. He said he was opposed to any violence or intimidation during strikes, but on the other hand he believed that employees who were compelled to go on strike "should not be legally restrained from advising those who sought to replace them of what the conditions were."

In this connection a passage from the recent annual message of Governor Alfred E. Smith of New York to the State Legislature may be quoted: "A source of dissatisfaction frequently expressed concerning the courts," he said, "is the present practice which prevails with reference to the issuance of injunctions in labour disputes. The criticism is made, and in many cases properly so, that preliminary injunctions in these cases are issued on affidavits, and without a full and comprehensive knowledge of facts. I need hardly call attention to the importance that these so-called labour injunctions play in our industrial and social life. A better feeling between labour and capital will be brought about if, before such injunctions are issued, preliminary hearing is held to establish the facts, and I recommend an amendment along these lines" (Special Bulletin No. 145, New York Department of Labour—"New York Labour Laws in 1926").

Seven-hour day for department store employees

Four months ago a working day of seven hours was introduced by the firm of W. A. Wieboldt and Company, merchandise importers, wholesalers and retailers, of Chicago, employing about 3,000 people in their three department stores. The new working schedule was adopted after a special investigation had shown that the interests of the purchasing public could be served satisfactorily after 9.30 a.m. The conclusion was reached that any plan which resulted in shorter working hours would not only benefit the employees by giving them added time for rest, recreation and pleasures, but would better fit them for the daily requirements of the store, and that any plan which resulted in a better service to the public together with better working conditions for the employees was bound to contribute to the best interests of the business. The general manager of the company in a recent interview, stated the results of the new system after four months' trial as follows:—

"With our present opening hour at 9.30, the housewife has time to perform her routine duties and then reach our store at opening time, when stocks are fresh and selections plentiful. She is met by a sales organization which, by reason of its better and preferred working conditions, is more enthusiastic, alert and capable. As a factor which contributes to good service, our shorter hours have made it not only easier to engage the most desirable employees, but our turnover has reduced considerably. No better proof of the practicability of the plan could be had than that the individual sales production is growing. While general growth is a contributing factor to individual sales production, there has been a decided increase in spite of the shorter working period and our service is noticeably improved. The time may come when the shopping period will change, if indeed it is not constantly changing. Opening our store at 9 30 is merely in accord with the trend. The shorter day was a net gain to our employees, since in no case were salaries reduced."

Industrial research by trade union

The International Stereotypers and Electrotypers' Union of North America decided at their last annual convention to establish a technical education bureau to conduct research work for the purpose of keeping their members informed as to the best technical practice in the industry. The resolution giving effect to the new constructive policy sets forth that this is an age of research work, and that it is in accord with the policy of all progressive labour unions to promote technical education and to furnish all necessary information pertaining to their trades to their members and apprentices. The international president was therefore authorized to appoint a committee consisting of a stereotyper, electrotyper finisher, and an electrotype moulder, to be known as the technical educational bureau, this bureau to be under the direct supervision of the executive board. The duties of this committee will be to obtain all information possible pertaining to the trades and to impart this knowledge to the members when requested to do so under the seal of a local union.

Industrial development in Manitoba

Colonel R. H. Webb, mayor of Winnipeg, in a recent interview with a representative of the Toronto *Mail and Empire*, mentioned several new industries in Manitoba. The first paper mill will open at Winnipeg on December 1, with a capacity of 250 tons a day, and it is expected that another mill will open in 1927. In this connection Mayor Webb stated that there were vast areas of pulpwood in the province, and in the rivers within reach of Winnipeg there were 650,000 horse power units available for industry, half of which had been already developed by public and private organizations. Another new enterprise, he said, was the construction of the largest abattoir and meat packing plant in the British Empire, while the first unit of a large cordage and binder twine factory would also be opened on December 1. Hitherto the hemp grown in Manitoba has been shipped overseas for manufacture, and about 114,000,000 pounds of binder-twine, valued at about $17,000,000 has been imported annually for use in western Canada. The sugar beet industry also is likely to be developed next year for the supply of home needs. Mayor Webb referred to the shortage of labour required for the rapidly expanding mining industry of the province, and concluded that "what the West needs is an industrial development and population that will supply a home market for the produce of the farms."

An organization for the industrial development of the Province was formed at Winnipeg in 1924 under the title of the Industrial Development Board of Manitoba (Labour Gazette, April, 1924, page 309), some labour representatives serving on the organizing committee along with other industrial, agricultural, municipal and educational representatives. The movement received support from the provincial legislature in 1925, a grant of $12,000 being made to assist the new organization in carrying out an industrial survey of the Province (Labour Gazette, May 1925, page 461). The Board recently published a report showing the results of the efforts made by them during the past year to promote industrial activity in the province. In the past year the Board has completed a directory of manufacturers' agents in the province and the commodities they represent, and beside this, a directory of Manitoba manufacturers and their commodities. An industrial survey of Manitoba has been completed and the results are now being tabulated. General statistics on 102 subjects relating to industries were compiled.

"No accident" bonus on street railways

On August 1 the Brooklyn City Railroad Company began the practice of giving each of its motormen and conductors a bonus of $5 for each 30-day working period in which cars are operated without an accident. Forty such bonuses, amounting to nearly $6,000, had been paid in this way before September 15. The average daily number of accidents was reduced in this period from about 45 to 30. Employees failing to report an accident forfeit the bonus for the 30-day period in which it occurred. To avoid a charge being made against them in connection with an accident, employees must be able to prove that it has not resulted from carelessness on their part. Similar no-accident bonuses are paid by the Los Angeles Railway Company, the Newport News and Hampton Railway, Gas and Electric Company, and the West Penn Railways Company of Pittsburgh.

Agricultural unemployment insurance inquiry in Great Britain

Reports have been issued by an inter-departmental committee on agricultural unemployment insurance in Great Britain, recently appointed to consider whether workers in agriculture should continue to be excluded as they have hitherto been from the national system of insurance. The majority report, signed by the chairman and five other members of the committee recommends that

agricultural workers should be insured against unemployment. Any practical scheme on this basis, it is held, must be contributory in principle, in other words the funds must be provided by means of contributions from employers, workers and the state. Assuming that a total contribution of 6 pence *per* week *per* insurable person would be sufficient, the committee recommends that 3 pence *per* week should be provided by the state, and that the other half should be contributed in equal shares by employers and workers. It is suggested that as the scheme becomes well established, and if the farming community should become better able to bear the burden of its contributions, the proportion of cost borne by the state might be decreased. The report suggests, as a safeguard against abuses of the scheme, that general provision should be made to the effect that married men with families shall in no case receive a weekly amount of benefit in excess of the amount of wages they would have earned if they had been employed. The responsibility for the administration of an agricultural scheme, the report suggests, should be entrusted to the Ministry of Agriculture, with such co-operation as the Ministry of Labour might be able and willing to give.

The minority report takes the position that no real necessity exists at the present time for extending unemployment insurance to include farm labour, since the present supply of such labour falls short of the actual demand. Moreover, the steady decline in the number of children attending rural schools indicates that this shortage is likely to increase rather than decline. It will be further accentuated in January, 1928, when pensions under the contributory pensions legislation of 1925 will be given to persons on attaining the age of 65 years.* (Non-contributory old age pensions are paid at the present time to persons of 70 years of age). It is suggested further that the electricity schemes of the government will tend to employ many men as labourers, and, owing to the continuous increase in motor-vehicle traffic, large numbers of men will be permanently employed in the improvement and maintenance of the roads in rural areas. The minority report notes further, as showing that the farm labour shortage is likely to increase rather than diminish, that while the state assistance afforded to Empire Settlement plans is applicable to would-be emigrants in urban and rural areas alike, the Dominion Governments have made it clear that their preference is for skilled agricultural workers as immigrants, and the selection of intending settlers overseas is effected accordingly.

* (LABOUR GAZETTE, June, 1925, page 581.)

"International aspects of the coal question"

Dr. Mack Eastman, formerly professor of history in the University of British Columbia, and now attached to the Research Division of the International Labour Office, Geneva, deals with "international aspects of the coal question" in the September issue of *Unity*, published by the National Industrial Alliance of Great Britain (This organization aims at reconciling employers and employees by demonstrating their mutual dependence). Dr. Eastman discusses the international crisis in the coal industry and its causes, and enumerates various remedies that have been suggested, all of them based on the assumption that a unified control of the industry exists in each exporting country.

The widespread coal crisis is attributed to the over-development of the mines of Europe during and since the war, to the opening up of new competitive coal-fields in many countries not formerly reckoned as exporters, and to the increasing application of hydro-electric and gasoline power. Moreover the stagnation of the iron and other industries which are large consumers of coal has further depressed the mining industry. Another disturbing factor in the European situation is the possibility that a United States coal combine may conceivably choose to dump coal on the world market, with catastrophic results to the European industry.

The efforts of the coal exporting countries to dispose of their surplus stocks led to an international coal war in 1925, the chief participants being Great Britain, Germany, Poland and Czechoslovakia (The French mines were protected—at the expense of the nation as a whole—by the fall of the franc and the ephemeral prosperity of the iron trade). Foreign competitors have benefited by the prolonged strike in the British industry, but they recognize that their prosperity from this cause is destined to be short-lived.

Measures have been taken in most countries towards better organization of the industry to meet the crisis. Production has in many been placed on a national basis by the unification of the industry under a centralized control. In Germany the whole fuel industry has been "rationalized," or reorganized on strictly scientific lines; Poland likewise has "syndicated, centralized, nationalized, and mechanized" her national coal fields on the German model, and immensely increased their

efficiency from the standpoint of international competition; Spain has adopted the same pattern; Czechoslovakia is inclining towards it, and Russia has energetically applied a similarly drastic program. The result of this reorganization has been intensified competition. "The most vigorous applications of purely national remedies attempted up to last May bore no visible fruit other than the intensification of the international crisis. Every move, whether political, economic, or technical, has produced almost immediately a reaction, equal, if not opposite, among its rivals."

This situation has produced a general desire among the coal exporting countries to reach an international *entente,* and the best minds in British and European industry believe that some degree of international collaboration in coal is possible and necessary. The various remedies that have been suggested are outlined and criticized by Dr. Eastman as follows:—

"Given the prerequisite of a responsible national coal executive, the first plan which may be mentioned is that for a division of the world's markets among the chief exporters on what is known as a 'freight favourable' basis. Such a rigid system would undoubtedly appear arbitrary to the importing regions, and would frequently run counter to their industrial interests because of the great variety in the qualities of coal. Dissatisfied customers could easily thwart the terms of the exporters' agreement by indirect means and subtle devices.

"A seemingly more flexible arrangement might be found in a simple understanding as to export quotas. These quantities would be determined by an international committee of experts who would estimate the probable world demand for a given period. Difficulty would arise here again from the number of different grades and qualities of coal, but a strong national syndicate could probably live up to its undertakings in this respect.

"In the opinion of some people there would be still greater suppleness in an all-inclusive periodic agreement as to the total national production of the principal competitors in the export trade. Each national syndicate might be more harassed by the opposing claims of its own component companies, but its agreement with foreigners would need to take cognizance only of total quantities and not of diverse qualities.

"A similar advantage can hardly be claimed for the Anglo-German price-fixing plan countenanced by many authorities, including the British Royal Commission. Even if a highly differentiated price-schedule could be accepted and firmly applied by two national syndicates, the difficulty of maintaining it would probably increase in an almost geometric progression as new partners came in.

"All these and most other plans could be seriously entertained only after the British industry had been as completely unified as the German.

"There remains one relatively modest project which might be attained under existing circumstances through inter-governmental agreements, and that is the standardization of hours of labour. In its report (p. 178) the British Royal Commission said: 'If a common level of working hours, through the intervention of the International Labour Organization or otherwise, could be agreed upon, it might be advisable to accept it, even if it meant some small increase here to meet part way a decrease elsewhere.' Suppose the length of the mining day were thus scientifically and authoritatively regulated, first as regards England and Germany, and later as regards the other greater exporting nations, is it an exaggeration to suggest that the question of prices (and therefore wages) might take care of itself?"

"Profiteering prevention" in Australia

The Department has received the report of the Board of Trade and Arbitration under the Queensland Profiteering Prevention Act of 1920, summarizing the results of the administration of this Act during the eight months ending June 30, 1926. It is claimed that the effects of this legislation may be seen in the fact that the cost of living in Queensland, as reflected in the figures covering (1) food and groceries, and (2) food, groceries, and house rents, is lower than in any other state in the Commonwealth.

"This favourable position," the report states, "has been reached as the result of the strictest control of the prices of commodities that find a place in the household budget of the working man. It has been maintained, too, despite the severe drought which has prevailed in Queensland during the period under review, and which has compelled the Board to increase the maximum prices of meat, bread, and milk."

It is noted that the control of rents—a large factor in the cost of living—is beyond the powers of the Board, the Fair Rents Act providing that house rents are to be determined judicially in each individual case.

The Profiteering Prevention Act of Queensland is one of a series of measures passed by the legislatures of the several states of the Commonwealth to continue the control over prices that had been assumed during the war

by the Commonwealth Government. In March, 1916, a Federal Prices Adjustment Board was created, with authority to fix the prices of flour, bread, bran, and pollard. Prices of bread were fixed in upwards of 1,000 separate towns after investigations had been made as to the cost of manufacture, distribution, etc. Later the scope of the investigations and activities of the Prices Adjustment Board were considerably enlarged, and an exhaustive list of commodities was made of "necessary commodities." Later, again, a commissioner was appointed in each state to make investigations, and to make recommendations to the minister as to the necessity for fixing maximum selling prices of various commodities. Shortly after the appointment of these commissioners, the members of the Prices Adjustment Board resigned in a body, and the control of prices was placed in the hands of a minister acting upon the recommendation of state commissioners. The commissioner for Victoria acted also as Chief Prices Commissioner. Prices were fixed by regulations under the War Precautions Act for a large number of commodities. In May, 1919, the Commonwealth Government released from the control of the Prices Commissioners many articles in which trade had been regulated during the war.

In July, 1919, control ceased of all but a few commodities, the more important of which were butter, cheese, and flour. In August, 1920, the Commonwealth organization for the fixing of prices was abolished. Prices, however, of necessary commodities were not permitted to remain uncontrolled except in Tasmania. In New South Wales, Queensland and South Australia price fixing was resumed under the authority of Acts already in existence, while in Victoria and Western Australia necessary legislation was passed to enable the Government of these states to deal with the subject.

In Queensland the Profiteering Prevention Act, 1920, and the Fair Rents Act, 1920, and in New South Wales the Fair Rents Act, 1915, amended in 1920, are still in force. Similar legislative measures enacted by the other states and by the Federal Parliament have been repealed or allowed to lapse. The Fair Rents Acts of Queensland and New South Wales established Fair Rents Courts for the regulation of house rents.

Price fixing in New South Wales

The Government of New South Wales decided in September to submit to Parliament a bill amending the Industrial Arbitration Act for the purpose of enabling the police to obtain from the court established under that Act an order fixing conditions and hours of work and rates of pay, and of giving power to the commissioner to prevent unreasonable increases in the prices of commodities. The bill provides that, if the industrial commissioner is convinced that the prices of commodities affected by increased wages have been unreasonably raised, he may enforce the provisions of the Act. When the Act becomes operative, it will be unlawful for prices to be raised unless the commissioner declares it to be lawful. The commission, which will be created by the Act, will consist of the industrial commissioner and two accountants, one of whom would be nominated by the trade concerned.

It is stated that the ministry is expecting a substantial increase in the basic wage, and that if the Minister for Labour and Industry obtains the passage of the bill, and it is proclaimed to be in operation before the declaration of the new basic wage, he would then be in a position to prevent the increasing of prices consequent upon the higher wages awarded.

Labour unions in New Zealand, in submitting to the Arbitration Court their claims for new wage awards, are making a feature of a demand for a 40-hour or five-day week, with Saturday and Sunday free.

At the thirty-second annual convention of elementary school teachers from Nipissing and South Temiskaming district in Ontario a resolution was passed in favour of a proposal to allow teachers the privilege of "accumulated sick allowance." Under this arrangement teachers who have not been absent from school owing to sickness and have not taken advantage of the annual time allowance for sickness, would be permitted, in case of serious illness to draw upon their accumulated allowance to the extent of 20 per cent of their unused sickness allowance each year.

The New Jersey State Supreme Court recently awarded as workmen's compensation the sum of $1,700 to a worker who was shot in a hold-up at Newark. The court ruled that "in these times" a hold-up can be "reasonably anticipated as connected with employment."

The Vancouver Board of School Trustees gave a ruling in October that married women may not serve as school teachers except under special circumstances. This decision was made in connection with the appointment of teachers for the Vancouver School of Decorative and Applied Arts.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at October 31st was reported by the superintendents of the Employment Service of Canada to be as follows:—

Threshing and outdoor farm work were being finished up throughout the Province of Nova Scotia. Storms having seriously interfered with fishing, the catches were reported as light. Winter activities in the logging industry were starting, and the prospects for the winter's work seemed good. A number of placements were being made in this industry. Some firms in the iron and steel industry were curtailing operations, but in other respects the manufacturing industry was commented upon as being fairly active. Outdoor construction work was gradually decreasing in volume, although in some cases the desire to finish work before the coming of the winter was speeding up activity. In the City of Halifax work on a number of projects continued, and a report that a large hotel is to be erected during the coming winter was creating considerable interest. The coal mining industry continued to be very active with the exceptionally heavy production still the rule. Trade showed some slight improvement, but transportation was reported as being only fair.

Farm work in the Province of New Brunswick was just about finished for the season. The fishing industry in this province reported fair catches. Placements in the logging industry were on the increase, and prospects for a heavy winter's work were bright. Manufacturing industries showed very little fluctuation from normal. The speeding up of construction work, customary at this season, and the prosecuting of the work on the water power project of Grand Falls were the only notable features in the building and construction industries. Transportation was fairly brisk, and trade was very satisfactory.

Very few orders for farm workers were being listed with the Quebec employment offices. The demands for bush workers, however, were heavy, and difficulty in satisfying them was being experienced in some cases. Except in the leather and metals groups, manufacturing seemed to be very active throughout the province. The leather and metals groups were reported as showing some slackening. Tradesmen in the building and construction industry were practically all engaged, and calls for building labourer, particularly in Montreal, were rather numerous for the time of year. Railroad maintenance work continued, and some additional workers were being taken on for it. The demands for domestic workers were numerous, and the usual shortage of women applicants for these vacancies was noted.

The Ontario offices reported that the orders for men for late fall work on the farms were rather heavy, and some centres reported a shortage of applicants. Throughout this province factories appeared to be maintaining the increased activity reported in earlier months; while some persons applying at the employment offices for factory work remained unplaced, and while there was no general demand for workers from the manufacturing industry, it was reported from different places that the placements being made in this industry were more numerous than heretofore, and, generally speaking, the outlook for this industry seemed optimistic. Railroad construction work was decreasing in volume, but other branches of the building and construction industry showed the usual fall activity, with an effort being made to finish up work before winter sets in. The metal mining industry remained normal. Demands for workers in the logging and lumbering industry were numerous, and there was no difficulty in placing those seeking this sort of employment. A strike of bush workers in the Port Arthur-Fort William district was causing some unsettlement in that industry in that portion of the province. As usual with Ontario, demands for women domestics were general, and local shortages were reported.

In the Province of Manitoba threshing was practically completed, and the men being sought for farm work were for the usual late fall farm operations. For this work plenty of applicants were available. Work in the building and construction industries was gradually slackening off, although most tradesmen appeared to be engaged, and road and railroad construction were progressing. The logging industry was absorbing some men. Casual labourers were not in brisk demand, and apart from the City of Winnipeg the prospects for them were not promising. The volume of trade was commented upon as being satisfactory. The demand for women domestic workers was less than a few weeks previously, but no surplus of this class of applicant was reported.

The season having been backward for threshing operations, some of the threshing in Saskatchewan remained to be done. There were, however, more than sufficient applicants to care for any demands. Placement of farm workers for fall and winter

work had begun, and here again sufficient applicants, for the time being at least, were reported. The demands for general labour for construction work were rapidly declining, but in the larger centres building tradesmen were practically all employed. In this province, as in the others, the building and construction industries were showing the usual seasonal activity in anticipation of winter. The prospects for the winter's work in the logging industry in Prince Albert district were bright, and a movement of men into industry had already begun. Activity in miscellaneous industries and in casual work was not such that there was any shortage of suitable workers at any point. Quite unlike the usual experience, the demands for domestic workers were not heavy, and a sufficient number of women were presenting themselves to take such work to satisfactorily dispose of all vacancies.

The superintendents at some points in Alberta reported that the demand for harvesters for this season was practically over, although as some threshing remained to be completed some few placements of these workers were being made at certain points. The demands

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending October 30, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

for farm workers for fall and winter work were not exceptionally heavy, and between harvesters remaining over and local help there was no shortage of applicants. The building and construction industries were rather busy, and practically all tradesmen were employed. Although a few orders for bush workers were being received, colder weather would have to be awaited before the demands from this source would reach any proportions. The coal mining industry was rather dull. Manufacturing activity was about normal. A sufficient number of women applicants have been registered to satisfy the demands for domestic help.

The logging and lumbering industries in British Columbia, which had been rather quiet, seemed to be giving indications of increased activity toward the close of the month. Some camps, which had been closed, were re-opening, and consequently were taking on employees. This state of affairs, however, was not general throughout the province, and there would not seem to be any indication of a general revival of activity. The building and construction industries showed a speeding up in order to finish work before the advent of winter. Apart from Vancouver and Victoria, where quite a number of building tradesmen were available, these workers seemed to be rather well employed throughout the province. The mining industry was reported as in a rather satisfactory state. Conditions generally in this province seemed to be satisfactory for the season of the year. Although the return of harvesters from the Prairie Provinces was well underway, the speeding up of construction work had had some effect in minimizing unemployment, and in surveying the whole situation it might be said that employment conditions in the Province of British Columbia were encouraging.

Employers' Reports

Further gains in employment were reported at the beginning of October, when 5,918 firms added 2,231 persons to their staffs, bringing them up to 865,013 on the date under review. The situation continued to be better than at any time since 1920; the index number stood at 105.2 on October 1, as compared with 104.9 at the beginning of September and 98.3, 93.9, 99.5, 94.6 and 90.2 on October 1, 1925, 1924, 1923, 1922 and 1921, respectively.

Heightened activity was reported in Ontario and the Prairie Provinces; the situation in Quebec remained practically unchanged, while employment in the remaining provinces showed a falling off. In the Maritime Provinces, construction released a large number of employees and there were also losses in manufacturing, transportation and hotel services. On the other hand, logging and coal mining reported improvement. In Quebec, there were reductions in the metal, lumber, pulp and paper, electric current and local transportation divisions, offsetting increases in leather, textiles, mining, steam railway operation and shipping. In Ontario, manufacturing, logging, mining and trade registered greater activity, while construction showed a seasonal falling off. In the Prairie Provinces, manufacturing, mining, transportation and trade reported considerable improvement; construction, however, was seasonally slacker, as was work in summer hotels. In British Columbia, the curtailment took place chiefly in the food, construction and transportation industries, while logging and coal mining were busier.

Improvement was shown in the cities of Quebec, Toronto, Ottawa and Winnipeg, while employment declined in Montreal, Hamilton, Windsor and Vancouver. In Montreal, railway car shops released a large number of workers, following a season of great activity, and electric current plants, local transportation and building were also slacker. On the other hand, the leather, vegetable food, textile and printing groups recorded moderated improvement, and there were pronounced gains in shipping, on road construction and in trade. In Quebec, there was an inrease in manufacturing, but a decrease in transportation. In Toronto, the greatest improvement was in manufacturing, particularly in the textile and food industries, while construction was seasonally quiet. In Ottawa, further gains took place, chiefly in manufacturing and trade. In Hamilton, employment showed a moderate decline, mainly in the manufacturing group, while a slightly upward tendency was shown in other industries. In Windsor and the other Border Cities, automobile works released some help and construction was also slacker. In Winnipeg, trade showed pronounced improvement, but manufacturing was rather dull. In Vancouver, food and tin can factories reported seasonal losses and there was also a falling off in employment in transportation.

Manufacturing showed a comparatively small decline on October 1, chiefly due to seasonal losses in lumber mills and fish canneries, together with reductions in pulp and paper and iron and steel. On the other hand, boot and shoe, edible plant, textile and electrical factories registered important increases. There was considerable seasonal activity in logging, and mining, steam and water transportation and trade also showed improvement.

Construction—highway, railway and building —showed important seasonal losses; there were also declines of the same nature in summer hotels.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of October, 1925.

TRADE UNION REPORTS

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness are not considered as unemployment. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation among organized labour at the end of September as indicated by returns tabulated from 1,540 local unions with an aggregate membership of 146,202 persons was slightly less favourable than in the preceding month, 3.3 per cent of the members being idle at the close of September as compared with percentages of 2.5 at the end of August and 5.7 in September last year. The most outstanding change in comparison with August was shown in Quebec where an almost four per cent increase in unemployment was noted reflecting less active conditions among railway carmen in Montreal. Slight reductions in employment also occurred among unions in Ontario, Saskatchewan and British Columbia. In the remaining provinces there was improvement, the most substantial increase being that of three per cent in Alberta. In comparison with September last year very slight declines in employment were registered by unions in Saskatchewan and British Columbia, while the gains in the other provinces ranged from .6 per cent in Alberta to 5.5 per cent in Nova Scotia. Unemployment in the metal trades affected the situation in the manufacturing groups to a marked degree during September as compared with August, though contributing reductions were also reported among bakers, hat and cap makers, metal polishers and garment workers. On the other hand cigar makers, wood, textile and glass workers were somewhat busier. The situation in the manufacturing industries, as a whole, was considerably better than in September last year. The coal mining industry both in Nova Scotia and Alberta showed improvement, but in British Columbia there was no change, all members being reported at work. Quarry workers in Nova Scotia were also fully engaged. Tradesmen in the building and construction group registered a slightly lower level of employment than in August, the percentage out of work standing at 5.5 in September as compared with 4.7 per cent in the previous month. Steam shovel and dredgemen were much better engaged and lesser increases were indicated among tile layers, lathers and roofers, granite and stone cutters, plumbers and steamfitters and carpenters and joiners. The declines among painters, decorators and paperhangers, bricklayers, masons and plasterers, electrical workers, bridge and structural iron workers and hod carriers and building labourers, however, more than offset these gains. In comparison with September last year the building trades registered considerable improvement, painters, decorators and paperhangers, granite and stone cutters, bricklayers, masons and plasterers, hod carriers and building labourers and tile layers and lathers and roofers reporting the most substantial increases. The trend of employment in the transportation industry was practically the same as compared with both the previous month and September last year, the percentage of variance being only .1 in each case. During September employment in the steam railway division was in greater volume than in August, but almost counteracting declines were registered in the navigation and street and electric railway divisions. In comparison with September last year both steam railway and street and electric railway employees were more fully engaged, but navigation workers were slacker. Retail shop clerks were slightly busier than in August as also were theatre and stage employees, but stationary engineers and firemen, hotel and restaurant employees and barbers reported a slightly greater volume of unemployment. Lumber workers and loggers registered considerable slackness in British Columbia the only province from which reports were received from this class of worker. Employment for fishermen remained on the same level as in August.

An article elsewhere in this issue gives a summary of unemployment as reported by local trade unions during the quarter ending September 30, 1926.

EMPLOYMENT OFFICE REPORTS

During the month of September, 1926, the offices of the Employment Service of Canada made 53,572 references to positions and effected a total of 52,150 placements. Of these the placements in regular employment were 41,681, of

which 37,630 were of men and 4,051 of women. Placements in casual work totalled 10,469. Vacancies reported to the Service numbered 64,106, of which 53,136 were for men and 10,970 for women. Applications for work were received at the offices from 48,737 men and 11,955 women, a total of 60,692. It will be noted that a decline is recorded in the transactions of the employment offices during this month when the figures are compared with those of the previous month and also with September last year, the reports for August, 1926, showing 77,501 vacancies offered, 78,519 applications made and 70,980 placements effected, while in September, 1925, there were recorded 75,312 vacancies, 77,436 applications for work and 68,637 placements in regular and casual employment. In another section of this issue may be found a detailed report of the work of the offices for September, 1926, and for the quarterly period July to September in the current year.

PRODUCTION IN CERTAIN INDUSTRIES

Some figures indicating the recent movements of trade and industry are given in the table on page 1052.

The Dominion Bureau of Statistics reported that production of pig-iron in Canada during September totalled 64,187 long tons, almost double the 34,609 tons in September a year ago. This month's output showed a 9 per cent increase over the 58,780 tons of August, which in turn was 13 per cent under the 67,232 tons reported for July. For the nine months ending September the cumulative production of pig-iron totalled 561,063 tons as compared with 372,960 tons in the corresponding period last year. The increase was general in all grades, basic iron advancing 32 per cent to 371,803 tons, foundry iron 129 per cent to 149,252 tons and malleable iron 63 per cent to 40,008 tons. In 1925, the first nine months' output included 283,430 tons of basic iron, 65,039 tons of foundry iron and 24,491 tons of malleable iron. Furnace charges in September included 112,735 long tons of imported iron ore, 72,568 short tons of coke and 34,421 short tons of limestone. For the nine months' period the furnace charges totalled 999,028 long tons of imported iron ore, 625,081 short tons of coke and 304,552 short tons of limestone. During the month one additional furnace was blown in at Sydney, N.S., resulting in 6 furnaces being in blast at the end of September. Of the active furnaces 2 were located at each of the following points: Sydney, N.S.; Hamilton, Ont.; and Sault Ste. Marie, Ont. Active furnaces had a capacity of 2,325 long tons per day or about 46 per cent of the total capacity of all blast furnaces in Canada.

The production of ferro-alloys amounted to 3,083 tons, a slight increase over the 3,058 tons of August. This production consisted mostly of the grade having a high manganese content. A small quantity of ferrosilicon was also produced. For the nine months ferro-alloys totalled 26,923 tons, an increase of 45 per cent over the 18,566 tons made during the first three-quarters of 1925.

Production of steel ingots and castings in Canada rose to 58,837 long tons in September, marking an increase of 29 per cent over the 45,674 tons of the previous month. While the production of direct steel castings fell off to 1,673 tons from 2,128 tons in August, the loss was more than offset by the greater output of steel ingots, this grade advancing to 57,164 tons from 43,546 tons. In September, 1925, the producing companies reported an output of 35,833 tons of ingots and 1,261 tons of castings. For the first nine months of this year the cumulative production totalled 600,542 tons or slightly more than the 581,711 tons made during the corresponding period a year ago. This year's output included 573,709 tons of ingots and 26,833 tons of castings. During the first three-quarters of 1925, production included 588,483 tons of ingots and 23,228 tons of castings.

Pig-iron prices were unchanged in September, No. 1 foundry at Toronto still being quoted at $24.80, and No. 2 foundry at $24.30 per ton. At Montreal, No. 1 foundry was still quoted at $27.20 and No. 2 foundry at $26.70. Basic pig-iron at mill was again $21. The Bureau's index number for iron and its products (1913 prices=100) rose from 144.2 to 144.8 chiefly because of advances in scrap iron and steel sheets.

Coal Production.—Full statistics of coal production during September are not yet available. The output of coal from Canadian mines during August was 1 per cent less than the production for the preceding month, and 17 per cent greater than the average for August in the past five years. The figures were 1,336,414 tons in August as against 1,349,155 tons in July, and an average of 1,134,341 tons during the five preceding years.

The coal-producing provinces of Nova Scotia and British Columbia showed a gain over the preceding month, and the outputs of Nova Scotia and Alberta were greater than the average for the month in the five preceding years.

Men employed in the coal mines of Canada during August numbered 25,497 of whom 19,538 worked underground and 5,959 on surface, as compared with a total of 24,380 in July of whom 18,701 worked underground and 5,679 on surface. Production per man was 52.4 tons in August as against 55.2 tons per

man in July. During August the production per man-day was the same as in July, being 2.4 tons. The tonnage lost was largely due to "lack of orders."

EXTERNAL TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in September, 1926, the merchandise entered for consumption amounted to $85,562,911 as compared with $78,662,591 in September, 1925. The domestic merchandise exported, amounted to $92,224,610 in September, 1926, as compared with $90,621,419 in August, 1926, and $108,497,911 in September, 1925.

The chief imports in September, 1926, were: Iron and its products, $18,915,022; non-metallic minerals and products, $15,322,862, and fibres, textiles and textile products, $14,085,753.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $26,213,316; and wood, wood products and paper, $25,654,740.

In the six months ending September, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $206,749,530, and wood, wood products and paper, at $143,041,731.

BUILDING PERMITS

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada during the month of September, 1926, amounted to $11,036,359, as compared with $11,874,552 in August, and $10,140,853 in September, 1925. This was a decline of 7.1 per cent as compared with the preceding month, but an increase of 8.8 in comparison with September last year.

The *MacLean Building Review* estimates the total value of the contracts awarded in Canada in October, 1926, at $43,384,600, as compared with $29,647,500, in October, 1925. Of the contemplated new construction in Canada during October, 1926, $10,333,900 was for residential building; $18,691,500 for business building; $14,127,500 for industrial building, and $7,818,400 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). By classification the construction contracts during October, 1926, were divided as follows: business building, $15,227,900; industrial building, $13,166,700; residential building, $10,407,500, and public works and utilities, $4,582,500. The apportionment by provinces was: Ontario, $25,120,600; Quebec, $15,086,400; Prairie Provinces, $1,234,800; British Columbia, $1,214,200 and the Maritime Provinces, $728,600.

Strikes and Lockouts

The time loss due to industrial disputes was greater in October than in September, 1926, and greater than during October, 1925. There were in existence during the month 9 disputes, involving 2,138 employees and resulting in a time loss of 26,425 working days, as compared with 14 disputes in September involving 2,248 workpeople and resulting in a time loss of 20,697 working days. In October, 1925, there were recorded 8 strikes involving 8,023 workpeople, and resulting in a time loss of 12,142 working days. None of the strikes and lockouts commencing prior to October terminated during the month, but the two strikes commencing during October terminated during the month. At the end of the month, therefore, there were on record seven strikes and lockouts affecting 381 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices showed little change during the month, a substantial seasonal advance in the price of eggs being offset by a decline in the price of potatoes. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was $10.93 at the beginning of October as compared with $10.94 for September; $10.89 for October, 1925; $10.31 for October, 1924; $10.65 for October, 1923; $10.23 for October, 1922; $11.48 for October, 1921; $15.83 for October, 1920; $16.92 for June, 1920 (the peak); $13.54 for October, 1918; and $7.99 for October, 1914. Besides the advance in the price of eggs less important advances occurred in the prices of veal, milk, butter, rice and evaporated apples. The seasonal decline in the price of potatoes continued. Slight declines occurred in the prices of beef, mutton, pork, bacon, lard, cheese and flour. Including the cost of fuel and rent with that of foods the total budget averaged $21.14 at the beginning of October, as compared with $21.15 for September; $21.11 for October, 1925; $20.67 for October, 1924; $21.16 for October, 1923; $20.87 for October, 1922; $22.01 for October, 1921; and $26.46 for October, 1920; $26.92 for July, 1920 (the peak); $21.48

for October, 1918; and $14.48 for October, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined to 151.1, as compared with 152.5 for September; 156.0 for October, 1925; 157.0 for October, 1924; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak); and 206.9 for October, 1918. In the grouping according to chief component materials three of the eight main groups moved upward, three moved downward and two were unchanged. The Animals and their Products group advanced slightly, higher levels for milk and eggs more than counterbalancing lower levels for live stock, meats and leather. The Iron and its Products group also advanced, due to higher levels for pig-iron and steel sheets. The Wood and Wood Products group showed a small increase. The Fibres, Textiles and Textile Products group and the Non-Ferrous Metals and their Products group declined, the former due to lower prices for cotton, cotton fabric and jute; and the latter due mainly to a drastic decline in the price of silver. The Vegetables and their Products group was little changed being slightly lower however, increases in the prices of grains, sugar and rubber being offset by declines in the prices of flour and milled products, potatoes and hay. The Non-Metallic Minerals and their Products group and the Chemicals and Allied Products group were unchanged.

Workmen's Compensation in New York State

The Department of Labour of the State of New York has published a special Bulletin (No. 146), analyzing the cost of compensation awarded in the year ended June 30, 1925, for industrial accidents. Another bulletin is promised analyzing the same awards with special reference to the causes of accidents. The plan of separately treating workmen's compensation under these two aspects is to be followed in future.

During the twelve months reviewed the the Bureau of Workment's Compensation closed 76,216 awards for industrial accidents, costing in all $27,854,726. The total amount of compensation paid this year was 4.8 per cent greater than the total for cases closed during the preceding year. The corresponding increase in the number of cases closed was 4.4 per cent.

Although the manufacturing industries, due largely to the great number of employees engaged therein, had many more compensated disabilities than the other groups, the average compensation for permanent partial and temporary disabilities was lower than for any of the other industries. The construction group, which had only half as many compensated disabilities as the manufacturing industries exhibited averages for both permanent partial and temporary disabilities that exceeded by far the averages for any other of the major groups of industries.

In regard to fatalities, awards were completed during the year in connection with 1,102 deaths. The average compensation for each death was $5,898. For the 844 fatalities where awards were made to surviving dependents the average compensation was $7,345. The 2,031 dependents to whom awards were made were distributed as follows: widows, 670; children, 1,199; parents, 162. The average number of dependents for all of the death cases was 1.8, while the average for the 844 cases where dependents were left was 2.4.

The wage distribution of the injured employees whose cases were closed during the year shows that the weekly wage, computed as provided in the law, for 46,579 employees was $30.49 a week or less. The wages of the remaining 26,637 were in excess of this amount. The significance of this appears when it is recalled that the rate of compensation is based on the weekly wage but may not exceed $20 a week. This means that the 29,637 employees whose wages were greater than $30.49 a week suffered greater proportional wage loss than those whose earnings fell below this amount, and were compensated at less than two-thirds wages.

The median wages were in the following groups: males, $28.50-$29.49; females, $16.50-$17.49; total, $28.50-$29.49. It therefore becomes apparent that almost half of the male workers who sustained disabilities earned more than $30 a week and were compensated by a maximum of $20 a week.

The report contains statistical tables giving full particulars of the year's cases, by industries, location, nature of disabilities, number of dependents, sex, wages, etc.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF OCTOBER, 1926

DURING the month of October the Department received the report of the Board of Conciliation and Investigation established to deal with the dispute between the Canadian Pacific Railway Company and Canadian National Railways and certain employees of the said railways being conductors, trainmen and yardmen, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

One application was received for the establishment of a Board of Conciliation and Investigation, and three Boards were established in connection with disputes regarding which applications had been received during the preceding month.

Application Received

An application for the establishment of a Board of Conciliation and Investigation was received in the Department during the month of October from employees on Eastern and Western lines of the Canadian Pacific Railway Company, being clerks, freight handlers, station employees, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Other Proceedings under the Act

During the month of October other proceedings under the Act took place, as follows:—

(1) A Board was established to deal with the dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and certain of their employees, being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was composed as follows: Mr. Farquhar Robertson, Montreal, chairman, appointed on the joint recommendation of the other two members, Sir William Stavert, Montreal, appointed by the Minister in the absence of a recommendation from the employers, and Mr. J. T. Foster, Montreal, nominee of the employees.

(2) A Board was established to deal with the dispute between the Canadian National Railways and certain of its employees on the Montreal wharf, being checkers, coopers and porters, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Two Board members were appointed as follows: Mr. U. E. Gillen, Toronto, on the recommendation of the employer, and Mr. J. T. Foster, Montreal, on the recommendation of the employees. At the close of the month the chairman had not yet been named.

(3) A Board was established to deal with a dispute between the Canadian National Railways and certain of its employees in parlor and dining car service (on former Grand Trunk lines), members of the Canadian Brotherhood of Railroad Employees. The Board was composed of Mr. E. McG. Quirk, Montreal, chairman, appointed on the joint recommendation of the other two members, Messrs. Guy Tombs and H. S. Ross, both of Montreal, nominees of the employer and employee respectively.

Report of Board in dispute between the Canadian Pacific Railway and Canadian National Railways and their conductors and trainmen.

A report was received from the Board established to deal with a dispute between the Canadian Pacific Railway Company and Canadian National Railways and certain employees of the said railways, being conductors, trainmen and yardmen, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen. The Board was composed as follows: The Honourable Mr. Justice Hugh T. Kelly, Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, Messrs. Isaac Pitblado, K.C., Winnipeg, nominee of the companies, and David Campbell, K.C., Winnipeg, nominee of the employees. The dispute related to wages only, and the report, which was signed by the chairman and the employers' representative, recommended that there should not be at this time any increase of pay. Mr. Campbell, the employees' representative, presented a minority report. The text of the two reports follows:—

Report of Board

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and in the matter of differences between the Canadian Pacific Railway Company and the Canadian National Railways, and certain employees of the said railways, being conductors, trainmen and yardmen, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

To the Honourable
The Minister of Labour,
Ottawa, Ontario.

SIR,—The Board of Conciliation and Investigation established in the matter of differences between the Canadian Pacific Railway Company and the Canadian National Railways, and certain employees of the said railways, being conductors, trainmen and yardmen, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen, and composed of the Honourable Mr. Justice Hugh T. Kelly, of Toronto, Chairman, Mr. Isaac Pitblado, K.C., of Winnipeg, Manitoba, and Mr. David Campbell, K.C., of Winnipeg, Manitoba, convened in Montreal on Saturday, September 4th, 1926, and continued in session there for several days; and afterwards it held meetings in Toronto and in Winnipeg.

The employees were represented as follows:—

On behalf of the Order of Railway Conductors—

Mr. S. N. Berry, Senior Vice-President, Cedar Rapids, Iowa;
Mr. G. A. Glay, General Chairman, Canadian National Railways Lines West, Winnipeg, Manitoba;
Mr. W. G. Chester, General Chairman, Canadian Pacific Railway System, Winnipeg, Manitoba;
Mr. J. A. Sutherland, General Chairman, Canadian National Railways Lines East, Joliette, Quebec;
Mr. Thomas Todd, General Chairman, Canadian National Railways Lines East (Old Grand Trunk Railway), Hamilton, Ontario;

On behalf of the Brotherhood of Railroad Trainmen—

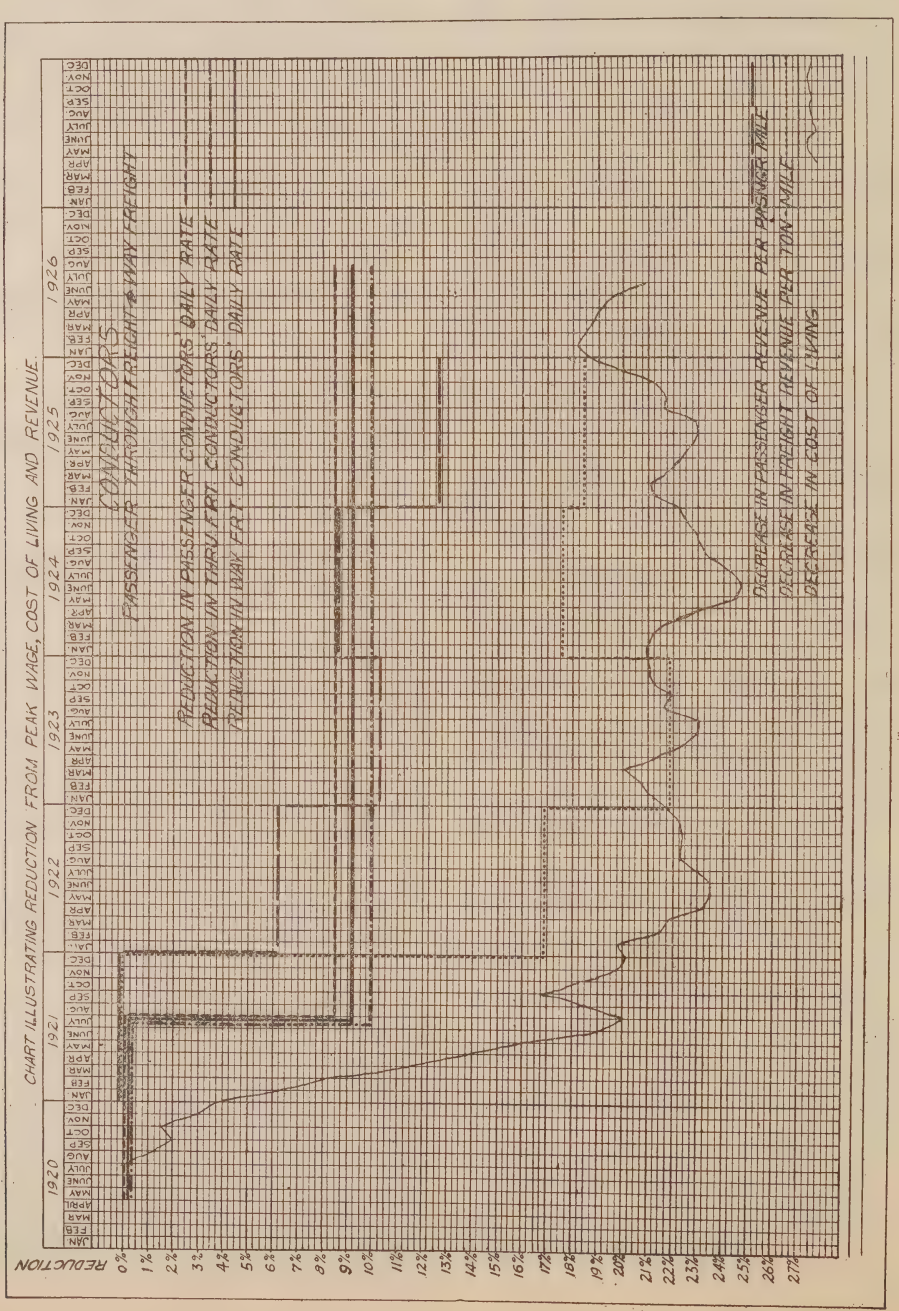
Mr. W. J. Babe, Vice-President, St. Thomas, Ontario;
Mr. A. J. Ryall, General Chairman, Canadian National Railways Lines West, Winnipeg, Manitoba;
Mr. R. H. Urquhart, General Chairman, Canadian Pacific Railway Lines West, Winnipeg, Manitoba;
Mr. A. McGovern, General Chairman, Canadian Pacific Railway Lines East, Toronto, Ontario;
Mr. J. Maloney, General Chairman, Canadian National Railways Lines East, (Old Grand Trunk Railway), Ottawa, Ontario;
Mr. J. W. R. Hibbits, General Chairman, Canadian National Railways Lines East, Bedford, Nova Scotia;

Representing the Railway Companies:—

On behalf of the Canadian National Railways—

Mr. A. E. Crilly, Chief of Wage Bureau, Montreal, P.Q.;
Mr. C. F. Needham, Assistant to General Manager, Central Region, Toronto, Ontario;
Mr. A. A. Tisdale, Assistant to General Manager, Western Region, Winnipeg, Manitoba;

On behalf of the Canadian Pacific Railway—



Mr. George Hodge, Assistant General Manager, Eastern Lines, Montreal, P.Q.;
Mr. A. Halkett, Superintendent, Moose Jaw Division, Moose Jaw, Saskatchewan.

In February, 1926, on behalf of the employees above mentioned, there was submitted a proposal for changes in rates of pay and regulations for the classes represented by the Order of Railway Conductors and the Brotherhood of Railroad Trainmen. In April a proposal came from representatives of the employees that the questions involved should be dealt with collectively on behalf of the Railways instead of separately or individually. After some correspondence and conferences in regard to this proposal, the Railways expressed their willingness to enter into joint negotiations, and such negotiations took place at meetings of representatives of the respective parties on July 15th and 16th, which, however, resulted in the Railways' refusal to agree to any increase in existing rates of pay.

On July 17th, 1926, an application was made by the employees for the establishment of a Board of Conciliation and Investigation. On July 28th the application was granted and a Board was established under the provisions of the Industrial Disputes Investigation Act, 1907. The employees recommended as a member of the Board Mr. David Campbell, K.C., of Winnipeg, and the employers recommended Mr. Isaac Pitblado, K.C., also of Winnipeg, as a member. These having become members of the Board and having failed to recommend

a person willing and ready to act as a third member, the Honourable Hugh T. Kelly, of Toronto, was, on August 16th, in pursuance of the provisions of said Act, appointed such third member and Chairman.

Every reasonable effort was made by the Board during the proceedings to bring about a settlement of the differences between the contending parties. The Chairman also conferred separately with the representatives of each of the parties to that end. The employees, through their representatives expressed a willingness to modify their demands; the representatives of the employers

adhered to their refusal to grant any increase in pay.

At the sittings of the Board at which representatives of the parties concerned appeared, ample opportunity was given by the Board for presentation of the case from each side in the fullest manner possible. The representatives of the contending parties submitted lengthy written statements and arguments, supplemented by several exhibits and submissions, all of which remain on file and now form part of the case as so presented. In addition to this opportunity was also given to the named representatives of the parties and to others present from either side to verbally express themselves fully and frankly on the question involved.

The proceedings were marked throughout by commendable harmony and apparent good feeling, creating the impression that on each side there was a desire to treat the matter in a purely business way and with due consideration for the other.

On the opening of the first sittings of the Board at Montreal, Mr. Babe, representing the employees, submitted (as Exhibit 1) a statement of changes in scales of pay and regulations, acceptance of which they had requested from the Railways in the early part of this year and prior to the establishment of the Board. It was then stated on behalf of the employees, and acceded to, that the sole question submitted for the determination of the Board was increased rates of pay, as set out in Exhibit 1, which is as follows:—

Order of Railway Conductors

Brotherhood of Railroad Trainmen

The following changes in rates of pay and regulations for the classes represented by the Order of Railway Conductors and the Brotherhood of Railroad Trainmen are submitted:

Passenger Service

	Rate per Mile	Day	Month
Conductors	.05166	$7.75	$232.50
Assistant conductors and ticket collectors	.0456	6.84	205.20
Baggagemen handling express, dynamo and Government mail	.04786	7.18	215.40
Baggagemen handling dynamo and express	.0456	6.84	205.20
Baggagemen handling dynamo and Government mail	.0456	6.84	205.20
Baggagemen handling express and Government mail	.0456	6.84	205.20
Baggagemen handling either dynamo, express or Government mail	.04333	6.50	195.00
Baggagemen	.041	6.16	184.80
Flagmen and brakemen	.04	6.00	180.00

Note.—Where flagmen or brakemen are required to handle baggage, express, dynamo and Government mail, or either of them, the same differential as applies to baggagemen will be added to their rates.

For service paid Local or Way Freight rates under schedules now in effect the rates shall be as follows:

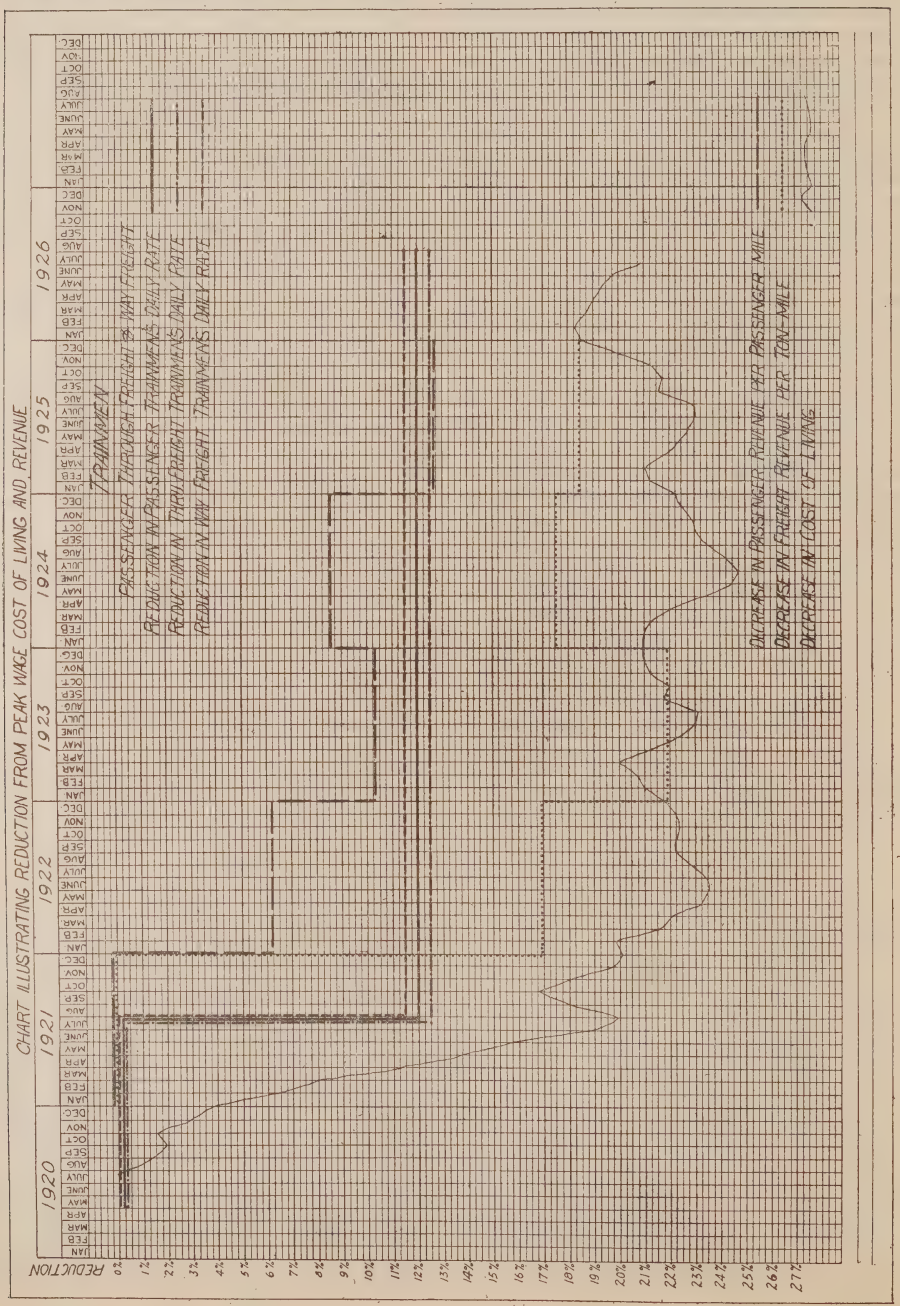
	Rate per Mile	Per Day
Conductors	.0774	$7.74
Brakemen	.0624	6.24

For service paid the Through Freight rates under schedules now in effect, the rates shall be as follows.

	Rate per Mile	Per Day
Conductors	.0734	$7.34
Brakemen	.0584	5.84

Yard Service

	Per Day
Car Retarder operator	$8.44
Foremen	7.64
Helpers	7.16
Switch tenders	5.72



Corresponding increases to be added to the present rates of pay for Yardmasters and assistant Yardmasters.

The main reasons now advanced as justifying or calling for increase of pay at the present time are:—the necessity for more money to enable these employees to maintain a suitable standard of living; advance in the standard of living; the hazards and hardships and the responsibility incident to their employment; additional expense of living necessitated by their absence from home while in the discharge of the duties of their employment; and the added expenditure for clothing suitable for their work due to the character of their employment and especially to climatic conditions; and arguments were advanced—as will appear upon a reference to the material filed—based upon and elaborating these and other reasons. Mr. Berry for the employees emphasized the importance that should be given to the employees responsibilities and what is expected of them, and he submitted that the employees were not basing their request for increase of pay on cost of living and that cost of living should be considered as a mere factor of the case.

The representatives of the employees in their presentation went into the history of conditions, rates of pay, cost of living, etc., extending as far back as 1914, with special reference to changes in these respects which followed the outbreak of the War. After cost of living had materially advanced, increases in rates of pay were more than once granted, and other changes took place to the employees' advantage such as reduction in hours of the basic day, increase in the rate of pay for overtime in certain cases. The last of these increases in pay was in 1920.

What occurred in 1921 and in January, 1922, was much discussed before the Board; it has an important bearing upon the merits of the present demands. In May, 1921, the Railway

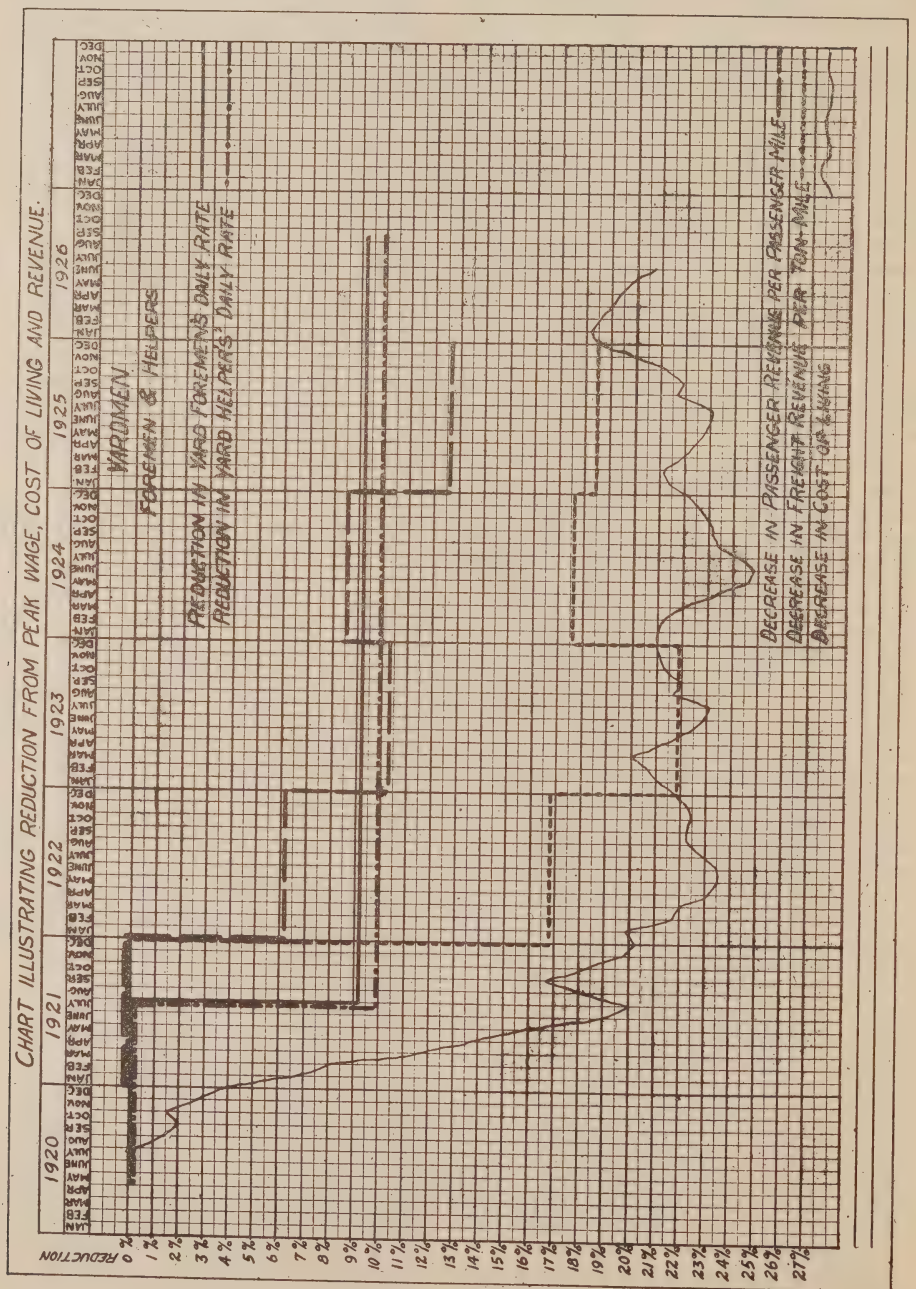
Companies served notices upon the representatives of several classes of employees, including those who are parties to the present proceedings, of a desire for revision of the rules and rates of pay, based upon changes in conditions and reduction in cost of living. Conferences between representatives of the Railways and of the employees being without result, the Companies decided to tentatively withhold a portion of the employees' wages. This led to an application by the representatives of the employees for the ap-

pointment of a Board of Conciliation and Investigation, which was granted. On October 8th, 1921, the Board so appointed reported that, after repeated negotiations and conferences with the parties interested, a tentative agreement, suggested by the Board, had been reached by which rates of pay were reduced; the Board remaining in existence until it should be ascertained whether its services should again be required pursuant to the terms of the agreement (For this Report see the Labour Gazette, November, 1921, page 1354). On January 16th, 1922, a further agreement was made between the parties concerned in relation to rates of pay and Schedules of Rules governing working conditions "to continue in effect subject to thirty days' notice, excepting where existing agreements show a longer period, from either of the Railways or their employees named herein to the other." (For this agreement see the Labour Gazette February, 1922, page 182). The rates of pay agreed to by these two agreements are those now in force, no change having since been made.

In view of the fact that the agreement of January 16th, 1922, was reached after deliberations extending over several months, it is fair to assume that all the conditions then affecting the question of reasonable compensation to these employees were taken into consideration. It has been urged, however, before this Board that increases of rates of pay from 1913 to 1921 did not keep pace with the increases from time to time in the cost of living. That other changes, such as reduction of hours, increase of rate of pay for overtime, etc., took place during that period to the advantage of the employees must surely have been taken into consideration in arriving at the agreements of October 8th, 1921, and January 16th, 1922. As the duty of this Board is confined altogether to a consideration of demands for increased rates of pay, it seems proper to give weight to those agreements as expressive of the decision of both parties thereto, based on a consideration at the time of all the factors affecting the merits of the situation from both sides. It was stated upon the argument before this Board that, though the representatives of the employees signed these agreements, the employees themselves were averse to accepting all the terms thereof. Be that as it may, they were bound by the action of their authorized representatives; and there is nothing now in evidence to indicate that there was undue pressure by the employers to bring about these agreements.

Therefore, has anything occurred, or have conditions changed, since these agreements were entered into, warranting or calling for an increase, or indicating that the present rates, if reasonable at that time, are not now fair and reasonable? Hazards and hardships incident to employment in train service are not new; they have always existed, but in a reduced degree as improvements have been made in train equipment. The character of the work has always required that those employed in it be in fit condition physically and mentally, and responsibility has always been an incident of the service. Additional expense of living while away from home, and expenditure for clothing etc., due to climatic conditions, have always existed. In none of these respects has there been any material change since the rates of pay were last determined. It has been urged that in that time the average number of cars per train and the average weight of train loads has increased, thus adding to the hazards of the employment. Statistics were introduced to show these increases, but, though some increases were shown, they were not so substantial as apparently to add materially to the hazards when all factors are taken into account.

On the other hand, from an authoritative source, it appears that, as compared with October, 1921, the cost of living (Weekly Budget) in June, 1926, had decreased by a fraction over three per cent. Hitherto in arranging wage schedules the cost of living seems to have been a most important factor.



The representatives of the Railways in their written presentation (Exhibit 4) submitted three graphic charts covering the period from the beginning of 1920 until the end of June, 1926, intended to illustrate the reduction from peak wage, cost of living and revenue for (1) Conductors-passenger, through freight and way freight; (2) Trainmen-passenger, through freight and way freight, and (3) Yardmen foremen and helpers. These charts have not been shown to be inaccurate; and they illustrate the situation during the time to which they apply, and they are accordingly introduced here as a part of this Report.

Reference is also here made to page 18 of the Supplement to The Labour Gazette of January, 1926.

Special reference should be made to the suggestion put forward by the employees' representatives that, certain railroads in the United States having since 1921 granted an increase of pay to their employees (commonly called the 6 per cent increase), the Canadian Railway Companies should in fairness have granted similar increases. This argument has relevancy to the situation which arose after the adoption in the United States of what is

known as the "McAdoo Award" of May 25th, 1918, in respect to the application of which to railroads in Canada the representatives of the employers, in their written statement to the Board (Exhibit 4), say:—

Under the war conditions and the labour situation as it had developed it was arranged, in accordance with an order of the Governor-in-Council, that the railways in Canada would apply to their employees similar increases in rates of pay and changes in working conditions as were applied to the employees on United States railroads, the Government, on its part,

undertaking that the railways would be granted like increases in passenger and freight rates as were applied on United States railroads.

The McAdoo Award was made during the War period and after the United States Railroads had come under Government control. After the close of the War these railroads were returned to their owners (March 1st, 1920). The body which in that time had control over the fixing of rates of pay has long since gone out of existence and the fixing of rates of pay has passed successively under the control and jurisdiction of other bodies. The conditions which in the United States permit of the added cost of increased rates of pay being met by compulsory increases of freight rates do not extend to or exist in Canada. From any evidence submitted to this Board there does not seem to be any obligation upon the Railway Companies in Canada to follow changes of rates of pay in the United States.

Moreover, it would appear that conditions in the United States are different from those in Canada. Statistics filed by the railway companies from what appears to be an authoritative source indicate that the cost of living in the United States had increased 3 per cent from October, 1921, to June, 1926, while, as mentioned before, there had been in Canada a decrease in the same period of a fraction over 3 per cent. The statistics also show that, as compared with pre-war conditions in July, 1914, the cost of living in the United States to June, 1926, had increased 64.1 per cent, while in Canada during that period the increase was 50.4 per cent.

Again, the order of the United States Railway Board dated February 2nd, 1925, by which the so-called 6 per cent increase (which had already been granted by certain Eastern Railways by agreement with their employees) was awarded to the employees on certain other railways in the United States, states "it also appears that certain changes in rules were agreed to in consideration of the increases in wages. The details as to the changes in the rules are not a matter of record with the Board." No changes in rules are under consideration by the present Board as it has to consider only increased rates of pay.

On a careful review and consideration of all the evidence, statements and arguments, we are unable to conclude that, according to the merits and substantial justice of the case, there should at this time be any increase of pay to the present applicants. The Board makes its recommendation accordingly.

All of which is respectfully submitted.

(Sgd.) Hugh T. Kelly,
Chairman,

(Sgd.) Isaac Pitblado,
Member of the Board.

October 26, 1926.

Minority Report

It is regrettable when members of a Board of Conciliation are unable to arrive at a unanimous decision with regard to recommending to the Minister what, according to the merits and substantial justice, ought to be done by the parties to a dispute in order to bring about a settlement. I, therefore, regret very much that my views differ so widely from those of my colleagues on this Board that I am obliged to present them to you as a minority report.

The subject matter of the dispute consists of a proposed amended scale of wages submitted on behalf of all the Conductors, Trainmen and Yardmen employed on the Canadian Pacific Railway and the Canadian National Railways in Canada to the number of about fifteen thousand. This new scale of wages would mean an increase in their wages of approximately twenty per cent. It was submitted to the representatives of the railways by the representatives of the employees during the month of February, 1926, and in July of this year it was agreed between the managements of the two railway companies and the representatives of the employees, that the matter should be treated and disposed of by conference committees consisting of representatives of the railways, and a committee consisting of representative officers of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen as representing the employees. The conferences between the parties were of a brief nature and were so decisive that it was evident from the beginning that no agreement could be reached between them, and an application was made to the department for the appointment of a Board of Conciliation and Investigation, which was appointed accordingly.

The Board commenced its hearings at the City of Montreal on Saturday, the 4th of September, and the proceedings continued all the following week. The parties to the dispute presented their respective views and contentions and the Board made every effort to

conciliate between them. The Board's work was continued at Toronto on September 20th, 21st, 22nd and 23rd, but no agreement could be effected, nor could the Board arrive at a unanimous report then, or at its subsequent meeting in Winnipeg.

The grounds upon which the contentions of the employees for increased wages were mainly based were briefly, as follows:—

1. That prior to the war they were receiving more remuneration for their services than similar employees in the United States, and that the differential in their favour had been wiped out during and subsequent to the war by the adoption of the awards of the Lane Commission, and of the United States Railway Labour Board.

2. That rigorous climatic conditions in Canada created a higher living cost and increased the element of hazard as compared with similar employees in the United States on the average.

3. That since 1921 wages for similar kinds of work had increased while their wages have remained stationary.

4. That these classes of employees in the United States had received increases in wages since 1921, averaging in the aggregate about six per cent, and the Railway companies in Canada were at least morally bound to apply to their Canadian employees the decision of the United States Labour Board in this respect.

5. That the increased earnings and improved financial conditions of the railways warranted the increase demanded if earnings were a factor to be considered.

On many of the questions involved in this controversy, it was apparent that full and complete information could not be placed before the Board, particularly by the employees. They do not keep, nor have they records or statistics by which such information could be placed before the Board by them. The company in this respect has always a very decided advantage, as they keep records, and employ statisticians and are able to produce from their records statements which place their side of the controversy in the most favourable light, and they do not voluntarily produce information that might support the contentions of the employees. The employees were not in a position to answer or to analyse many of the statements made by the companies, or to compile statements in answer to them.

Upon some of these matters I suggested to my colleagues that, if certain contentions of the employers were a factor or an element to be considered in dealing with the matter, it would involve an exhaustive investigation. In my opinion, if an exhaustive and impartial investigation were made into the contentions and representations of both parties, many things would appear in a different light. My colleagues, however, rather took the view, which has been taken by a majority of the members of several boards upon which I have represented employees in the past, namely, that the board constitutes some sort of a tribunal, resembling a court, which receives and considers the evidence adduced by the parties and arrives at its conclusions, having regard to the weight of such evidence, and that the Board should not of its own motion make an investigation beyond the material submitted by the respective parties, or inquire and ascertain what may be the underlying, and probably unexpressed, causes of the dispute, or, of its own motion inquire into any of the conditions or circumstances which might seem to have a bearing on the merits of dispute, but must rely entirely, and as best they can, upon what is presented by the parties. It seems to me that if this view is correct, then the words "investigate" and "inquire into" ought to be struck out of the Industrial Disputes Investigation Act, and it should be made clear that the Board should merely sit as a court to weigh the evidence of the respective parties in arriving at conclusions and making recommendations.

With very great deference to opinions to the contrary, it is my humble opinion that the spirit and letter of the Act, having regard to its title and to Sections 23, 25, 31 and 32 and other sections, indicate clearly that a full and complete investigation or inquiry into all the matters alleged by the parties, or which the Board may find upon its own inquiry to affect the conditions of either or both parties should be had before concluding what recommendations should be made. It is conceivable that any party may withhold valuable information, or may not be able to furnish from its own resources full and complete information to the Board.

As suggested above, on this and several other occasions, my colleagues on the Board have adopted the view that their duties do not go beyond a consideration of the evidence adduced, and I think I should direct attention to it so that if necessary the Act may be amended so as to remove all doubt in this respect. I quite realize that those who accept appointments to boards established under the Act cannot always afford the time which may be necessary to make complete investigation into all matters involved in a dispute, however important and far-reaching it

may be, nor can any one readily foresee what investigation or inquiry may become necessary in order to be able to recommend to the Minister a basis of settlement according to the merits and substantial justice thereof. But does that alter or affect the meaning and purpose of the Act? I submit that it does not.

The present rates of pay of these employees may be said to have been fixed by a decision of the United States Railway Labour Board in May, 1921. A brief résumé of the conditions of the employment and their historical development are well worth brief consideration at this point. Of these I have an intimate knowledge extending back to 1890, and am confident that, as compared with the United States, there have been more railway men on strike from time to time since then in Canada, in proportion to the railway mileage, than there have been during the same period in the United States. During this same period many strikes have been averted by the Railways yielding concessions at the last moment, and I am quite confident that Canadian workmen are not more inclined to industrial strife; in fact I think it is quite the opposite. I am also well aware that, up to the present time in Canada, no thorough or exhaustive investigation has ever been made with regard to the wages and working conditions affecting these or other railway workmen.

Even after two years of our participation in the World War, conditions bitterly complained of by a large number of these employees as having existed for several years were denied redress, and no relief was forthcoming until a strike was imminent.

In 1914 a Board of Conciliation, the majority of whom adopted views similar to those of my learned colleagues here, recommended the continuation of the existing working conditions, holding that sufficient evidence had not been adduced by the employees to support their demands. Contemporaneous with their report came the declaration of the Great War, and loyalty to country for a time suspended the hostility of the employees although the cost of living shown by the statistics of the Department of Labour shewed an increase of over ten per cent since 1910, the period then under consideration.

It was contended by the employer at that time, as in the present instance, that, having previously made an agreement as to wages and working conditions, the onus was on the employees to show such circumstances as would justify any subsequent change or alteration therein, and that the so-called increase in cost of living constituted no substantial ground for such changes. It is important to consider briefly the practice followed by these parties for many years in arriving at their earlier or preceding agreements. Each agreement arrived at was generally the outcome of mutual compromise, and was accepted by both parties as an adjustment of the case for the time being, preferable to industrial strife. The employers preferred that the employees should obtain recognition of their demands for piecemeal process, granting moderate concessions at one conference, both parties recognizing that such agreement should stand for at least a year and that negotiations for further concessions would again be resumed. To attempt now, or at any time, to enforce the proposition that, once having agreed to compromise their demands in the interests of harmony, the employees should be taken to have forever waived their rights to receive recognition of their claims would, to my mind, be taking undue advantage of a long established practice, and would displace peaceful methods of negotiation by an effort to obtain every demand in full by means of force and compulsion. It is to be hoped that the adoption of such methods may never be precipitated into industrial relations.

It is instructive to note what followed the majority report of the Board of Conciliation in the dispute of 1914 already referred to. The employees felt it their duty, for the time being, to set aside their demands rather than in any way jeopardise our country's efforts in the War. Two years passed, but the company showed no reciprocal policy. It then became apparent that the War would probably last for some considerable time, and the employees were determined to no longer submit to their unsatisfactory working conditions, and a strike was ordered and a nation-wide conflict was averted at the last moment by the railway conceding their demands.

It is to be noted that, following these events, and regardless of the serious situation due to the War, no investigations into the wages and working conditions obtaining on Canadian railways was inaugurated, although industrial peace was of paramount importance. Strained relations were more or less widespread, and at the end of another year conflict between these parties again loomed up A Board of Conciliation was able, early in 1918, to secure an agreement between them, one of the most important features being that the findings of the Lane Commission, appointed for the purpose of making an exhaustive survey of the wages and working conditions of all railway employees, and the fixing of their wages, in the United States, should be adopted

by both parties. It will be seen that it remained for the United States upon entering the War to establish a commission to make a proper investigation. The report of that commission showed the appalling conditions which existed among these workers, and it is well worth consideration by any person interested in industrial problems. It was recognized that the conditions which prevailed in the United States were almost identical with those on Canadian railways. The Lane Commission report, commonly known as the McAdoo Award, ordered unprecedented increases in wages, the shortening of the hours of the basic work-day, and other improvements in working conditions, as essential to the fair treatment of these employees, and in order to ensure industrial peace at home. The Railways, and in fact everybody, realized that it would be hopeless to deny these things to Canadian railway employees, if industrial peace was to be had in Canada, and their adoption here became general.

At a later date, namely, 1920, the United States Railway Labour Board, having been established by an Act of Congress, another exhaustive investigation was made of these matters, and all the elements rightly to be considered in fixing of wages and working conditions were given due consideration, and another very large increase in wages followed which was made effective by law in the United States, and followed, by the necessity of industrial peace, in Canada.

A perusal of these reports shows that the increased cost of living was recognized as a very important element to be considered; that in fixing the wages at that time only living wages were established, and no provision was made therein for a competency to take care of old age or other infirmity. The drastic changes in wages and working conditions made by the said Commission were based upon humane considerations having regard to the conditions under which railway men were obliged to work, and were also based upon the cost of living at that time. Earnings, profits, fixed charges, and all such were not regarded by these commissions as having any bearing on the question of wages or working conditions, nor was the question of higher or lower freight rates a factor in their consideration. Impoverished railways were obliged to pay the same rates as the highest profit bearing railways. I quote here two brief paragraphs from the report of that Board:

> The Board has endeavoured to fix such wages as will provide a decent living and secure for the children of the wage earners opportunity for education, and yet to remember that no class of Americans should receive preferred treatment and that the great mass of the people must ultimately pay a great part of the increased cost of operation entailed by the increase in wages determined herein.
>
> It has been found by this Board generally that the scale of wages paid railroad employees is substantially below that paid for similar work in outside industry, that the increase in living cost since the effective date of General Order No. 27 and its supplements has thrown wages below the pre-war standard of living of these employees and that justice as well as the maintenance of essential industry in an efficient condition require a substantial increase to practically all classes.

The Canadian railways, as I have already indicated, put into effect the decisions of these eminent commissions of investigation. During the period from 1913 to May, 1918, the cost of living in Canada had increased, according to the statistics of the Department of Labour, approximately fifty per cent, but the only redress that had been obtained by these employees in Canada was obtained by a threatened strike and finally by a Board of Conciliation bringing the parties to an acceptance, in February, 1918, in advance of the McAdoo Award.

These Commissions had carefully considered the following conditions of employment affecting these employees:—

(1) The scale of wages paid for similar kinds of work in other industries;
(2) The relation between wages and the cost of living;
(3) The hazards of the employment;
(4) The training and skill required;
(5) The degree of responsibility;
(6) The character and regularity of the employment, and,
(7) Inequalities of increase in wages or of treatment, the result of previous wage orders or adjustment.

It will be seen that the hazardous nature of the employment, and the expenses away from home of these employees, were considered and given effect to, but the long and severe Canadian winters could not have been a factor in the minds of the Commissions in that case, nor was the slow promotion, as now contended by these employees on Canadian roads, nor the seasonal nature of the employment of hundreds of these workmen in Canada, matters of their consideration.

It is now claimed by the employees that during the past few years the employment of larger locomotives resulting in the hauling of longer trains, has increased the hazard of their employment, and minimized the number of trains so that a larger unit of service is given, with increased responsibility. To what extent this prevails is more or less a matter of conjecture. The employees have no data or statistics by which they can prove conclusively their contentions, however correct they may

be. As pointed out by the employees, there is a greater degree of hazard, more work and greater responsibility in handling a train of one hundred cars than in handling a train of fifty. Before one could determine the full effect of these factors or deny their due recognition, a careful survey of this feature should be made.

I should now like to deal for a moment with the decreases established by the decision of the United States Railway Labour Board in May, 1921. Owing to the decline in the cost of living from the beginning of 1921, applications by the Railways in the United States for a reduction in wages of Railway employees were successful, the Board ordering a reduction of approximately 20 per cent in the wages of Conductors and Trainmen. The employees in Canada resisted, for a time, the acceptance of these decreases, but the Railways promptly reduced their pay, stating the amount of reductions would be *withheld pending final adjustment*. Their real attitude was disclosed, however, when the employees applied for a Board of Conciliation in their efforts to discuss and negotiate regarding various conditions in Canada. The Railways went so far, in their efforts to avoid conferences of this character, as to decline to appoint a representative to the board which was established to inquire into the matter at that time. Having been a member of that Board and having been one of those who urged the employees at that time to accept the reduction in pay, I feel that I can say with confidence that the employees were morally bound to accept the reduction of the same Commission whose decisions granting increases had been accepted by the Railways, and on this ground it was urged upon them by the Board and contended for by the Railways. I feel that I am quite as justified in saying that these employers ought to have promptly accepted, some two years ago, the decision of this same Board when it authorized a six per cent increase in wages.

I shall now deal in detail with the chief reasons put forth by the employees for their demands, and the replies made thereto by the employer.

1. *Better remuneration to Conductors, Trainmen and Yardmen in Canada than in the United States prior to the War.*

The representative of the Railways did not deny this, but contended that an eight-hour day now prevailed, instead of the nine and ten-hour day in effect prior to the war. The Board did not have before it anything more than the statements of the parties in regard to this contention. But, having regard to the fact that the employers did not specifically deny the allegations of the employees, I think that I am justified in concluding that such was the case. The precise amount of this differential does not appear, and it probably varies in different localities. But the nature and extent of these are no doubt well known to the parties. Having regard to the more severe and longer winters in Canada, than in the United States, on the whole, and the greater expense for fuel and clothing thus entailed, I am of the opinion that there should be a substantial differential in the rates of pay in favour of these employees in Canada.

2. *More rigorous climatic conditions in Canada than in the United States increasing the cost of living and the element of hazard.*

The employers contended in respect to this that the conditions under which these employees work have been matters of negotiation, and have been established by mutual agreement for some forty years, and that the element of hazard was not as great now as when the trains were not controlled by air brakes, and that the automatic coupler has replaced the old link and pin coupler; that climatic conditions in Canada were somewhat similar to those of certain of the Northern United States, and that the climate of Canada, on the average, was more agreeable and beneficial physically than the climate of a portion of the Southern States. To my mind this does not answer the claim of the employees.

The modern use of the air brake and the automatic coupler is well established in the United States, and to my personal knowledge were universally adopted there at an earlier date than they were in Canada. Relief as a result of changes in equipment may be considerable as compared with thirty years ago, but, as the railways admit, many agreements and bargains have been made between the respective parties which have been current for years with this improved equipment. The element of danger, which I take it the employees refer to, is that which follows train and yard service in very severe winter weather.

In dealing with comparisons as between Canada and the United States, we cannot compare the most southerly portion of Canada with the most northerly portion of the United States. Wages are fixed for this class of labour on a country-wide basis, and for the purpose of comparisons we must have regard to general averages. We must therefore compare Canada as a whole with the United States as a whole. There can be no disputing the fact that the climatic conditions of Canada are very much more severe than those in

the United States as a whole. As already suggested, this requires the expense of heavy and additional clothing, and additional expenses in fuel and housing to meet the severity of the climate, and generally the longer period over which it exists, all of which was pointed out by the employees. This must involve a greater expense on the whole to these employees in Canada than in the United States, and it seems to me that due recognition should be given to this. If the parties, both in Canada and the United States, through the many years of their mutual bargaining and agreements, arrived at a point, before the War or ten years ago, where some recognition in some form or other was given to this class of labour in Canada, surely it cannot be contended that any justification exists to-day for not recognizing them now.

It was also stated by the employers that the adoption by mutual agreement of the decision of the Lane Commission and the United States Labour Board, mentioned above, abolished the distinction by mutual agreement, and it should not now be restored. It must be borne in mind, however, that the Commission's reports, above referred to, affected railway employees in the matter of wages purely as creating necessary living wages, having regard to the conditions then existing, and were made and accepted having regard to the highest interests of our national difficulties at that time, and the necessity for a living wage, rather than dealing in distinctions between the climatic conditions in Canada and the United States, and the exact bearing on the cost of living, and the increased hazard which those distinctions might have.

Any distinction in the remuneration for this class of labour, between the two countries prior to the War should now be given due consideration if the Canadian workmen are to be placed upon an equal footing, and are to enjoy an equal standard of living, as obtains in the United States for the same service.

3. *Increases in wages for similar kinds of work since 1921.*

The employees urged that the advances in their wages up to 1921 showed an increase of from forty to forty-seven per cent since 1913, while in the building and metal trades, coal mining, miscellaneous factory labour, lumbering and electric railways, wages had increased from sixty-six to ninety-seven per cent. These facts apparently are taken from the statistics of the Department of Labour on Wages and Hours of Labour in Canada. The employers contend that the higher percentage in the other trades was due to the low wages existing in these trades in 1913; that the monetary increases which railway employees had received would amount to more than were received by these tradesmen, and that such tradesmen did not enjoy any guarantees of daily or monthly wages. As already referred to herein, the employees pointed out that a considerable number of them did not enjoy any guarantee, and that, as railway traffic fluctuated downwards, junior men were laid off and senior men moved back into the places of spare men, and this process would continue until traffic began to increase, and that by this process hundreds of railway men were without employment for many months in the year, and that only those were able to obtain steady employment who had been in the service for many years.

When I asked the employers if they could furnish information showing the number of men employed from month to month in the classes of service concerned in this dispute, I was informed that such information would probably require months of detailed examination of pay rolls for its preparation. Nevertheless the employers were quite able to have on hand information which would appear to require even much greater detailed examination of pay-rolls and records, such as showing the total amount paid to the classes of employees herein concerned, and the number of hours actually on duty by all of these employees annually, in an endeavour to show the average hourly rate of pay upon the basis of the number of hours actually on duty by each employee.

Illustrations of runs were selected by the employers, showing the location of the run, the total regular miles in the month, the total number of hours worked, together with the total runs and the average hourly basis, no doubt introduced to suggest to the Board how well paid the employees were for the actual time employed in these runs. However, it appears from the information given by the employees that, although the men are on duty in many cases less than eight hours in order to complete the hundred miles or more, there are other circumstances in connection with the case. To illustrate—Moncton and Halifax passenger run was introduced by the company showing that, having regard to the time actually worked, the Conductor earns $1.24 an hour and the Brakeman 85 cents per hour. But the facts developed in that case indicated that the men come on duty at 7.30 in the morning and are actually not relieved until 11 o'clock at night. They are away from home during that entire period and are under expense at the distant terminal. At the conclusion of the going trip, they wait at the distant terminal until their train is

due to leave for the home trip. This is but one illustration of expense and inconvenience involved in their work.

While a large number of men have a monthly mileage guarantee, it would appear that this is beneficial only to men who have been in the service for upwards of fifteen years. At every terminal there is a "Spare Board" maintained. This is a list of spare men, or regular men reduced to spare work, who must remain on hand at their home at the terminal and await employment. The number of these men, I find, is, generally, equal to one for each crew of three men; that is to say, if at Winnipeg one hundred train crews are necessary to take care of the regular work which men do in order to earn their monthly guarantee, there would be a hundred men on the spare list which would be used for relief purposes, or could be used when the traffic moving would result in the regularly assigned men exceeding their monthly guarantee. These men may get quite a considerable amount of work during the month or they may only get a very few days work. It is largely governed by the amount of traffic moving. When traffic falls off, the number of crews is reduced to a number sufficient to handle it on the basis of the monthly guarantee, and regular men are moved back into the spare list, and the junior men in the service on the spare list are dispensed with. These latter leave their addresses with their superintendent or trainmaster and are sent for when the traffic increases.

During the winter months, and in fact for many months each year in Western Canada, hundreds of these men are out of employment at periods of the year when little or no other employment is available, and they begin to move back into the service just at the time when other employment would be available. There is, therefore, only steady employment for men who have had long years of service, while for hundreds of others their employment on the Railways may not exceed three or four months in the year. It will therefore be seen that employment in this kind of railway work is just as "seasonal" as that of the building trades, and other employment. No definite information as to the extent of the irregularity of this employment was available, but the employer contended that this was a large factor in fixing the higher rates of wages for building trades and like occupations. To my mind a full and complete investigation into this phase of the problem must be had if the public is to be informed as to the extent men in Railway service are really in the position of following a seasonal vocation, and before any tribunal can properly estimate this factor in regard to making recommendations as to rates of wages.

The report of the Department of Labour in Canada entitled "Wages and Hours of Labour in Canada, 1920 to 1925", issued in January, 1926, shows that, while the wages of these employees have remained stationary since 1922, *the wages* of other somewhat similar classes of labour have advanced. No data are available for 1926, but I happen to know of my personal knowledge that the building trades in the City of Winnipeg are this year receiving from 15 cents to 20 cents per hour more than they did last year, being an increase averaging around 20 per cent. It might be noted that with the building trades and other such employment, the employer increases the price of his building, and the additional cost is thus passed on to the public where it is taken as a matter of course, but the moment the Railway employees seek an increase in wages it becomes a country-wide matter, and the employers proceed to estimate it in large sums, their basic calculations including all employees receiving a similar increase, including everybody in the service up to the Presidents of the Railways, and this large sum is publicly announced, together with the declaration by the Railways that they cannot grant such an increase in wages and maintain their financial prosperity on the existing freight and passenger rates. Public hostility is thus invited to the demands of the employees, and if the burden of increased freight rates ultimately takes place, the public at least believes it is due to the excessive wages paid to these employees despite the efforts of the Railway management to protect the public against such injustice. This all reminds one of the coal miners strikes in Pennsylvania, which occur regularly and which seem to end in conceding a few cents per ton (to the miners) and thus the owners of the mines are forthwith privileged to add a few dollars per ton to their price of coal to the consumers.

4. *Similar employees in the United States receiving an increase of Six per cent in wages since 1921.*

The United States Railway Labour Board of that country about two years ago sanctioned an increase in wages to these classes of employees amounting in the aggregate to approximately six per cent, carrying with it certain changes in rules as to working conditions. Some of the Railways granted these increases as a matter of negotiation with their employees. Ultimately an order of the

Board was made putting it into effect on all railways. The results of these increases in the United States accentuates the dissatisfaction now prevailing in Canada among these employees. American railways operating in Canada, such as the Michigan Central, Pere Marquette and Wabash railways, are paying these increased rates to their Canadian employees, and Canadians employed by the employers parties to this dispute, working beside those employed by American railways, receive lower wages for the same work. On the other hand, the Canadian National Railways operating in the United States territory, at least in the territory West of the Detroit and St. Clair Rivers, pay these increased wages to their Conductors, Trainmen and Yardmen. If there is any deficit on the eleven hundred odd miles of its railways in American territory, the Canadian people have been paying it. Is there any good reason why these same employees in Canada should be paid less wages than in the United States? I confess that I am unable to find any.

5. *Increased earnings of railways warranting an increase in wages, if earnings is a factor to be considered.*

I may say that I agree with the view that the railway's gross or net earnings, its freight and passenger rates, profits, and losses, are not elements which enter into the fixing of wages. Their wages at best, having regard to the nature of their employment, involving as it does board and lodgings away from home, are nothing more than a living wage. In the eighty-seven selected examples of earnings of Conductors for the month of July, 1926, exhibited to the Board by the employers, there were five cases where the monthly wages of Conductors exceeded $300.00, while on the other hand the wages for eleven out of these eighty-seven Conductors were less than $200.00 for the full month. When one realizes the years of work which a man must go through before he is promoted to a Conductor, the fact that he must be away from home every time he earns a day's pay, and often away several days at a time, and that he must report for duty in all kinds of weather, and at any time and all hours of the day or night, one is rather surprised at the very modest wages thus earned. The brakemen's pay in these same examples range from about $150 to $200, and no doubt brakemen who are able at that time of the year to hold a steady run have been in the service for a period of probably fifteen years.

As stated in my opening remarks under this topic, I do not consider that Railway earnings or profits or the absence of them should be permitted to stand in the way of any reasonable or proper wage demand. If these are a factor to be taken into account we should also consider to what extent these railways have benefited and are benefiting to-day from the bountiful concessions in land and money freely given to them by this country. It should also be considered that an employer like the Canadian Pacific Railway has assets valued, probably, at one billion dollars, against which there exists only two hundred and sixty millions of common stock, and that its replacements and improvements have been and are being paid for out of its earnings instead of by capital investment, to say nothing of its constantly increasing huge rest fund. Moreover, the burden of the financial success of any concern must never be thrust upon its employees nor act as a denial to their rights.

As pointed out elsewhere in this report, Boards which fully and exhaustively investigated wages and conditions of these employees in the United States recognized that their wages were not incidental to the Railway's earnings. It was rather the reverse. Until there is to be a profit sharing with employees there can be no incidence between wages and earnings.

In the course of the hearings it developed that these classes of employees in the United States were demanding the same rates of pay as are claimed here and that their demands are under investigation and consideration by the United States Railway Labour Board. Doubtless the same careful and complete survey of all matters relating to these employees and their demands as has heretofore characterized their labours will be made, and in the absence of such an investigation in Canada, and having regard to what I have already said with reference to conditions in Canada as compared with the United States, the decision of the United States Railway Labour Board should when given out be accepted by the parties here.

I therefore recommend:—

1. That former differentials in favour of these employees in Canada be restored;
2. That the increase of six per cent awarded by the United States Railway Labour Board to these classes of employees upwards of two years ago be now adopted here, and that the decision of that Board as to specific rules be also adopted;
3. That the parties here adopt the decision, when given, by the United States Railway Labour Board upon the question of the adoption there of the rates of pay in question in this dispute.

All of which is respectfully submitted.

(Signed) D. CAMPBELL,
Representing the Employees.

ALBERTA LABOUR DISPUTES ACT, 1926

Report of First Board of Conciliation and Investigation Appointed Under the Act

A DISPUTE having arisen between the West Canadian Collieries, Limited, Blairmore, Alberta, and the Canadian Mine Workers' Union, Local No. 1, Blairmore, Alberta, in regard to the application of certain clauses in an agreement between the two parties in effect from April 7, 1925, to April 7, 1928, being one of several such agreements entered into at that time between various coal mining operators and their employees, or organizations of their employees (LABOUR GAZETTE, May, 1925, pages 510-514), the above mentioned organization of the employees made application for a board under the Labour Disputes Act, 1926, of the province of Alberta (LABOUR GAZETTE, May, 1926, page 447). A board was established by the Minister of Public Works, this being the first board to be established under the statute.

The following report on the dispute and the proceedings of the board is taken from the *Alberta Gazette,* October 30, 1926.

THE LABOUR DISPUTES ACT, 1926

Report of Board of Conciliation and Investigation in the matter of a dispute between West Canadian Collieries, Ltd., Blairmore, Alberta, Employer, and the Canadian Mine Workers' Union, Local No. 1, Blairmore, Alberta, Employees.

The Board consisted of L. P. Robert, Blairmore, appointed on the recommendation of the EMPLOYER; Frank Wheatley, Blairmore, appointed on the recommendation of the EMPLOYEES; and H. M. E. Evans, Edmonton, Chairman, appointed on the recommendation of the two members first named above.

The matters in dispute as set out in the application, made by the Employees, for a Board were:—

"(*a*) First: a claim by the miners for payment of a day wage rate of $6.50 per day for the new work of machine pick mining which has been refused by the company.

"(*b*) Second: a claim for payment of laying of sheet iron in working places, other than a chute, the miners claiming 35 cents per yard, as provided for in the agreement between the company and the workmen. The company is only paying 17½ cents per yard for this work."

Public sittings of the Board were held at the Court House in Blairmore, September 13 and 14, 1926.

The Employer was represented throughout the sittings by R. Green, general superintendent, and H. M. Congden, mine surveyor, and the Employees by P. M. Christophers and Thomas Williams, of Blairmore.

A number of witnesses appeared before the Board, and presented statements on behalf of the Employer or the Employees.

In respect of Clause (*a*) the Board failed to reach a unanimous decision, majority and minority reports being presented, and in respect of Clause (*b*) a unanimous decision was reached.

The findings of the Board are as follows:—

Majority Report

We, the undersigned members of the Board, beg to submit the following:—

(*a*) *Re Claim by Miners in Respect of Machine Pick Mining.*

(1) The earnings of the men on contract, under the new system of mining by machine picks without the use of explosives are not in dispute, whether those earnings be in excess of the earnings by the old method or whether in a normal working place they fall below even the minimum rate fixed in the minimum rate clause—that clause applies only to earnings in abnormal places.

(2) We find from the agreement, dated 7th April, 1925, and effective to 7th April, 1928, that it was the intention of the parties to that agreement to fix $5.40 a day for a fair day's work in an abnormal place.

(3) From the above we find that the company has no right to expect anything more than a fair day's work. If the use of the new machines involved unavoidable injury to the workmen, it would be a matter to be dealt with by regulations under the powers given to the respective bodies by the Mines Act and the Workmen's Compensation Act (Accident Fund) of the province of Alberta. An increase in the minimum rate for working abnormal places would not be a proper or adequate way of meeting any condition of work which involved unavoidable injury to the workmen.

(4) We find on the evidence submitted to us that the disabilities which have so far occurred might have been avoided by proper precautions in the way of protection against exposure to chill, and in taking steps to have the men become more gradually accustomed to the work.

(5) We dismiss the argument that the added productivity should be reflected in a higher

minimum wage, because the latter only applies in an abnormal place and in the very nature of the case just when there is no added productivity. As stated above by the agreement, the company has no right in an abnormal place to demand more than a fair day's work, which the men undertook to furnish throughout the life of the agreement on condition that they would be made up to the minimum of $5.40 a day.

(6) We also dismiss the argument that, since the contract man in a normal place earns more than before, he has the right to expect a higher minimum in an abnormal place. Having regard to its greater expense in the new method, the company claimed in its reply that the higher earnings of the contract men were a proof that the contract rates were too high. As stated, the matter of contract rates is not in dispute before this Board. At the same time, it would not be fair in view of the company's side of the case to use the higher earnings as an argument for a higher minimum. In any case, we do not think that this would touch the general principle of the agreement, that a fair day's work was to be given for the minimum stated.

(7) We therefore find against the claim of the employees under the first heading, namely: for the payment of a minimum rate of $6.50 per day for the new work of machine pick mining.

(*Sgd.*) H. M. E. EVANS,
Chairman.

(*Sgd.*) L. P. ROBERT.

Minority Report

In Section (3) of Claim (*a*) of the recommendations and findings of Majority Report of the Board the following statement occurs:

"If the use of the new machines involved unavoidable injury to the workmen, it would be a matter to be dealt with by regulation under the powers given to the respective bodies by the Mines Act and the Workmen's Compensation Act (Accident Fund) of the province of Alberta. An increase in the minimum rate for working abnormal places would not be a proper or adequate way of meeting any condition of work which involved unavoidable injury to the workmen."

May I point out to the Honourable Minister that in my opinion the above quotation from the findings of the Majority Report contains the kernel of the dispute; as it sets forth the two principal factors on which the employees base their claim, namely: An increase in the minimum rate of pay for working in an abnormal place under the new work of machine pick mining, coupled with unavoidable injury arising out of the use of the new machines. I shall, therefore, confine my report to this Section in briefly outlining to you wherein I differ with my colleagues on the Board.

In the first place I contend, and am supported by good mining practice, that when any contract working place becomes abnormal, such place requires a maximum of skill and hard work to overcome the abnormality, and in consequence warrants a higher rate of pay, and instead of the minimum wage, such person undertaking the work should at least be paid the average wage earned in a normal working place.

Secondly, it is the custom to pay higher wage rates where machines are used, a reason in itself which would justify the increase asked. As to the argument of the Majority Report—that if the use of the new machines involved unavoidable injury to the workmen it would be dealt with by the Workmen's Compensation Act, I wish to say: Sworn evidence of the Medical Doctor called to testify before the Board, showed that the use of these machines did involve injury to the workmen, and for which injury the Doctor prescribed rest as a cure. While this rest cure is usually obtained in the course of a few days, I must point out that the waiting period specified when making claim under the Compensation Act is: "For and from the fourth day of the accident," with the result that few claims for compensation would be sustained. Owing to this waiting period, the workmen are, therefore, compelled to seek relief in the higher rate of pay.

Nor can I agree that the Mines Act would deal with the matter by regulation. The Mines Department advised the necessity for this new system of work in the interests of safety, and endorsed by the workmen, with the company sharing equally in the results, as the small added costs referred to elsewhere in the report is taken up as insurance in greater protection to their property as well as to the lives of their workmen.

I therefore submit the foregoing as sufficient grounds to warrant the increase asked in the minimum wage rate to men working in an abnormal place under the new system of machine pick mining and to justify non-concurrence in that part of the Majority Report marked (*a*).

(*Sgd.*) FRANK WHEATLEY.

We, the undersigned members of the Board, unanimously beg to submit the following:—

(*b*) *Re Claim by Miners in Respect of Payment for Laying of Sheet Iron.*

(1) We find that neither the wording of the clauses in the agreement nor the estab-

lished practice at the mine are sufficient to constitute a definite agreement on this point between the employer and the employees. In any case a system of payment by lineal measurement does not appear to be satisfactory, because the sheet iron is often laid and relaid within the pay period, or may be covered up with coal and inaccessible for measurement.

(2) We therefore recommend that the present basis of compensation for this work be abandoned, and that the following be inserted in the agreement under the heading "Greenhill Both Seams" and immediately following the clause on "Chute Buildings": "Chute in pillars. Laying sheet iron in pillars 1½ cents per cubic yard—the company to lay the sheet iron to the pillar."

(*Sgd.*) H. M. E. EVANS,
Chairman.

(*Sgd.*) L. P. ROBERT.
(*Sgd.*) FRANK WHEATLEY.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

FOUR new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This Board was established under an Order in Council dated July 11, 1918, while the war was still in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods. Earlier cases were outlined in the LABOUR GAZETTE for August, 1926, and in previous issues. The four new decisions are as follows:—

Case No. 254.—Canadian Pacific Railway (western lines) and Order of Railroad Telegraphers.

This case was first presented to the Board in August, 1925, when it was found that additional information was required before a decision could be reached. Accordingly it was referred back again to the parties concerned. The Board was informed later that a settlement had been reached, and the case was therefore withdrawn.

Case No. 279.—Canadian Pacific Railway (western lines) and Brotherhood of Railroad Trainmen.

A dispute arose between the company and the trainmen as to the application to a certain case of Article 1, clause (*r*), of the Trainmen's agreement, which reads:—

> Trainmen when deadheading to a point to take a preference run or promotion to which they are entitled by change of time table or permanent vacancy, or when returning from same on account of being displaced by reduction of crews, will not be entitled to compensation from same.

In the case before the Board a passenger trainman, in accordance with seniority rights, was assigned to a run and required to deadhead to a distant terminal to take the run at a change of time-table. The company contended that under this clause it should not be called upon to pay for the "deadheading" of the crews in circumstances where the necessity is caused by the working out of promotion agreements. The employees contended that when the company requires trainmen to "deadhead" to a distant terminal to man a passenger train that is part of their assignment, this should be regarded as a movement connected with "operation." The Board held that this was a case of exercising seniority, and as the parties agreed several years ago that the railway would not be put to additional expense in allowing the men to exercise seniority, they denied the employees' claim.

Case No. 280.—Canadian Pacific Railway (western lines) and Brotherhood of Railroad Trainmen.

A difference of opinion arose between the company and the employees in regard to the payment of a trainman who was displaced from his assignment, notwithstanding his seniority rights. The company having admitted that a mistake had been made in the assignments which led to the displacing of the trainman, the Board ruled that the complainant should be paid for any time lost.

Case No. 281.—Canadian National Railways (western region) and Order of Railroad Telegraphers.

A controversy arose between the management and the employees to the interpretation of Rule 91 of the Standard Code of General Train and Interlocking Rules. This rule provides that when a train leaves a station the operator must remain on duty for a fixed period unless a report is received of the arrival of the train at the next open telegraph office. The employees stated that this rule involved them in overtime work for which the railways declined payment, and claimed that all overtime so worked should

be paid for in accordance with the telegraphers' wage schedule. The Board decided that the interpretation of General Train Order Rules was not a function of the Board, but that, in the matter of compensation, an operator, if not properly relieved, was entitled to payment for any overtime earned in carrying out the rules.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

A REPORT has been received of a case recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2.

This Board was established towards the end of 1925 for the purpose of adjusting disputes arising between the management of the Railways and the clerks and certain other office and station employees. The classes of employees coming under the Board are those given in the schedule of rules governing these classes which is contained in the existing agreement between the Railways and the Canadian Brotherhood of Railway Employees. Board of Adjustment No. 2 is composed of the following members:—

Representing the railways—Messrs. H. Morton, Moncton, N.B., J. F. Aitchison, Toronto, Ont., George Turvey, Toronto, Ont., W. A. Kirkpatrick, Saskatoon, Sask.

Representing the employees—Messrs. A. R. Mosher, Ottawa, Ont.; M. M. McLean, Ottawa, Ont.; N. L. Preston, Winnipeg, Man.; and C. H. Minchin, Calgary, Alta.

An outline of earlier cases dealt with by the Board was given in the July issue of this GAZETTE and in previous issues.

Case No. 21.—Parlour, Sleeping and Dining Car Department.

This case was a continuation of Case No. 18 (reported in the LABOUR GAZETTE, July, page 647). It concerned three employees, namely, the steward, waiter and chef on a café parlour car in the Montreal-Rivière à Pierre service, who were alleged by constables of the Investigation Department of the railways to have misappropriated revenue of the railways by manipulating a meal check in such a way that the check covered only one meal while the crew collected money for two meals. On this evidence the men were dismissed by the management. They brought their case before the Board, and at the first hearing it was found that the evidence was not sufficiently conclusive to warrant the dismissal of all the men involved, and that they had not received due notice of the investigation into their conduct. Accordingly another investigation was ordered. At the second hearing the Board denied the claim of the steward and waiter, the dismissal of these employees being thus confirmed. It was found that the chef had not been actually dismissed for misappropriation of revenue, but received 25 demerit marks for irregularities, making a total of 60 demerit marks against his record, his dismissal resulting automatically. The Board decided that the discipline administered in this case was excessive, and ordered a cancellation of sufficient demerit marks to effect the chef's reinstatement, time off to count as suspension.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1926

THE number of strikes and lockouts in existence during October was 9, as compared with 14 in September. The time loss for the month was greater than during October, 1925, being 26,425 working days as compared with 12,142 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
Oct. 1926	9	2,138	26,425
Sept. 1926	14	2,248	20,697
Oct. 1925	8	8,023	12,142

The Record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Seven disputes, involving 1,071 workpeople, were carried over from September, and two disputes commenced during October. None of the strikes commencing prior to October terminated during the month, but the two strikes which commenced during October terminated during the month. At the end of the month, therefore, there were on record

seven strikes and lockouts as follows: Lumber workers in Port Arthur and District; boot factory employees at Toronto, Ont., fur workers at Winnipeg, Man.; hat and cap makers at Montreal, P.Q.; ladies' garment workers at Toronto, Ont.; men's clothing workers at Montreal, P.Q.; and men's clothing workers at Toronto, Ont. A cessation of work involving about five carpenters was reported at Ottawa, Ont., the employer refusing to pay union wages or agree to union working conditions.

The record does not include minor disputes as described in the third paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet declared them terminated. Information is available as to six such disputes, namely: moulders at Galt, August 2, 1922; cigar makers at Montreal, March 24, 1925; upholsterers at Montreal, June 27, 1925; men's clothing workers at St. Hyacinthe, P.Q. (formerly of Montreal), March 19, 1926; and bookbinders and pressmen at Montreal, P.Q., March 9, 1926, a strike of carpenters at Trenton, Cnt., July 24, 1926, appears to have lapsed.

Of the strikes and lockouts commencing during October one was against the discharge of an employee and the other for union wages and working conditions. Both these strikes terminated during the month, one in favour of the employers, the other ending in a compromise.

The following paragraphs give particulars in regard to certain disputes in addition to information given in the tabular statement.

Lumber Workers, Port Arthur and District, Ont.—In the dispute involving lumber workers in Port Arthur and District, in a demand for increased wages and improved working conditions, toward the end of October it was reported that a settlement had been reached between the employers and about two-thirds of the workmen involved, work being resumed at the higher wages demanded and with some of the working conditions improved. The strikers picketed railway stations, railway trains, employment offices, etc., in order to inform newly arriving workmen as to the conditions of the dispute.

Fur Workers, Winnipeg, Man.—In this strike for recognition of union and shorter working hours, which began in September, during October most of the strikers resumed work, some of the employers having signed an agreement with the union granting the conditions demanded while others granted the conditions but without recognition of the union and without agreeing to a shop steward or a chairman for the shop. About October 22, it was reported that only one shop was still involved in the strike and ten former employees. Some of the pickets were arrested on charges of assault and disorderly conduct as the result of disturbances.

Men's Clothing Workers, Montreal, P.Q.—In this dispute which commenced in July most of the firms and the employees involved had agreed to a settlement in August and others in September. In October it was reported that only two firms were still involved and about 130 employees at the beginning of the month, and of these 50 secured work elsewhere during October.

Men's Clothing Workers, Toronto, Ont.—This strike, beginning on September 25, was not reported to the Department in time for inclusion in the October issue of the Labour Gazette. The union attempted to organize the factory of the employer, and, on his refusal to sign an agreement and recognize the union, the employees were called out on strike. At the end of October the dispute was unterminated.

Coal Miners, Springhill, N.S.—This dispute, involving the employees of a firm operating three mines, was caused by the stopping of work by a number of boys in sympathy with one of their number who had been laid off for breaking one of the rules, causing an accident. The agreement under which the mines are operated provides that no cessation of work shall occur until a dispute has been dealt with between officers of the company and the union. After two days the strikers returned to work on the order of the district president of the union, the dispute to be dealt with as provided for in the agreement.

Electrical Workers, Vancouver, B.C.—This dispute arose when the union declared that the job was unfair. The Fair Wages Officer of the Department of Labour brought the parties into conference and a settlement was reached, the employer giving an increase of pay of 25 cents per day, making it $7.75, for eight hours, as a concession for the working conditions not being in compliance with those given by other firms in similar lines of electrical work.

STRIKES AND LOCKOUTS DURING OCTOBER, 1926.

Industry, occupation and locality	Number of employees involved	Time lost in working days	Remarks
(a) Strikes and lockouts commencing prior to October, 1926.			
LOGGING—			
Lumber workers, Port Arthur, Ont., and District	700	17,200	Commenced Sept. 16, 1926, for increased wages and improved working conditions. Unterminated.
MANUFACTURING—			
Boots and Shoes (other than rubber and felt):			
*Boot factory employees, Toronto, Ont	5	130	Commenced Jan. 13, 1926, against changes in working conditions alleged to be in violation of agreement. Unterminated.
Leather, Fur and Products:			
Fur workers, Winnipeg, Man	150	2,424	Commenced Mar. 4, 1926, for shorter hours and recognition of union. Unterminated.
Clothing (including knitted goods):			
*Hat and cap makers, Montreal, Que	1	26	Commenced Mar. 4, 1926, against violation of agreement. Unterminated.
*Ladies clothing workers, Toronto, Ont	25	650	Alleged lockout, commenced June 30, 1926, against enforcement of non-union conditions. Unterminated.
Men's clothing workers, Montreal, Que	130	2,080	Commenced July 28, 1926, for union wages and working conditions in non-union shops; partial resumption of work on Aug. 9, 1926, under union conditions and almost complete resumption by Oct. 1.
Men's clothing workers, Toronto, Ont	60	1,560	Commenced Sept. 25, 1926, for recognition of union. Unterminated.
(b) Strikes and lockouts commencing during October, 1926.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Springhill, N.S.	1,050	2,100	Commenced Oct. 18, 1926, against suspension of employee. Terminated Oct. 21, 1926, the strikers being ordered back to work.
CONSTRUCTION—			
Electrical lines and works:			
Electrical workers, Vancouver, B.C	17	255	Commenced Oct. 1, 1926, for union wages and working conditions. Terminated Oct. 19, 1926. Compromise.

*Reports indicate that the strikers had been replaced, but there were still a number of employees out and on the strike or lockout benefit list of the union.

Workingmen's Tenements in New York

In connection with proposals for new legislation to eliminate slums in New York, attention is called to the provisions of the Tenement House law, which went into effect in the State in 1901. This law, however, applied only to new construction, and not to tenement houses existing on that date. It is now proposed that tenement houses built since 1901 should be required to comply with the law. Under its provisions courts and yards must not be less in area than certain minimum sizes, governed by the height of the building, and the height, in turn, is in all cases limited to one and one-half times the width of the widest street upon which the building faces. Every room in a flat must have a window of one-tenth its floor area opening upon the street or upon a yard or court; at least one room in each apartment must have an area of 120 square feet and no room can be less than 70 square feet. The bathroom or toilet compartment must have a window of 3 square feet, must be floored with waterproof material and must be accessible from each bedroom without passing through another bedroom. Two entirely independent means of escape in case of fire must be provided for each apartment, one of which must be a well-lighted stairway leading from the roof to the entrance floor.

WORKMEN'S COMPENSATION IN ONTARIO

Compressed Air Illness Classed as Industrial Disease

THE Workmen's Compensation Board of Ontario has issued a regulation declaring "compressed air illness" to be an industrial disease as defined in the Workmen's Compensation Act. The June issue of the LABOUR GAZETTE noted the inclusion of "pneumoconiosis," or stoneworkers' or grinders' phthisis in the schedule of such diseases. The new regulation is as follows:—

96. It is hereby declared that compressed air illness or caisson disease, or its sequelae, due to employment carried on in compressed air, shall be an industrial disease within the meaning of The Workmen's Compensation Act as if the words "Compressed air illness or caisson disease, or its sequelae" were inserted in the first column of Schedule 3 of the Act and the words "any process carried on in compressed air" were inserted opposite thereto in the second column of the said schedule.

This regulation shall go into effect on the 1st day of January, 1926.

Passed this 29th day of September, 1926.

Approved by the Lieutenant-Governor in Council the 1st day of October, 1926.

Mothers' Allowances in Saskatchewan

Mr. F. J. Reynolds, chief of the Bureau of Child Protection of the province of Saskatchewan, states that a total of 1,100 widows and dependent mothers with children under sixteen years of age (with approximately 4,500 children concerned), benefited by the allowances made on August 1, the total amount of grants being $26,960, paid under the Saskatchewan Mothers' Allowance Act. Mr. Reynolds further states that there has been a slight increase since January 1 in the amount paid and the number of beneficiaries. The number of families receiving the allowance on January 1, was 1,059. During this period, January 1 to August 1, 1926, 79 new families were added to the roll, and 38 families have been dropped for various reasons, such as moving from the province, widows remarried, improved financial conditions, and some cases where the older children are now old enough to contribute sufficiently towards the family requirements.

FACTORIES AND WORKSHOPS IN GREAT BRITAIN IN 1925

THE annual report of the Chief Inspector of Factories and Workshops of Great Britain for the year 1925 shows a continued increase in the number of factories and an equally regular decline in the number of workshops. "Factories" under the act are equipped with mechanical power, and "workshops" are not so equipped. The total number of factories was 144,361 in 1925, and 142,494 in 1924. Workshops declined from 133,729 to 128,793. The elimination of "workshops" has been going on for a number of years, and is in many cases due to the introduction of electrical power or of an oil or gas engine into workshop premises, which are thus transformed into factories.

Another tendency noted in the report is the centrifugal movement of industries from the old and cramped surroundings in large towns to the outskirts. This process is noted as a special feature of 1925, and was specially remarked in the areas surrounding London. The Chief Inspector notes that this is "a highly beneficial movement, for work, instead of being carried on in closely populated districts, is transferred to new factories well laid out, usually on a one floor system, and in pleasant, healthful surroundings." The industrial importance of the area surrounding London is steadily growing, and many new types of industry were established during the year.

Certain trades were steadily busy throughout 1925, while others, more particularly the textile industry, potteries, the iron and steel and shipbuilding industries, suffered from acute depression. Towards the end of the year the situation was distinctly more hopeful, and the number of unemployed persons was diminishing. Building was among the industries which showed the greatest vitality and expansion, with the various trades which depend more or less on building activity, such as the manufacture of bricks, cement, light castings (stoves, grates and spouting), paints and varnishes, linoleum, cabinet and chair making, and sanitary and electrical fittings. The linoleum industry has been consistently busy and prosperous now for a number of years, and is expanding. The motor industry continues to develop rapidly, its growth being most marked in the Midland and Eastern Divisions and in the neighbourhood of London. There are at present some 14,600 works engaged directly in various branches of the motor trade, of which rather more than half are repairing garages. The beet sugar in-

dustry is developing rapidly and nine factories were working in 1925, while five others were under construction.

In regard to safe conditions of labour, 33 codes of regulations governing dangerous occupations are now in force. Four new codes became effective during the year, dealing respectively with electric accumulators; work on docks; woollen and worsted textiles (lifting of heavy weights): and grinding of metals.

The number of industrial accidents fell from 169,723 in 1924, to 159,693 in 1925. The decrease, however, is explained chiefly by the depression in the iron and steel and shipbuilding industries, these two industries alone being responsible for a drop of 8,000 accidents. The number of fatalities fell from 956 to 944. Among the industries contributing the largest number of fatal accidents, building operations come first with 142; docks follow with 93; shipbuilding is accountable for 84; metal conversion and iron and steel rolling 70. While shipbuilding and iron and steel manufacture show a substantial decrease from last year's figures, fatalities in building have risen from 104 to 142 and in docks from 88 to 93. Thus building is now in the unenviable position of having more fatal accidents than any other industrial occupation.

In regard to accidents in building the report says:—"Most of the fatalities are the results of falls from working platforms—a type of accident which should be largely reduced when the building regulations, now in draft, come into force. A considerable proportion of these building fatalities occurred in the London area, where, as is well known, very extensive reconstruction work involving employment at dangerous heights has been going on for the last few years. The peculiar risks involved in building have been recognized for some time, and a comprehensive code of Regulations framed to meet the specific hazards of the trade has been practically agreed with the Industry and it is hoped will soon be in force."

The Senior Medical Officer was notified of 79 cases of industrial poisoning in 1925, compared with 61 in 1924. Of these 13 were cases of lead poisoning, 55 of epitheliomatous ulceration (mule spinner's cancer), 9 of anthrax, and one each of aniline poisoning and taxic jaundice. A committee was appointed during the year to investigate mule spinner's cancer, and steps are now being taken to give effect to their recommendations. In regard to anthrax, the government wool disinfecting station continued in operation during 1925; further improvements were made in the plant and process of disinfection, mainly with the object of securing more perfect and regular drying and the more complete removal of formaldehyde from the disinfecteed materials.

Reports received from the factories on this subject were somewhat contradictory; in a few districts the movement appeared to be making no progress, and in some cases enthusiasm was found to be even waning. But in most instances interest was steadily maintained and in certain areas there was substantial progress. Sometimes, it is stated, advancement appears to be hampered by a feeling amongst employers and managers that safety committees may be derogatory to their own authority; there is also the fear that such committees tend to become self-centred and to pay little attention to developments in works other than their own.

The 48-hour week appeared to be almost universal, and factories in which the 60 hours of employment (still permissible by law) are regularly worked are becoming rare. Although the system of working a 5-day week has been introduced into a number of factories, it is not possible to foretell at this stage whether it will become a permanent and general institution. In many works bad trade has been the reason for the adoption of the system, and a period of good trade is needed to show whether the firms intend to continue such an arrangement of hours. As has been reported in former years, the shortening of the hours of employment and re-arrangements of the periods of employment have not shortened the spells of work as much as is desirable. The shortened day period normally worked has, of course, made it impossible to work regularly two spells of 5 hours, but one such spell (usually from 8 a.m. to 1 p.m.) is common in many individual works and in certain industries, and more particularly clothing, confectionery, letter-press printing, and laundries, followed by an afternoon spell of 3½, 4 or 4½ hours, which at times of pressure may be extended to 5 hours. The length of spell is often determined by local conditions, such as the accessibility of the factory to the workers' homes, means of transit, etc., and in some trades to the fact that there is no work on Saturdays and that the 48 hours must be fitted into 5 days. Although in recent years a reduction in the 5-hour spell by means of an interval of half an hour has not been particularly prevalent, the practice of introducing recognized rest pauses or short breaks of 10-15 minutes for refreshment is becoming much more general in all industries, especially non-textile trades and where a 5-hour spell is in operation. In these cases the length of the spell to the worker is of less moment than formerly and may partly account for the fact

that an actual reduction in the length of the spell has not generally taken place. The report states that "as to the effect on output of rest pauses, researches by the Industrial Fatigue Research Board leave no reasonable doubt that in a working spell of 4½ hours or over a short rest pause tends to greater efficiency. As in the case of length of spells, there is however a great diversity of opinion on the part of employers on this question, some holding that the effect is favourable, while others maintain that the break is unsettling and that the rate of production for a short time before and after such an established break is lessened." It is noted however that where the system is adopted it is nearly always continued, which may be taken as a sign that output is not seriously diminished.

In regard to voluntary schemes it is stated that this form of welfare is now definitely established in industry and is operating on a scale much beyond what is generally known. It is true the movement has hitherto been initiated chiefly by the larger and more successful industrial concerns, but it is steadily growing and every year sees more firms joining in the advance and framing schemes for the betterment, entertainment or education of their workers.

CANADIAN COUNCIL ON CHILD WELFARE

THE annual meeting of the Canadian Council on Child Welfare was held in the Chateau Laurier, Ottawa, on October 29, 1926, but the annual conference has been postponed until the spring of 1927 when it will be held at Vancouver, B.C.

The report of the executive secretary, presented at the annual meeting, revealed very extensive and progressive work during the past year in the fields of administration, relation to other organizations, legislation, international child welfare relations, and special activities. The membership is increasing and there appears to be an active interest in the work of the Council in all provinces. Special reports were submitted by the chairmen of each of the following sections: Child hygiene; child in employment; education and recreation; child in need of special care; and the ethical and spiritual development of the child Extracts from these reports which may be of interest to Labour Gazette readers are appended.

The officers elected for the ensuing year are as follows:—

Past President—Mr. A. P. Paget, Winnipeg.

President—Mrs. C. H. Thorburn, Ottawa.

Vice Presidents—Dr. Helen R. Y. Reid, Montreal; Dr. H. E. Young, Victoria, B.C.

Honorary Treasurer—Mme. Jules Tessier, Quebec.

Executive Secretary—Miss Charlotte Whitton, Ottawa.

Chairmen of Sections—

Child Hygiene—Dr. A. Grant Fleming, Montreal.

The Child in Employment—Dr. Weyman, Vancouver, B.C.

Education and Recreation—Dr. G. Weir, Vancouver, B.C.

Sub-Chairman on Education—N. MacLean, M.A., Ottawa.

Sub-Chairman on Recreation—Mrs. G. Cameron Parker, Toronto.

The Child in Need of Special Care—Robert E. Miles, Toronto, Chairman.

Sub-Committee on Delinquency—Judge Ethel MacLachlan, Regina.

Sub-Chairman—Mrs. Sidney Small, Toronto.

The Ethical and Spiritual Development of the Child—Dr. Hugh Dobson, Vancouver, B.C.

French-Speaking Section—Mme. P. E. Marchand, Ottawa.

Committee on Revision of the Constitution—

Prof. E. D. MacPhee, Toronto, Chairman.

Ways and Means Committee—

Dr. Helen R. Y. Reid, Montreal, Convener.

Governing Council, 1926-27—

Mr. Tom Moore, Ottawa, Chairman; Mrs. J. A. Stewart, Perth, Hon. Secretary; Mrs. Harold Riley, Calgary, Alta.; Magistrate Emily Murphy, Edmonton, Alta.; Mrs. V. S. MacLachlan, Victoria, B.C.; Mr. C. J. McNeely, Vancouver, B.C.; Dr. C. A. Barager, Brandon, Man.; Mrs. R. A. Rogers, M.L.A., Winnipeg, Man.; Miss H. Dykeman, R.N., St. John, N.B.; Judge E. H. Blois, Halifax, N.S.; Miss Jean Browne, Toronto, Ont.; Dr. J. W. Crane, London, Ont.; Dr. J. E. Davey, Hamilton, Ont.; Dr. C. A. Seguin, Ottawa, Ont.; Prof E. D. MacPhee, Toronto, Ont.; Rev. Father Haley, Toronto, Ont.; Mrs. D. A. Dunlop, Toronto, Ont.; Miss Mona Wilson, Charlottetown, P.E.I.; Mme. L. G. Beaubien, Montreal, Que.; Mrs. R. J. MacDonald, Saskatoon, Sask.

Mr. Frank Yeigh, Secretary of the Canadian Save the Child Fund Committee, addressed the meeting, suggesting co-operation between his committee and the Council and the matter was referred to the executive for detailed information and report.

The following resolutions were adopted by the meeting:—

Child Hygiene—

That this Council approves of the following recommendations of the Section of Child Hygiene:

1. Completion of work in hand;
2. Publication of results secured by special classes for the handicapped in Canada;
3. The Canadian Council on Child Welfare go on record as endorsing the "Seymour Plan" for a campaign against Diphtheria during September and October, 1926; Smallpox during November and December, 1926; Typhoid fever during January and February, 1927; through:—

Co-operation of all health agencies, official and voluntary, on the North American Continent; the American Medical Association; the Canadian Medical Association; the Federal Department of Health of Canada; the United States Public Health Service; the Churches, the Press; Educational Authorities and all other agencies that can in any way assist.

Concentration of effort on the part of the foregoing organizations, by propaganda and publicity in the daily and weekly press, current magazines, moving picture theatres and by public addresses.

Education of the public to the fact that Diphtheria, Smallpox and Typhoid Fever are communicable and preventable; and that by making use of the knowledge which medical science has made available these diseases can be prevented.

Mental Hygiene—

Whereas, the President of the Calgary Council on Child Welfare has requested the Canadian Council on Child Welfare to state a concrete national policy on the care of the mentally defective, in order that the Calgary Council may take up the matter with the government of Alberta; And whereas it is the opinion of this Council that the problem of the care of mentally defective persons demands urgent consideration; And whereas the special knowledge of the Canadian National Committee for Mental Hygiene makes it a proper authority for advice on matters pertaining to mental hygiene; Be it therefore resolved that the request of the President of the Calgary Council on Child Welfare be referred to the Canadian National Committee on Mental Hygiene for their consideration and report and that the Canadian National Committee on Mental Hygiene be assured of the heartiest co-operation of the Canadian Council on Child Welfare.

Child Labour—

That the Canadian Council on Child Welfare reaffirms its conviction that every effort should be made to bring about acceptance of the International Child Labour Conventions and Recommendations by the provinces of Canada to the end that adherence to these may be given by the Dominion Government.

Survey of Literature—

That the Section on Spiritual and Ethical Development of the Child be requested to survey the literature sold throughout Canada to secure facts concerning: (1) The circulation of different magazines and periodicals throughout Canada and an appraisal of the effects of this literature; (2) The nature of the wit, humour, etc., in the reading matter of the Canadian people, e.g., the comic sections of the press, etc., and an appraisal of the effects of the same upon habits and character; (3) The books sold for the reading public in Canada and the books loaned through the public libraries in Canada and an appraisal of any tendencies that might vitally affect national ideals; (4) An appraisal of the spoken drama, the cinema and the radio as to their contribution to spiritual and ethical ideals.

Motion Pictures—

That the Canadian Council of Child Welfare endorses the principle of the classification of motion pictures as for general audiences and for children's audiences and that the practical application of this endorsation within the provinces be referred to the Committee on Recreation.

Section on Child Labour, 1925-1926

The following report, signed by Judge Helen Gregory McGill, convener of the section on Child Labour, was adopted by the committee:—

(*a*) The minimum age for permanent gainful employment during the school year of either sex shall be fifteen years.

(*b*) Night employment shall be prohibited for persons under eighteen years of age.

(*c*) Employment of persons under twenty-one years of age in dangerous, unhealthy or hazardous occupations shall be prohibited.

(*d*) Persons under eighteen years of age shall not be employed more than eight hours a day or forty-four hours a week and shall have a rest period of one day in seven. Hours spent in continuation classes shall be counted as hours of labour.

These standards are all recognized in the International Child Labour Convention. The Council therefore plans to devote its energies in 1926-7 towards obtaining the adherence to these Conventions from the Canadian provinces and ultimately adherence by Canada.* . . . The appended schedule of the changes necessary in each province to make ratification possible has also been prepared for the information of co-operating groups. Every organization within the Council will be especially urged to give some attention to this matter, this year.

(*e*) Minimum wage regulations shall apply to all persons of both sexes up to eighteen years of age.

This resolution was brought to the attention of the responsible Minister in each province where Minimum Wage Regulations are in force, with fairly satisfactory results.

* A report has been prepared on the present status of Canadian Provincial law on these subjects.

In Alberta.—The Prime Minister, the Hon. J. F. Brownlee, introduced an amended Factories' Act, providing for the application of minimum wage regulations for male workers in certain industries.

In British Columbia.—At the Conference of the British Columbia Minimum Wage Board, of which your convener is a member, held August 29, 1926, at the Court House, Vancouver, on the Minimum Wage in the Fruit and Vegetable Industry, the wage for the "inexperienced, whether over or under eighteen years of age, was fixed at $11 a week for a forty-eight hour week with 30 cents an hour after the tenth hour in a day." The "inexperienced period" was also shortened from three months to *two months,* while there is, as before, a limit on the emergency period during which very long hours may be run for ninety days. The unfortunate discrepancy, however, still remains between the Factories Act, so that a Factory Inspector in spite of the gazetted orders of the Government Minimum Wage Board, may give a permit during the berry and fish seasons, when all the limitations as to children and young girls and upon the hours of opening and closing of the factory are not binding on the employer.

Notwithstanding the fact that conferences are advertised that the orders are based upon public recommendations from the employers, employees and the representatives of the public and are held by a duly constituted Government Board and gazetted, we are advised that since this authority is given the Factory Inspector by statute, no order of the board can hold against such a permit. The deplorable effects of this clause constantly crop up. Many witnesses at this conference, as at the previous ones, stated again and again that they had worked for fourteen or fifteen hours beside girls ten, twelve and fourteen years old, sometimes as long as fourteen or fifteen hours in a day.

I would therefore again recommend that British Columbia and Nova Scotia Provincial Governments, which alone have this lapse in their Child Labour Laws, be urged to eliminate this section and fix the age for entry into any industry at fifteen years of age, without relaxation below this age for any reason.

It should be explained that this would still not include either domestic or farm labour. Such a proposed amendment would not in any way interfere with that class of labour.

In Manitoba.—Only an acknowledgment of the resolution was sent forward, but during the year, amendments giving effect to the principles of this resolution were passed.

In Quebec.—As the legislative program for the year had been concluded, the Prime Minister, the Hon. L. A. Taschereau, stated that consideration of legislative changes would have to be postponed until 1926-27.

In Saskatchewan.—The Commissioner of Labour and Industries agreed to bring this recommendation before his Minister for consideration in the preparation of legislation for the 1927 session.

In Ontario.—The minister of Labour, the Hon. Forbes Godfrey stated that he was planning a survey of the situation in this matter and would not care to declare his policy until this was completed.

It would appear that in this field the Council should continue its educational efforts in the coming year, and especially attempt to enlist the sympathy of provincial agencies in approaching their respective governments.

Investigation into aims and methods of juvenile employment divisions and vocational guidance bureaus in Canada, the United States and elsewhere, with a view to development of the most effective services in these fields.

It was ascertained early in the year that Mr. A. W. Crawford, Director of Technical Education in the Federal Department of Labour, was prepared to make a preliminary survey on the extent and nature of apprenticeship in the Dominion. Such co-operation, of a very informal and general nature as was required at the early stage in the study was offered. Several hundred copies of Mr. Crawford's Bulletin on Vocational Guidance were obtained and mailed to our membership.

It would appear that the most efficacious work, in obtaining this objective, can be done in the closest collaboration with Mr. Crawford, and your convener would recommend that the officers of the Council in Ottawa proceed along these lines.

Special Activities.—Your convener in collaboration with the central office directed a protest against a proposed amendment to the Ontario Adolescents School Attendance Act on the ground that the proposed change, viz., rendering it obligatory to attend school certain hours, after work hours—would be prejudicial to the entire child labour programme of the Dominion. The details of this matter are covered in the Secretary's report.

Section on Education and Recreation

The report of the section on education and recreation was in part as follows:—

Resolutions of the Annual Conference of 1925 adopted certain aims on education and recreation for children subject to the right to enlarge or modify its statement of programme at any annual meeting. They are as follows:—

(*a*) To extend the technical school system.

(*b*) To obtain compulsory school attendance for at least nine months of the year by every pupil from 7-15 years of age.

(*c*) To establish under trained supervisors recreational facilities for all children twelve months of the year.

Activities in the past year have been confined to general propaganda in articles and addresses along the lines here indicated, with special efforts to give assistance of a specialized type when requested. For instance, special enquiries and reports have been furnished on request, on playground equipment and management, and on the organization, equipment and management of fresh air camps.

In the field of effort towards obtaining compulsory school attendance, our efforts for the present are being concentrated on the perfecting and enforcement of the laws existing in all the provinces, *re* the minimum age for the entry of children to industry and agriculture. The obtaining of a uniform minimum across the Dominion and the adherence of Canada to the International Child Labour Conventions on this matter, will form one of the chief activities of the Section, this year

(*d*) To obtain through provincial departments of education, the appointment of full time instructors in health education in the normal schools so that teachers may be equipped to teach Health as a regular subject on the school curriculum.

This resolution was forwarded to all the Provincial Ministers responsible, early in the year. The replies in all cases indicated considerable interest in the proposal.

Vocational Guidance and Training, etc.

Recommendations are offered in the following:—

Five thousand is considered to be the minimum population which can support day vocational classes but municipalities under 10,000 will have difficulty in supporting more than one or two branches of the work. A separate director for vocational work is highly desirable but scarcely possible in cities under 20,000, as work is organized at present. All vocational work should be conducted by thoroughly qualified teachers and organizers. It is a serious mistake to place it in the hands of academically trained people who lack industrial or commercial experience.

Vocational guidance is urgently needed but to be effective it must be conducted by specially trained and carefully selected teachers or experts. Regular teachers can help the counsellors and placement officers but cannot carry out a program of vocational guidance.

Economic Aspects of Child Welfare

At a recent meeting of the Montreal city subdivision of the Catholic Women's League, Dr. W. E. Williams, in the course of an address, referred to the economic aspects of Child Welfare. "Not only," he said, "is it necessary to vote the required amount for the provision of health centres and dispensaries as well as paying for efficient social and medical workers, but there should be the establishment of adequate playgrounds, the abolition of child labour, drastic laws demanding the proper amount of air and sunshine in properly constructed houses as well as the destruction of those unfit for human habitation. The labourer should be paid an adequate wage, and compulsory insurance should be instituted to provide against illness and possible death."

Besides this assistance on the part of the government, Dr. Williams said that there was a great deal of work that could be done by the individual woman. "There are many ways," he stated, "in which individual effort united becomes a powerful collective force as exemplified in your Catholic Women's League. The aim of the health centre was to be preventive rather than curative." To show how effective the work of such centres is, Dr. Williams compared the Montreal death rate of 130 in 1,000 babies with that noted at the health centres of 11 in 1,000.

Mr. George S. Rice, M.E., chief mining engineer of the United States Bureau of Mines, has been invited to co-operate with the chief of inspector of mines of Alberta in an investigation of a recent explosion at the Hillcrest mine in the Crows Nest Pass. This explosion occurred on September 19 and caused the death of two men, a fire boss and a pumpman. Mr. Rice, on the invitation of the Government of Nova Scotia, conducted an inquiry in 1924 on the subject of "bumps" in the Springhill mine. The result of this inquiry were outlined in the LABOUR GAZETTE for February, 1925, page 161.

MINIMUM STANDARDS FOR CHILD LABOUR

Program of National Child Labour Committee (U.S.A.)

THE National Child Labour Committee of the United States, in its monthly bulletin entitled *The American Child,* publishes the following "minimum standards," which it is seeking, through its publications, departments of research, investigation and legislation, and in other ways, to have established in every State:—

I. No child under fourteen to be employed at any gainful occupation.

II. No child under sixteen to be employed:

1. At any work or in any place dangerous, injurious or hazardous. Places and occupations known to be dangerous, injurious or hazardous for children under sixteen should be enumerated in the law, but authority should be delegated to some state board to extend the list.

2. After 7 at night or before 6 in the morning.

3. For more than 8 hours a day, or 6 days or 48 hours a week.

4. During the hours when the public school is in session unless the child has completed the eighth grade or its equivalent.

5. Unless the employer gets a work permit from the proper school official upon the following conditions: (Except that no work permit is to be required for work in domestic service or agriculture).

(*a*) A promise of employment showing the exact nature of the work.

(*b*) Evidence that the child is of legal age for that specific employment.

(*c*) Evidence that the child has completed the eighth grade of the public school or its equivalent.

If all other requirements are complied with, this should be waived during the time the public school is not in session, a special vacation work permit being issued.

(*d*) A statement by an authorized physician showing that he finds the child physically fit for that particular employment.

III. No child under eighteen to be employed at any work or in any place dangerous, injurious or hazardous for children under eighteen. Places and occupations known to be dangerous, injurious and hazardous for children under eighteen should be enumerated in the law, but authority should be delegated to some state board to extend the list.

Program of League of Nations Committee

The program proposed by the Committee of Child Welfare of the League of Nations as a minimum to be aimed at is as follows:—

1. Minimum age for admission to industrial employment 14 years.

2. Prohibition of night employment between 10 p.m. and 5 a.m. of all persons under 18 years of age.

3. Prohibition of agricultural employment during school hours of children under 14 years.

4. Exclusion of women and young persons under 18 years from industries in which there was a danger of lead poisoning.

5. Equal pay for equal work in industry regardless of sex.

6. Protection of prospective mothers by providing for absence from industry or agriculture for six weeks preceding and six weeks following the birth of a child.

Pension Scheme for London Co-operative Employees

The Co-operative Wholesale Society in London, England, is considering the establishment of an employees' pension scheme. The fund is to be administered by a committee of eight members, four appointed by the management committee, and four elected by ballot from the employees, two of whom shall retire each year. The age limits for entry into the scheme will be between seventeen and fifty, and all applications for membership will be subject to the approval of the management and pensions committees. When the fund is established membership will be a condition of employment.

The scale of contributions is based on 2¼ per cent upon wages, exclusive of bonus, overtime, etc. The maximum wage upon which contributions will be received is £300. The society will contribute to the fund at the same rate as the employees; sixty-five is fixed as the retiring age.

The amount of superannuation is to be 1-80th of the average wage, or salary received during the five years preceding retirement, up to a maximum of $300, multiplied by the number of years of future service from the date of the commencement of the scheme with a maximum of 40-80ths. The maximum pension is to be £150 a year.

In the event of death before the pension age the members' contributions, plus 4½ per cent interest per annum, will be paid to the legal representative.

AMERICAN FEDERATION OF LABOUR

Summary of the Proceedings of the Forty-Sixth Annual Convention

THE forty-sixth annual convention of the American Federation of Labour, with which a large number of organized workers in Canada are identified, was held in Detroit, Michigan, October 4 to 10. At the opening session an invocation was delivered by the Rev. R. W. Woodrofe, rector of St. John's Episcopal Church, who represented the bishop of the diocese of Detroit, while the Right Rev. M. J. Grupee, as representative of the bishop of the Roman Catholic diocese of Detroit, delivered an address. Addresses of welcome on behalf of organized labour were delivered by Mr. Wm. B. Fitzgerald, first vice-president of the Amalgamated Association of Street and Electric Railway Employees, whose headquarters are located in Detroit; Mr. Frank X. Martel, president of the Detroit Federation of Labour; and Mr. Frank Wade, president of the Michigan State Federation of Labour. The civic welcome was extended by the Hon. John Smith, Mayor of Detroit. The several addresses were replied to by Mr. Wm. Green, president of the American Federation of Labour, following which the report of the Credential Committee was presented.

Ninety-one international organizations were represented by 273 delegates; the four A.F. of L. departments, 30 state federations of labour, 75 trades and labour councils and 13 federal unions were represented by one delegate each, making 213 bodies represented by a total of 395 delegates. There were also eight fraternal delegates, one of whom represented the Trades and Labour Congress of Canada, two the British Trades Union Congress, three the Mexican Federation of Labour, one the Women's International Union Label League, and another the National Women's Trade Union League.

Following the submission of the report of the Credential Committee Mr. J. Bromley, one of the British fraternal delegates, on behalf of the three railway men's organizations in Great Britain, presented the president of the American Federation with a silver ink stand and a silver pen, both suitably engraved.

Finances and Membership

After the adoption of the report of the Committee on Rules of Order and the appointment of the customary committees, the report of the executive council, which included the annual statements of the secretary and treasurer, were submitted and referred to the proper committees for consideration and report.

The report of the secretary, Mr. Frank Morrison, showed that the receipts for the year, including the balance from the previous year, were $731,505.29, and the expenses $519,-113 33, leaving a balance of $212,391.96, of which $193,095.78 is in the defence fund for local trade and federal labour unions, the remainder of $19,296.18 being available for the general expenses of the federation.

The secretary also reported on the educational fund designed to promote co-operation on the Rochdale plan, the receipts to which since April 1, 1918, to August 31, 1926, amounted to $4,430.50 and expenses to $3,331.-92, leaving a balance of $1,098.60.

Contributions in response to the appeals of the executive council for the anthracite coal miners had from December 22, 1925, to June 19, 1926, amounted to $200,710.67, all of which had been forwarded to the secretary of the United Mine Workers of America.

In response to the appeal of the executive council for assistance to the British miners there had been contributed from July 6 to August 31, 1926, the sum of $31,438.32, the money being forwarded to the secretary of the Miners' Federation of Great Britain.

For the Woodrow Wilson Memorial building fund the contributions and interest now amount to $1,574.61.

To furnish a room in the International Labour Office building in Geneva, Switzerland, contributions amounting to $1,660.68 had been received and sent to the proper authorities.

For what is called the flag fund $526.64 had been subscribed, and for the Gompers memorial fund $98.50 had been collected.

During the past year $41,913.66 had been paid as strike benefits to members of directly chartered local unions and $105,151.92 was spent for organizing purposes.

One international union—the Windsor Glass Cutters and Flatteners' Union—had been chartered during the year, as well as 19 trades and labour councils, 41 local trade unions and 11 federal unions, making 72 charters issued. For the same period one international—the Brotherhood of Railway Clerks—had been suspended for failing to comply with a decision in regard to a jurisdictional dispute; 24 trades and labour councils had disbanded; 9 were suspended and 13 reinstated; 13 local trade unions had disbanded, 67 were suspended,

four joined international organizations, and 11 were reinstated; 7 federal labour unions had disbanded, 33 were suspended, one joined an international organization and two were reinstated.

At the close of the fiscal year of the federation there were 107 national and international organizations in affiliation, as well as four departments, 49 state federations, 769 local department councils, 833 city central bodies, 380 local trade and federal labour unions, the whole comprising 29,417 local unions, the average paid-up membership being 2,813,910. As the affiliated international organizations are required to pay only per capita tax upon their fully paid-up membership, the membership reported did not include all the members involved in strikes or lockouts, or those who were unemployed during the fiscal year, and who if counted, the secretary pointed out, would give a total membership of 3,313,910.

The report of the trustees of the A. F. of L. building located at Washington, D.C., showed receipts of $41,512.04 and expenditures of $22,980,69, leaving a balance at the close of the fiscal year of $18,531.35.

These reports, together with that of the treasurer, were referred to the Auditing Committee, and were subsequently approved by the convention.

The remainder of the report of the executive council, which was referred to the appropriate committees, dealt with matters which had engaged their attention since the 1925 convention and made reference to these and other subjects under the following headings:—(1) Voluntary principle and organization in industry, (2) Organization progress, (3) Jurisdictional problems, (4) Company unions, (5) Anti-union shop, (6) Wages, (7) Employee stock ownership, (8) Banking and insurance, (9) Observance of contracts, (10) Economic measuring rods, (11) Co-operation between unions and management, (12) Information and education, (13) Committee on education, (14) Workers' Education Bureau, (15) Citizens' Military training camps, (16) Child labour, (17) Radio broadcasting, (18) Relations to other groups, (19) International relations, (20) Labourers' specific days, (21) Samuel Gompers Memorial, (22) A. F. of L. room at Geneva, (23) Legal Information Bureau, (24) National legislative activities, (25) Legislative draft proposals, (26) State compensation legislation, (27) A. F. of L. non-partisan political campaign.

The report of the executive council also contained reports from the fraternal delegates to the Trades and Labour Congress of Canada and the Mexican Federation of Labour.

Report of Committee on Organization

The Committee on Organization, in dealing with the portion of the report of the executive council under the heading of "Organization Progress," commended the work of the council in organizing activities and recommended that city central and state bodies co-operate and assist in future organizing work as well as in the settlement of difficult problems as they arise.

The Committee recommended that the work of organizing women wage-earners be continued, and that special organizing literature be supplied to all affiliated organizations, and also approved of local unions being identified with the central city bodies.

A statement was presented in regard to the campaign of education and publicity which had been undertaken by the Union Label Trades Department, and in connection with which the moving picture "Labour's Record" had been shown at 591 meetings in various localities in 30 states.

The committee reported favourably on the inauguration of a labour "Chautauqua," with a view to organizing the workers in the South and also approved of a campaign of education and organization amongst the working people of Porto Rico.

Three resolutions proposing organizing campaigns were approved, and the committee recommended their reference to the executive council.

The committee also approved of a resolution urging demand for union labelled brooms to assist campaign against prison-made brooms.

Approval was given by the committee to a resolution proposing an organizing campaign in the automobile industry, the resolution as submitted reading as follows:—

"That the President of the American Federation of Labour call a conference of all national and international organizations interested in the automobile industry for the purpose of working out details to inaugurate a general organizing campaign among the workers of that industry; and that the question of jurisdiction be suspended for the time being, so that the desired result sought for in the resolution may be accomplished."

After a brief discussion this proposal was adopted by the convention, as were also the earlier recommendations of the committee.

Report of Committee on Labels

To the Committee on Labels only one resolution was referred, and this outlined an agreement made by the Central Labour Union of Philadelphia, Pa., with a retail firm to

handle none but union label goods, and asked the federation to concur in the plan and recommend the same for adoption in all localities in the jurisdiction of the A. F. of L. The committee, which approved of the proposition, submitted a statement on the union label and the benefit to be derived from a consistent demand for union-labelled goods. The suggestion was made that such bodies as state federations of labour, trades and labour councils, the Women's Union Label League and trade union auxiliaries co-operate with the Union Label Trades Department in initiating and conducting organization and union label campaigns.

For a resolution proposing that delegates to A. F. of L. conventions be required to have six union labels on their person before taking their seats the Committee on Resolutions presented a substitute proposing that delegates file with the president of the federation a statement as to the number of trade union label articles in his possession, and the articles on which they appear. After discussion the matter was referred back to the committee for further consideration, the subsequent report, which was adopted, was to the effect that all wage earners should be advised to demand the union label when purchasing merchandise and to give support to union shop cards and buttons.

On a resolution requesting the purchase of union made hosiery and underwear, it was decided to advise the United Textile Workers of America to co-operate with the Union Label Trades Department in a campaign to meet the demand of the resolution.

Report of Committee on Legislation

The Committee on Legislation, in referring to the item in the executive council's report under the head of "National Legislative Activities," noted with approval the recorded legislative progress during the first session of the 69th Congress of the United States. Reference was made to the passage of the Railroad Labour Bill and to the Federal law in regard to the retirement of Government employees, as well as to the mother's pension plan for the District of Columbia. The executive council was commended for suggesting reforms in the rules of the House of Representatives, as well as for its efforts in securing defeat of bills providing for the registration of aliens, in which it was stated there were objectionable features. In regard to the executive council's report on immigration the committee favoured the present restricted immigration policy of the United States, which is in general accord with labour's views on the subject. Endorsation was given to closer co-operation between the farmers and organized labour for mutual benefit and protection. The committee also recommended adoption of resolutions:

(1) Reaffirming protest against modification of Federal law excluding aliens ineligible to citizenship;

(2) In favour of making more rigid the Act prohibiting enlisted men from accepting engagements which would interfere with the employment of civilians;

(3) In favour of increased compensation for watchmen, messengers and labourers employed in the United States Post Office Department;

(4) In favour of deportation of certain aliens who have entered the United States in violation of the immigration and expulsion laws;

(5) In favour of the Shipping Commissioners' Act of the United States being made so as to control the shipment of seamen in the lake and coastwise trade and trade to nearby foreign countries;

(6) Pledging assistance for the passage of bill providing for standardized annual and sick leave for Federal Government employees.

The committee recommended that resolutions on the following subjects be referred to the executive council with a view to securing the legislation desired:

(1) Proposing amendment of the act governing the working conditions of United States navy yard employees so as to provide that contractors shall give preference to American citizens when hiring labour and pay the prevailing scale of wages;

(2) Proposing amendment of existing laws to require that contracts for work for the United States shall provide that American citizens be given preference in employment at the scale of wages, hours and working conditions prevailing in the locality where work is performed;

(3) Request for investigation of health menace in the use of the pneumatic hammer in the cutting and carving of stone;

(4) Asking for endorsation of a bill providing for United States citizenship for certain Hindus who through long residence in the United States had been classed as American citizens, but who through an administrative ruling were now without a country.

The report of the committee as a whole was adopted.

Raise Per Capita Tax on Directly Affiliated Unions

The Committee on Law disapproved of a proposal that women's union label leagues chartered by the Women's International Union Label League be given representation in trades and labour councils and state federations of labour on an equality with local unions. The committee, however, concurred in a resolution raising the *per capita* tax payable by directly chartered unions from 25 cents to 35 cents per month and eliminating the provision that local unions, the majority of whose members are under 18 years of age, shall pay only 5 cents *per capita* per month. A resolution as amended by the committee increases the maximum initiation fee charged by directly chartered local unions from $10 to $15. The Committee on Law submitted a proposal to increase the dues of directly chartered local unions from 75 cents to $1 per month. This proposal with the remainder of the report of the committee was adopted.

Shorter Work Week Approved

The report of the Committee on Shorter Work Day endorsed a resolution urging the War and Navy Departments of the United States to put into effect the 44-hour work week in all navy yards, arsenals and industrial plants. Approval was also given to a proposal favouring the extension of Saturday half holiday for United States Government employees.

As amended by the committee, a resolution proposing a 40-hour work week in all industries placed the convention on record as favouring a progressive shortening of the hours of labour and the days per week, and instructed the executive council to inaugurate a campaign of education and organization with a view to giving effect to the proposals.

Supports Executive Councils' Report

The convention approved of the statement of the executive council under the head of "Voluntary Principles and Organization of Industry," and affirmed "labour's disapproval of anti-trust and anti-combination laws and the judicial interpretation and construction placed on them. It holds that industry and labour should be free to work out their problems without undue intrusion on the part of the Government."

Referring to the right to organize, the convention reaffirmed opposition to the practice of wage-earners being compelled to pledge themselves to refrain from joining labour unions under what is termed the "yellow dog contract."

The convention supported the contention of the executive council that any state legislation to delay unnecessarily or to deny the workers the right to cease work and to compel them to submit their grievances to an industrial court was a denial of freedom of contract.

In regard to communist activities in the strike of textile workers in Passaic, and in other fields, it was decided to urge that greater discrimination be practised in responding to appeals for financial assistance, as funds contributed by unionists had on occasions been used to undermine the trade union movement.

Under the heading of the "Anti-Union Shop" it was pointed out that as the efforts to promote the so-called "open shop," or "company union," or "American plan," had not abated, support be given to the warning of the executive council to be on guard against the anti-union shop in every guise.

In regard to subject of "Employee Stock Ownership" it was stated that "workers should be warned against this development of employee ownership plans where the purpose is to prevent the workers from organizing and functioning effectively as a trade union."

Approval was given to the action of the executive council in making available summaries of statements of labour banks, which it was stated "will develop material for comparative study and evaluating tendencies in this development." The progress in establishing labour insurance was also commended.

On the subject of "Co-operation Between Unions and Management" concurrence was given to the presentation of the executive council of the need for co-operation and the spirit of intelligent responsibility in industry. "In view of the attention focused upon company unions, shop representation plans, American plans and the like," the president of the federation was recommended to arrange for a comparative study of the results of union-management co-operation and employer-controlled unions and like schemes.

Approval was given to the relations existing between the federation and certain organizations interested in social and religious problems.

Authority was given the executive council to complete a plan for securing voluntary donations to a fund to create a suitable memorial to the late Samuel Gompers.

Approval was expressed at the furnishing of a room in the International Labour Office at Geneva, which it was believed would be appreciated as an expression of international fellowship with labour of all countries.

The convention approved of the work of the Labour Information Bureau, and recommended that the executive council continue the service.

Opposition was raised to legislative proposals to authorize plans for future mobilization of materials and men in event of other wars as well as to compulsory military training.

In regard to the observance of contracts referred to by the executive council the convention approved of a declaration that observance of trade union agreements, by employers as well as by wage-earners is equally essential. The president of the federation was recommended to cause a study to be made of voluntary methods and means for the observance of trade union agreements.

The convention approved of the work of the executive council under the non-partisan political policy of the federation since the 1925 convention.

Report of Committee on Boycotts

The Committee on Boycotts had three resolutions submitted for consideration, the first of these, which was adopted, reaffirming action taken in 1925 against a firm of furnace manufacturers. The second resolution asked that affiliated unions be informed of the attitude of a stove manufacturing company towards the Stove Mounters' Union and that the executive council endeavour to adjust the difficulty. This request was adopted, as was also a resolution asking assistance for the Metal Polishers' Union in the strike against a sporting goods manufacturer.

Report of Committee on Education

The Committee on Education, in reporting on the section of the executive council's report under the head of "Economic Measuring Rods," reported favourably on the need and value of having complete records of all developments in the trade union movement, such as records of membership, funds, services rendered to the membership, investments, collective agreements and other machinery created for the purpose of dealing with productive and personnel problems developing from day to day. The committee therefore urged the co-operation of all affiliated organizations by responding to all requests from headquarters for information.

The *American Federationist,* the official journal of the federation, was commended as an educational medium within the trade union movement, and as an aid to those interested in the study of trade unions and industrial problems. It was recommended that affiliated unions co-operate in an effort to increase the circulation of the *Federationist.*

As regards the *Legal Information Bulletin,* it was recommended that the executive council continue the service rendered by this publication.

The committee recommended that the executive council continue and develop the news service of the federation, and approved of the character and appearance of the pamphlets which had been published during the past two years.

The Committee on Education, in reporting on compulsory school attendance, while believing that laws will help to reduce neglect and truancy, stated that the introduction of interesting matter in the school curriculum will further reduce truancy. The committee also commended the executive council for co-operating with the research department of the American Federation of Teachers in having a study made of the selection of text books in the public schools and also the selection made of current magazines for public school libraries.

Approval was given to supervised recreation in towns and cities as significant of the increasing concern for the health of the people.

Referring to the teaching of science in public schools, the committee was of opinion "that when organized labour makes its own studies of new developments in education it will not be at the mercy of those in charge of educational systems who may have selfish reasons for the introduction of a particular educational device."

The executive council was commended for its work in arranging for a careful study of the conditions relating to health in the various industries.

In regard to copyright legislation it was stated that the several interests affected, including the trade unions directly concerned, have come to an agreement regarding this legislation, and which includes trade union labels, shop cards and buttons.

Other recommendations made by the committee were:—

(1) that the executive council continue the policy of developing special organizing literature;

(2) that the executive council advertise the History and Encyclopedia of the Federation with a view to having a wider circulation of the book;

(3) endorsation of the action of the executive council in arranging an exhibit of the

A. F. of L. at the Philadelphia sesquicentennial;

(4) that every central body provide for the appointment of a committee on education;

(5) that all state federations and city central bodies undertake active affiliation in the Workers' Educational Bureau;

(6) that local unions arrange to set aside a certain portion of the meetings for educational purposes;

(7) encouragement to study classes and workers' colleges for the free and impartial study of subjects of interest to wage-earners;

(8) approval of summer schools and labour institutes;

(9) that the section of the executive council's report dealing with child labour be printed in pamphlet form and given wide circulation;

(10) that unions seek the aid of librarians in regard to undertakings in adult education;

(11) that friendly relations be maintained with the American Legion and all groups and institutions that can make contributions to the labour movement;

(12) that workers be urged to fittingly observe Labour's memorial Sunday, Labour Sunday and Labour Day;

(13) that the executive council make a thorough investigation of proposed national control of education before committing itself further on the subject.

With very little discussion the report was adopted.

Opposed to Lifting of Immigration Restrictions

In regard to two resolutions proposing modification of the existing immigration laws of the United States the Committee on Resolutions pointed out that though worded differently they were alike in interest and purpose and sought to weaken, if not destroy, the existing immigration law and throw wide open the gates of the United States to all foreign workers, regardless of the social, political and economic consequences that would follow. The committee disapproved of both resolutions, and after some debate the convention concurred in the report of the committee.

Company Unions

The Committee on Resolutions dealt with the reference to company unions in the executive council's report, as well as with two resolutions on the same subject. Reporting thereon the committee stated in part:—

"Company unions are a menace to the trade union movement and to American industry which must be met and overcome. Although they admit the principle of organization in form, they are not and never can be a fundamental solution to the problem of industrial relations. They deny the substance of organization. They do not give the worker the freedom and responsibility necessary for full creative expression in his work. They appear to establish a means of co-operation between management and workers but in fact retard the development of institutions which are real and lasting. This artificial development is a distinct menace both to workers and management and to industry. It cannot last. The chances are that when its falsity is discovered there may be bitterness of feeling which will make readjustment a more difficult task.

This anti-union movement professes to favour unions, pretends to approve labour organization, co-operation, collective bargaining and employee representation."

The committee was of opinion that the time is opportune for the American labour movement to work progressively for the substitution of union-management co-operation for company unions, and to substitute voluntary democratic organization of trade unions for employer-controlled company unions on shop representation plans. After a brief discussion the report of the committee was adopted.

Against Injunctions in Labour Disputes

Reporting on the reference in the report of the executive council as to the issuing of injunctions, the committee to which the matter was referred stated:—

"The way equity courts have used the injunctions in industrial disputes has created in the minds of wage earners a general distrust of our courts. Injunctive writs in labour disputes have by no means ceased. To the contrary they have increased. Hence we welcome the report of the Executive Council that draft proposals will be introduced in the next session of Congress to limit the equity powers of Federal courts and to free organized labour from the conspiracy interpretation which has hampered unions in the performance of normal functions."

The committee declared that "Government by injunction must cease, if Government by law is to function unchallenged." The committee supported the recommendation of the executive council that labour should seek to secure state legislation prohibiting injunctions in industrial disputes.

Following a discussion on the subject, in which reference was made to several injunctions which had been issued in connection with labour disputes in the United States, the convention by unanimous vote adopted the recommendation.

Opposed to Individual Contracts

The attention of the delegates was directed to what is termed the individual or "yellow dog" contract which "anti-union employers are compelling employees to sign." It was stated that "Under the guise of a contract for employment wage-earners are compelled to surrender their trade union membership, and pledge themselves to take no collective action with fellow employees relative to their terms of employment, or to become members of trade unions while remaining in the firm's employ." The report of the committee, which was approved, declared that the federation denounced and condemned any system of industry which tends or undertakes to subjugate free men by reason of their necessities or weaknesses, and called upon "trade unionists to meet the present challenge to human rights and unflinchingly and intelligently attack that form of autocracy which is manifesting itself through 'yellow dog' contracts."

Favour Compensation Laws

The Committee on Executive Council's report urged that the workers of the State of Missouri accept the compensation bill which is now pending before the electors in that State, even though it may have defects, as it is better than no law at all. It was also urged that workers in the states where no compensation laws have been enacted continue efforts to secure satisfactory compensation measures. It was recommended that the legislative committee of the federation continue to co-operate with the longshoremen in an effort to secure compensation laws to cover the men working along the waterfronts of the United States.

High Wages American Policy

The executive council was commended for the statement that there is no simple formula to which wage theory can be reduced.

"High wages is the American policy. An additional problem with which organized labour must deal is that of adding wage increases in proportion to increased production and indicating the sources from which such increases may and should be paid. As one of the means to this end we recommend study of the organization of business and of accountancy and of all essential factors and considerations related to and involved in this subject. To this end the co-operating service of the Workers' Education Bureau can be made of great service."

It was also decided that the *American Federationist,* official paper of the federation, make available during the year all possible information and discussions on this subject.

Jurisdictional Disputes

The Committee on Adjustment, to which was referred a resolution proposed by the Tunnel and Subway Constructors' International Union asking for the revocation of the charter of local union No. 63 of the International Hod Carriers, Building and Common Labourers, because it was alleged the latter body was dual to the complaining organization, was referred to the president of the A.F. of L. to bring the conflicting unions together in conference, a procedure to which they had agreed.

A resolution introduced by the Brotherhood of Painters made complaint against members of the International Brotherhood of Electrical Workers painting electrical equipment and asked that the electrical workers be instructed to cease infringing on the jurisdiction of the painters. The committee recommended and the convention approved, that the president of the federation arrange a conference in an effort to settle the dispute.

Approval was given to an agreement designed to settle a dispute involving the International Journeymen's Horseshoers' Union, under which a conciliator is to be appointed to decide all issues where no agreement can be reached.

The Committee on Executive Council's report which considered a resolution in regard to a dispute between the International Association of Machinists and the Amalgamated Association of Street and Electric Railway Employees, recommended, and it was adopted, that the last named organization should no longer exercise jurisdiction or control over work properly coming under the jurisdiction of the machinists, and that the street railway employees dissociate from their organization all men who are doing machinist work exclusively, whether employed in machine shops or car barns.

The decision of the executive council interpreting a previous decision in a dispute between the electrical workers and steam engineers was approved, as was also the agreement reached in regard to the means provided for the settlement of a dispute between the Bricklayers' International Union and the Operative Plasterers' International Association.

Resolutions Submitted

Besides the resolutions referred to the Committee on Resolutions a number of passages in the report of the executive council were also submitted. The Committee recommended approval of a resolution pledging support to the Bakery and Confectionery Workers' International Union in its struggle against what is termed the Ward bread trust.

Concurrence was given to a request that the unions in Miami, Florida, continue close co-operation in relieving distress in the district recently swept by a hurricane, and that the executive council inquire into conditions existing in the locality, and if found necessary that a general appeal be issued for relief of the sufferers in the disaster.

The committee recommended that a resolution proposing the creation of a commission by Congress to investigate conditions in Porto Rico be referred to the executive council to proceed in such manner as may seem best. Another resolution in regard to Porto Rico, and approved by the committee, favoured the transfer of the Government of the island from the Bureau of Insular Affairs to a civil government.

The committee approved of a resolution opposing any further increase in postage rates on printed matter and recommended its reference to the executive council with a view to securing the desired object.

In the report of the executive council approval was given to the citizens' military training camps as being conducive to the building up of the mind and body of the American youth. Two resolutions opposing these camps were introduced, both of which were reported against by the committee, which recommended endorsation of the training camps, with the understanding that they shall not be made institutions for the development of the spirit of militarism or the glorification of war.

Approval was given to a resolution reaffirming advocacy and urging political activity in behalf of the direct primary in the selection of party candidates for office.

A resolution proposing endorsement of Governor Smith of New York for election to the presidency of the United States was not favourably considered by the committee, on the ground that there is not at present a presidential campaign, and further that in order to maintain strict adherence to the non-partisan political programme of the federation it was necessary "to withhold the formation and expression of judgments until the proper time, no matter how appealing or friendly the person or persons involved may be."

On a resolution proposing that the A.F. of L. demand an investigation into the activities of agents of the United States Department of Justice in the Sacco-Vanzetti case the committee recommended re-affirmation of a former demand for a retrial and the reference of this resolution to the executive council to inquire into the charge made therein that there was collaboration between the Department of Justice and the District Attorney of Norfolk country to convict Sacco and Vanzetti for a crime of which the Department of Justice did not believe them guilty.

In regard to the reference of the executive council to radio broadcasting the committee approved of the need for safeguarding freedom of speech over the radio, and recommended the promotion of legislation to this end, including limitation of the radio franchise to short periods such as one year and Federal control over the radio. Endorsation was given to the radio broadcasting station established by the Chicago Federation of Labour, and in regard to an offer made by the latter body to the American Federation of Labour to participate in the control and management of the station it was recommended that this matter be referred to the executive council.

Other resolutions which the convention adopted were:

(1) Approval of efforts being made to secure enactment of a longshoremen's and harbour workers' compensation act;

(2) Approval of widows of civil war veterans being placed on equal pension rating with widows of veterans of other wars;

(3) Reaffirming adherence to the principle of an inheritance tax;

(4) Opposition to any legislation which will weaken the United States Seamen's Act;

(5) Disapproval of proposed legislation for the registration and finger-printing of aliens;

(6) Approval of Government contracts for war memorials providing for the use of American granite;

(7) Denunciation of the Fascist principle of government;

(8) Endorsing the action of Accountants' Union No. 12646 in organizing the accountants and calling upon all unions to employ union accountants wherever available;

(9) In favour of labour bodies studying the problems of crime and scientific penal administration;

(10) Asking elimination of speeding up practices in Government employment;

(11) Favouring higher differentials in pay rates for night work in Government employ;

(12) In favour of civil service court of appeals for United States Government employees;

(13) In favour of substantial increases in rates paid to Government workers under the United States compensation for injury law;

(14) In favour of higher annuities and lower optional age requirements under the United States civil service retirement law;

(15) Opposition to discrimination against workers on account of race, colour, sex or religion;

(16) In favour of continued support of Near East relief;

(17) Condemning activities of dual union of mechanics and labourers in Chicago, Ill.;

(18) In favour of state federations of labour interesting themselves in the enactment of legislative measures to insure the highest efficiency in the practice of the medical profession;

(19) Approving of the reference to the executive council of the Building Trades Department of the A. F. of L. of a resolution seeking co-operation of the building trades unions in Scranton, Pa.;

(20) Approving of the Workers' Education Bureau, referred to in the executive councils' report, and requesting all state federations of labour to give the subject of workers' education unqualified support;

(21) Endorsing a request for the complete organizing of the workers in the sheeting industry;

(22) In favour of state federation and city central bodies assisting in the organizing of the laundry workers;

(23) In favour of appointment of American members of joint commission to consider problem of Mexican immigration;

(24) Opposition "to the constant menace which exists to our higher institutions of learning because of the continuous efforts of 'big business' to dominate the administration of these institutions";

(25) In favour of international organizations insisting on their local unions affiliating with the trades and labour councils in their respective localities.

Resolutions on the following subjects were recommended for reference to the executive council for consideration:—

(1) Opposition to diverting the operation of Muscle Shoals nitrate plants and dam for private profits;

(2) Favouring assistance to railroad signalmen to secure legislation for their protection under the Hours of Service Act of the United States, a law designed to regulate the hours of employment of railroad employees;

(3) Seeking restoration of citizenship rights to Eugene V. Debs (since deceased);

(4) Suggesting investigation of a proposed lecture series on the subject of taxation;

(5) Asking that a statement be published by the A. F. of L. to manufacturers of woollens that the "wool-dumping" process practiced in some mills is injurious to employees and employers in the industry.

The Committee on Resolutions, which in the main concurred in the various resolutions submitted, reported unfavourably on one asking release of all political prisoners throughout the world, on the ground that it was not specified what political prisoners it was sought to free.

Still Opposed to Recognition of Soviet Russia

A resolution was presented asking that the American Federation of Labour go on record as being in favour of the United States Government commencing negotiations with the Russian Soviet Government "looking towards an adjustment of all difficulties and the speedy recognition of Soviet Russia by this Government." The Committee on Resolutions, to which it was referred, reported that it saw "no reasons for recommending that the American Federation of Labour modify or change its position regarding recognition of the autocratic Soviet regime in Russia." Proceeding the report stated:—

"There has been no essential change in either the character or the operations of that regime since we last had the question under consideration. It remains a regime of enslavement, a regime determined to bring about world revolution if and when possible. Through the Red Internationale, which is controlled by the communist party of Russia, the soviet regime has continued its efforts to undermine and destroy the democratic labour movement of the United States. Its lack of progress in that direction is due, not to any lack of determination on its part, but to the strength and deep conviction of the membership of the American trade union movement. If it is not the assassin standing over the prostrate body of freedom and democracy, it is always the would-be assassin, and we can be no less opposed to the one than to the other."

The committee recommended "as the principles of our movement demand, that we nonconcur with all possible emphasis and determination in this resolution." After a prolonged discussion of the resolution the motion non-concurring was adopted unanimously. It

was subsequently moved and adopted that the report of the committee on the above resolution, together with the discussion, be published as a pamphlet for general distribution.

International Relations

The Committee on International Relations, in reporting on the British miners' appeal for assistance, commended the action of the executive council in issuing an appeal for relief.

The committee noted with approval that the executive council had continued correspondence with the International Federation of Trade Unions, and regretted that no agreement had been reached on the demands upon which the A. F. of L. predicates its willingness to affiliate. The Committee expressed "satisfaction that the International Federation of Trade Unions has been a potential factor and stalwart bulwark in restraining the machinations of the communist groups and that it has refused to submerge constructive trade union principles to communist activities."

The executive council, in reporting on the situation in Mexico outlined the reasons that the A. F. of L. had not "interfered in the difficult situation developed in Mexico over religious policies." The committee on International Relations commended the report of the executive council on the subject, and recommended that the council be authorized to inquire into the relationship of the Mexican Federation of Labour and the Mexican Government for the purpose of ascertaining all the facts possible, and with special reference to the relationship alleged to exist between the Mexican Government and the Mexican Federation of Labour for the information of the affiliated unions.

The committee in reporting on a resolution opposing participation of the United States in the League of Nations, World Court or International Labour Office, recommended the reference to the executive council for further consideration and such action as future circumstances and events may warrant. This clause of the report of the committee, as well as those preceding, was adopted.

Assistance for Textile Workers

Two resolutions appealing for financial assistance for striking textile workers in Passaic and Williamantic were reported on by the Committee on Resolution, which recommended that the executive council be authorized to issue immediately an appeal to all affiliated unions for financial assistance in behalf of the United Textile Workers of America, with which the strikers are identified. This suggestion was adopted, as was also a motion that the president of the American Federation of Labour call a conference of national and international officers attending the convention to take under advisement the raising of funds for the immediate assistance of the Passaic strikers. It was subsequently proposed that a collection be taken up in the convention to relieve immediate needs, $1,286.10 being realized.

Another resolution which was adopted was one extending full support to the striking cloakmakers of New York city and authorizing the executive council to take immediate steps to have all affiliated unions render financial assistance.

Fraternal Messages

On the third day of the convention the fraternal message of the British Trades Union Congress was delivered by Mr. George Hicks, chairman of the British Trades Union Congress General Council, and Mr. J. Bromley, M.P., secretary of the Associated Society of Locomotive Engineers and Firemen. Fraternal greetings of the Trades and Labour Congress of Canada were presented by Mr. Richard Lynch, of Montreal, Quebec, while the message from the Mexican Federation of Labour was delivered by Mr. Ricardo Trevino. At a subsequent session of the convention Miss Anna Fitzgerald spoke on behalf of the Women's International Union Label League, and Miss Rose Schneidermann delivered a message from the National Women's Trade Union League. Among the communications received conveying fraternal greetings were those from the Porto Rico State Federation, Diamond Workers' Protective Union of America, Venezuelan Labour Union, and from the Italian workers in the United States. Greetings to the A. F. of L. were also received from the National commander of the American Legion, and from the president of the Mexican Republic.

At the close of the afternoon session of the seventh day each of the fraternal delegates from Canada, Great Britain and Mexico was presented with a handsomely engraved gold watch and chain. Mrs. Bromley, Mrs. Hicks and Mrs. Trevino, who accompanied their husbands, were also presented with smaller gold watches.

Fraternal delegate Bromley was also the recipient of the gift of a mahogany clock, presented by the railway organizations affiliated with the American Federation of Labour.

Other Addresses

It was announced at the morning session of the second day that a fraternal visit had been paid to the convention of the Metal Trades Department of the A. F. of L., which had met

previously, by a delegation representing the International Metal Workers' Federation, with headquarters in Europe. The delegation, which also visited the federation convention, consisted of Mr. Robert Dissman, the general secretary of the Metal Trades Federation of Germany and a member of the Reichstag; Mr. Henri Labbé, secretary of the French Metal Trades Federation; Mr. Conrad Ilg, secretary of the Swiss Metal Trades Federation, and Mr. J. T. Brownlie, representing the Metal Trades Federation of Great Britain, the latter of whom acted as spokesman, and explained that the object of the visit was for the purpose of inducing the metal trades unions of the United States to become identified with the International Metal Workers' Federation.

The convention also had as visitors at the same session representatives of the shoe workers' unions in Germany, on whose behalf an address was delivered by Mr. Josef Simon, speaking in German, Dr. Phil. Margarete Ewinger-Schenk, translating. The object of the visit to the United States was to study the conditions of wages and employment in the boot and shoe industry for the benefit of the German shoe workers.

Another address was delivered by Mr. Vernon E. Zeilger, a student of the law school of the University of Chicago, who visited the convention at the request of the Federal Council of Churches of Christ in America.

Others who addressed the convention at one or other of the sessions were Mr. Walter E. Holloway, representing the People's Legislative Service; Dr. S. C. Curran, representing the Near East Relief; Mrs. Kate Richards O'Hare, a member of the American Federation of Teachers, who had investigated prison-made goods and prison conditions for the United Garment Workers of America; Rabbi Dr. Stephens S. Wise, of the Free Synagogue of New York city, who spoke on the Passaic textile workers' strike; Mr. Spencer Miller, Jun., secretary of the Workers' Education Bureau; Dr. Sherwood Eddy, secretary for Asia for the Young Men's Christian Association, who spoke of conditions as he saw them in Russia, France, Germany and England; Mr. Eugene T. Lies, special representative of the Playground and Recreation Association of America.

Visit of British Industrial Mission

At one of the sessions of the convention the following members of the British Industrial Mission were introduced to the delegates: Mr. Ernest Bevin and Mr. James Taylor, representatives of the employees, Mr. C. Randolph Smith, employers' representative, and Mr. F. W. Leggett, of the British Ministry of Labour. Mr. Bevin, who was the spokesman for the delegation, explained that the object of the Government sending them to Canada and the United States was to secure an impartial report of the prevailing conditions in industry. The remaining members of the mission, which is headed by Sir Wm. MacKenzie, were in other localities at the time of the Detroit visit.

Memorial to Deceased Members

At one of the sessions the delegates stood in silence for a brief period as a tribute to the memory of labour representatives who had passed away during the past year. The list of departed members numbered 26, and included officers of international organizations as well as those of State and city labour bodies.

At a later session a resolution, in which the name of the late president, Samuel Gompers, was specially mentioned, was adopted and in which tribute was paid to the memories of the departed.

Invitation Withdrawn

At the afternoon session of the third day President Green was asked whether an invitation which had been extended to him to address the Y.M.C.A. in Detroit had been withdrawn. It was also stated that through the influence of the Board of Commerce certain clergymen had withdrawn invitations which had been extended to representatives of the trade union movement to speak in their respective churches. The president replied that in July last he had received an invitation from the secretary of the Detroit Y.M.C.A. to address a mass meeting under the auspices of that association on Sunday, October 10. A supplementary invitation was received September 28 urging him to accept the invitation formerly extended. Mr. Green stated he accepted the invitation and came to Detroit fully prepared to deliver an address under the auspices of the Y.M.C.A. Subsequently the president and secretary of the Y.M.C.A. called upon Mr. Green and informed him that the board of directors of the Y.M.C.A. had cancelled the invitation because it was believed that it would be both unwise and inadvisable for the president of the A.F. of L. to address a mass meeting under the auspices of the Detroit Y.M.C.A. The delegation further stated "that they had under way a building program that runs into millions and they did not want anything to interfere with it; that they were apprehensive that if this meeting were held that the building

program would be seriously interfered with." After a number of speeches were made deploring the action of the Detroit Y.M.C.A., it was announced by Mr. James Myers, a representative of the Federal council of the Churches of Christ in America, that fourteen speakers had been named to speak in the pulpits of Detroit churches on the following Sunday, five of them labour men and the others social service workers; also that President Green would speak in the Congregational Church on Sunday afternoon and that Delegate John P. Frey was to address the local ministers' association on the following Monday morning. At a subsequent session it was suggested that the board of trustees of the Y.M.C.A. be invited to appear before the convention and explain their action. The President, however, stated that there was a standing invitation to all citizens of Detroit who cared to listen to the proceedings to come and be present. He further stated that "we would welcome the directors of the Y.M.C.A.; we would be glad to have them come and sit with us. There does not seem to be any general desire that they come here for the purpose of defending themselves. I can't imagine what kind of a defence they could make. If there is no objection we will consider the matter closed at this time and proceed to the regular order of business."

By resolution of the convention the address of President Green which he delivered in the Congregational Church was incorporated in the official proceedings of the federation. Similar action was taken in regard to a special sermon to delegates delivered in St. Aloysius Church, Detroit, by Rev. John A. Ryan, D.D., of the Catholic University, Washington, D.C., and to the address of Mr. John P. Frey delivered before the Ministerial Association of Detroit.

Election of Officers

The election of officers resulted in all former incumbents being re-elected as follows:—

President, William Green;

First vice-president, James Duncan;

Second vice-president, Frank Duffy;

Third vice-president, T. A. Rickert;

Fourth vice-president, Jacob Fischer;

Fifth vice-president, Matthew Woll;

Sixth vice-president, Martin F. Ryan;

Seventh vice-President, James Wilson;

Eighth vice-president, James P. Noonan;

Treasurer, Daniel J. Tobin;

Secretary, Frank Morrison.

Delegates to the 1927 convention of the British Trades Union Congress, A. J. Berres and John Coefield;

Fraternal delegate to the Trades and Labour Congress of Canada, Thos. McQuade.

Los Angeles, Cal., was chosen as the convention city for 1927.

NOTES ON LABOUR UNION ACTIVITIES

International Printing Pressmen and Assistants' Union of North America

THE thirty-first convention of the International Printing Pressmen and Assistants' Union of North America was held on August 23 to 28, 1926, at Pressmen's Home, Tennessee. A large number of delegates were present from the United States and Canada. A membership of approximately 40,000 was represented by the delegates present. An item of special interest on the program, was the dedication of a memorial chapel in honour of the 5,552 members of the organization who rendered service in the world-war and in memory of the 111 who paid the supreme sacrifice. Among those who delivered addresses during the dedicational ceremonies were: Hon. Newton D. Baker, former Secretary of War of the United States; Hon. Josephus Daniels, former Secretary of Navy of the United States; Hon. Gideon D. Robertson, former Minister of Labour of Canada; Gen. Jas. A. Drain, former Commander of the American Legion; Hon. Austin Peay, Governor of Tennessee, and Rev. Joseph Lonergan, former Chaplain of the American Legion. During the opening sessions of the convention addresses were delivered by representatives from other International unions and by a number of prominent business men.

The first committee to present its report was that on International Allied Printing Trades Councils, bodies whose jurisdiction and authority has to do solely with the subject of the use and distribution of the allied printing trades council label. The committee was of the opinion that "joint action on the label proposition was best, but when it was apparent that joint action had failed, it was only natural that attention should be given to our own label, its promotion and its use."

The convention adopted the report of the committee on Office Building, which recom-

mended that the auditorium, formerly used as a convention hall, but inadequate to accommodate future conventions owing to increased representation, be used as a display room for exhibiting supplies, devices, tools and all kinds of pressroom equipment accessories, and samples of printing. The delegates reiterated their endorsation of the League of Nations as adopted at previous conventions. The committee on labels were in accord with the opinion expressed by Mr. John W. Hays, president of the Union Label Trades Department of the American Federation of Labour, who stated, that "if every organized worker, his family and sympathizers in America used exclusively union label products there would not only come to the workers economic improvements in compensation rates and working conditions, but there would be eliminated from our country the necessity of engaging in strikes or opposing lockouts engineered by unfair employers."

Signed agreements instead of verbal understanding for all local organizations was the adopted recommendation of the committee on contracts with employers.

Reference was made by the committee on the home, to the new hotel which had been constructed at the entrance to the International Union's property, in which a convention hall had been built with a seating capacity of one thousand. This was necessary owing to the fact that the international union was defraying the expenses of a representative from every local union within its jurisdiction to the 1928 convention. Mention was also made of other building activities that have been carried out, such as the erection of a paper house, alterations to the power plant and the construction of new roadways.

The committee on Canadian affairs referred to the trying conditions that had confronted the commercial printing business of Canada since the 1924 convention, but they were optimistic as to the future, there being ample signs of improvement beginning to manifest themselves. Special mention was made of the generous support given to members in Canada and to the interest taken in their welfare by President Berry and the board of directors.

In the report of the Committee on contracts with unions, reference was made to a number of documents which had been presented by individual members and officers of local unions of the International Brotherhood of Bookbinders, in which they advocated the consolidation of their international union with the International Printing Pressmen and Assistants' Union. However, as these requests did not emanate from officers of the International Brotherhood of Bookbinders, the only action taken was to authorize the board of directors, upon invitation, to engage in conversations and the formation of such plans as may be necessary, to make such recommendations to the membership as circumstances warrant and to take such action as in their judgment may be expedient and best for the trade.

In speaking of the harmonious feeling and high regard that has existed for many years between the National Society of Operative Printers and Assistants and the Printing Machine Managers' Trade Society of Great Britain and the international union, mention was made of the general strike in which the printing trades unions as well as practically all organizations of labour in England had engaged. The committee was of the opinion that the organized workers of United States and Canada considered that a general strike was both impractical and unsound. While the committee on officers' reports were reviewing that part of the president's address dealing with the establishment of a widows and orphans' home, President Berry stated that "the widows and orphans' home would be open to the wives and dependent children of deceased members of the organization. The home would be a series of cottages in which women who had children dependent upon them could find a refuge where their children could be reared, educated and developed in an atmosphere that will be wholesome and good. It will take a million dollars to do this job because we want to establish a permanent endowment of at least $800,000 so that we might be able to give each mother and little ones a few dollars aside from a free cottage, free water, heat, milk, etc." So enthusiastically received was the president's scheme for the establishment of a home that within twenty minutes over $55,000 was subscribed by the delegates present. The land on which the home is to be built was presented by President Berry to the international union and is valued at $35,000.

The committee on American Federation of Labour reported that the voting strength of the International union at the conventions of the A.F. of L., had steadily increased from 1907 until the present. At the 1925 A.F. of L. convention the international union had 400 votes, ranking fourteenth of all national and international organizations. The convention adopted the recommendation of the committee to congratulate William Green, president of the American Federation of Labour, upon his appointment to that office.

Hon. George A. Isaacs, former member of the British House of Commons and General

Secretary of the Operative Printers and Assistants' Society of Great Britain, paid tribute to the international union for the erection of their chapel, and informed those present that 3,000 of the members of his organization enlisted for war service and out of this number 331 did not return. He asked the privilege of sending a Bible of English manufacture to be placed on the table in the chapel. During the course of his address Mr. Isaacs referred to the miners' strike in Great Britain and stated that "there was very great suffering among the people in the mining villages, although the other organizations were doing everything possible to relieve the situation." At the conclusion of the address, President Berry suggested, and a motion was adopted to the effect that a cheque for $1,000 be drawn and presented to Mr. Isaacs for delivery to the miners' cause in England.

During the convention a letter was received from President Coolidge in which he congratulated the organization on the building of a beautiful chapel to be used by all denominations as a place of worship. A letter from William Green, president of the American Federation of Labour, expressed his sincere regrets at inability to be present owing to the fact that he was presiding at a meeting of the executive council of the A.F. of L., being held in Montreal, Canada.

Among the resolutions adopted by the convention were the following:

(1) Urging the international union directly and through its affiliated locals to study and consider the purchase of stock in the Union Life Insurance Company.

(2) Ratifying the action of directors and executive officers in chartering and organizing the Pressmen and Assistants' Patent Corporation and authorizing expenditure necessary to promote and operate the same.

(3) Recommending the amending of the constitution to allow international officers to have all the rights of regularly elected delegates in conventions.

(4) Recommending an increase of twenty per cent in the salary of the president, vice-presidents and secretary.

The officers elected were: President, George L. Berry; Vice-presidents, John M. Brophy, William H. McHugh, S. B. Marks, and George R. Brunet, Montreal, Canada; Secretary-treasurer, Joseph C. Orr.

Bricklayers, Masons and Plasterers' International Union of America

The biennial convention of the Bricklayers, Masons and Plasterers' International Union of America was held in Atlantic City, N.J., from September 13 to 22, 1926, with 448 delegates present, representing 195 subordinate unions in the United States and Canada.

In his address to the convention, international president W. J. Bowen reviewed the development of the international union from the time of its inception in 1865 until the present time. He spoke of the establishment of the mortuary fund in 1910 and of the old age pension and disability benefit system in 1915. The establishment of the International Brick Company in El Paso, Texas, was, he considered, another forward step taken by the international union. Before closing his address, president Bowen tendered his resignation, to take effect on January 31st, 1927.

A motion was made calling upon the president to withdraw his resignation, this being afterwards amended to read "that this convention absolutely refuse to accept the resignation of president Bowen at this time". The amended motion was adopted by a unanimous rising vote of the delegates.

Among those who addressed the convention at its opening session was Matthew Woll, vice-president, of the American Federation of Labour, who explained in detail the Union Labour Life Insurance Company, which he characterized as a new phase of the labour movement, another development in the onward march of organized labour.

Some of the resolutions adopted by the convention were the following:—

Directing the executive board to subscribe, in the name of the international union, the full amount of stock and surplus allowed in the Union Labour Life Insurance Company, namely, 800 shares for the sum of $40,000;

Instructing the executive board to investigate the request of the New York State Conference petitioning the convention to help in establishing a labour Bank in New York state, the place to be selected by the board;

Empowering the executive board to support the subordinate unions in Chicago in the matter of brick instead of concrete sewers;

Instructing the executive board to co-operate with branch No. 4 (New York city) in its fight against the non-union conditions in marble saw-mills, even to the extent, if necessary, of establishing a wholesale marble yard and mill in New York;

Empowering the executive board to forward to the British miners on strike a donation in proportion to the contributions of other international unions;

Recommending that a special assessment of $2 a year, for a period of three years, be levied on the membership of the union, same to be collected in the months of July and August, $1 each month, to be used for the purpose of purchasing ground and erecting a building for the use of the organization, to be located at Washington, D.C.; and recommending further that the executive board appoint a committee, to be drawn from the different sections of the country, to be known as the building committee, to work in conjunction with the executive board and to approve plans and specifications.

The convention also adopted a number of amendments to the constitution and commended the work of the secretary and treasurer.

The officers elected were: President, William J. Bowen, 1417 K Street, N.W., Washington, D.C.; Secretary, John J. Gleeson, 1417 K Street, N.W., Washington, D.C.; Treasurer, H. C. Bates, 1417 K Street, N.W., Washington, D.C. Among the ten vice-presidents are two resident in Canada, namely, Walter Thorne, 1017 Ossington Ave., Toronto, Ont., and John McLeod, 10 Stanton Ave., Toronto, Ont.

Boston, Mass., was chosen as the convention city in 1928.

"Twenty-five Years of International Trade Unionism"

The International Federation of Trade Unions has published a useful book, written by its secretary, J. Sassenbach, outlining the activities of the Federation in connection with the celebration of its founding at Copenhagen in 1901. It is a record of the principal events that have occurred since 1901; and also of previous efforts to link the various national movements together in one international organization. The first practical attempt of this kind, it is noted, was the conference called by the Parliamentary Committee of the British Trades Union Congress in London, in 1888, to consider better methods of organization, hours of work, and other labour questions. However, the German, Austrian and Russian unions were not included in the invitations to this congress. A further attempt to build up an international organization was initiated by the French trade unions at an international conference which met in the Paris Labour Exchange in December, 1900, when it was sought to create an International Labour Secretariat as a step to the formation of a Workers' International. Some Italian and British delegates took part in addition to the French, but in view of the lack of support given to the conference the Secretariat was not formed. Instead, the French trade union centre was commissioned to get in touch with the trade unions of other countries and obtain their opinion on the calling of a new international conference.

As neither the British nor the French attempts were successful, the Copenhagen Conference of 1901 must be taken as the starting-point of the International Trade Union movement, and its 25th anniversary is accordingly being celebrated this year.

The book then describes the development of the organization from 1901 to the present year. The war brought the international movement to a temporary standstill, but signs of recovery were evident even before the Armistice, and by the beginning of 1919 it had become possible to convene an international congress at Amsterdam, which was the starting point for new and closer co-operation. Events since 1919 are summarized in convenient form. Much of the success of the movement is attributed to Karl Legien, the first international secretary of the International Federation of Trade Unions, and past president of the general committee of the German Trade Unions. The book may be obtained from the Publication Department of the Trades and Labour Congress of Canada, 172 McLaren street, Ottawa, for 35 cents.

The Nova Scotia Accident Prevention Association proposes to conduct an active campaign among the industries of the province in connection with first aid classes. The establishment of a merit rating system such as exists in Ontario and other provinces under Workmen's Compensation is also recommended. The Association recently considered the subject of a resolution passed by the Nova Scotia Medical Society at their recent annual meeting, to the effect that unlimited medical aid should be provided under the Workmen's Compensation Act, instead of aid for 30 days only, as at present. No action was taken on this proposal, which it was thought would involve additional cost in administration.

The Essex County Safety Association (Ontario) decided during October to establish safety schools, with a membership fee of one dollar. Classes will be held throughout the winter months, the students being divided into trade groups, which will be addressed by persons conversant with the problems in the several trades.

LABOUR INVESTMENTS AND INDUSTRIAL MANAGEMENT

THE *American Federationist*, in its issue for October, contained a discussion on the subject of labour investments in industry, arising out of certain proposals with regard to a definite labour investment policy that had been made in an earlier issue of the same publication by Professor William Z. Ripley, of Harvard University. Professor Ripley suggested that with proper organization labour investments might be used to make labour an active partner in productive industry. To this end he proposed that the American Federation of Labour should organize a responsible bureau of information for the purpose of directing the attention of employees with small sums to invest to sources of sound advice in regard to investments. Such a service, he suggested, might be rendered by labour banks. No investments, however, should be encouraged other than those carrying voting power, which would enable the workers to participate in the election of the directors and in management policy. Workers' voting power, he suggested, might be thrown in one block or group in order to bring about the establishment of advance labour observation posts on boards of directors, and might ultimately become a considerable element in the management of large corporations.

These proposals by Professor Ripley were discussed by trade union officials and other exponents of trade union policy, as follows,—

President J. P. Noonan, of the International Brotherhood of Electrical Workers, considered that labour organizations might, as suggested, serve their members by furnishing them, at their request, with information as to sound investments. Such a service had been conducted for some time by the Electrical Brotherhood. The Brotherhood's experience however, was that "the campaign to create so-called employee ownership is all for the purpose of tying each man more closely to his job in the hopes of some little return on the stock he holds in the company, we view the whole practice as vicious from a trade union standpoint at least, and done principally for the purpose of creating so-called loyal employees."

Dr. H. A. Millis, of the Department of Political Economy, University of Chicago, also held the view that existing employees' investment plans have "strings tied to them;" that the amount of stock offered is usually limited to a small fraction of the whole; that it usually reverts to the company under certain conditions, and that it is often "non-voting" stock. "I should not want," he says, "to co-operate even in good stock-selling plans unless real control was fairly certain to be realized. For union men I should favour labour banks, offering opportunities for safe investments freely made. A union cannot afford to have its members too closely tied up in their interests with individual firms in which they have invested."

Mr. James M. Lynch, former president of the International Typographical Union, considers Professor Ripley's proposals indefinite, and utters a warning against the danger of taking a false step, or "promulgating advice predicated on a few facts." He suggests however, the appointment of a committee to study the whole question of the investment of the savings of wage-earners, their report to be subjected to discussion by the Federation.

Dr. R. F. Foerster, formerly director of Industrial Relation Sections, Princeton University, agrees with Professor Ripley's suggestions, holding that the Federation might well establish a centre for financial data which would act mainly through correspondence with local organizations related to it, including labour banks, and partly perhaps through the independent circulation of printed information. A financial centre might compile general information on the significance of different kinds of stocks and of bonds as channels of investment."

President B. M. Jewell, of the Railway Employees' Department, American Federation of Labour, notes that "American workers are investing their savings in corporations controlled by their employer, notwithstanding the fact that the American Labour Movement has repeatedly advised that to do so has a tendency to impair the economic welfare of the worker, because it tends to make him more subservient to, rather than more independent of, his employer." However, the suggestion that the American Federation of Labour should maintain an investigation and advisory bureau respecting investments, would, he thinks, be a valuable service to the American worker. Many of the component organizations of the Federation, in fact, are already conducting investigations and giving advice to their membership respecting investment of savings. No stocks should be recommended which do not carry full voting rights. The Federation, might well establish a "clearing house," by agreement among the labour banks and labour unions participating in the banks.

He considers the guidance of worker-investors a "very pressing and vital subject."

Mr. John H. Williams, consulting engineer, New York City, approves of Professor Ripley's suggestion for an "investment trust" operated by a board of directors appointed from the various labour banks as a medium for the investment of labour's savings. However, he regards quarterly statements, figured and issued by the company in terms of dollars per share, from a practical standpoint, as more important than voting rights. "Quarterly statements in dollars per share can be had for the asking by any considerable number of stockholders and will constitute the first step in the education concerning investment, without which voting rights will accomplish but little."

William P. Clarke, president of the American Bank, Toledo, Ohio, advised caution on the part of labour unions before they embark on a fresh enterprise such as Professor Ripley suggests. He referred to unfortunate labour experiences with labour temples and co-operative factories. For example, he states that had it not been for the American Flint Glass Workers' Union advancing $174,000, the Toledo trade unionists would have lost their investment of $131,000 almost three years ago. . . . When I think of co-operative factories I can say to you that there have been many efforts made by the men in my own industry to control a factory, and in practically every instance it has been a failure. I am sorry to say that those failures did not only mean the loss of money invested, but, as a rule, they conducted the business in a way that jeopardized the interest of other concerns and the workmen employed by such concerns, that is, when they were pinched for funds, they would not hesitate to go out and demoralize the market by cutting prices." Mr. Clarke believes that Professor Ripley's proposals are good in theory but impracticable.

Mr. Daniel J. Tobin, engineer, believes, on the other hand, that the suggested plan is feasible and that labour unions would be wise in adopting it. He cites a financial authority writing in the *New York Times* in November, 1925, on the diffusion of stock ownership, that control of large corporations might be obtained by a comparatively small amount of the total stock concentrated in the hands of a single individual or group. "An organized minority can certainly block or promote action in any corporation. The Chesapeake & Ohio stockholders prove it. That the plan to vote employee stock as a unit through the union is not a mere fancy is proved by the employees of the Philadelphia Rapid Transit Company. At one time, the Board of Directors of that company wanted to oust the Mitten management. The men wanted to keep it. So they set aside a quarter of a million of their own funds, bought stock quietly, voted it as a unit by turning their proxies over to Mr. Mitten, and in that way obtained the control necessary to keep the management they wanted. When this thing is done on a large scale, employees obtain big blocks of stock. For instance, the employees of the Standard Oil of New Jersey own 4 per cent of the total amount of common outstanding. They rank next to J. D. Rockefeller, Jr., in individual holdings. The employees of the U.S. Steel own 8 per cent of the amount outstanding. Think what this would mean if all of it were voted as a unit." The whole idea, he concludes, presents great opportunities for union leadership.

Mr. Charles L. Reed, business agent and educational director, Central Labour Union, Salem, Massachusetts, believes that while labour banks might do important work in safeguarding workers' investments, it could not be expected that labour could acquire control of corporations by investing their small capital. Moreover, positive harm might result to the labour movement by the publicity that would be given to "labour management" by the real managers of the corporations. He quotes the law of Massachusetts on this subject (General laws, chapter 156):—

> A manufacturing corporation may provide by bylaw for the nomination and election by its employees of one or more of these members of its board of directors. All such elections shall be held at the works of the corporation on the day of the annual meeting, and the voting shall be by secret ballot. A director elected by the employees shall have the same rights and powers and shall be subject to the same duties and responsibilities as a director elected by the stockholders.

In the Chancery Division of the High Court of Justice of England and Wales an injunction was granted recently to restrain the Amalgamated Marine Workers' Union from interfering with the fund of the National Union of Ships' Stewards, Cooks, Butchers and Bakers. The former union was formed by the alleged amalgamation of the Stewards' Union and the British Seafarers' Union. A member of the Stewards' Union brought the action on behalf of himself and all other members of the Union, to obtain a declaration that the amalgamation was void, and also an injunction as stated above. The Trade Union Act requires that if trade unions desire to amalgamate a ballot must be taken, more than half the members voting, and a majority of at least 20 per cent voting in favour of the proposal. The court found that the legal requirements had not been met in this case.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

The Growth of Vocational Education in Ontario

THE following statement is taken from Premier Ferguson's speech in connection with the opening of the new Vocational School at St. Thomas.

The rapid growth of vocational education in Ontario during the last ten years is told in the reports of the Education Department. In 1925 the total enrolment of day pupils, full and part-time, exceeded fifteen thousand, while over forty thousand students were in attendance at night classes. Over five hundred teachers were engaged in this work. These figures indicate that a new movement in education, almost revolutionary in character, is going on in Canada.

The explanation is not hard to find. The Department of Education made surveys of our conditions, and sent commissions to visit other countries. Investigation showed that we in Ontario were being left behind in the race for educational efficiency. The ladder reaching from the kindergarten to the university was travelled by only a few, and the majority of our young people were inadequately trained for the duties of citizenship. They were not being trained for industrial life nor to apply intelligence in the pursuit of agriculture.

The outcome of these reports was three important legislative acts, revolutionary in character, which have largely influenced our educational program. The Dominion Government placed ten million dollars aside to assist the provinces in establishing vocational schools. The Provincial Government passed the Industrial Educational Act and the Adolescent School attendance Act. The former Act offered municipalities liberal grants for the erection, equipment and maintenance of Technical and Commercial High Schools; the latter made attendance compulsory up to the age of sixteen. The natural result was the rapid increase in attendance in all our secondary schools. A building program became necessary and, with only a few exceptions, every city in Ontario erected a school of the new type offering the broader courses of study.

Plan to Promote Technical Education in Western Canada Through Correspondence Instruction and Evening Classes

At an Inter-provincial Conference on Vocational Education held at Calgary in April, 1925, the following resolution was adopted:—

Whereas it is desirable that co-operative action be taken in the four western provinces in the formulation of standard courses for vocational correspondence and evening schools and,

Whereas it is desirable that investigation be made of the feasibility of co-operative action along other lines of vocational education;

Therefore this conference recommends that each of the four western departments of education appoint one representative to act upon an inter-provincial vocational education committee for the purpose of:—

(*a*) Considering and reporting upon standard courses for correspondence and evening schools and indicating methods for their compilation and distribution;

(*b*) Reporting to the various departments upon the scope of interprovincial co-operation;

(*c*) Preparing the details of any scheme or agreement arising out of clauses (*a*) and (*b*) and submitting the same to the departments of education concerned.

Representatives from the four provinces were appointed to act as such committee and two meetings have been held at the Provincial Institute of Technology and Art, Calgary. The committee sought to find out and develop a vocational education policy for Western Canada that might be universal in application, not too expensive in organization and application, provide a program adapted to the peculiar needs of the country to be served, and be readily available to persons in sparsely settled areas.

The correspondence method of giving instruction was thoroughly canvassed, and while it was felt that it was not as effective a method as man to man instruction it nevertheless had in it many commendable features that made it valuable as a means of instruction under conditions in Western Canada. It offers assistance to anyone living within reach of the mail and in this way is the most far-reaching and democratic scheme that may be devised. This method of instruction has been very highly developed and efficiently used in Wisconsin, Massachusetts and Pennsylvania as a part of their State systems of education, and also in the province of Nova Scotia. The committee felt that it was a method that could render extensive service more economically than any other known plan and has recommended its use throughout Western Canada.

Careful consideration was given to courses of instruction that might be profitably given by the correspondence method. Without making specific application of any course to any province, it was thought that there was a useful service to be rendered through the following courses: coal mining, steam engineering, electricity, gas engine (including motor cars, tractors and stationary engines), dressmaking and millinery, business courses, plumbing, heating and ventilating and mechanical drawing. After carefully planning the range and content of these courses it was estimated that the cost of preparing them in

Western Canada would exceed $40,000. In addition to this there would be the cost of reproducing these lessons and maintaining a service staff to make instruction effective. If each province assumed the responsibility of organizing two distinct courses and gave their courses into the pool available for all, each province would be provided with eight courses for the cost of two. And since fifty per cent of this cost would be repayable to the province through federal grants, the courses so produced would be available to each province at a reduction of 87½ per cent of the original cost.

After carefully reviewing and considering the rather large capital outlay involved, it was thought that it would be better to examine ready-made courses as issued by commercial correspondence schools and other organizations with the view to selecting those that would meet the need of Western Canada at a much lower initial outlay.

Negotiations are now under way with some of the leading correspondence schools, which, it is hoped, will result in co-operative action whereby specially selected courses will be made available in the four provinces at greatly reduced cost to both pupils and provincial governments.

The committee has recommended that experienced instructors be engaged to prepare manuals for the purpose of assisting teachers in evening classes. These manuals are to contain outlines of the lessons to be taught and to deal with method, teaching devices, reference material and other phases of the teachers' problem. For this purpose it was recommended that 12 manuals be prepared in the following departments:—

English for non-English students; vocational English; shop mathematics; shop sketching and blue print reading; machine shop practice; sheet-metal work; blacksmithing; electricity; motor mechanics; automotive electricity; plumbing, heating and ventilating, and dressmaking.

The cost of these manuals is to be borne equally by the provincial and federal governments.

Three Rivers Paper School Opened

The *Pulp and Paper Magazine* announced in its issue of October 7 that the Technical and Paper Making School at Three Rivers, which is conducted under the auspices of the Forestry Department of the Quebec Government, opened its doors for the fall session early in October. The mills at Three Rivers have appointed representatives to an advisory committee which meets monthly in consultation with the principal of the school, and which is augmented by members of a general committee. With the co-operation of this committee, of which the editor of the *Pulp and Paper Magazine* is chairman, the school has arranged three groups of courses: 1. Day school classes for those who are not yet engaged in the industry, but who are preparing themselves for a pulp or paper mill career. 2. A complete course arranged for men who are employed in the mills, given both day and evening so as to accommodate those who are on shift work. 3. Unit courses which give the essentials of individual jobs to men who want merely to improve their knowledge of the particular work on which they are engaged, such as acid makers, paper finishers, grinder men, etc.

The Three Rivers technical school was constituted a corporation under a provincial act of 1918. By another act of 1924 it became a provincial technical school for pulp and paper industry (LABOUR GAZETTE, April 1924, page 304). The agreement between the province and the school corporation authorized the government to organize and maintain a paper making school for the period of 20 years, subject to termination on six months' notice by the government. The government pays the interest and sinking fund of the bonds issued by the school corporation as well as the salaries of the director and principal, professors, foremen and other employees both for general technical instruction and for in-instruction in the manufacture of pulp and paper, and other expenses in connection with the establishment. The government further assumes various debts incurred by the school, the latter body transferring to the province all the grants now received from the province, the city of Three Rivers, or other sources.

The accidents reported to the Ontario Workmen's Compensation Board during the month of October numbered 6,122, 31 of these being fatal, as against 5,761 accidents during October a year ago, of which 40 were fatal. This brings the total number of accidents reported to date this year 54,546, as compared with 49,743 during the same period of 1925. The benefits awarded during October amounted to $503,282.34, $413,361.94 of this being for compensation and $89,920.40 for medical aid, as compared with $482,622.40 total benefits during October of 1925. The total benefits awarded to date this year are $4,701,759.92, and in the same period of 1925 benefits were $4,589,961.74.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Nova Scotia Accident Prevention Association

THE Nova Scotia Accident Prevention Association is conducting a campaign among the industrial establishments of the province with a view to securing safer conditions of work for the employees, and at the same time lowering the heavy charges against industry for workmen's compensation. This association has authority, under the Workmen's Compensation Act, to make rules which, when they have been approved by the Workmen's Compensation Board, become binding on all the employers included in the class affected thereby. (Labour Gazette, June, 1925, page 570).

The association has recently sent out a number of leaflets, posters and notices for distribution in the places of employment throughout the province. These notices called attention to the cost of accidents, not only to the injured person, but also to the employer and the consumer. The workman, it is pointed out, pays in time lost and in physical pain; where a permanent disability results, this loss is a heavy one, the entire family being affected and sharing the misfortune. The employer pays through loss of production, labour turnover, lowered efficiency, and increased insurance cost. The consumer also pays because the article purchased must cost more. This means that the whole community is involved. The industries of Nova Scotia, it is declared, are paying more than one million dollars each year for accidental injuries to their employees. The compensation cost of industrial accidents from 1917 to 1925 was $9,727,349; the number of workmen killed was 801 and the injured, in some degree, was 59,349. Nearly all this human suffering, loss of life and money was preventable. The compensation assessment rate depends on the number and nature of accidents.

Many posters have been issued recently with reference to the needs of particular industries. One of these calls attention to the dangers of loose clothing near moving machinery. Other posters give instructions to sawyers and other operatives, as follows:—

To the Sawyer

Yours is a responsible job in more ways than one, for the safety of several men (including your own) depends to a large extent on your carefulness.

See that your saw, carriage and other equipment are in good shape and properly set up. If not they are dangerous.

Have your saw arbour covered and wherever possible guard shaftings, couplings, gears, belts, etc.

Teach your canter and tailing-out man to be always careful. Do not permit tailing-out man to trip taper.

Do not permit any carrying on or fooling around you when the mill is running.

Wear snug fitting clothing. Loose or open clothing is likely to be caught by moving machinery and haul you into serious danger.

Instructions Respecting Belts

To throw off, shut off power if possible. Throw belt off driving pulley first—use a pole or stick—not your hand. To put on shut off power if possible—or if belt is running idle on overhead driving pulley, throw it off with a pole.

Put belt on driven pulley first. Then put belt on driving pulley, using a rope or stick or belt to guide it on. Do not put on by hand while pulley is running. Do not let pole catch in spokes. Hold it at your side. Do not let clothing catch on pulley, belt or shaft.

If you use a ladder, it should have hook over shaft or should be held by someone. Do not put on a belt until someone has shown you how to do it safely.

Separate posters are also issued for the instruction of the man "tailing out," and the elevator man, and simple suggestions are offered for the safe management of boilers.

Of special interest are the safety rules for sawmills, this industry being responsible for a large proportion of accidents in the province.

Safety Rules for Sawmills

Posting of Notice.—Every sawmill operator shall keep a copy of these regulations posted up in his mill while it is running. When card becomes spoiled through moving of mill or otherwise, a new one can be obtained free of charge from—Nova Scotia Accident Prevention Association, P.O. Box 267, Halifax, N.S.

Boilers.—(*a*) All boilers should be thoroughly inspected internally and externally by a competent inspector at least once in every year. (*b*) The safe working pressure as fixed by a competent inspector shall never be exceeded.

Engines.—(*a*) All engine fly wheels shall be guarded so as to prevent injuries through accidental contact with them. (*b*) Projecting engine crank shafts shall be guarded. (*c*) Care shall be taken that no object can fall from floor or platform into fly wheel and so be thrown out at high velocity.

Pulleys.—(*a*) All pulleys shall be guarded or fenced off, unless so placed that there is no possibility of a workman being caught. (*b*) In turning down pulleys on shaft, it shall be done at a safe speed and with a proper tool for the purpose.

Belts.—(*a*) Belts shall be walled off where there is a possibility that a person might be caught in them. (*b*) Substantial guards shall be erected over main drive and edger belts, to protect men working on log skids, should belt break.

Shafting.—(*a*) All revolving shafting, if exposed to contact, shall be guarded. (Men have been caught and killed on smooth revolving shafts). (*b*) Shaft couplings shall be protected and have in them no projecting bolts.

Set screws.—(*a*) All projecting set screws in any moving parts of machinery shall be removed and replaced by flush set screws, unless so placed that there is absolutely no possibility of a workman being caught thereon. This applies also to projecting bolts, keys, or any projecting part which might catch in clothing.

Note:—Ordinary set screws may be countersunk or replaced by the hollow "safety" type which is now procurable.

Gears.—Gears, friction drives, sprockets, and chain drives unless so placed that there is no danger of contact with them, shall be properly guarded or fenced off.

Rotary saw and carriage.—(*a*) The saw arbour shall be guarded. The friction control shall be enclosed and covered. A board, not less than nine inches wide, shall be hung vertically over saw. (*b*) Means shall be provided to prevent the accidental moving of the carriage, when the sawyer is not in his place. (*c*) The "tailing-out" man shall not be allowed to trip the taper. (*d*) The centre skid on log bed shall have a swing end, to be extended only when short logs are being sawn. (*e*) When sawdust is removed from the big saw by hand, some arrangement must be made so that it will be impossible for the man in the pit to touch the saw with his shovel. (*f*) Many millmen consider a knife splitter safer and preferable to the disc or roller commonly used.

Edgers.—(*a*) The compression rolls shall always be used. (*b*) No one shall be allowed to remove sawdust or shims from the saws while they are running.

Trimmers.—(*a*) The top of the saw shall be boxed so that, when not in use, it shall be completely enclosed. (*b*) The back of the saw shall be guarded underneath, if exposed to contact. (*c*) This applies also to slab and wood saws.

Lath Machines.—A high splitter shall be used on bolter. A board shall be hung over bolter saw. The butters shall be guarded to prevent accidental contact with them. Too much wood should not be allowed on bolter table.

Signals.—(*a*) A signal cord or wire shall be provided, running from the sawyer's position through the mill to the engine and boiler room, where it shall be attached to a suitable signal, so that in case of an emergency, the engineer or fireman can be signalled by this means to stop the engine. (*b*) When a mill has stopped for temporary repairs, filing, or other purposes, it shall be the duty of the engineer to warn all men by means of some pre-arranged whistle or other signal before starting up again.

Floors, etc.—The floors, tables and benches of mill shall be kept in good repair and reasonably clear of bark, sawdust, and other waste material. Openings in floor, where there is a possibility of a man falling through, shall be fenced off.

First Aid.—Every employer shall comply with the Workmen's Compensation Board's Regulation 9, regarding proper equipment for rendering first-aid to the injured.

Clothing.—Employers shall warn employees of the danger of wearing loose or open clothing while working around moving machinery.

Dominion Iron and Steel Company's Safety Organization

The *Industrial Safety News*, published by the Nova Scotia Accident Prevention Association, describes in its issue for October the accident prevention work that has been carried on during the past three years by the plant of the Dominion Iron and Steel Company at Sydney, Nova Scotia. Some time ago the co-operative system of plant management was introduced in the Sydney Works, and one of its functions has been to study the causes of accidents and reduce their number to the minimum. Safety committees have been formed in the various plant departments, and at the meetings of these committees the causes of accidents have been fully discussed and measures taken to prevent the recurrence of similar accidents. These discussions developed the fact that between seventy and eighty per cent of the accidents were due to the thoughtlessness or carelessness of the injured workmen or their fellow-employees. Accordingly an intensive campaign has been carried on throughout the plant with the object of educating the employees in safe methods of working. Illustrated placards, bulletins, and safety literature have been prominently displayed on the plant and distributed to the workmen. New employees have been instructed in safe working practices, and advice or example given where in the course of operations, dangerous conditions have been revealed. The heads of the various departments have made frequent personal appeals to their men for co-operation and support in these accident prevention activities.

The following statement shows what has been accomplished in the past three years:—

Year	1923	1924	1925
Compensable Accidents	498	351	222
Days lost	10,840	7,589	5,093
Amount of compensation	$34,860	$24,510	$16,708

An analysis of these figures indicates that in the year 1925, the Dominion Iron & Steel Company was able to reduce the number of accidents, as compared with 1923, by 44 per cent; the time loss by 47 per cent; and the compensation cost by 48 per cent. This splendid improvement in the accident experience has lessened delays in plant operations and in working time and wages; has materially reduced compensation payments, and has brought about the lower rate of assessment now enjoyed by this class of industry under the Workmen's Compensation Act. In addition to the reduction in accidents there is another phase of this company's safety activities which is worthy of mention. A well-staffed emergency hospital is maintained at Sydney, with a complete system of first aid and ambulance service. There are numerous minor injuries not within the scope of the Workmen's Compensation Act which are treated at the company's emergency hospital, and it is a strict rule on the plant that all injuries of this nature, no matter how slight, must be treated there. During the year minor cases to the number of 2,106 were treated, and only one case of infection resulted.

Benefits for Pulp and Paper Workers

Care of the sick members of the Powell River community is amply provided for by the Sick Benefit Association for the employees of the Powell River Pulp and Paper Company, Limited, Powell River, British Columbia. The society operates a modern hospital containing, with an annex, forty beds, with a medical superintendent and assistant in charge. The staff of the hospital comprises six nurses, in addition to the matron and a housekeeper. When an employee falls sick he receives hospital and medical attention free and a sick benefit of $20 a week for thirteen weeks and $10 a week for the succeeding thirteen weeks. Membership dues in this society are only $2.50 per month. When an employee is injured at his work, in addition to free hospital and medical attention, he receives also the usual allowance from the Workmen's Compensation Board. The company assists with a substantial donation each month towards the upkeep of the society. In addition to the sick benefit, each employee is insured at the expense of the company. After six months service he is insured for $500, at the end of twelve months this is increased to $750, and to $1,000 at the end of two years.

Safety Prizes for Loggers in Ontario

The Lumberman's Safety Association is offering cash prizes which will be paid to ten men working in the logging camps of Ontario who make the best suggestions on accident prevention. These prizes will be presented in order to stimulate the interest of the men in the work, and the co-operation of superintendents, foremen and others if desired.

A recent notice sent out by the Lumbermen's Safety Association to the superintendents and foremen of logging operations says:—

"If you can get your men really thinking about accident prevention and trying to eliminate all avoidable accidents from your camps, the battle will be half won. May we request that, when the enclosed notices are being posted, a few words of explanation be given by the foreman and clerks to the men. The sawmill crews made wonderful improvement in their accident prevention record this summer and we believe the woods superintendents and foremen will not lag behind them in carrying on the accident prevention campaign. We expect to see a big improvement in the accident situation during the months of October, November and December, compared with the same period last year."

The bulletin announcing the cash prizes states that fifty dollars in cash, consisting of $5 each, will be paid to the ten men working in logging camps in Ontario who make the best suggestions on accident prevention. The rules governing the contest provide that suggestions must be in the form of "slogans," drawings, pictures or letters. contestants may send in as many suggestions as they like and as often as they like. They are to sign their name, the name of the company and the Post Office address for camp mail. The president and directors of the Lumbermen's Safety Association will act as judges on suggestions received up to December 15, 1926. Prize money will be mailed to the winners by December 21 so that it may be received before Christmas.

All communications are to be addressed to the Lumbermen's Safety Association, 16 Fraser Building, Ottawa, Ontario.

Employees' Welfare in Victoria, Australia

The report of the Chief Inspector of Factories of the State of Victoria for 1925 notes a marked improvement in the standard of safeguarding machinery during the year. The removal of dust from metal polishing shops received attention, and practically all these shops are now equipped with dust removal appliances. It is noted that employers often objected to the installation of these appliances, but after an experience of their operation they expressed their approval. The use of the circular cutter-head and automatic guards on surface-planing machines was a factor in reducing the severity of accidents on these machines. Accidents due to circular saws were reduced by the use of guards. Regulations governing the use of electrical energy in factories took effect during the year, providing for the safe fitting and handling of the various electrical appliances used in factories.

The welfare of employees received increased attention from manufacturers. One firm provided not only play and recreation grounds, tennis court and three rooms equipped with first aid under the control of a professional nurse, but also provided with a dining-room with waitresses and free soup, tea, sugar, milk, rolls, butter and jam for the midday meal. Another firm supplied an ice chest and ice during the warm weather. Other firms established baseball clubs, physical culture classes, surgery and rest rooms, granted the use of pianos and arranged for concerts during lunch hour. At several country factories the convenience and comfort of employees received special consideration, e.g.,—One fruit-canning

29395—5½

company erected a spacious dining-room adjacent to the cannery, and arranged for the Y.W.C.A. to conduct a large hotel for the female employees. Another company engaged in milk preserving, etc., provided up-to-date bathing, dressing, dining and recreation rooms for the use of its employees.

A female medical inspector of factories and shops was appointed during the year, her duties being to investigate the effect of industrial conditions in factories and shops on the health of female workers, and, when necessary, to suggest remedial measures; also to examine female applicants under fifteen years of age for permits to work in factories; to furnish reports, when required to do so, and to recommend action necessary to secure the health and well-being of female workers.

Inadequate Safety Standards in Coal Mines

The *American Labour Legislation Review* calls attention to the frequency of recent disasters in the coal mines as proving the inadequacy of the existing safety standards in this industry. It is stated that in ten years no fewer than 25,000 coal miners have been killed in the coal mines of the United States. In the first eight months of 1926, 248 miners were killed. Recent major accidents have been as follows:—

January 13, at Wilburton, Okla., 91 dead.
January 14, at Farmington, W.Va., 19 dead.
January 29, at Helena, Ala., 30 dead.
January 29, at West Frankfort, Ill., 5 dead.
February 3, at Horning, Pa., 19 dead.
February 16, at Nelson Creek, Ky., 7 dead.
March 8, at Eccles, W.Va., 19 dead.
May 6, at Port Carbon, Pa., 5 killed.
July 21, at Moffatt, Ala., 9 killed.
August 26, at Clymer, Pa., 44 killed.

In 1925 ten major mine explosions took the lives of 237 men. This record is not quite so bad as that for 1924. The improvement, it is suggested, is in a measure due to the remarkable activity of coal companies, beginning in 1924, in installing the rock-dust safeguard in their mines—activity which has continued in 1926 until at least 160 mine companies are now rock-dusting. In 1924 ten "major" explosions in coal mines took 459 lives. In 1923, 265 miners were killed in nine "major" coal mine disasters. These tragedies followed a series of eleven "major" explosions in 1922 which caused the death of 264 men.

The American Association for Labour Legislation is urging the adoption of a program for strengthening protective legislation, as follows:—

1. The adoption of uniform legal minimum standards of safety;

2. The use underground of no explosive that is not after scientific investigation numbered among the "permissables"; the strict limitation of "shooting off the solid"; and the use of shale or approved rock dust to check the spread of coal dust explosions;

3. Reward careful employers and penalize the less scrupulous, by the universal adoption of schedule rating for insurance under accident compensation laws, with a further graduated penalty for cases of willful failure to put into effect legal safety regulations;

4. An adequate mine inspection staff selected upon a merit basis of training and experience, fairly paid, for reasonably long tenure of office and protected from partisan interference whether political or industrial.

5. Greater public authority, federal and state, to procure and disseminate information, and to establish and maintain on a uniform basis reasonable minimum standards of safety.

Studies in Occupational Health Hazards

Valuable information in regard to occupational health hazards is contained in the annual report of the Surgeon-General of the Public Heath Service of the United States for 1925, recently received by the Department. Studies were made during the year of dust hazards, benzol poisoning, illumination, hazards in connection with radium, posture, absenteeism, health conditions among 12,000 industrial workers, and tetra-ethyl lead. In regard to general sickness, influenza and grippe were the outstanding causes of "industrial absenteeism." By comparing the sickness experience of the employees in each reporting establishment with the average morbidity frequency, a high incidence rate for certain other diseases was found in different factories, and even in whole industries. Thus, in the iron and steel industry, in 1923, the frequency of pneumonia was 122 per cent in excess of the rate for employees in the other reporting industries. This fact suggested the desirability of a detailed study of all the pneumonia morbidity and mortality data available for iron and steel workers. Among other things, it was found that the excess was greatest in the early winter of each year, and again in the spring, but that at practically all other times as well, the disease occurred more frequently among steel company employees than among the other workers included in the study. The racial factor apparently does not explain the high pneumonia rate in the steel industry. From the rates obtained from sample groups of the industrial population, it is estimated that iron and steel workers in this country, numbering approximately 500,000 persons, contract 1,200 more cases of pneumonia annually than do the same number of employees in such industries as paper manufacturing,

the rubber, chemical, abrasive, and textile industries, and the public utilities.

The studies of dust in industry, reports of which will be published later by the Service, include separate investigations into the hazards of metallic, hard coal,, silica and cement dust. Investigations of the effects of lighting showed a decided increase in the speed of working when the illumination was increased, and further experiments will be made to ascertain whether this increase continues while the illumination is maintained. Special tests in this direction are being carried out among the employees of the Chicago general post-office. A committee has been appointed to examine the hazards in the manufacture, distribution and use of tetra-ethyl lead fluid and tetra-ethyl lead gasoline. This inquiry is the outcome of a number of deaths which had occurred at a factory of the Standard Oil Company, in connection with the manufacture of the tetra-ethyl lead fluid.

The Public Health Bureau promises to publish early next year the results of a study of the physical condition of 12,000 industrial workers, which will contain much material of a kind not hitherto available in regard to the incidence of occupational diseases.

FIRST AID COMPETITIONS ON CANADIAN PACIFIC RAILWAY

IN accordance with the annual practice, First Aid competitions for Canadian Pacific Railway trophies were this year again conducted to ascertain the All-Lines championship team among employees of the Company. The system is divided into two sections—Eastern and Western Lines. Each competing team is composed of five members, who are holders of either the First Aid Certificate or higher awards of the St. John Ambulance Association.

The first series of competitions are those to decide the championship team of each "District" of the system, of which, for First Aid purposes, there are five on Eastern Lines and four on Western Lines, viz.,

Eastern Lines

District	Name of Trophy
New Brunswick	Downie Challenge Cup
Quebec	Gutelius Challenge Cup
Angus Division	Johnson Challenge Cup
Ontario	Oborne Challenge Cup
Algoma	Scully Cup and Taylor Shield.

Western Lines

District	Name of Trophy
Manitoba	Hall Challenge Cup,
Saskatchewan	Scully Challenge Cup,
Alberta	Price Challenge Cup,
British Columbia	Busteed Challenge Cup.

As many teams as desire to do so may enter the competitions from any one District, but the men composing them must be employed on the District represented by the trophy for which they compete. When the championship team of each District has been established, competitions take place among these teams to decide which of them is the most efficient of Eastern or Western Lines, as the case may be. After the Eastern and Western Lines championship teams have been ascertained these two teams meet to compete for the Grand Challenge Cup, emblematic of the "All-Lines" championship.

The "practical" tests given this year dealt with supposed cases of—

A man having a piece of steel embedded in one of eyes while walking through a machine shop, causing him to stumble against a machine and fracturing one of his legs in falling;

A person being struck by an automobile and sustaining a simple fracture of the lower jaw and left ribs;

A man being knocked down by an automobile, one of the wheels of the car passing over his left leg fracturing both bones and setting up severe bleeding from a varicose vein;

A man sustaining a wound in the middle third of his right thigh while splitting wood in the bush, the First Aider being alone with the victim at the time;

A man suffering from electric shock as a result of having come in contact with an electric current while standing on an upturned bucket fixing a switch in his house and being found on the floor with a deformed forearm.

The "team" test dealt with a case in which a man is supposed to have fallen to the sidewalk from a scaffold which collapsed while he was at work on it, sustaining a simple fracture of the right forearm and a fracture of the right leg.

In the 1926 "District" competitions the Company's McAdam, N.B. team, composed of the undermentioned persons, carried off the Downie Cup by default:—W. F. Bailey (Captain); William Dawson; G. W. Gehan; Cameron Bogart; Chas. W. Lee.

The Windsor Street Station, Montreal, Police Team, made up of the undermentioned members, won the Gutelius Cup, making 378 marks out of a possible 475. Two other teams competed for the trophy:—Sergt. H. W. Bailey (Captain); Constable T. A. Griffith; Constable W. H. Allison; Constable E. G. Wykes; Constable Patrick Keogh.

Two police teams from Angus Works, Montreal, this year entered the competitions—Team No. 1, composed of the persons whose names are given below, winning the Johnson Challenge Cup by gaining 385 points out of a possible 475:—Acting Sergt. George Curtis (captain); Constable F. Pettit; Constable Thos. O'Neill; Constable Enos Sharpe; Constable Jesse Holmes.

The Toronto General Freight Office Team, made up of the following persons, won the Oborne Cup, taking 415 points out of a possible 450. One other team competed:—Alfred T. Curle (Captain); Herbert H. Braid; Thos. Warren; Chas. Sellen; W. J Turk.

The North Bay, Ont. Team, with the belowmentioned personnel, won the Algoma District trophies—the Scully Cup and the Taylor Shield—by obtaining 390 marks out of a possible 450. One other team competed:—D. Salmon (captain); F. Granger; C. Fricker; H. Owen; J. Botwright.

The five teams mentioned above competed at the Place Viger Hotel, Montreal, on 6th instant, for the championship of Eastern Lines, represented by the Lord Shaughnessy (Eastern Lines) Shield. The competition was won, for the third successive year, by the McAdam, N.B. Team, which made an aggregate of 455 points out of a possible 475.

This year thirteen teams entered the contest in the western division as against ten last year and seven in 1924, with the following result in the Preliminary test (Possible, 450):—

Fort William (Police), 285; Brandon (Shops), 376; Calgary (Police), 336½; Calgary (Shops), 337½; Kamloops (Shops), 320; Vancouver (Police), 284; Vancouver (Shops), 360½; Nelson (Shops), 410; Lethbridge (Miners), 329½; Sutherland (Shops), 388; Moose Jaw (Police), 290; Winnipeg (Police), 339; Winnipeg (Shops), 379.

From the above it will be seen that the following won out in their respective provinces and were entitled to enter the intermediate competition and fight for the "Western Lines" Shield:—

Winnipeg (Manitoba) Shops.
Sutherland (Sask.), Shops.
Calgary (Alta.), Shops.
Nelson (B.C.), Shops.

These four teams met at Moose Jaw on September 23, and were judged by Doctor Leask, Chief Surgeon for Saskatchewan, assisted by Mr. E. G. Noble, with the following results (Possible, 525):—

(1) Winnipeg, 450.
(2) Calgary, 386½.
(3) Sutherland, 370.
(4) Nelson, 363.

The Winnipeg Shops team making the highest number of points in this contest therefore won the Western Lines Shield, which is the third successive year they have gained this distinction.

On account of the All-Lines championship having last year been won by a Western Lines team, the McAdam Team this year journeyed to Winnipeg, where, on 13th instant, they matched their skill in the art of rendering First Aid to the Injured against that of the Winnipeg, Weston Shops Team No. 2 (who were, for the third year in succession, champions of the Western Lines—represented by the Lord Shaughnessy, Western Lines, Shield—and last year's All-Lines champions) and retrieved the Grand Challenge Cup by being awarded 34 points more than their opponents, gaining 652 marks out of a possible 900, the Winnipeg team making 618. The McAdam team were the 1924 All-Lines champions.

Dr. H. A. Beatty, M.R.C.S., the Company's Chief Surgeon and Medical Officer, acted as Judge throughout the competitions. Mr. A. G. Shakespeare, C.P.R. First Aid Instructor, Montreal, examined the Eastern Lines teams and Mr. E. G. Noble, the First Aid Instructor at Winnipeg, the Western Lines teams.

The following are the names of the Winnipeg team: Thomas Mansbridge, Harry Shaw, Ernest J. Bull, William Reynolds (Captain), Frank Perkins, Herman Hartley (Reserve).

The number of assisted passages to Canada from Great Britain and Northern Ireland in connection with agreed schemes under the Empire Settlement Act was 978 during September, as compared with 2,941 to Australia and 883 to New Zealand. The total departures from Great Britain this year to the end of September numbered 17,205 to Canada; 25,660 to Australia; and 8,375 to New Zealand. During the entire period from the inception of the scheme in 1922 to the end of 1925 there were 21,489 departures from Great Britain to Canada, as compared with 78,689 to Australia and 22,625 to New Zealand.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Visit to Canada of Mr. H. B. Butler, Deputy Director, International Labour Office

REFERENCE is made on page 1113 in the present issue to the visit to Canada of Mr. H. B. Butler, Deputy Director of the International Labour Office. Mr. Butler came first to Ottawa and afterwards visited Montreal, Toronto and Hamilton.

History of the International Labour Office

There has just been published in London a little volume of one hundred pages entitled "History of the International Labour Office," by the Right Hon. G. N. Barnes, who was intimately associated with the International Labour Organization in its beginnings and who has since followed its progress with sympathy. Mr. Barnes was a member of the War Cabinet which existed in Great Britain during the latter stages of the War. The book has a foreword by Mr. Emile Vandervelde, a distinguished Belgian statesman who shared with Mr. Barnes in the framing of the Labour Part of the Peace Treaty. Mr. Barnes makes one or two kindly comments on the broad aspects of the work of the Organization and some shrewd observations on the problems with which it is confronted. One quotation may be given by way of instance:—

> The Geneva Labour Office (writes the author) has now become an established fact. Yet very little is really known about it, and what is said and written is oft tinged with error and sometimes, I am afraid, with a subconscious feeling of hostility. The average employer believes the Office to be something which is only adding to his burden; and many workmen think of it, if at all, as merely another of the many bureaux which have come and gone without anyone being either better or worse for their coming or going. And so, while employers think ruefully of foreign competition and workmen hopefully of international labour solidarity, many of them fail to realize that there is now at Geneva an agency which is designed to lessen the intensity of the one and to give practical expression to the other. As a consequence, the International Labour Office does not get that full measure of support to which it is entitled from the employers and employed whom it was designed to serve, nor is it supported as it ought to be by Governments.

Thirty-Third Session of the Governing Body

The Thirty-third session of the Governing Body of the International Labour Office was held in Geneva in October. Dr. A. W. Riddell, Canadian Advisory Officer in Geneva, attended on behalf of the Minister of Labour as one of the Government representatives. Mr. James Simpson, Vice-President of the Trades and Labour Congress of Canada, was present as one of the Workers' representatives in place of Mr. Tom Moore.

At the opening of the first sitting it was announced on behalf of the Spanish Government that the decision of Spain to withdraw from the League of Nations would not affect in any way her relations with the International Labour Organization. "Spain will remain" the Government representative said, "with enthusiasm in this Organization, in accordance with the legal principles which apply to it. Such an attitude is a consequence of the great interest which Spain takes in the problems of social legislation and the protection of the working classes."

The annual election of officers of the Governing Body took place at this meeting. Mr. Arthur Fontaine, French Government representative, was re-elected unanimously as Chairman, and Mr. Jules Carlier of Belgium, and Mr. Jan Oudegeest of Holland were re-elected as Vice-Chairmen from the Employers' group and Workers' group, respectively.

The Governing Body next considered a report by Mr. Albert Thomas, Director of the International Labour Office, on the work of the Office since the previous session of the Governing Body. The report stated, among other things, that the total number of ratifications of International Labour Conventions had now reached 214. The Governing Body took note of the unconditional ratifications by the Belgian Government of the Washington Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week.

A general discussion arose on the development of the eight-hour question in various countries. The Workers' representatives protested against the decree issued on June 30th last by the Italian Government dealing with the possible extension of hours in Italy to nine in the day. The representative of the Italian Government on the Governing Body declared that the decree issued by his Government did not infringe the real principles of the eight-hour day and that in fact it remained unapplied. The representatives of other countries described the difficulties which have delayed ratification of the Hours Convention of their respective countries. They were unanimous in affirming that these delays were due primarily to the economic situation and that their governments still desire to ratify the Convention as soon as possible. It was intimated by the German Government delegate that a government bill relating to the protection of workers and hours of labour would shortly be considered by the Federal Govern-

ment of Germany. This bill contains clauses in conformity with the eight-hour convention, the ratification of which would be made possible by the passage of the proposed legislation. Assurances had also been given that this measure would be discussed in the near future by the German Parliament. Mr. Albert Thomas, Director of the International Labour Office, maintained that there had been no retrogression in the efforts which were being made to secure the adoption by law of the eight-hour day. At the same time, it was necessary to continue energetically any efforts which tended to obtain from the various governments an early and common ratification of the Washington Convention.

The Governing Body, on the proposal of Mr. Sokal, Polish Government representative, set up a Committee of twelve of its members (4 Government representatives, 4 workers' and 4 employers') to submit to the next Session of the Governing Body a report on the state of the hours question, with a view to the adoption of measures to reinforce the efforts of the Director to hasten the ratification of the Washington Convention.

The Governing Body considered a resolution adopted by the Eighth Session of the International Labour Conference with regard to means of making use of the reports presented in accordance with Article 408 of the Treaty of Versailles with regard to the application of Conventions by Governments which have ratified them. The Governing Body appointed the Committee of Experts contemplated by the resolution, such Committee to be composed of six members.

May 25, 1927, was fixed as the opening date for the Tenth Session of the International Labour Conference.

It was decided that the next session of the Joint Maritime Commission should be held in January, 1927. In accordance with a resolution of the Ninth Session of the International Labour Conference, the Commission will be called upon to give its opinion on the advisability of placing on the agenda of a special session of the International Labour Conference the question of hours of work in the mercantile marine.

Dr. W. A. Riddell, Government representative from Canada, proposed the following resolution with a view to securing the continuance of Canadian representation on the Joint Maritime Commission:—

That the Governing Body accepts the suggestion of the Director that the number of regular members of the Joint Maritime Commission shall be increased to fourteen and that, in order to secure in the future that the personnel of the Commission shall be more in keeping with the character of the International Labour Organization, at least four of the fourteen regular members shall be chosen from among the representatives of non-European countries.

Dr. Riddell referred to the strong support received at the Ninth Conference to his proposal to refer back the nominations to the employers' and workers' groups on the ground that they were not sufficiently representative of world maritime interests. The Director observed that everyone agreed with Dr. Riddell's proposal but that the matter should first be referred to the Joint Maritime Commission. The Governing Body could then take the final decision at its next meeting. The proposal to adopt Dr. Riddell's resolution at once was defeated by eleven votes to six, and the resolution was instead sent to the Joint Maritime Commission for consideration and report.

The Governing Body approved the summoning, towards the end of this year, of the Advisory Agricultural Committee composed of representatives in equal numbers of the International Labour Office and the International Institute of Agriculture. It was decided to raise the number of delegates of the Governing Body on this Committee from three to six.

The Governing Body also considered the part to be taken by the International Labour Office in the preparatory work for the International Economic Conference to be convened by the League of Nations.

A preliminary discussion occurred on the questions which might be placed on the agenda of the International Labour Conference in 1928. It was decided to reserve for final choice the following three questions: prevention of industrial accidents; unemployment insurance; regulation of native labour.

The Governing Body completed the list of experts who will compose the Advisory Committee for the study of the questions of forced labour and long-term contract labour. The first meeting of this Committee will be held in November.

One of the resolutions adopted by the Eighth Session of the International Labour Conference requested the Office to give special attention to problems connected with the scientific organization of labour. The Governing Body considered a report which was submitted to it on this subject, and in which suggestions were made for collaboration between the International Labour Office and an institute the establishment of which has been contemplated by various organizations, particularly the Twentieth Century Fund, of Boston. The Governing Body approved the negotiations undertaken by the Director of the Office in this matter, and requested him to continue the negotiations with a view to arriving at a definite agreement.

The next Session of the Governing Body will open on January 26, 1927.

Ratification by Great Britain

Announcement was made in October of the formal ratification by the British Government of the Draft Conventions of the International Labour Conference concerning Workmen's Compensation for Occupational Diseases, and concerning Equality of Treatment for National and Foreign Workers as regards workmen's compensation for accidents, which were adopted by the Seventh Session of the International Labour Conference in 1925.

The British Government informed the Secretary-General of the League of Nations also of the acceptance by Great Britain of two recommendations subsidiary to these Conventions, namely, the Recommendations concerning workmen's compensation for occupational diseases and concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents. With reference to the remaining Draft Conventions and Recommendations of the Seventh Session of the International Labour Conference, the British Government furnished the Secretary-General of the League of Nations with a statement showing certain reasons which rendered them unacceptable.

Appointment of Canadian as Assistant Legal Adviser to the International Labour Office, Geneva

The position of Assistant Legal Adviser to the International Labour Office in Geneva has been held successively by two Canadians, namely, Professor P. E. Corbett of McGill University, and Professor Norman MacKenzie, a graduate of Dalhousie University, Halifax, N.S., who retired during the past summer in order to take up the position of Professor of International Law in the University of Toronto. The Director of the International Labour Office wrote to the Minister of Labour of Canada at the end of September, intimating that it was his desire that the post of Assistant Legal Adviser should again be filled by a Canadian, provided that a suitable candidate was forthcoming. Announcement of this vacancy was made in the press throughout Canada and also through notices issued by the Civil Service Commission. A number of applications were received for the position from different parts of the country and, in accordance with the desire of the Director of the International Labour Office, were referred for examination and report to a committee composed of Professor Norman MacKenzie of the University of Toronto, Professor P. E. Corbett, of McGill University (both of whom had held the position in question) and Professor Léon-Mercier Gouin, of the University of Montreal. Applications were received up to the end of October when this committee met in Ottawa and submitted a report to Mr. H. B. Butler, Deputy Director of the International Labour Office, who was in Ottawa at that time. Subsequently, Mr. Butler interviewed personally certain of the candidates who were regarded as possessing the required qualifications, and it is expected that the appointment will be made shortly after Mr. Butler's return to Geneva next month.

VISIT TO CANADA OF THE DEPUTY DIRECTOR OF THE INTERNATIONAL LABOUR OFFICE

Mr. H. B. Butler, Deputy Director of the International Labour Office (League of Nations), Geneva, visited Ottawa between October 29 and November 2 and afterwards made brief visits also to Montreal, Hamilton and Toronto. The purpose of his coming was to discuss the work of the International Labour Organization with the Dominion Government and with leading employers and labour representatives. He is also making a brief sojourn in the United States with the object of studying at first hand some of the developments which are occurring in industrial relations there.

Mr. Butler spent a number of years in the British Civil Service, and was for a time Assistant Secretary of the Ministry of Labour. He was present in Paris during the negotiations of the Treaty of Peace with Germany and assisted in the framing of the Labour Part of the Treaty of Versailles, which provided for the establishment of the International Labour Organization, an important part of the machinery of the League of Nations. He was later in charge of the arrangements for the First Session of the International Labour Conference, which, pursuant to the provisions of the Labour Part of the Peace Treaty, was held in Washington in 1919. On the conclusion of this Conference, he was appointed Deputy Director of the International Labour Office and has since been associated with Mr. Albert Thomas in the direction of this work. This is Mr. Butler's third visit to Canada.

On his arrival in Ottawa he was tendered a dinner by a number of those who have attended sessions of the International Labour Conference.

During his stay in Ottawa he conferred with the Minister and staff of the Department of Labour in regard to questions that have arisen concerning various Conventions and Recommendations which have been adopted at successive sessions of the International Labour Conference. Examination by the Law Officers of the Crown in Canada has shown that some of these proposals fall within provincial legislative jurisdiction, while others are within the jurisdiction of the federal authorities. The different Draft Conventions have been brought before the Dominion Parliament and those that were found to be within provincial legislative jurisdiction were referred to the several provincial governments. Four Draft Conventions relating to seamen were ratified by Dominion of Canada during the past year.

An opportunity was afforded to Mr. Butler during his visit of inspecting some of the large industrial plants in Montreal, Toronto and Hamilton, and of meeting representatives of the Trades and Labour Congress of Canada and also of the Canadian Manufacturers' Association, both of which have been represented at the annual sessions of the International Labour Conference during the past seven years.

In the course of his stay in Montreal he visited the large shops of the Canadian National Railways at that point and attended a meeting of the committee representative of the management and of the workmen which was in session at the time under the co-operative plan of management which has been introduced by the Canadian National Railways with the object of promoting closer relations between the Company and its employees.

The visitor was entertained by the Men's and Women's Canadian Clubs of Ottawa, the McGill University Canadian Club of Montreal, and the Men's and Women's Canadian Clubs of Hamilton and Toronto. A dinner was tendered to him in Montreal on November 3 by the Montreal branch of the Canadian Manufacturers' Association. He was also the guest on November 6 at a dinner which was arranged by members of the Canadian Manufacturers' Association in Toronto. The visitor spoke at all these gatherings on various phases of the work of the International Labour Organization and his visit served to emphasize the importance of this work in the minds of the many persons who had an opportunity of meeting him and of listening to his addresses.

Ottawa Men's Canadian Club

In his address before the Men's Canadian Club of Ottawa, Mr. Butler emphasized the fact that the League of Nations is not merely an European institution but that all who are engaged in the work of the League realize its universal appeal. True, the countries outside of Europe have not experienced its influence as strongly as some of the European nations, but this was due to the emergent conditions which existed during recent years in Europe. The League of Nations was, he said, a sort of fire brigade which had necessarily to respond first to the more urgent calls.

The principal tasks of the League in reconstruction work thus far had fallen under three heads: First, there was the matter of political reconstruction. Stability was now beginning to be established in many of the countries where governments had been disrupted by the war. The entry of Germany into the League this year had been a step of great importance and significance. The second matter was that of economic reconstruction. The League had to assist Austria, Hungary and other tottering countries to get on their feet. These countries have now stable governments and stable currencies, social order and decent habits of life. Through the League's efforts Greece and Bulgaria had been assisted to attain stability. Further conferences were also under way at present through League activities which Mr. Butler ventured to suggest would bring far-reaching results. Naturally the magnitude of some of the issues involved did not permit of speed. Finally, there was the social work of the League in which the International Labour Organization had an important part. This Organization had, indeed, provided a rallying point for all the elements making for discipline and progress. It did so by guaranteeing certain conditions for the protection of the workers in the countries concerned and assuring them that their standards of work and living would not be endangered by international competition. Without this assurance, the social history of Europe during the after-the-war period would have presented far more serious problems than had actually occurred.

Mr. Butler explained that the International Labour Organization comprised representatives of governments, of employers and of workers. Treaties of peace which were framed at the conclusion of the European War had contained certain provisions for the protection of labour and had made it plain that labour was not to be regarded merely as an article of commerce. The successive sessions of the International Labour Conference and the permanent organization in Geneva connected therewith had resulted in the improvement of labour standards all over the world and were calculated ultimately

to provide equitable standards throughout the world.

He hoped that the word "Internationalism" would not alarm people. Fear of internationalism was the result of distrust but personal contact with the other fellow proved that humanity was pretty much the same the world over and that a means of co-operation and mutual assistance could always be found when men with similar objects in view were brought together.

In conclusion, the speaker acknowledged the assistance which had been received by the International Labour Organization from the successive Ministers of Labour of Canada, from Mr. Tom Moore, President of the Trades and Labour Congress of Canada, and others who had attended the International Labour Conference on different occasions.

Ottawa Women's Canadian Club

Mr. Butler's address to the Women's Canadian Club of Ottawa dealt with the several Draft Conventions of the International Labour Conference which had been framed for the purpose of affording protection to women workers and young persons engaged in industrial employment, agriculture and at sea.

Montreal Branch Canadian Manufacturers' Association

Mr. Norman Holland, of the Montreal Branch of the Canadian Manufacturers' Association, who presided at the dinner which was arranged by that organization in Montreal on the evening of November 4, intimated that this was one of the first occasions in Canada when representative employers and employees had gathered around a common table to hear a message of common interest. It seemed fitting, he added, that in Montreal, with the two races and languages existing there, and a cosmopolitan population, they should come near to the fulfilment of the hopes of the International Labour Organization. "We as good citizens of Canada and Quebec." he said, "will, I hope, indicate to Canadians at large that we are striving to a common end, namely, that the employers without employees cannot function, and vice versa; that we in the Montreal branch of the Association have realized and attempted to carry out that aim in actual practice and that it is highly necessary we should meet and discuss, not the difficulties of one faction or the other, but our common problems in the strictest sense of the word. I hope, Mr. Butler, that when you return to Geneva, you will be able to tell our very good friends on the other side that you have seen a real and actual demonstration in Canada's greatest city of the working out of the aims and objects, as I understand them, of the International Labour Office."

Mr. Tom Moore thanked Mr. R. W. Gould, Secretary of the Montreal Branch of the Canadian Manufacturers' Association, for his initiative in arranging this dinner so that so many might have an opportunity of meeting Mr. Butler and hearing him speak. Mr. Moore paid tribute also to the good work which had been done by Mr. Butler as Deputy Director of the International Labour Office.

In the course of his remarks Mr. Moore expressed the view that the name of the International Labour Organization had not been well chosen, as labour had only twenty-five per cent representation therein, the same as the employers, whilst the governments of the member states held the other fifty per cent.

The guest of honour spoke both in French and in English. "The more," he said, "one looks back on the last seven years the more one is inclined to think that without stabilization influence of this kind, the reconstruction particularly of Europe, but not only of Europe, would have been an almost impossible task. At that time the world was seething with unrest, and I think the International Labour Conferences by bringing groups and governments together have exercised a great moderating influence."

Mr. Butler, after explaining how the conferences are formed, pointed out that no draft convention, which means a serious decision of the Conference, can pass the Conference unless it has received a two-thirds vote of the delegates, hence the governments have a predominating influence, but this fact had not worked out as adversely as some had feared at the time the provision was made. It was necessary to give this predominance to the government representation since it rested with the governments to ratify the conventions and execute them. The speaker pointed out that an inception had had to be made for federal states, such as Canada, the United States and Australia, since the central government in these countries in the matter of labour legislation could not go beyond the recommendation stage.

As to results, Mr. Butler felt that it was well to give some facts because of so many loose statements being made, many people believing that these International Labour Conferences were naught but debating societies. The conferences had approved of 24 conventions, and already there had been 217 ratifications registered by various countries.

The speaker dealt first with the new countries, those created by the Peace Treaty which

had to start off with clean sheets, such as Poland and Czecho-Slovakia which were industrial countries in a large way. Poland had ratified 13 conventions and Czecho-Slovakia had ratified eight conventions. Of the smaller new countries of that part of Europe, Latvia had ratified 12 conventions, Rumania 12 and Bulgaria 16. Turning to the East, Mr. Butler noted that India and Japan had recently come forward as industrial countries, both of them being part of the eight countries which could claim seats on the Governing Body by right. Canada was another such country, so that three of the eight countries were in the British Empire, viz., Britain, Canada and India. Previous to the Peace Treaty India and Japan had virtually no social legislation. India had a Factory Act but it permitted a 72-hour work week, and the Japanese Act permitted a 84-hour work week. India has reduced its hours to 60 and abolished child labour of those under 12, also night work for women and young persons, and done a number of other things not strictly within the terms of the conventions of the Conferences but through the assistance of the International Labour Office. Japan has ratified conventions abolishing child labour under 14 years of age, and night work for women was to be abolished within three years. India had voted at Washington for the abolition of night work, and so had Japan, but in the latter case the provision was to come into effect when decided by the Privy Council of Japan.

The result was that at the last conference the Indian delegates complained in quite definite terms that Japan had not carried out her part of the agreement, with the result that Japanese textiles, made from Indian cotton, were underselling Indian textiles in India. The Japanese delegates had stated that the convention would be carried out July 1st this year.

The last category of countries mentioned by Mr. Butler included the industrial nations such as Germany, France and Britain. Germany, even before being a member of the League, had been admitted to the conferences because it was too great an industrial country to keep out, and had ratified five of the conventions, but intended to ratify others shortly. Britain had ratified 13 conventions, Italy 12, Belgium 13, and France six.

Mr. Butler turned to the work of the Labour Bureau itself, telling of its growth from small beginnings to its present staff of 350 at a cost of 1½ millions a year for maintenance, and of the new building provided for it. As to cost, the speaker said that Canada's share of the Labour Bureau was about $67,000 a year, or two cents each three years for every Canadian citizen. Mr. Butler pointed out that his office collected accurate information from all parts of the world and distributed it, some of it now being sent out in publication form in a commercial way which netted the Office $30,000 a year, and this would grow It was useless to deal with matters, especially international matters, unless one knew the facts, and knew them accurately, and that was the work of each office, and as the knowledge came to the office in 30 different languages, it meant considerable staff work. Another task which the Labour Office is now attempting is to get all information as to the coalfields of Europe, the only definite information hitherto having been as to British coalfields.

Still another problem being studied was Asiatic labour, and he believed that the results of this investigation would be a real contribution to the knowledge of the world, and would correct many misapprehensions. Then, too, the Labour Office had gathered together impartial accounts as to what is happening in Russia, and while some abuse had resulted because of the publication of several volumes of such information, the facts themselves had never been challenged, and he believed that the facts thus published were the best story of industrial conditions in Russia. The picture as to Russian conditions was not a very bright one, but the facts on which the picture rests had never been called into question. Another task was answering queries from governments, labour groups, employers and individuals. This had been carried out to such an extent that Britain had been able to materially reduce its foreign intelligence department since it could get much of the information it wanted from the Labour Office.

Mr. Butler believed the world to-day realized that it is impossible to have good relations on purely national scales, the argument being adduced, and with justice, that it is impossible to improve or even maintain a standard reached in advanced industrial countries if they are being undercut by countries which have very inferior conditions, as illustrated in the Indian-Japanese contention mentioned above.

No doubt the labour office machinery was not perfect, but the speaker said he knew of no better machinery, and the same criticism could be levelled against the League of Nations in the matter of prevention of war. The question was to those who criticized: "Have you a better machine?"

Among those who were present at the dinner tendered to Mr. Butler by the Montreal Branch of the Canadian Manufacturers' Association were: J. H. Sherrard, past Dominion president, C.M.A.; Col. Robert Starke, presi-

dent, Montreal Board of Trade, who moved the vote of thanks to Mr. Butler; J. T. Foster, president, Montreal Trades and Labour Council; W. S. Fallis, first vice-president, C.M.A.; Tom Moore, president, Dominion Trades and Labour Congress; E. McG. Quirk, special officer Department of Labour, Ottawa; Louis Guyon, deputy minister of labour of the province of Quebec; J. V. Desaulniers, president, Chambre de Commerce; Jos. Desautels, president, Canadian Credit Men's Trust Association; Emilien Daoust, Montreal harbour commissioner; T. W. Harvie, general manager, Montreal Harbour Commission; Gerald Tremblay, Montreal secretary, Catholic and National Syndicate; Gustave Francq, chairman, Minimum Wage Board, Quebec; H. H. Ward, deputy minister, Department of Labour, Ottawa; and Sir Herbert Ames, late financial director, League of Nations.

McGill University Canadian Club

In his address before the McGill University Canadian Club, the Deputy Director of the International Labour Office spoke in part as follows:—

"With the stabilization of currency, the first stage in European rehabilitation after the troubles of the war has been accomplished.

"Now the second stage is beginning, which seems likely to make Europe more stable and prosperous than in the past.

"Next year an Economic Conference is going to be convened by the League to discuss a very wide range of subjects. A committee has been appointed to define the program and collect the necessary material. That committee consists not of Government representatives but of business men, a certain number of economists, and a certain number of labour representatives.

"The general lines on which it is moving is toward bringing the countries together economically, towards inducing economic co-operation. At first sight that might seem a difficult proposition, especially when you think that since the war things have become more difficult than they were during the war. More tariffs have been set up; more obstacles to trade have been erected. But I think the reaction is setting in.

"The world is one-fifth the size it was a hundred years ago. In twenty-five years it will be very much smaller. You will live to see the day when the Atlantic will be crossed in an air machine in two days. And what is true of the Atlantic is true of other parts of the world. This is going to make the ties between nations very much closer than at present.

"The tendency is for industry to be conducted on a larger and larger scale. I am not sure that it is going to end with the national scale. It is stretching across borders. Within the last few weeks a combination has been formed between the steel industries of France, Belgium, Germany and Luxemburg. Similar combinations have been formed in eight other industries; yet others are under negotiations. All these things are bound to have a great effect on the world. I think they are going to improve its prosperity, and also assist very much the principal object of the League, which is the prevention of war. On the whole labour is in favour of that tendency. Labour believes they are making for a higher standard of living and greater prosperity.

"There is a general tendency to regard international co-operation in the economic field in quite a different light from anything that existed before the war. If co-operation of that kind is established it is going to make the task of preserving peace a much easier one. With strong industrial links, it is going to be harder to embark on quarrels for political reasons. If you go deep enough you will find that political quarrels have economic bases. If you remove the economic difficulties you are going to make a recurrence of trouble very much more difficult.

"There is no doubt that the League is going to help in that direction. It is a great mistake to think that those who live in other continents have no responsibility in European matters. The troubles between peoples of one continent are bound to re-act on the others."

Women's Canadian Club of Hamilton

In the course of his address before the Women's Canadian Club of Hamilton, Mr. Butler spoke of the Draft Conventions of the International Labour Organization which had been adopted with reference to night work for women and young persons, also fixing a minimum age of fourteen years for admission to industrial employment. The Convention on this last mentioned subject was drawn up in 1919 and already fourteen countries have enacted legislation to carry it into effect. In Europe thirteen years was the common age limit among working children before the 1919 Convention, and in India the age limit was nine years. As a result of the Convention the age limit in India had been raised to twelve years, which really corresponds to fourteen on this continent or in Europe on account of the fact that children in India developed so much earlier. Japan too, where children

were so largely employed in industry, had ratified this Convention. When one considers how long it had taken the older civilized countries to bring about public opinion on the employment of young people, it was a wonderful thing to think that such countries as Japan and India had subscribed to these new principles in so short a time. The abolition of night work by women and children had been carried out by fifteen countries. There was, he said, no doubt that the sum of human welfare had been increased and the sum of human misery reduced as a result of the new principles laid down by the International Labour Conference.

Toronto Canadian Club

Speaking in Toronto before the Men's Canadian Club on November 9, Mr. Butler pointed out that when the Armistice took place the problems before the world were political, economic and social reconstruction. The League of Nations now embraces those countries which won the war and those which lost it. A new period of international co-operation was beginning.

The speaker alluded to some of the work done by the League of Nations including the rehabilitation of the finances of Austria and Hungary and assistance in the settlement of 1,000,000 refugees turned out of Russia and Asia Minor. The International Labour Office has been charged with the care of the unemployed and destitute among these refugees, numbering approximately 190,000, of whom 90,000 were Russian refugees and 100,000 Armenians. Since it took over this work at the beginning of 1925, the International Labour Office had succeeded in placing 40,000 of these refugees in employment. Mr. Butler believed that the economic life of Europe was beginning to flow freely again and that this could not have happened if the unrest existing after the Armistice had continued. The International Labour Office, he thought, could take a share of the credit for bringing peace into the industrial world.

"Conventions of the League's Labour Office," he proceeded, "require a two-third vote of members before they can be sent to Governments for their consideration. Governments may ratify or reject them, but they are obliged to submit them to a competent authority, which in most cases is the Parliament of the country. In the days of diplomacy it was possible for a treaty to remain pigeonholed for years and perhaps never to be dealt with. When a convention is accepted by a government, the government agrees to carry it out for ten years and to make annual reports to the International Labour Office.

"Thirty-three per cent of the possible ratifications have been deposited with the Secretary-General of the League. The new countries of Europe, such as Poland, Czechoslovakia, both of which are industrial nations, and others close to the Russian frontier started without social legislation and took as their basis the conventions of the League. The reason was that these countries feared the subversive influences from the East. They felt they must have a standard of social legislation for the masses."

Mr. Butler referred to the Oriental countries as the second group. He touched upon the remarkable industrial development in Japan and India. Both countries, he said, had gone as far as possible in dealing with the conventions of the League. Both had abolished child labour, while India had placed restrictions upon night work and had reduced hours of labour from 72 per week to 60 per week and as low as 48 per week.

THIRD INTERNATIONAL CONFERENCE OF LABOUR STATISTICIANS, GENEVA, OCTOBER 18-23, 1926

THE Third Conference of Labour Statisticians was held at Geneva from October 18 to 23, having been called by the Governing Body of the International Labour Organization (League of Nations). The First Conference had been held in October, 1923, and dealt with (i) Classification of Industries; (ii) Index numbers of wages; (iii) Industrial accident statistics.

The Government of Canada was represented at the first Conference by Mr. R. H. Coats, Dominion Statistician, formerly editor of the LABOUR GAZETTE and Chief Statistician of the Labour Department.

The agenda of the Second Conference in April, 1925, was as follows: (i) Classification of Industries; (ii) Cost of Living Index Numbers; (iii) Statistics of Real Wages; (iv) Unemployment Statistics. At the Second Conference Canada was represented by Mr. W. R. Tracey, of the Dominion Bureau of Statistics, formerly of the Labour Department.

On each of these subjects for each conference the International Labour Office had prepared a preliminary report.

At the Third Conference the Government of Canada was represented by Dr. W. A. Riddell, Canadian Advisory Officer at the

League of Nations, formerly Deputy Minister of Labour for the Province of Ontario. The agenda of the Conference was as follows:—

(i) Methods of Conducting family budget inquiries,

(ii) Methods of statistics of collective agreements,

(iii) Methods of compiling statistics of industrial disputes,

(iv) Classification of industries.

The conference adopted resolutions on these topics as follows:—

(i) Methods of Conducting Family Budget Enquiries

(1) In order to provide adequate information with regard to actual standards of living, enquiries should be conducted at intervals generally of not more than ten years into the income, expenditure and conditions of living of families representative of large homogeneous sections of the population. The families should be selected to include a sufficient number from different income classes within the sections of the population under consideration, and also from different industries and districts. It is preferable to ask for less detailed information than to reduce the number of families covered by the enquiry.

(2) In order that the results of the enquiries may be as complete and comparable as possible, information should be based on daily records of income and expenditure kept by a member of the family for a period of twelve months.

Where it would be impracticable to obtain annual records, every effort should be made to secure from as large a number of families as possible budgets covering at least four periods of not less than a week, one in each quarter, or two periods of at least a fortnight in different seasons of the year. These records would supply adequate information regarding items of expenditure which recur daily. In the case of items of income and expenditure (clothing, furniture, etc.) which recur only at considerable intervals, annual records kept from a smaller number of families or information on which annual estimates could be based should be sufficient.

Special forms or account books should be distributed to the families for their use in making these records of income and expenditure. It is desirable that competent persons should be appointed to visit the families during the course of the enquiry and advise them regarding the keeping of the records.

(3) The records should show the district in which the family resides, the industry and occupation to which members of the family who are gainfully occupied belong, and the composition of the household, including the sex of each member and the age of juvenile members. They should show in sufficient detail the nature of the housing accommodation.

Information should be given for each important item of income and expenditure. By income should be understood earnings, in money and kind, sums received from boarders and lodgers, from insurance funds, pensions and investments, together with income from allotments or in the form of gifts. The chief items of income and expenditure should be specified on the forms, or account books, distributed. In the case of items of expenditure, the quantity purchased, as well as the cost should be recorded wherever practicable. Where a family includes boarders, lodgers or domestic servants, information should be given to show the proportion they represent in the family consumption. In the calculation of expenditure, the cost of maintenance of domestic servants should be added to their money wages.

(4) In compiling the results of an enquiry, if the number of budgets secured is adequate, separate averages should be given for important districts and industries. Families of manual and non-manual workers should be shown separately. Averages calculated for different income groups should be shown.

In addition to averages per family and for families classified according to size, the data expressed in terms of some more precise unit of consumption, for example the consumption of an adult male, should be given. For reducing data for families of different size to terms of a common unit, it is desirable, where suitable scales showing the relative consumption of persons of different age and sex are available, to apply one scale to food commodities and a second scale to other items.

The tabulated results should show the average income from different sources, and the quantity of and expenditure on each of the chief commodities consumed. Separate information should be given for each item of income and of expenditure which constitutes on the average not less than 1 per cent of total income or expenditure. Other items of interest may be shown separately as desired. The Items of expenditure should be classified into the following groups: food, clothing, housing accomodation, fuel and light, furniture and furnishings, and miscellaneous. It is desirable that payments of direct taxation should be given as a separate item. It is also desirable to determine the nutritive value of the principal articles of food defined by the cost of a thousand calories.

* * *

Where the sole object of an enquiry is to provide weights for the calculation of cost of living index numbers, satisfactory results may be obtained from a less detailed investigation than that indicated above. Information regarding district, industry, composition of family and expenditure upon each of the several items to be included in the index numbers only is necessary. It is desirable, however, to have, in addition, information as to quantities.

The results will be tabulated to meet the requirements of the series of cost of living index numbers which it is proposed to publish in each country. Thus if separate series of cost of living index numbers are to be published for a number of districts or categories of workers, the results of the family budget enquiries will be tabulated separately for each district or category; if a single national index is to be calculated, the results may be shown in the form of general averages only.

(ii) Methods of Statistics of Collective Agreements

The following general principles were laid down:

In each country information concerning collective agreements and their principal contents should be collected and published in a summary form at appropriate intervals.

It is desirable that any statistics compiled on the basis of this information should be compiled in accordance with the following general principles:

(1) The collective agreement should be defined, for the purposes of the statistics, as a written agreement concluded between one or more employers or an employers' organization on the one hand, and one or more workers' organizations of any kind on the other, with a view to determining the conditions of individual employment, and in certain cases to the regulation of other questions relative to employment.

(2) The number of collective agreements should be recorded at annual intervals according to the following scheme:

(*a*) Number of agreements in force at the beginning of the period of registration,
(*b*) Number of agreements concluded during the period of registration,
(*c*) Number of agreements expired within the period of registration,
(*d*) Number of agreements in force at the end of the period of registration.

(3) The importance of each collective agreement should be measured by ascertaining the numerical strength of the contracting parties, i.e., the number of establishments covered, the total number of workers employed in these establishments, and the number of workers covered by each agreement.

The extent to which workers are covered by collective agreements should be indicated by calculating the number of workers covered by agreements as a percentage of the total number of workers in the various industries.

(4) The collective agreements, together with the number of establishments and of workers covered, should be classified according to their principal legal and social characteristics on the following lines:

A. *Nature of Contracting Parties.*—The agreements should be classified according to the nature of the contracting parties as follows:

(*a*) Agreements concluded between an employer and his workers,
(*b*) Agreements concluded between one or more employers, and one or more workers' organizations,
(*c*) Agreements concluded between employers' organizations and workers' organizations.

B. *Scope of Application.*—The agreements should be classified according to the extent of the area in which they are applicable, as follows.

(*a*) Shop agreements: i.e. agreements applicable to a single establishment,
(*b*) Local agreements: i.e. agreements applicable to several or all establishments of similar kind situated in the same locality,
(*c*) District agreements: i.e. agreements applicable to several or all establishments of similar kind situated in several or all localities belonging to a district forming an economic or an administrative unit,
(*d*) National agreements: i.e. agreements applicable to several or all establishments of similar kind in several districts or in the country as a whole.

C. *Subjects Regulated.*—The agreements should be classified in the following two principal groups:

(*a*) Agreements regulating individual conditions of employment only,
(*b*) Agreements regulating—in addition to individual conditions of employment—general matters relative to employment.

In group (*b*) the number of agreements providing for special procedure for the enforcement of the agreement may be shown separately.

The statistics should also indicate the number of agreements which regulate each subject of importance, e.g., wages, hours of work, holidays, conditions of apprenticeship, labour exchanges, works councils, conciliation and arbitration.

D. *Duration of Validity.*—The agreements should be classified according to the period for which they are concluded, as follows:—

(*a*) Three months or less;
(*b*) Three to six months;
(*c*) Six months to one year;
(*d*) One to two years;
(*e*) Two to three years;
(*f*) More than three years;
(*g*) Indefinite period.

E. *Method of Conclusion.*—The agreements should be classified according to the method of the conclusion of the agreements and according to the method of negotiation, as follows:

(*a*) Collective agreements concluded as a consequence of an industrial dispute;
  (i) by direct negotiations,
  (ii) through the intervention of a third party,
(*b*) Collective agreements concluded as a consequence of peaceful discussion:
  (i) by direct negotiations,
  (ii) through the intervention of a third party.

F. *Industries Covered.*—The agreements should be classified according to the principal industrial groups. The classification may be left to the domain of national statistics.

G. *Industrial Importance.*—The agreements should be classified according to their industrial importance, as defined under (3).

(*a*) Classification of agreements by the number of establishments covered:
  (i) Agreements covering one establishment,
  (ii) Agreements covering 2 to 20 establishments,
  (iii) Agreements covering 21 to 100 establishments,
  (iv) Agreements covering more than 100 establishments.
(*b*) Classification of agreements according to the number of workers covered:
  (i) Agreements covering less than 100 workers,
  (ii) Agreements covering 100 to 1,000 workers,
  (iii)Agreements covering 1,001 to 10,000 workers,
  (iv) Agreements covering 10,001 to 100,000 workers,
  (v) Agreements covering more than 100,000 workers,

A distinction should also be made between workers who are members of the organization which is a party to the agreement and other workers to whom the agreement applies in practice.

(iii) Methods of Compiling Statistics of Industrial Disputes

In each country statistics of industrial disputes should be compiled according to the following general principles:—

(1) The basic unit—the case of dispute—should be defined as a temporary stoppage of work wilfully effected by a group of workers or by one or more employers with a view to enforcing a demand. Disputes affecting several establishments should be considered as one case if they are organized or directed by one person or organization.

It is desirable to make, as far as possible, a distinction between strikes and lock-outs.

(2) The statistics should relate to disputes beginning in the period under review, and also, but separately, to those continuing from the previous period. The total of these two groups of disputes represents the number of disputes in existence during the period under review.

(3) The importance of the dispute should be measured by ascertaining the number of establishments and of workers affected by the dispute, the duration of the dispute, and the number of man-days lost on account of the dispute.

The number of establishments affected should be based on the technical unit as defined in censuses of industries.

The number of workers affected should be based on the vacancies caused in the establishments affected by the dispute, and calculated by taking an average of the number of vacancies each day during which the dispute lasted, or where this is not practicable, by taking an average of the number of vacancies recorded at weekly intervals.

The duration of the dispute should be expressed as the number of working days from the date on which the dispute began in the first establishment affected to the date on which it terminated in the last one.

The number of man-days lost should be based on the number of vacancies caused by the dispute during each day of the dispute, or, where this is not practicable, by multiplying the number of days for which the dispute lasted by the average number of vacancies recorded at weekly intervals.

(4) The disputes, together with the number of establishments and workers affected, the duration of disputes, and that of man-days lost, should be classified according to their principal characteristics, viz:

A. *The Matter in Dispute.* The principal criterion should be the relation of the dispute to collective bargaining as follows:

(*a*) Disputes related to collective bargaining:
- (*i*) Concerning trade unionism or refusal to conclude a collective agreement;
- (*ii*) Concerning conditions of employment:
  - (1) Wages
  - (2) Hours of Labour
  - (3) Engagement or dismissal of workers
  - (4) Others

(*b*) Disputes not related to collective bargaining:
- (*i*) Sympathetic disputes
- (*ii*) Political disputes
- (*iii*) Others.

Groups (a) (ii) may also be classified into disputes concerning general terms of future employment, and disputes concerning the interpretation of existing terms of employment.

B. *The Result of the Disputes.*—Disputes should be classified according to their general result from the point of view of workers involved, as follows:

(*a*) Disputes where the workers' demands have been entirely accepted,
(*b*) Disputes where the workers' demands have been partially accepted,
(*c*) Disputes where the workers' demands have been rejected,
(*d*) Disputes where the employers' demands have been entirely accepted,
(*e*) Disputes where the employers' demands have been partially accepted,
(*f*) Disputes where the employers' demands have been rejected,
(*g*) Disputes with indeterminate or unknown result.

C. *The Method of Settlement of the Disputes.*—Disputes should be classified according to the method of their settlement on the following lines:

(*a*) Disputes settled by direct negotiations between the two parties.
(*b*) Disputes settled by the medium of a third party:
- (*i*) Through voluntary conciliation accepted by the parties to dispute,
- (*ii*) Through compulsory conciliation imposed by the law,
- (*iii*) Through voluntary arbitration,
- (*iv*) Through compulsory arbitration.

(*c*) Disputes terminated without successful negotiations.

D. *The Industries Affected.*—Disputes should be classified according to the principal industrial groups. The classification may be left to the domain of national statistics.

E. *The Extent of the Disputes.*—Disputes should be classified according to the number of establishments affected as follows:

(*a*) Disputes affecting one establishment,
(*b*) Disputes affecting 2 to 10 establishments,
(*c*) Disputes affecting 11 to 20 establishments,
(*d*) Disputes affecting 21 to 100 establishments,
(*e*) Disputes affecting more than 100 establishments.

F. *The Importance of Disputes.*—Disputes should be classified according to their importance, taking as criteria the number of workers affected, the duration of the disputes, and the number of man-days lost.

(*a*) The classification of disputes by the number of workers affected should be as follows:
- (i) Disputes affecting less than 10 workers,
- (ii) Disputes affecting 10 to 100 workers,
- (iii) Disputes affecting 101 to 1,000 workers,
- (iv) Disputes affecting 1,001 to 10,000 workers,
- (v) Disputes affecting 10,001 to 100,000 workers,
- (vi) Disputes affecting over 100,000 workers.

(*b*) The classification of disputes by their duration should be as follows:
- (i) Disputes lasting less than 2 working days,
- (ii) Disputes lasting from 2 to 10 working days,
- (iii) Disputes lasting from 11 to 50 working days,
- (iv) Disputes lasting from 51 to 100 working days,
- (v) Disputes lasting from 101 to 300 working days,
- (vi) Disputes lasting over 300 working days.

(*c*) Disputes should be classified by the number of man-days lost as follows:

(i) Disputes involving the loss of less than 20 man days,
(ii) Disputes involving the loss of 20 to 1,000 man days,
(iii) Disputes involving the loss of 1,000 to 50,000 man days,
(iv) Disputes involving the loss of 50,001 to 1,000,000 man days,
(v) Disputes involving the loss of 1,000,001 to 30,000,000 man days,
(vi) Disputes involving the loss of over 30,000,000 man days.

G. *Amount of wages lost.*—The wage loss caused by each dispute may be estimated by multiplying the number of man-days lost by the average daily wages of the workers affected. The classification of disputes according to the amount of wages lost may be left to the domain of national statistics.

(5) For the purpose of comparing the risk of industrial disputes between different industries and countries, frequency and severity rates of disputes should be calculated.

The exposure to risk should be expressed in terms of the number of full-time workers, obtained by dividing the total number of days worked during the period by the total number of normal working days in the same period.

The frequency rate should show the number of disputes per 100,000 full-time workers. The severity rate should show the number of man-days lost per 10,000 full-time workers.

(6) The above-mentioned data should be published at least yearly. It is desirable that the preliminary data, particularly those concerning the number of disputes, should be published monthly.

(iv) CLASSIFICATION OF INDUSTRIES

(1) This Conference recommends the International Labour Office to elaborate the list of industries submitted to it so as to show in greater detail the contents of each industrial group in the different countries, obtaining from the Governments any necessary information on the subject. This amplified list should be submitted in due course to the different Governments for their information and comment.

(2) The Conference also recommends the International Labour Office to pursue its endeavours in collaboration with the League of Nations and the International Statistical Institute to compare the existing classifications and to promote their gradual readjustment in the direction of greater uniformity and better comparability.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF OCTOBER, 1926, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

EMPLOYMENT at the beginning of October showed a further moderate improvement, 2,231 workers being added to the staffs of the 5,918 reporting employers, whose payrolls aggregated 865,013 persons. Although this gain is somewhat less extensive than that noted on the corresponding date last year, employment continued to be in decidedly greater volume than in any other month since 1920; the index rose from 104.9 on September 1 to 105.2 at the beginning of October, compared with 98.3, 93.9, 99.5, 94.6 and 90.2 on October 1, 1925, 1924, 1923, 1922 and 1921, respectively.

Manufacturing, construction and services showed curtailment, while increases were recorded in logging, mining, transportation and trade; in the last named the gains were the largest indicated on October 1 of any year of the record.

Employment by Provinces

Ontario and the Prairie Provinces registered heightened activity; in Quebec the situation was practically unchanged, while employment in the remaining provinces showed a falling off.

Maritime Provinces.—Construction, especially the highway division, released a large number of employees and there were also losses in manufacturing, transportation and hotel services. On the other hand, logging and coal mining reported improvement. Statements were tabulated from 516 employers with 69,597 workers, as compared with 71,360 in the preceding month. Reductions had also been indicated on October 1, 1925, when the situation was less favourable.

Quebec.—Practically no general change in employment was reported in Quebec, according to 1,295 firms, whose working forces totalled 248,742 persons, a decline of 0.04 p.c. from their September 1 staffs. There were considerable losses in iron and steel plants and smaller decreases in lumber, pulp and paper and electric current works, and in the street railway and cartage group, but leather, textiles, mining, trade, steam railway operations and shipping recorded important increases. Although improvement had been noted at the beginning of October last year, the index of employment then was over 10 points lower.

Ontario.—The trend in Ontario continued to be favourable; 2,698 establishments reported that they had added 2,856 persons to their payrolls, bringing them up to 350,841 on October 1, when the index, at 98.7, was higher than in any other month of the last five years. Manufacturing, logging, mining and trade registered heightened activity, while construction showed a seasonal falling off during the month under review.

Prairie Provinces.—Continued gains were noted in the Prairie Provinces, where 755 firms increased their forces from 113,318 employees on September 1 to 116,453 at the beginning of October. Manufacturing, mining, transportation and trade reported considerable improvement; construction, however, was seasonally slacker, as was work in summer hotels. Employment was in greater volume than on the corresponding date a year ago, when additions to staffs had also been made.

British Columbia.—For the first time since the beginning of April, employment in British Columbia showed curtailment; this took place chiefly in the food, construction and transportation industries, while logging and coal mining were more active. A combined working force of 79,380 persons was reported by the 654 co-operating employers, who had 81,259 in the preceding month. Moderate improvement had been recorded on October 1, 1925, but the index then was over four points lower.

Table I gives index numbers by economic areas.

Employment by Cities

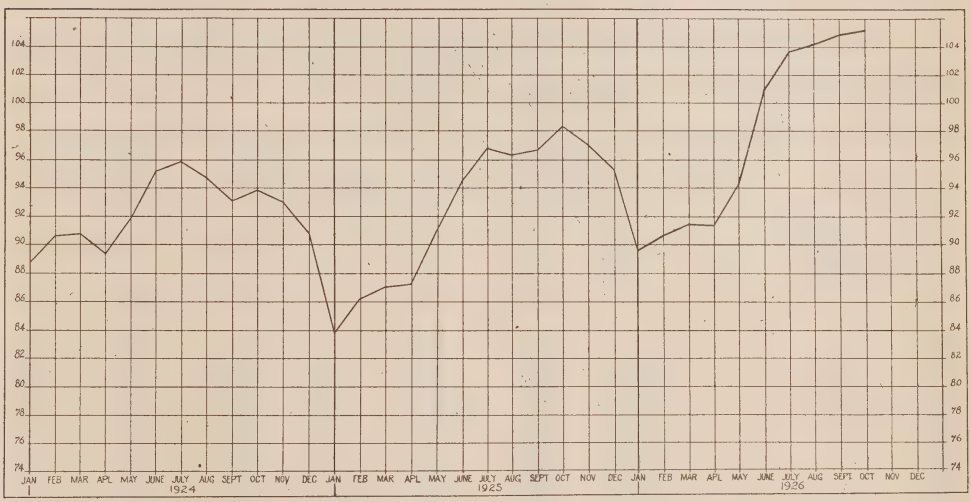
Improvement was shown in Quebec, Toronto, Ottawa and Winnipeg, while employment declined in Montreal, Hamilton, Windsor and Vancouver.

Montreal.—A further small reduction was reported in Montreal, where 704 firms employed 118,514 persons, or 213 less than in the preceding month. Railway car shops released a large number of workers, following a season of great activity, and electric current plants, local transportation and building were also slacker. On the other hand, the leather, vegetable food, textile and printing groups recorded moderate improvement and there were pronounced gains in shipping, on road construction and in trade. Conditions were

considerably better than on October 1, 1925, when large additions to staffs were made.

Quebec.—Statistics were compiled from 91 Quebec employers with 9,374 workers, whose reports showed that there was an increase in manufacturing, but a decrease in transportation. The index was several points higher than on the corresponding date last year, although more marked gains were then registered.

Toronto.—Employment in Toronto showed the ninth consecutive increase recorded so far this year, 718 persons having been added to the working force of the 780 co-operating firms, who had 100,125 employees. The greatest improvement was noted in manufacturing, particularly in the textile and food industries, while construction was seasonally quiet. Rather larger gains were indicated on October 1, 1925, but employment on the date under review was at the highest level reached since the record for Toronto was commenced in 1922.



Ottawa.—Further improvement was noted in Ottawa, chiefly in manufacturing and trade. The 128 employers furnishing statistics added 107 workers to their staffs, bringing them up to 10,579 at the beginning of October. Employment was not quite as brisk as on the same date in 1925.

Hamilton.—Employment in Hamilton, after eight months of uninterrupted expansion, showed a moderate decline, but the situation continued to be decidedly more favourable than in any month of previous years of the record. Manufacturing, especially of iron and steel products, reported curtailment, while a slightly upward tendency was shown in other groups. A combined working force of 30,272 persons was employed by the 201 co-operating firms, as compared with 30,564 on September 1.

Windsor and Other Border Cities.—Automobile works in the Border Cities released some help, and construction was also slacker; 80 establishments reduced their working forces from 11,987 persons on September 1 to 11,452 on the date under review. Considerable improvement had been indicated on October 1 last year, but the index then was several points lower.

Winnipeg.—Continued important gains were reported in Winnipeg, where the 277 employers furnishing data enlarged their payrolls by 809 workers to 29,081 at the beginning of October. Trade showed pronounced improvement, while manufacturing was rather dull. This increase greatly exceeded that recorded on the corresponding date last year, when the index was over 15 points lower.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January 1920, as 100.

Vancouver.—Food and tin can factories reported seasonal losses, and there was also a falling off in employment in transportation. Returns were compiled from 224 firms in Vancouver, whose staffs aggregated 25,903 persons, compared with 26,884 in the preceding month. Although an upward tendency had been indicated on October 1, 1925, the index then was considerably lower.

Index numbers by cities are given in Table II.

Manufacturing Industries

After eight months of uninterrupted expansion, employment in manufacturing showed a comparatively small decline on October 1; this was chiefly due to seasonal losses in lumber mills and fish canneries, together with reductions in pulp and paper and iron and steel, particularly in vehicle works. In the last named, a large share of the curtailment was in accordance with the pre-arranged plan of large railway car shops, in which employment in 1926 has been at a higher level than for several years. On the other hand, boot and shoe, edible plant, textile and electrical apparatus factories registered important increases. Statements were compiled from 3,825 manufacturers employing 476,429 operatives, compared with 477,669 in the preceding month. The index number continued to be higher than on the same date in any other year since 1920.

Animal Products, Edible.—Employment in fish preserving establishments and dairies showed a seasonal recession, which was rather larger than that recorded on October 1, 1925. The situation, however, was more favourable than on the corresponding date in any of the last five years. Statistics were tabulated from

NOTE.—Number employed by the reporting firms in January, 1920=100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing
1921							
Oct. 1	90·2	93·1	89·2	85·9	100·0	96·4	81·3
1922							
Oct. 1	94·6	91·8	92·0	93·6	101·9	100·1	86·7
1923							
Oct. 1	99·5	97·0	104·0	96·0	100·7	104·2	91·8
1924							
Jan. 1	88·7	86·3	90·5	86·1	94·3	90·9	80·1
Feb. 1	90·6	83·2	92·8	90·0	92·1	92·7	84·9
Mar. 1	90·7	82·4	93·5	89·8	89·6	97·1	86·0
April 1	89·3	84·6	91·5	87·6	87·0	99·6	86·5
May 1	91·8	88·1	94·1	89·8	89·4	102·9	87·7
June 1	95·2	90·0	99·9	92·1	94·1	103·4	88·4
July 1	95·9	90·6	100·6	91·4	99·1	105·8	87·7

183 firms in the animal food group employing 15,901 persons, as compared with 16,816 at the beginning of September. The bulk of the decline was in British Columbia.

Fur Products.—There was an increase of 101 persons in the number employed by 23 fur manufacturers having 1,223 employees. The greatest gains were in Quebec and Ontario. This is the most pronounced increase recorded in the small fur group since 1923.

Leather and Products.—Further and larger gains were reported in boot and shoe factories and also in other divisions of the leather group causing the index to be higher than on the same date of any year since 1920. Firms in Quebec and Ontario registered most of the improvement. Statements were received from 191 employers whose payrolls rose from 17,124 persons in the preceding month to 17,687 on October 1. This increase exceeded those noted on the same date in previous years.

Lumber and Products.—Continued and more marked losses in personnel were recorded in lumber mills, while furniture factories were slightly busier; 1,143 workers were let out from the staffs of the 726 establishments reporting, which had 57,868 at the beginning of October. All provinces shared in this curtailment, which, was, however, heaviest in Quebec and Ontario. The contraction involved a smaller number of workers than that registered on October 1, 1925, when the index number was lower.

Musical Instruments.—Employment in musical instrument factories showed a further increase, the trend having been consistently favourable during the last eight months. Although the improvement was not as pronounced as on the corresponding date a year ago, the level of employment was much higher on October 1, 1926. The working forces of the 39 co-operating manufacturers totalled 3,465 workers, as against 3,311 in the preceding month. The largest gains took place in Quebec and Ontario.

Plant Products Edible.—Fruit and vegetable canneries, biscuit, chocolate and confectionery, flour and other cereal plants reported seasonal activity, while there was a falling off in the starch and glucose, sugar and syrup

divisions. There were important increases in Ontario and smaller gains in the other provinces except British Columbia, in which there was an unfavourable movement owing to the completion of the season's work in some establishments. Statistics were received from 310 factories, employing 31,557 persons, or 1,804 more than in their last report. Additions to staffs on a somewhat larger scale were noted on October 1, 1925, but the index number on the date under review was slightly higher than in any other month since 1920.

Pulp and Paper Products.—Following six months of uninterrupted expansion, employ-

[1]NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

ment in the pulp and paper group, chiefly in pulp and paper mills, showed a decline, in which all except the prairie provinces shared. An aggregate working force of 57,116 persons was reported by the 455 manufacturers whose returns were received and who employed 58,129 at the beginning of September. Practically no change in the situation was indicated on the same date last year, when the index, at 102.8, was over nine points lower than on October 1 in the present year.

Textile Products.—There was a pronounced increase in employment in this division, the gain being larger than that noted at the beginning of October, 1925, when the level of employment was lower. The hosiery and knitting, garment and headwear groups reported most of the improvement, mainly in Quebec and Ontario. Data were tabulated from 509 establishments, which increased their staffs by 1,740 persons to 72,660 at the beginning of October.

Tobacco, Distilled and Malt Liquors.—There was a reduction in employment in this division, largely in Quebec; 254 persons were released from the staffs of the 102 co-operating firms, who had 11,873 workers on the date under review. Employment was in rather less volume than on October 1 last year.

Clay, Glass and Stone Products.—Activity declined in building material factories, chiefly in brick yards in the Prairie Provinces, the contraction being seasonal in character. Statements were received from 121 employers, with 10,678 persons as compared with 10,933 on September 1. The volume of employment during most of 1926 has been considerably greater than in any year since 1920; the index number stood at 106.7 on October 1, 1926, as compared with 90.0 on the corresponding date in 1925.

Electric Current.—Losses in employment on a much smaller scale than on October 1 last year were recorded in electric current plants, 88 of which reduced their working forces from 12,616 employees at the beginning of September to 12,333 on the date under review. There were decreases in Quebec and minor gains in Ontario, while elsewhere little general change was shown.

Electrical Apparatus.—Further expansion in the electrical appliance group caused the addition of 460 workers to the staffs of the 38 reporting firms, who had 10,344 operatives. Most of the increase took place in Ontario. The index of employment, at 131.3, was higher than at any other time in the record; rather larger gains had been registered at the beginning of October a year ago.

Iron and Steel Products.—Statistics were tabulated from 638 manufacturers in the iron and steel group, whose payrolls declined from 127,300 persons on September 1, to 124,861 at the beginning of October. The bulk of this curtailment was in railway car shops, in fulfilment, as already pointed out, of plans made some months ago, which caused employment to be very active in these particular plants during the summer. Agricultural implement and steel shipbuilding establishments were also slacker, but improvement was shown in some other branches of the iron and steel group, notably in heating appliance and iron pipe works. There were heavy losses in Quebec and Ontario, a small decline in the Maritime Provinces and moderate gains elsewhere. On the corresponding date last year important increases were noted, but the index number then, and also on October 1, 1924, was lower.

Miscellaneous Manufacturing Industries.—The production of jewellery supplies, lay figures and other goods coming under this heading, showed an increase in Ontario. The 66 co-operating firms in the Dominion had 4,053 employees, as against 3,872 in their last report.

Logging

Seasonal activity in bush work caused the addition of 3,639 men to the staffs of the 203 logging firms making returns, who had 18,133 employees. Rather larger gains were noted on October 1, 1925, when employment was in somewhat greater volume. All provinces except Quebec shared in the upward movement, which was most pronounced in Ontario and British Columbia.

Mining

Coal.—Coal mining in the Maritime Provinces and British Columbia showed a moderate advance, while in the Prairie Provinces there were important gains. Returns were compiled from 88 operators, with 26,445 workers, or 1,280 more than in the preceding month. This improvement, following the larger expansion indicated in September, caused the index number to be higher than on October 1 a year ago, although greater increases were then indicated, but as recovery from losses in the preceding month.

Metallic Ores.—The trend of employment in metallic ore mining was upward, 114 per-

sons having been added to the staffs of the reporting firms, who had 11,668 workers on October 1. Decided reductions in personnel were noted on the corresponding date a year ago, when the index number was over nine points lower. There were gains in Ontario and Quebec, while in British Columbia employment declined.

Transportation

Street and Electric Railways and Cartage.—There was a decrease of 400 persons in the staffs of the 114 firms making returns in this division, who had 19,581 employees. Most of the loss took place in Quebec. Improvement had been indicated on October 1, 1925, and the index number then was higher.

Steam Railways.—Continued and important increases were noted on the date under review; 101 employers reported 82,037 persons on payroll, or 2,665 more than in the preceding month. The largest increases were in the Prairie Provinces, but improvement was also noted in Quebec. Employment was in much greater volume than on the corresponding date in 1925.

Shipping and Stevedoring.—According to statistics received from 57 firms in the water transportation group, they enlarged their payrolls by 611 persons, to 16,144 on October 1. There were declines in the Maritime Provinces and Ontario, but in Quebec the movement was upward. Additions to staff of practically the same size were made at the beginning of October a year ago; the index number was then, however, about 20 points lower.

Construction and Maintenance

Building.—Following six months of pronounced expansion, there was a comparatively small reduction in building construction, 458 persons being laid off by the 341 contractors furnishing statistics, who had 37,973 workers. Ontario and British Columbia reported the losses. Although activity had increased on October 1, 1925, employment then was at a much lower level.

Highway.—A further diminution in employment was indicated on highway construction, according to 121 employers with 22,841 workers as against 25,555 in their last report. Most of the decline took place in the Maritime Provinces, Ontario and British Columbia. Somewhat more extensive curtailment was registered on the same date a year ago.

Railway.—Employment in the construction departments of the railways showed another decline, which was larger than that noted on October 1 of the preceding year, when the index number was over 18 points lower. A combined working force of 46,175 persons was employed by the 35 co-operating contractors and divisional superintendents, who had 48,401 workers on September 1, 1926. There were losses in all provinces except Quebec, that in the Prairie Provinces being most extensive.

Services

The closing of their season caused further losses in the staffs of summer hotels, while laundries were slightly busier. The result was a decline of 690 persons in the payroll of the 174 firms in the service group whose statistics were tabulated and who had 15,633 employees on the date under review. Similar contractions took place on October 1, 1925, but the index number then was several points lower.

Trade

Retail and wholesale trading establishments increased their forces, this being the sixth consecutive increase recorded since the spring; it was also the largest gain indicated on October 1 of any year of the record, which was begun in 1920. Reports were compiled from 560 firms, employing 60,016 workers, or 1,607 more than in the preceding month. The expansion was fairly general in all except the Maritime Provinces, but that in Quebec and the Prairie Provinces was the most marked. The situation was better than in the autumn of any previous year of the record.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns for October 1, 1926.

In New Zealand, the Companies' Empowering Act, 1924, permits the issue of "labour shares" to all employees and to owners of capital who are actively engaged in an enterprise. After charging all costs of production, capital and reserves, the surplus profits may be divided among the holders of labour shares in proportion to the value of the service rendered by them. These shares carry the usual voting rights, but the admission of labour to control and management may, under the act be regulated to any extent by the company's charter.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING SEPTEMBER 30, 1926, AS REPORTED BY UNIONS MAKING RETURNS

UNEMPLOYMENT as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters from 1916 to 1921 inclusive and by months from 1922 to date. The trend of the curve during the quarter under review was downward during the first month of the quarter, but took a slight upward turn in the following two months. The level reached during July was the most favourable attained this year or at any time since September, 1923.

When comparing July with June the situation in Nova Scotia, Quebec, Ontario, Manitoba and Saskatchewan was slightly better, but in the remaining three provinces there were small reductions. A higher level of employment was recorded in the manufacturing industries due, for the most part, to the exclusion of the garment workers in the Province of Quebec who were on strike during July. Among building tradesmen and transportation workers there was a slight increase in the amount of work afforded. Fishermen reported considerable idleness.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

Quarterly 1916-1921, Monthly 1922-1926

The present article on unemployment deals with the situation reported during the quarter ending September 30th, 1926, and is based on the returns of the locals reporting at the end of each month throughout the quarter. The percentage out of work at the close of July was 2.3 or 1.8 per cent lower than in June. During the following two months unemployment gradually increased, there being 2.5 per cent of the members unemployed at the end of August and 3.3 per cent at the close of the quarter. The situation throughout the quarter was more favourable each month than in the corresponding period last year, the percentage of idleness on September 30th standing over two points lower than at the close of September, 1925.

In August Nova Scotia, Ontario, Alberta and British Columbia unions were afforded slightly more work than in July, but in the remaining provinces there were nominal reductions. None of the changes, however, were particularly pronounced. The manufacturing industries were slightly less active than in July and the trend of employment in the

building trades was also downward. Fishermen were much better employed and the situation both in Nova Scotia and Alberta coal fields was slightly more favourable. Transportation workers reported a somewhat lower level of employment.

During September a better situation than in August was shown in Nova Scotia, New Brunswick, Manitoba and Alberta, the largest gain being that of 3 per cent in Alberta mostly due to greater activity in the coal mining areas. Of the reductions, that of 3.9 per cent in Quebec due to idleness in railway car shops, was the most noteworthy. Unions in the manufacturing industries registered more unemployment than in August owing to the inactivity in the metal trades. The situation in the coal mines in Nova Scotia and Alberta improved. The level of employment in the building trades was slightly lower than in August and among transportation workers there was but a nominal change.

Table I on this page summarizes the returns by provinces for each month from July 1922 and Table II on page 1131 shows the percentages of unemployment reported in different groups of industries, also by months from July, 1922.

In July lumber and logging workers reported no unemployment as compared with much idleness in the same month last year. The manufacturing industries registered considerable improvement, mainly due to the strike situation in the Montreal garment trades and their consequent exclusion from the tabulations for July of this year, although there were gains in the printing trades and among textile, iron and steel and glass workers. Activity in the building trades and the mining industry was also greater. Transportation workers were slightly busier than last year. Fishermen reported much slackness whereas last year they were fully employed.

In August the movement in the manufacturing industries was toward greater employment as compared with August last year, the garment trades, iron and steel, glass, textile and printing trades all contributing to this upward trend. Building and construction workers were slightly busier and a nominal increase was indicated in the transportation industry. Fishermen showed a slight drop in the volume of business afforded.

When comparing September with the corresponding month last year a considerably better situation was shown in the manufacturing industries attributable, for the most part, to the exclusion of the garment trades in Quebec due to a strike in these trades in September this year, and also in a lesser degree to greater employment among textile workers. Glass workers, on the other hand, were much slacker and lessened activity was also reported among iron and steel workers. In the building trades there was an increase in employment of 5 per cent. Transportation workers reported practically no change in the situation. Lumber workers were much busier and a higher level of employment was also maintained among coal miners.

The accompanying tabulation (table III) shows the percentages of unemployment for the months of July, August and September for all Canada and also by provinces for the month of September. For this month reports were received from 1,540 locals with a combined membership of 146,202 persons of whom 4,837, or a percentage of 3.3 were unemployed.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

EMPLOYMENT OFFICE REPORTS FOR SEPTEMBER, 1926

THE volume of business transacted by the offices of the Employment Service of Canada during the month of September, 1926, showed a decline of about 24 per cent in the average daily placements when a comparison is made with the records of last month, and also with those of September a year ago, the decrease from the preceding month being partly due to unfavourable weather conditions throughout the West, which greatly affected harvest operations. The reduction in placements from the period of 1925 was also greatest in the farming group, accentuated by minor declines in manufacturing, logging, mining, construction and services, these being offset, in part, by gains in trade.

A summary of the reports from the offices shows that the average number of applications recorded during the first half of September was 2,642 daily as compared with 3,540 daily during the preceding period and with 3,909 daily during the corresponding period in 1925. Applications for work during the latter half of the month registered 2,231 daily in contrast with 2,349 daily during the latter half of September a year ago.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - - - - - - - - - Placements o—o—o—o—o—o

The accompanying chart shows the trend of employment since January, 1924, as represented by the ratio of vacancies notified, and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies rose abruptly during the first half of the month, followed by a sharp decline during the latter half of the period, while the curve of placements registered a downward trend throughout the month. In the former instance the level maintained was much higher than that registered during September last year, while in the latter case it was slightly lower. The ratio of vacancies to each 100 applications was 111.6 and 99.1 during the first and second half of September, 1926, in contrast with the ratio of 96.7 and 98.1 during the same periods in 1925. The ratio of placements to each 100 applications during the period under review was 87.1 and 84.7 as compared with 91.1 and 84.8 during the corresponding month a year ago.

Employers notified the Service of a daily average of 2,949 vacancies during the first half and 2,210 during the latter half of the month under review, as compared with a daily average of 3,781 and 2,304 vacancies

during the month of September, 1925. Vacancies offered to the Service during the latter half of August, 1926, averaged 3,595 daily.

The Service effected a daily average of 2,300 placements during the first half of September, of which 1,898 were in regular employment and 402 in work of one week's duration or less, as compared with a total average placement during the preceding period of 3,238 daily and with 3,563 daily during the first half of September, 1925. During the latter half of the month under review placements averaged 1,889 daily (1,454 regular and 435 casual) as compared with an average of 1,992 daily during the corresponding period last year.

During the month of September, 1926, the offices of the Service referred 53,572 persons to vacancies and effected a total of 52,150 placements. Of these the placements in regular employment numbered 41,681, of which 37,630 were of men and 4,051 of women while placements in casual work totalled 10,469. Opportunities for employment reported by employers numbered 53,136 for men and 10,970 for women, a total of 64,106. The number of applications for work was 60,692, of which 48,737 were from men and 11,955 from women

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812

1926 (9 months).....	235,986	80,711	316,697

NOVA SCOTIA

The demand for workers as reflected by orders listed at offices in Nova Scotia during September was nearly 6 per cent lower than in the preceding month, but nearly 10 per cent higher than during the corresponding month last year. Placements were nearly 14 per cent less than in August, but 1 per cent higher than in September, 1925. The most noteworthy gain in placements over last year was in the services group, but this and minor gains in other groups were offset by declines in logging, farming and construction and maintenance. Placements by industrial divisions included: manufacturing, 45; logging, 43; construction and maintenance, 55; trade, 49; and services, 236, of which 153 were of household workers. Placements in regular employment numbered 156 of men and 89 of women.

NEW BRUNSWICK

During September offices in New Brunswick received orders for about 4 per cent less workers than in August, but over 21 per cent more than during September last year. Placements were over 1 per cent higher than in August and nearly 19 per cent above September, 1925. All industrial divisions except farming, services and trade showed increased placements over last year, those in construction and maintenance being the most pronounced. Industrial groups in which most of the placements were effected during the month included: manufacturing, 63; logging, 111; construction and maintenance, 123; and services, 444, of which 249 were of household workers. During the month 274 men and 95 women were placed in regular employment.

QUEBEC

Opportunities for employment as indicated by orders listed at employment offices in the Province of Quebec during September were nearly 4 per cent better than in the preceding month, and over 27 per cent in excess of the corresponding month last year. There was a gain in placements of nearly 5 per cent over August, and of over 7 per cent in comparison with September, 1925. Placements in the construction and maintenance group were more than double those of last year, and entirely accounted for the gain under this comparison as there were fewer placements in all other divisions. The most noteworthy decline occured in the services group. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 150; logging, 860; construction and maintenance, 1,123; and services, 495, of which 330 were of household workers. Regular employment was secured for 2,324 men and 403 women, during the month.

ONTARIO

Orders listed at Ontario offices during September called for over 8 per cent more workers than in August, but over 3 per cent less than in September, 1925. Placements were nearly 8 per cent higher than in August, but over 2 per cent less than during September last year. Increased placements over the corresponding month of last year were recorded in all industrial divisions except farming,

communication, finance, and construction and maintenance, the declines in the latter being the most pronounced. The most substantial gain occurred in the logging industry where the demand was not fully met. Industrial groups in which most of the placements were effected during the month were: manufacturing, 2,039; logging, 1,303; farming, 1,606; mining, 137; transportation, 734; construction and maintenance, 3,246; trade, 430; and services, 3,903, of which 2,523 were of household workers. During the month 8,173 men and 1,314 women were placed in regular employment.

MANITOBA

There was a decline of over 23 per cent in the number of positions offered through offices in Manitoba during September when compared with the preceding month, but a gain of over 5 per cent in comparison with the corresponding month last year. Placements were over 21 per cent less than in August, but 5 per cent higher than during September, 1925. Farm placements were considerably higher than last year and increases were also shown under services and trade, but these gains were partly offset by minor reductions in other industrial divisions. Placements by industrial groups included: manufacturing, 231; logging, 114, all transfers to points in the Port Arthur zone; farm, 4,856; construction and maintenance, 490; trade, 410; and services, 1,950, of which 1,487 were of household workers. Placements in regular employment during the month numbered 5,265 of men and 520 of women.

SASKATCHEWAN

Employment opportunities as indicated by orders listed at offices in Saskatchewan during September were over 25 per cent less than in the preceding month, and nearly 31 per cent below September last year. There was a decline in placements of nearly 37 per cent when compared with August and of nearly 53 per cent in comparison with September, 1925. A reduction of about 55 per cent in farm placements almost entirely accounted for the adverse change when comparing the month under review with September last year, although minor reductions were shown in all other industrial divisions except communication, transportation, services and trade. Industrial groups in which most of the placements were effected during the month included manufacturing, 76; farming, 11,742; construction and maintenance, 334; trade, 93; and services, 909, of which 496 were of household workers. Regular employment was found for 12,259 men and 394 women during the month.

ALBERTA

During the month of September positions offered Alberta offices declines 34 per cent from the preceding month and over 21 per cent in comparison with the corresponding month last year. Placements were nearly 33 per cent less than in August, and over 20 per cent less than during September, 1925. A decline in farm placements was the predominating factor in causing the reduction from last year, although less placements were also made in all other groups except manufacturing, transportation and trade. Placements by industrial divisions during the month under review included: manufacturing, 318; farming, 5,639; mining, 102; transportation, 120; construction and maintenance, 677; trade, 195; and services, 823, of which 557 were of household workers. Placements in regular employment numbered 6,696 of men and 421 of women.

BRITISH COLUMBIA

There was a decline of nearly 8 per cent in the number of positions offered by employment offices in British Columbia during September when compared with the preceding month and of 3 per cent in comparison with September last year. Placements were nearly 54 per cent lower than in August and nearly 3 per cent less than in September, 1925. Increased placements over last year were shown in logging, farming and trade; the most noteworthy declines were in transportation, construction and maintenance, and services. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 777; logging, 424; farming, 1,335; mining, 106; transportation, 286; construction and maintenance, 899; trade, 295; and services, 1,082, of which 644 were of household workers. There were 2,483 men and 815 women placed in regular employment during the month.

Movement of Labour

During September, 1926, the offices of the Employment Service of Canada made 41,681 placements in regular employment, of which 32,814 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 4,932 were granted the Employment Service reduced rate, 3,199 going to points within the same province as the despatching office and 1,733 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employ-

ment, for which no workers are available locally.

Persons travelling on reduced transportation in Quebec numbered 496, all of whom were bushmen, 276 going to points within the province and 220 to other provinces. The majority of the provincial transfers were toward the logging camps around Montreal and Quebec City. The interprovincial movement was entirely from Hull to Northern Ontario logging districts, 119 bushmen going to points in the vicinity of Sudbury, 92 to camps near North Bay, and 9 to Cobalt.

The offices in Ontario granted 676 certificates, 608 of which were provincial and 68 interprovincial. Of the provincial transfers 39 were bushmen for Sudbury, Timmins, North Bay, Sault Ste. Marie, Fort William and Port Arthur logging camps, and 193 were building and highway construction labourers for the Fort William, Cobalt, Timmins and Port Arthur districts. From Sudbury 2 mill hands were transferred within the Sudbury zone, and from North Bay 2 bricklayers went to Timmins, 6 miners to Cobalt, and one machinist to St. Catharines. Oshawa received one diemaker from Windsor, North Bay 3 sawmill labourers from London, Timmins one cook-general from Toronto, St. Catharines one machinist from Timmins, and Port Arthur 3 machinists from Hamilton. St. Catharines issued transportation to one machinist and one bricklayer travelling to Port Arthur and one boilermaker to Kingston, and Port Arthur transferred one miner within its own zone. Of those going outside the province, 2 were carpenters sent to Hull from Sudbury, and 2 were miners going from Timmins to the mining areas around Sydney, N.S. The remaining 64 were all farm labourers transferred from Fort William and Port Arthur, 61 for Manitoba harvest districts and 3 for Saskatchewan.

In Manitoba 1,906 certificates were granted 887 provincial and 1,019 interprovincial. Of the former, Winnipeg sent one housekeeper, one blacksmith, one construction labourer, one cook and one cleaner to Brandon, one baker to Dauphin, and the remainder included 858 farm labourers, 11 farm domestics, and 9 female hotel workers for various provincial points, all of whom were despatched by the Winnipeg office. Three farm hands were also despatched by Dauphin. Of those transferred to other provinces, Port Arthur received 4 firemen, 3 hoisting engineers, 59 sawmill labourers, 133 bushmen, 12 construction labourers, one engine room helper, 2 stationary engineers, one cook, one hookman, one gas engineer, and 3 kitchen workers,; Moose Jaw received 3 farm domestics; Regina one farm domestic; Weyburn one female hotel worker and one farm domestic; and Edmonton one engineer, all from Winnipeg. In addition, Winnipeg transferred 782 farm hands to Saskatchewan points and 8 to Alberta farms, and Dauphin sent 2 farm hands to Saskatchewan.

Of the 555 persons transferred at the special rate in Saskatchewan, 541 were going to provincial points and 14 to other provinces. The provincial movement included 12 railway teamsters, 2 sawmill labourers and 9 bushmen travelling from Saskatoon to points in the Prince Albert zone, one machine man going from Swift Current to Moose Jaw and 3 bushmen and one housekeeper from Prince Albert to points within its own zone. From Regina one domestic and one cook received transportation to Moose Jaw, one carpenter to Prince Albert, and 2 waitresses within the Regina zone; while from Moose Jaw one housekeeper went to North Battleford, and 2 cooks and one housekeeper to points within the Moose Jaw zone. The remaining 504 provincial transfers were into Saskatchewan harvest areas, the greater volume of the business being transacted through the Moose Jaw office. Of those going to other provinces, 8 farm hands travelled to Alberta points, 3 from Saskatoon, 2 from Regina and 3 from Moose Jaw, and 5 farm hands went to Manitoba districts 4 from Regina and one from Moose Jaw. From Moose Jaw also one cook was despatched to Medicine Hat.

Alberta offices issued 1,056 certificates for reduced transportation, 699 to persons going to points within the province, and 357 to persons travelling outside the province. Of the latter, one engineer, one derrick man, one oil driller, 2 labourers and one cook went from Calgary to Saskatoon; and 350 farm hands travelled to various points in Saskatchewan, the majority of these being sent from Edmonton and district. In addition Medicine Hat transferred one farm hand to Manitoba. Within the province Edmonton despatched 2 female hotel workers, 17 labourers, one gas fitter, 19 mine labourers, 3 carpenters, one engineer, 2 housekeepers, one machinist, 4 miners, one cook and 2 cookees to points within its own zone; Calgary transferred one sheep herder to Medicine Hat, one logger to Lethbridge, and 5 labourers, and one waitress within the Calgary zone. The remaining 638 were farm labourers sent by the Edmonton, Calgary and Medicine Hat offices to various provincial points.

In British Columbia 243 certificates for transportation were granted, 188 provincial and 55 interprovincial. Provincially, Vancouver transferred 8 miners, 2 flunkeys, one timberman, 10 teamsters, one machinist, 13 labourers, one engineer, one housekeeper and 2

cooks to Penticton, 12 miners, 34 labourers, 1 engineer, 4 carpenters, 8 cannery workers; 4 cooks and one handyman to Kamloops, 3 miners to Revelstoke, one engineer to Cranbrook; 47 carpenters, one painter and one machinist to Nelson; one farm labourer to Vernon, one engineer to Prince George; one box maker, 8 labourers and one apple picker to Kelowna; and 3 miners, one cook, 2 labourers and one chambermaid within the Vancouver zone. From Prince Rupert 2 miners, and from Prince George 8 bushmen and 2 culvert builders were sent to employment in their respective zones, while from Victoria one fruit picker was transferred to Vernon. Of the interprovincial transfers, 2 were housekeepers, one going to each of the Yorkton and Moose Jaw zones from Victoria, and the remainder were farm hands, harvesters and threshers 38 for employment in Alberta and 14 for Saskatchewan.

Of the 4,932 workers who benefited by the Employment Service reduced transportation rate, 1,976 were carried by the Canadian National Railways, 2,862 by the Canadian Pacific Railway, 87 by the Temiskaming and Northern Ontario Railway, and 7 by the Pacific Great Eastern Railway.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JULY TO SEPTEMBER, 1926

THE business of the offices of the Employment Service of Canada during the third quarter of 1926 was somewhat less in volume than that transacted during the corresponding quarter of last year as there was a decline of about 5 per cent in opportunities for employment, and over 9 per cent in the placements in regular and casual employment. This reduction was chiefly in the farming group, in which the demand for workers at the peak of the harvest season could not be fully met, and which was also adversely affected by unfavourable weather conditions prevailing throughout the West during the latter part of the period. Mining also showed lessened activity. These losses, however, were partly offset by substantial gains in manufacturing, logging, transportation, construction and maintenance, services and trade. All provinces except Saskatchewan and Alberta participated in the gains registered in vacancies offered, while declines in placements were recorded by the same two provinces and by Nova Scotia and British Columbia as well, the remaining provinces showing favourable increases in placements effected. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period July to September, 1926.

From the chart on page 1136 which accompanies the article on the work of the employment offices for the month of September, it will be seen that the trend of the curves representing the ratio of vacancies and of placements to applications followed a sharp upward trend during the first part of the period, followed by an abrupt decline during the latter part of the quarter, but throughout the three months the curve of vacancies was on a much higher level than that shown during the corresponding quarter last year, while that of placements was higher during July and only slightly lower during August, maintaining approximately the same level at the close of September as was shown at the close of September last year. During the period July to September, 1926, there was a ratio of 98.6 vacancies and 86.3 placements for each 100 applications for employment as compared with 94.0 vacancies and 86.3 placements during the corresponding period a year ago. The average number of applicants registered daily during the quarter under review was 2,364, of positions offered 2,331 and of placements effected 2,041, in contrast with a daily average of 2,607 applications, 2,451 vacancies and 2,251 placements in regular and casual employment during the same quarter of 1925.

During the three months July to September 1926, the offices reported that they had made 160,997 references to positions, and had effected a total of 157,100 placements, of which 128,172 were in regular employment and 28,928 in casual work. Of the placements in regular employment 116,465 were of men and 11,707 of women, while casual work was found for 16,318 men and 12,610 women. Comparison with the same period of 1925 shows that 173,312 placements were then made, of which 146,913 were in regular employment and 26,399 in casual work. Applications for employment during the period under review were received from 149,334 men and 32,640 women, a total of 181,974 in contrast with a registration of 200,715 persons during the same period of 1925. Employers notified the Service during the quarter July to September, 1926, of 179,458 vacancies, of which 149,131 were for men and 30,327 for women, as compared with 188,700 opportunities for work during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of September, 1926.

BUILDING PERMITS ISSUED IN CANADA DURING SEPTEMBER, 1926

THE value of the building permits issued by 63 cities during September showed a seasonal reduction of 7.1 per cent as compared with August, but in the more significant comparison with September last year there was an increase of 8.8 per cent. The total for the month under review was $11,036,359, while in the preceding month building valued at $11,874,552 was authorized, and in the corresponding month in 1925, the aggregate was $10,140,853.

Some 50 cities furnished detailed statements showing that they had issued over 1,200 permits for dwellings estimated to cost nearly $5,400,000 and more than 2,900 permits for other buildings valued at approximately $5,600,000. During August, permits were issued for almost 1,250 dwellings and over 2,500 other buildings, estimated to cost $5,000,000 and $6,500,000 respectively.

Nova Scotia, Quebec and Ontario recorded increases in the value of the permits issued during September as compared with August, that of $517,953, or 25.5 per cent in Quebec being the largest absolute gain. Of the losses elsewhere, that of $1,478,119 or 72.0 per cent in Saskatchewan was the most pronounced.

As compared with September, 1925, Nova Scotia, Ontario and Saskatchewan registered increases in the value of building authorized; Ontario reported the greatest absolute gain, of $910,543 or 20.3 per cent, but there was a larger proportionate increase, of $292,412 or 867.2 per cent, in Nova Scotia. The remaining provinces recorded reductions, that in Quebec of $261,820 or 9.3 per cent being most marked.

Montreal showed an increase in the value of the building permits issued as compared with August, but a decline as compared with September, 1925. In Toronto and Vancouver there were gains in both comparisons, while Winnipeg registered losses as compared with both the preceding month and the same month last year. Halifax, Shawinigan Falls, Westmount, Brantford, Guelph, Niagara Falls, Oshawa, Stratford, St. Catharines, Sault Ste. Marie, Welland, Moose Jaw, Saskatoon, Kamloops, Nanaimo, New Westminster and South Vancouver reported gains in both comparisons.

Cumulative Record for First Nine Months, 1926.—The following table shows the value of the building authorized by 63 cities during September and in the first nine months of each year since 1920. The January-September average index numbers of wholesale prices of building materials in those years are also given (1913=100).

Year	Value of Permits Issued		Average indexes of wholesale prices of building materials first nine months
	In September	In First Nine Months	
	$	$	
1926	11,036,359	120,248,301	149·7
1925	10,140,853	98,364,181	154·0
1924	15,055,250	96,817,333	161·5
1923	10,768,898	108,319,972	166·8
1922	11,597,034	116,778 450	161·9
1921	10,907,828	88,573,442	189·3
1920	9,842,677	96,146,278	215·1

The total for the first nine months of this year was 22.2 per cent higher than in 1925; it was also 3.0 per cent greater than in 1922, the previous high level since the war, and 35.8 per cent above the 1921 low mark. The index numbers of wholesale prices of building materials have averaged lower during 1926 than in any other year since 1920.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Mining, Non-ferrous Smelting and Quarrying: Coal Mining

EDMONTON, ALBERTA.—THE MARCUS COALS, LIMITED AND EMPLOYEES.

Agreement to be effective from June 20, 1926 until June 30, 1928. Similar agreements were made between certain other mines in the district and their employees.

(The employees were on strike from July 1, 1926, until August 28, 1926.)

Right to hire and discharge, management of mine and direction of the working forces are vested solely in the company.

After an employee has severed connection with the company, grievances shall not be considered under the agreement.

For settlement of disputes or grievances, there shall be a pit committee of three men selected by the employees; grievances shall be presented before the pit bosses or manager.

The company agrees not to overcrowd the mine. Sufficient cars will be furnished to each miner.

Time Rates: Surface, per hour: blacksmith, 58 cents; head tippleman, 45 cents; labourers, 45 cents. Underground, per day: chief cager, timbermen, tracklayers, miners on company work, $4.75; drivers, $4.50; common labour, $3.75.

In event of the Company wishing to operate on a tonnage basis, matter is to be taken up with the employees and a rate fixed for a two weeks' trial period.

The agreement also gives contract rate, per car, per foot, etc.

Manufacturing: Printing and Publishing

VANCOUVER, BRITISH COLUMBIA.—NORTHWESTERN PHOTO ENGRAVERS' ASSOCIATION OF BRITISH COLUMBIA (AND ADJACENT TERRITORY IN THE UNITED STATES) AND INTERNATIONAL PHOTO ENRGAVERS' UNION.

Agreement effective from January 1, 1926 until January 1, 1920, and thereafter, notice of desire to open and negotiate a new agreement to be served 90 days' before January 1, in any year.

Only union employees in good standing shall be employed.

No work shall be performed if resulting from a strike or lockout.

Minimum wages per week, journeymen, during 1926, $53; during 1927, $55; during 1928, $55. Night shift, $5 extra per week.

Engraving to be stamped with the union label.

Hours, in six consecutive working days, 44 per week; nights, 42. Day work to be done between 8 a.m. and 5 p.m.; Saturdays, between 8 a.m. and 12 noon. Night work not to start before 5 p.m. or 12 noon on Saturday.

Overtime rates: first three hours, time and one-half. Consecutive hours thereafter on same day, double time. Saturday, after closing time, Sundays and holidays, double time.

Lost time (except for sickness or accident) shall be made up before charging overtime.

One week's notice of leaving position or of discharge or lay-off shall be given, in case of employees who have worked steadily for four weeks. If schedule of hours is reduced, employees may leave without notice.

Ratio of apprentices to journeymen, one to five. If working force is reduced, last apprentice employed shall be first laid off. Apprentices must serve not less than five years, beginning at sixteen years or over. Minimum wages per week for apprentices: first year, $12; second year, $15; third year, $25; fourth year, $30; fifth year, $40.

Union is to furnish help when called upon, wage to be determined by workman's ability and to be agreed upon by him and employer inside of two weeks. Employer may secure help if union fails to do so, and must observe the minimum rates.

A local joint industrial council shall be created in respective cities, to settle differences and questions arising.

The council shall meet each month and on special occasions. In case of failure to adjust differences same shall be submitted to the Northwest Joint Industrial Council or to the Photo Engravers' Joint Industrial Council.

A journeyman or apprentice idle in his own branch may help in any other branch.

Manufacturing: Food, Drink and Tobacco

EDMONTON, ALBERTA.—NORTH WEST BREWING COMPANY, LIMITED, AND INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA.

Agreement to be in effect from August 1, 1926, until July 21, 1928, with 30 days' notice of change.

Employees must become members of the union two weeks from date of employment.

No discrimination against members for upholding union principles. No members shall be laid off without just cause.

Extra men shall not be counted as permanent, nor be taken into the union if working less than 3 months. Company may hire extra help, giving preference to returned soldiers and Canadian citizens, provided no union men are out of work. In dull season, men shall be laid off impartially, for not longer than a week at a time.

One apprentice may be put in the brewing, bottling and malt house department, being not more than 20 years of age, to serve two years.

Sickness not to be a reason for discharge.

Hours: eight out of nine consecutive hours for five days, and five hours on Saturday, from October to March (inclusive); for the remaining months, nine out of ten hours, and five hours on Saturday. This shall apply to local union No. 314 except engineers, firemen, truck drivers, teamsters and malt house men.

Engineers and firemen, 8 hours per day, 7 days per week; overtime, time and one-half; engineers to do their own repairing; a substitute may be employed on one day out of seven.

Truck drivers, teamsters and helpers shall take care of horses on Sundays and holidays. Route drivers to be responsible for their route. Hours for beer peddlers, teamsters and helpers, truck drivers, nine hours for six days. Overtime, time and one-half.

Union label shall be furnished free.

Free beer shall be allowed four times per day. Men shall be discharged for drinking to excess. Employees to receive beer for own use at special scale of prices.

Differences to be referred to a Board of Arbitrators of two from each party to the agreement. If these fail to agree, a fifth person shall be elected.

Brewery to give preference to union made materials and machinery.

A man working outside to have time to change his clothes.

Overtime, time and one-half. Sundays and holidays, double time, except where elsewhere specified.

After two years' service, one week's holiday per year with pay.

Wage scale, for first year of agreement, to which shall be added an increase of one per cent per hour during second year: Per hour: second engineers, 71 cents; third engineers, 66 cents; fireman, 61 cents; tight coopers, 68 cents; foreman coopers, 73 cents; slack coopers 65 cents; truck drivers, 63 cents; filler man, soaker man, labeller, 61 cents; wash house, 63 cents; brew house, cellar man, 68 cents; other men in cellar, brew house and wash house, 58 cents; labourers, permanent, 58 cents; temporary, 48 cents; apprentices, first year, 43 cents; second year, 48 cents; women, 33 cents.

Construction: Buildings and Structures

TORONTO, ONTARIO.—TORONTO DISTRICT, ONTARIO ASSOCIATION OF ELECTRICAL CONTRACTORS AND DEALERS, AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 353.

Working rules adopted September 27, 1926, in force to May 31, 1929. New rules to be negotiated 6 months before expiration.

Hours, 8 per day; four on Saturday. Night men, nine hours pay for eight hours, when two or more shifts are worked.

Overtime, until 10 p.m., time and one-half. Thereafter and Sundays and holidays, double time. Overtime must be authorized in advance.

Car fare other than going to work and home shall be paid for. Travelling time and room and board shall be paid for on outside work. Ten hour day to be worked where possible.

Mechanics must have city licenses.

There shall be a conference board of two members from each party, to meet twice a month or when called.

Apprentices shall serve four years, the first half year to be probationary. Wages, per hour, to May 31, 1928, 2nd half of first half year, 20 cents; second year, 30 cents; third year, 40 cents; fourth year, 50 cents. After June 1, 1928: 2nd half of first year, 20 cents; second year, 40 cents; third year, 55 cents; fourth year, 70 cents.

A fourth year apprentice may be loaned a kit of tools; he may work as a journeyman if in possession of a license; not more than one to four journeymen.

One apprentice under three years to be permitted to two journeymen.

For first nine months of these working rules, no new apprentices shall be taken on; those now in the trade shall be classified.

Journeymen's wages per hour to December 31, 1926, 80 cents; during 1927, 90 cents; during 1928, $1; January 1 to May 31, 1929, $1.10.

Complaints about workmen received from two or more contractors shall be considered by the Conference Board.

When work does not pass inspection it shall be done properly at employee's time and expense.

The employers shall be given preference in selection of Union workmen, and will give them preference in employment.

If Conference Board fails to settle disputes, matters shall be referred to the International Office and the Employees' Association. Failure of settlement shall then be considered sufficient cause for cancellation of working rules.

FAIR WAGE CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding various contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed.

One contract was awarded by the Department of Railways and Canals in connection with the works of construction, etc. ("A" group), the general fair wages clause being inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

DEPARTMENT OF RAILWAYS AND CANALS

Contract in "A" Group

Construction of a bituminous macadam paving on the new approaches to the new swing bridge at Queenston street, near St. Catherines, Ontario. Names of contractors, Roy Honsberger, of Vineland, in the county of Lincoln, Ontario. Date of contract, October 30, 1926. Amount of contract, One Dollar and Forty-five ($1.45) cents per square yard, approximately $1,653.

POST OFFICE DEPARTMENT

The following is a statement of payments made in October, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals	$ 4,110 61
Making and repairing rubber stamps, daters, etc.	135 05
Making up and supplying letter carriers' uniforms, etc	12,012 37
Stamping pads, ink, etc	307 25
Scales	236 25
Letter boxes, etc	4,555 00
Bag fittings	33,047 38
Cotton duck for mail bags	66,812 05

National Agreement in Building Industry in Great Britain

A new agreement was adopted in Great Britain in September by the National Wages and Conditions Council for the Building Industry. The parties signing the agreement are the employers organizations and the trade unions of the building trades. The agreement provides primarily that rates of wages, hours of labour, extra wages, overtime, night gangs, and walking, travelling and lodging allowances shall be determined on a national basis, but that other conditions of employment shall be determined on a local or area basis. For the purpose of carrying out the provisions of the agreement a National Joint Council is to be appointed. The rules of this council contain, *inter alia*, a procedure for effecting variations in the conditions of employment specified above. In regard to wages the council is to review the position at its statutory meeting in January of each year. For this purpose the existing rates of wages, as fixed for the various grades of towns, are assumed to correspond to a cost of living figure of 78. For each variation of 6½ points from this figure, taking the average of the index numbers from January to December, rates of wages shall be varied a half-penny per hour. Provision is made, however whereby exceptional or differential rates of wages, having been agreed to by Regional Joint Committees, may be submitted for approval to the National Council. Applications from towns for a variation in their grading are to be referred to a commission which will make recommendations to the council.

The agreement also contains national working rules dealing with the conditions of employment specified above. These rules so far as they concern conditions other than wage rates, may be varied by the Regional Joint Committee, subject to approval by the National Joint Council. On the subject of hours the rules provide that the working hours shall be 44 per week, except that during the Statutory Summer period they shall be extended to 46½ per week, but that nothing shall prevent employers and operatives in any town or area from maintaining by mutual consent the 44 hours week throughout the year.

An "Addendum Agreement" provides that existing rates of wages shall be stabilized till August 1, 1927, unless and except to the extent that they may be varied by the council, for a period not exceeding 12 months following application from Regional Joint Committees for exceptional rates in respect of a defined district.

PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices, and the Dominion Bureau of Statistics index number of wholesale prices being however somewhat lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was practically unchanged, at $10.93 for the beginning of October, as compared with $10.94 for September; $10.89 for October, 1925; $10.31 for October, 1924; $10.65 for October, 1923; $10.23 for October, 1922; $11.48 for October, 1921; $15.83 for October, 1920; $16.92 for June, 1920 (the peak); $13.54 for October, 1918; and $7.99 for October, 1914. Eggs showed a substantial seasonal advance, while there were less important advances in the prices of milk, butter, rice and evaporated apples. The price of potatoes was substantially lower, with slight declines also in the prices of beef, mutton, pork, bacon, lard, cheese and flour. Including the cost of fuel and rent with that of foods the total budget averaged $21.14 at the beginning of October, as compared with $21.15 for September; $21.11 for October, 1925; $20.67 for October, 1924; $21.16 for October, 1923; $20.87 for October, 1922; $22.01 for October, 1921; $26.46 for October, 1920; $26.92 for July, 1920 (the peak); $21.48 for October, 1918; and $14.48 for October, 1914. Fuel was practically unchanged. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, declined to 151.1 for October, as compared with 152.5 for September; 156.0 for October, 1925; 157.0 for October, 1924; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak); and 206.9 for October, 1918. Thirty-three prices quotations were higher, forty-six were lower and one hundred and fifty-seven were unchanged.

In the grouping according to chief component materials three of the eight main groups advanced, three declined, while two were unchanged. The Vegetables and their Products group was slightly lower, increases in the prices of the majority of grains, in sugar and rubber being more than offset by declines in flour and milled products, potatoes and hay. The Fibres, Textiles and Textile Products group and the Non-Ferrous Metals and their Products group also declined, the former because of lower prices for cotton, cotton fabrics, and jute; and the latter mainly because of a substantial decline in the price of silver. The Animals and their Products group advanced, higher prices of milk and eggs more than counterbalancing the lower prices for live stock, meats and leather. Advances in the prices of pig iron and steel sheets caused an increase in the Iron and its Product group. The Wood, Wood Products and Paper group also showed a slight increase. Non-Metallic Minerals and their Products, and the Chemicals and Allied Products groups were unchanged.

In the grouping according to purpose consumers' goods advanced slightly, while producers' goods declined. The increase in the former was due mainly to higher prices for milk, eggs and sugar, which more than offset the declines in the prices of flour, meats, potatoes and coffee. In producers' goods building and construction materials advanced, as did also materials for the Chemical using industries and for the milling and other industries. Materials for the textile and clothing industries, for the leather industry, for the metal working industries, for the meat packing industries, as well as for miscellaneous producers' materials, declined.

In the grouping according to origin raw or partly manufactured goods were practically unchanged, being, however, slightly lower, declines in the prices of potatoes, live stock, meats, coffee, cotton, jute, silk, silver and lead being almost offset by advances in the prices of milk, eggs, raw sugar, grain, pig iron and tin. Fully or chiefly manufactured goods also declined slightly, mainly because of declines in the prices of flour and milled products, cotton fabrics and meats. Canadian farm products and articles of forest origin advanced, while articles of marine origin and articles of mineral origin declined.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, was slightly higher for October at 171.4, as compared with 170.6 for September; 178.0 for October, 1925; 238.4 for October, 1920; and 119.9 for October, 1914. The index for twenty food stuffs advanced, due to higher prices for bacon, potatoes and eggs, which more than offset the declines in pork, butter and flour. The index of twenty manufacturers' goods was lower, due to declines in the prices of cotton, silver, lead, pine and rubber.

(Continued on page 1157)

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of October of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossiblity of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adapted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-1915 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 71.5; 1925, 69.1. This index number is weighted according to consumption in each city. When the above index

number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924 and 1925, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics:—Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6; 1924, 156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows:—1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices continued to decline, sirloin steak averaging 29.5 cents per pound in October, as compared with 30.1 cents in September; round steak 23.9 cents per pound in October and 24.5 cents in September; shoulder roast 15.9 cents per pound in October and 16.1 cents in September; and stewing beef 12.4 cents per pound in October and 12.6 cents in September. Prices were lower in most localities. Veal rose from an average of 19.4 cents per pound in September to 19.9 cents in October. Mutton fell from an average of 30.2 cents per pound in September to 29.3 cents in October. Both fresh and salt pork declined, the former averaging 31.4 cents per pound in September and 30.8 cents in October, and the latter 28.5 cents per pound in September and 28.3 cents in October. Bacon averaged somewhat lower at 44.4 cents per pound. Ham was down from an average of 67 cents per pound in September to 65.7 cents in October. Decreases occurred in most localities. In fresh fish cod steak and white fish were slightly higher. Salt herrings rose from an average of 13.8 cents per pound in September to 14.1 cents in October. Lard was somewhat lower in most localities, averaging 24.5 cents per pound in October, as compared with 24.9 cents in September.

Eggs showed a general advance, fresh averaging 49.8 cents per dozen in October, 41.4 cents in September and 39 cents in August; and cooking averaging 44.3 cents in October, 37.1 cents in September, and 34.7 cents in August. Higher prices for milk were reported from Toronto, Hamilton, Brantford, Woodstock, Windsor and Victoria. Butter showed a slight increase, declines in some localities being more than offset by advances in others. Dairy butter averaged 37.7 cents per pound in October, as compared with 37.3 cents in September, and creamery averaged 41.2 cents in October, as compared with 40.9 cents in September. Cheese declined in the average from 31.2 cents per pound in September to 30.6 cents in October.

No changes were reported in the price of bread, which averaged 7.6 cents per pound. Flour was lower in some localities the price averaging 5.3 cents per pound in October, as compared with 5.4 cents in September. Soda biscuits and rolled oats were steady. Rice and tapioca were slightly higher. Canned vegetables showed little change in the average. Onions were down from an average of 6.2 cents per pound in September to 5 cents per pound in October. Lower prices were reported from most localities. Potatoes showed a substantial decline in nearly all localities, being down from an average of $2.23 per ninety pounds in September to $1.86 in October. In British Columbia the decline was less pronounced than in the other provinces. Evaporated apples rose from 19.8 cents per pound in September to 20.4 cents in October. Raisins were slightly higher. Raspberry jam was again somewhat lower, averaging 82.4 cents per four pound tin in October, as compared with 83.4 cents in September. The price of this commodity has declined slightly each month since the beginning of the year from an average of 88.5 cents per four pound tin. Marmalade declined from 68.5 cents per four pound tin in September to 66.8 cents in October. The price of sugar continued steady. In this commodity no change has occurred since the beginning of the year from the average price of 7.9 cents per pound. Coffee was slightly lower at 61.1 cents per pound. Pepper was down from an average of 55.3 cents per pound in September to 54.8 cents in October. Anthracite coal was up in the average from $16.82 per ton in September to $16.87 in October. Higher prices were reported from St. John, Orillia, St. Catharines, Kitchener and Cobalt. Bituminous coal was practically unchanged. Coke was down from an average of $13.46 per ton in September to $13.39 in October. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month, issued by the Dominion Bureau of Statistics.

Grain prices were irregular but on the whole slightly higher, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, was practically unchanged, averaging $1.43½ per bushel in October, as compared with $1.43¾ in September. The low price for the month was $1.38 reached on the 5th, and the high $1.50⅝ reached on the 22nd. The poor export demand and favourable weather early in the month tended to lower prices. These, however, were counteracted to some extent by the decrease in the United States visible supply and rumors of frost in the Argentine, and by an improved demand toward the end of the month. The movement in coarse grains was mainly upward. Western barley advanced from 63 cents per bushel in September to 64 cents in October; Ontario barley from 60.5 cents per bushel in September to 60.8 cents in October; and American corn from 88¾ cents per bushel in September to 91¾ cents in October. Western oats rose from 52½ cents per bushel in September to 58 cents in October, and Ontario oats from 43½ cents per bushel in September to 46¾ cents in October. Flax seed declined, being $1.94 per bushel in October, as compared with $2.05 in September. Flour at Toronto declined from $8.28 per barrel to $8.21. Rolled oats advanced from $3 per ninety pound bag to $3.60. Shorts fell from $31.25 per ton to $30.25. Sugar advanced, raw being up from $3.96 per hundred pounds to $4.08; granulated from $5.89 to $5.98; and yellow from $5.51 to $5.60. Potatoes at Montreal declined from $1.50 per eighty pound bag in September to $1.39 in October, and at Toronto from $1.95 per ninety pounds in September to $1.90 in October. Coffee declined slightly. Cotton seed oil, in sympathy with lower cotton prices, declined from 14 cents per pound to 13½ cents. Rosin fell from $18.75 per barrel to $18.25. Straw rose from $9.25 per ton to $9.85. Western cattle at Winnipeg declined from $6.28 per hundred pounds to $5.92½, and choice steers at Toronto from $6.96 per hundred pounds to $6.67. Hogs and sheep were also lower, the former being down from $12.70 per hundred pounds, at Toronto, to $12.35, and the latter from $6.94 per hundred pounds to $6.75. Meats followed the trend in live stock, beef, barrelled, being down from 15 cents per pound to 13½ cents; dressed hogs from $19 per hundred pounds to $18.80; bacon from 36 cents per pound to 35 cents; and ham from 32-36 cents per pound to 31-35 cents. White fish fell from 18 cents per pound to 16 cents. Milk, at Toronto, again advanced, the price to producers being up from $1.95 per eight gallon can to $2.20. Cheese, at Montreal, fell from 26 cents per pound to 24 cents. Fresh eggs, at Montreal, rose from 50-55 cents per dozen to 52-55 cents. Cotton, at New York, fell from 17.1 cents per pound to 13.2 cents. The high price for the month was 14.3 cents at the beginning, and the low 12.45 cents per pound toward the end. The decrease was said to be due to the very large crop estimates. Cotton fabrics were also lower, denim declining from 56 cents per pound to 48 cents; ticking from 57 cents per pound to 53 cents; shirting from 73.95 cents per pound to 60.47 cents; and Saxony from 76.77 cents per pound to 73.66 cents. Flax fibre was down from 23-25 cents per pound to 20-25 cents. Raw jute fell from $8.95 per cwt. to $8.44. Foundry pig iron, at Montreal, rose from $27.20 per ton to $27.70. Non-ferrous metals were lower, zinc being down from $9 per cwt. to $8.93; lead from $8.20 per cwt. to $8.15; copper sheets from 22 cents per pound to 14¾ cents; and silver from 61 cents per ounce to 54 cents. The price of tin rose from 70½ cents per pound to 72½ cents. Prices of non-metallic minerals, and of chemicals and allied products were unchanged.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. There has been very little change in the general level of prices during the past month.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1913=100, was 150.9 in September, an increase of 1.2 per cent for the month. Foods declined 0.8 per cent with declines in cereals and meat and fish and an increase in other foods, and non-foods rose 2.3 per cent. There was a slight increase in the group iron and steel and an increase from 160.7 to 171.2, or 6.5 per cent, in "other metals and minerals." Cotton and other textiles both showed increases and other articles remained nearly stationary.

The *Statist* index number (in continuation of Sauerbeck's figures), base period 1867-77=100, showed a slight rise (0.8 per cent) on

August, 1926. Foodstuffs declined slightly owing to a drop in prices of vegetable foods. Materials rose 1.4 per cent owing to a rise of 7.5 per cent in minerals. Textiles declined 3.6 per cent.

Denmark

WHOLESALE PRICES.—The index number of the Department of Statistics, on the base 1913=100, was 162 in September, showing no change for the month. The chief movements were a rise of 9.8 per cent in the fuel and light group and a decline of 5.2 per cent in the group cement, glass, etc.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, was 804 in September, an advance of 2.4 per cent over August. Native products rose 2.9 per cent and imports rose 1.1 per cent. Foods rose 5.1 per cent and materials rose about 0.5 per cent. Since the beginning of July the index number has been calculated weekly.

COST OF LIVING.—The index number of cost of living, Paris, on the base 1914=100, compiled by the Committee of Studies on the Cost of Living rose to 539 for the third quarter of 1926, or 11.1 per cent over the level for the previous quarter. Foods rose 10.8 per cent, heat and light rose 19.7 per cent clothing rose 10.1 per cent, sundries rose 19.2 per cent and rent showed no change.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 682.84 in September, showing a decline of 1.2 per cent, the first in five months. The only groups to show increases were animal foods, miscellaneous vegetable products and miscellaneous industrial materials. All other groups showed slight declines.

Spain

WHOLESALE PRICES.—The index number of the Director General of Statistics, on the base 1913=100, was 180 in August, as compared with 128 in July. Foods and materials each rose two points. All food groups rose slightly while fuels rose 7.1 per cent, metals rose 2.7 per cent, and chemical and miscellaneous goods 1.3 per cent. Textiles and leather fell 3.3 per cent, and building materials 2.4 per cent.

Spain

RETAIL PRICES.—The official index number of retail prices at Madrid, on the base prices in 1914=100, declined 4.3 per cent to 178 in August. All groups declined slightly.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base average prices in 1913=100, was 146 in September, a decline one point for the month. Slight declines were shown by vegetable foods, feed and forage, fuel and lubricating oils, mortar, brick, etc., lumber, textiles and chemicals. There were slight advances in metals and their products, and hides and leather, and no change in the four remaining groups.

COST OF LIVING.—The index number of the Board of Social Welfare, on the base July, 1914=100, was 171 on October 1, a decline of one point from the level on July 1. Fuel and light, clothing and taxes all showed declines, and the other elements of the budget no change.

India

WHOLESALE PRICES.—The index number of the Labour Office, Bombay, on the base July, 1914=100, was 148 in August, a decline of one point from the July level. Advances were displayed by all food groups except miscellaneous foods which declined slightly, and by raw cotton. There were declines also in oil seeds, manufactured cotton, hides and skins and metals. The remaining groups showed no change.

COST OF LIVING.—The index number of the Labour Office, Bombay, on the base July, 1914=100, showed no change in September, being 155. Foods declined one point and other groups were unchanged.

New Zealand

WHOLESALE PRICES.—The official index number of the Government Statistician, on the base 1909-13=1,000, was 1628 in August, a decline of 10 per cent. In consumers' goods, both foods and non-foods declined; in producers' materials, etc., materials for farming and for building and construction both showed slight declines and materials for other industries advanced slightly. The index number of imported items declined slightly to 1586 and that of export prices rose to 1616.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics (1913=100) was slightly higher in September than in August, registering 150.5 as against 149.2. Farm products were 2.3 per cent higher, due to advances in cattle, hogs, eggs, hides and wool. Smaller increases were recorded for foods, clothing materials, fuels, metals, and building materials. There was no change in the price level for chemicals and drugs. House furnishing goods and miscellaneous commodities were lower than in August.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was $12.7370 on November 1, showing a slight downward tendency for the month. There were slight weaknesses caused by lower cotton and cotton goods and non-ferrous metal prices. There were advances shown by live stock, fruits, hides and leather, coal and coke, oils, naval stores, building materials, and declines shown by breadstuffs, textiles, metals, and the miscellaneous group.

Dun's index number (showing the cost per capita of a year's supply of commodities) was $187.904 on November 1, an increase of 0.3 per cent above the October 1 level. The slight rise was due to higher prices for dairy and garden products, the only other increase being in metals.

The *Annalist* weekly index number of wholesale commodity prices, on the base 1913 =100, was 147.8 in September and 147.4 in October. The principal changes in October were a decline in textile products and a rise in fuels. The figures are averages of weekly index numbers. The *Annalist* weekly index number of wholesale food prices, on the base, average of 1890-1899=100, was 201.213 at the middle of October, compared with 203.448 at the middle of September.

International Paper Company Employees' Stock Ownership

The International Paper Company has offered its employees the opportunity of purchasing preferred cumulative stock at 7 per cent interest, at $94 per share, the number of shares to be allowed to each employee being limited according to the amount of his earnings. The employees will be allowed to pay for their shares in weekly or monthly instalments, to be deducted from their pay envelopes. The company will pay one dollar per share for the first year, and one dollar additional for each of the next four years. The company has control of twenty-two subsidiary companies, including the Gatineau Power Company and the Gatineau Power Company, Limited, which are now developing a power plant on the Gatineau River, Quebec, and establishing large pulp and paper mills at East Templeton, Quebec. The names of the companies controlled by the International Paper Company are as follows: International Paper Company; Canadian International Paper Company; Riordon Pulp Corporation, Limited; Riordon Sales Corporation, Limited; Gatineau Company, Limited; Ticonderoga Pulp and Paper Company; American Realty Company; Champlain Realty Company; Miramichi Lumber Company, Limited; Dalhousie Lumber Company, Limited; Bastrop Pulp and Paper Company; Olcott Falls Company; Piercefield Paper Company; Umbagog Paper Company; Herkimer Fibre Company; Atlantic Transportation Company, Limited; Domill Construction Company, Inc.; Montagne Machine Company; Portland Wood Handling Company; Winnipiseoggs Lake Cotton and Woolen Manufacturing Company; Gatineau Power Company; Glen Junction Transfer Company; and Hull Electric Company.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1926

THE number of fatalities from industrial accidents and from industrial diseases (which are included with fatal accidents by workmen's compensation boards, etc.), recorded in the Department as occurring during the third quarter of 1926, was 426, there being 144 in July, 188 in August and 94 in September. In the third quarter of 1925 there were recorded 270 fatalities. In this report it is the custom to record industrial accidents under the date of the occurrence of the accident, and fatal industrial diseases under the date on which these proved fatal.

Reports were received from the Workmen's Compensation Boards, the Board of Railway Commissioners, and certain other official sources; from certain large employers of labour; and from the correspondents of the LABOUR GAZETTE. Reports of accidents were taken also from local newspapers.

By groups of industries the fatalities occurred as follows:—agriculture, 58; logging, 20; fishing and trapping, 54; mining, non-ferrous smelting and quarrying, 36; manufacturing, 47; construction, 63; transportation and public utilities, 120; service, 17; trade, 10; unclassified, 1.

The numbers of accidents in agriculture, fishing and trapping, construction, and transportation and public utilities were comparatively large, due to various causes, one of which was the prevalence of accidents involving great loss of life, in some instances reaching the rank of disasters. In the group "Fishing and trapping" the gales which swept the Atlantic Coast of Nova Scotia in the middle of August destroyed the schooners "Sylvia Mosher" and "Sadie Knickle" with forty-seven fishermen on board. In the group "Steam Railways" four sectionmen were killed in an accident on August 13, at Minataree, Ontario, when a hand-car on which they were riding was struck by a freight train in a rock cut during foggy weather. Four trainmen were killed and a fifth injured on September 5, when a runaway freight train on the Kettle Valley branch of the Canadian Pacific Railway was derailed on a bridge at Jessica, B.C., and crashed into a canyon. On September 18, three men, including an engineer and two firemen, were instantly killed, a brakeman was fatally injured and an engineer was injured, in a head-on collision of two freight trains near Kent Bridge, Ontario, on the Toronto-Detroit line of the C.P.R., in a dense fog. Under the heading "Water Transportation" is recorded an accident on Lake St. Louis on July 15 when the grain-boat "Brulin" rammed the tugboat "Emma L." so that the latter sank, drowning a woman cook and a crew of five men. The judgment of the Dominion Wreck Commissioner found that, while the tug was chiefly to blame, both ships violated the fundamental rules of navigation. The certificates of the second mate and the pilot were suspended for twelve months. In the group "Metalliferous mining" there is recorded an explosion which took place at Hillcrest Collieries on September 19. While only two fatalities were recorded, to a pump-man and a fire-boss, the property loss was very great, involving the wreck of No. 1 mine, and an investigation will be held, with a view to minimizing the possibility of a recurrence. Reference is made to this investigation on another page of this issue.

Supplementary lists of accidents: The second supplementary list of accidents occurring during the current year contains sixteen fatalities as follows:—January, one, making a total of 69 for the month; February, two, making a total of 66; April, three, making a total of 66; May, two, making a total of 81; and June, eight, making a total of 111. In regard to the April total, the figure 65, recorded in the LABOUR GAZETTE for August, was reduced to 63 as it included two accidents which have since been ascertained to have been non-fatal. These were under the group "non-metallic mineral mining and quarrying n.e.s.", and both were reported as "miner, Thetford Mines, Quebec, struck by falling stone." They were recorded as occurring on April 21 and April 30.

The third supplementary list for 1925 contains one accident, which occurred on September 30, 1925, and led to fatal results on July 19, 1926.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1926

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Farmer	Near Newboyne, Ont.	July 1		Trampled by horse.
Farm worker	Vernon, B.C.	" 1	47	Run over by team of horses.
Farmer	Kingston, P.E.I.	" 3	54	Fell from wagon.
Helper on stock farm	Byron, Ont.	" 4	35	Struck by wagon tongue when horses plunged forward.
Farmer	Estevan, Sask.	" 4	58	Thrown from wagon when horses bolted.
Farm labourer	Newcastle, Ont.	" 5	24	Stepped on trapdoor of loft, which gave way.
Farmer	Near Pont Rouge, Que.	" 5	73	Struck by train while driving cows on his own farm.
Farm manager	Niagara Tp., Ont.	" 5		Fell from haymow.
Farmer	Tillsonburg, Ont.	" 6	33	Fell from load of hay, breaking neck; died Aug. 17
Farmer	Herbert, Sask.	" 7		Struck by lightning.
Farmer	Glamis Yards, Sask.	" 8	36	Crushed between tractor and cars while unloading tractor on railway.
Farm hand	Westmeath, Ont.	" 8	25	Kicked by horse; died July 15.
Farmer	Esquesing Tp., Ont.	" 9	50	Struck by falling beam during barn raising.
Farm labourer	Hoey, Sask.	" 10	21	Was making repairs beneath plough which sank, crushing him.
Farmer	Near Markdale, Ont.	" 16	60	Fell from ladder.
Farmer	Poplar Dale, Ont.	" 16	70	Struck by falling rafter at barn raising.
Farmer	Near Tillsonburg, Ont.	" 17	73	Struck by train on his own farm.
Farmer	Near Camrose, Alta.	" 19	38	Went down into well; overcome by gas; drowned.
Farm hand	Inglis, Man.	" 20		Thrown from cart when horses bolted.
Farmer	Buckland, Sask.	" 21	45	Killed by runaway team.
Farmer	Near Barrie, Ont.	" 22	78	Fell from rafter to floor at barn raising.
Farmer	Whitemouth, Man.	" 23	72	Thrown from wagon during runaway; flies frightened horses.
Farm hand	Enderby, B.C.	" 23		Struck by cable which slipped from pulley during haying.
Farmer	Christian Valley, B.C.	" 24		Thrown from load by kicking horse.
Farmer	Broad Cove, N.S.	" 25	74	Gored by bull.
Farmer	Maitland, Ont.	" 26	42	Team ran away, frightened by dropping pole.
Farmer	Appin, Ont.	" 30	19	Fell from barn roof.
Farmer	Richmond, Ont.	(died July 30)		Fell from barn roof.
Farmer	Yorkton, Sask.	Aug. 1	69	Seized with sunstroke while digging potatoes.
Farmer	Milton, P.E.I.	" 4	66	Fell from load of hay.
Farmer	Newport Corners, N.S.	" 10		Dragged and cut by mower; died Aug. 12.
Farm hand	Near Penhold, Alta.	" 11	30	Fell from load; run over.
Farm hand	Phillips, Alta.	" 12		Delayed blast while breaking up rock.
Farmer	N. Easthope, Ont.	" 13	43	Raising roof of barn when jack slipped throwing victim to floor.
Farmer	Near Yorkton, Sask.	" 17	66	Thrown when team bolted.
Farm hand	Rivière des Prairies, Que.	" 19	39	Drowned when scow capsized owing to restless horses.
Farm hand	" " "	" 19		
Farmer	" " "	" 19	72	
Farmer	Big Valley, Alta.	" 23	44	Was thrown from horse which stepped on rein.
Fruit grower	Grantham Tp. Ont.	" 25	77	Fell from ladder in barn.
Farmer	Arcola, Sask.	" 27	55	Fell backwards from load of sheaves.
Farm hand	Springwater, Sask.	" 30	23	Mangled by runaway team.
Farmer	Mundare, Alta.	" 30		Struck by lightning.
Farmer	Halkirk, Alta.	" 30	21	Asphyxiated by gas when cleaning out well.
Farmer	" "	" 30	23	
Farmer	Near Creemore, Ont.	" 30	65	Struck by train while driving cows.
Farmer	Fairlight, Sask.	" 30	13	Killed by runaway team.
Boy from Boys' Home	Near Humberstone, Ont.	" 31		While extricating wagon from broken culvert in dark was struck by automobile.
Farmer's niece	Cantley, Que.	Sept. 2	17	Driving binder; horses ran away throwning her under knives.
Farmer	Bethany, Ont.	" 3		Fell and was run over by tractor.
Farmer's housekeeper	Near Telfordville, Alta.	" 9	50	Asphyxiated by gas in well.
Farmer	" "	" 9	60	
Farmer	Wallaceburg, Ont.	" 11		Leg fractured when run over by tilling machine; died Sept. 18
Farmer	Simpson, Sask.	" 13		Crushed by runaway team.
Farmer	Near Ste. Anne's Ont.	" 16	22	Struck by train while driving milk wagon.
Farmer	Balsover, Ont.	" 17		While extracting honey was stung about head by bees.
Sheep rancher	Savona, B.C.	" 18		Crushed by capsize of load of poles which he was driving.
Truck farmer	Richmond Hill, Ont.	" 21	60	While driving truck struck by radial car.
LOGGING—				
River driver	Near Rivière Joseph, Que.	July		Drowned.
Logger	Call Creek, B. C.	" 2	40	Struck by falling snag.
Hook tender	Near Duncan, B.C.	" 8	23	Struck by cable.
River driver	Bells Rapids, Ont.	" 10	23	Drowned.
Labourer	St. Jerome, Que.	" 13	17	Struck by falling tree.
Logger	Birchbank, B.C.	" 14	68	Crushed between rolling log and stump.
Logger	Onaping Lake, Ont.	" 17	22	Drowned.
River driver	Michipicoten River, Ont.	" 19		Drowned when boat capsized in current.
River driver	" "	" 19		
River driver	Wood Lake Creek, Ont.	" 26		Drowned.
River driver	Flanders, Ont.	" 27	46	Drowned.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1926—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—*Continued*				
Swamper	Near Donald, B.C.	July 20	56	Cut off from camp by forest fire; overcome by smoke and burned to death.
Logger	Brittle Point, B.C.	Aug. 3	25	Struck by falling tree.
Logger	Bowen Is., B.C.	" 5	50	Crushed by falling log.
Logger	N. Vancouver, B.C.	" 5	20	Foot caught in drum of engine; body drawn in by cable.
Foreman	Courtenay, B.C.	" 18	.....	Crushed by logs.
Logger	Deep Bay, B.C.	" 27	65	Owing to noise of engine failed to hear warning; struck by falling tree.
Logger	Goliath Bay, B.C.	Sept. 15	40	Fell off a bridge on way to logging camp.
Fireman	Sullivan, B.C.	" 17	50	Cutting firewood; tripped and fell on circular saw.
Driver	Lake Nipigon, Ont.	" 18	.....	Sucked into whirlpool while breaking log jam.
FISHING AND TRAPPING—				
Fisherman	Near Prince Rupert, B.C.	July 16	45	Sailing fishing boat after long trip; fell overboard while asleep; drowned.
Fisherman	Banks, N. S.	" 22	.....	Drowned while fishing off banks.
Fisherman	Naas fishing grounds, B.C.	" 28	75	Drawn into winch when hauling up seines.
Fisherman	Ironbound Is. N. S.	" 31	58	Fell overboard from boat.
N.S. Fisherman	Atlantic Coast, (off Mass.).	Aug. 4	.....	Washed overboard in storm; drowned.
21 fisherman	Atlantic Coast	" 8	.....	Wreck of fishing schooner.
Captain	Off Sable Island	" 9	25	Wreck of fishing schooner.
25 fishermen	" "	" 9	.....	
N.S. fisherman	Off St. John's, Nfld.	" 12	21	Washed overboard; drowned.
Fisherman	Off Low Point, N.S.	Sept. 1	35	Knocked overboard in squall; drowned.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous Mining:				
Labourer	Timmins, Ont.	July 9	42	Silicosis.
Machine man	Timmins, Ont.	" 9	40	Struck by rock.
Shift boss	Timmins, Ont.	" 30	41	Silicosis.
Miner	Galetta, Ont.	Aug. 6	.....	Struck by rock.
Cage man	Kirkland Lake, Ont.	" 7	.....	Fracture.
Bar man	Copper Mountain, B.C.	" 10	37	Apparently fainted; fell down incline to chute.
Motorman's helper	Kimberley, B.C.	" 14	45	Rolling rock struck one end of bar, which flew up hitting man on chin.
Miner	S. Porcupine, Ont.	" 26	25	
Miner	" "	" 26	40	Explosion of delayed charge.
Miner	" "	" 26	41	
Mucker	Levack, Ont.	Sept. 4	34	Explosion.
Miner	Timmins, Ont.	" 17	45	Crushed.
Coal Mining:				
Miner	Springhill, N.S.	July 2	.....	Buried in cave-in.
Miner	Reserve Mines, N.S.	" 5	30	Struck by fall of stone.
Rope rider	Fernie, B.C.	" 14	38	Caught by cave-in; asphyxiated.
Miner	Michel, B.C.	" 17	47	Crushed by rock in cave-in.
Chief surveyor	New Waterford, N.S.	Aug. 4	25	Run down by a trip.
Miner	Nanaimo, B.C.	" 21	42	Struck by falling rock and pinned to car.
Electrician	New Waterford, N.S.	Aug. 21	27	Struck by falling rock.
Miner	Nacmine, Alta.	" 21	46	Struck by fall of rock.
Machine runner's helper	Sydney Mines, N.S.	" 25	20	While moving long-wall machine was crushed between it and pack.
Warehouseman	Glace Bay, N.S.	" 27	.....	While sawing props was struck by rebound of prop thrown on sawhorse by another worker.
Brusher	Glace Bay, N.S.	" 30	36	Buried by fall of stone.
Cribber	Ponoka, Alta.	Sept. 3	27	Fell from scaffold.
Miner	Coleman, Alta.	" 3	33	Struck by falling piece of coal.
Engineer	Ladysmith, B.C.	" 12	36	Caught in belt.
Rope Rider	Cassidy, B.C.	" 13	34	Slipped in front of loaded car.
Fire Boss	Hillcrest, Alta.	" 19	55	
Pump man	"	" 19	45	Explosion.
Miner	New Waterford, N.S.	" 22	.....	Struck by empty trip.
Car runner	Glace Bay, N.S.	" 28	39	Missed step in jumping on a car; was dragged by wheels.
Machine helper	Dominion, N.S.	" 28	21	Caught in chain cutter of machine.
Non-metallic mineral mining and quarrying, n.e.s.				
Labourer in gravel pit	South Durham, Que.	July 14	17	Struck by rock.
Asbestos miner	Black Lake, Que.	" 28	21	Struck by rock falling from roof of tunnel.
Asbestos miner	Black Lake, Que.	Aug. 4	28	Crushed by boulder.
Miner	Thetford Mines, Que.	Sept. 16	36	Buried by cave-in and suffocated.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1926—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—				
Vegetable foods, drink and tobacco:				
Labourer	Sarnia, Ont.	Aug. 31	44	While unloading heavy vat from car was caught in rope and pulled; crushed by vat.
Salesman for biscuit company	Forest, Ont.	Sept. 15	40	Auto hit telephone pole.
Animal foods:				
Foreman with packing company	Havelock, Ont.	July 1	.....	Fell on head on rock.
Textiles:				
Night watchman	Magog, Que.	" 18	30	Electrocuted while moving live wire which had blown down.
Fur and leather products:				
Elevator operator	Kitchener, Ont.	" 2	56	Struck by safety device released through breaking ing of cable.
Rubber goods:				
Rubber worker	Farnham, Que.	Aug. 9	.....	Electrocuted, stopping a motor.
Pulp, paper, and paper goods:				
Labourer	Ocean Falls, B.C.	July 9	.....	Piling lumber on platform, which gave way; crushed by lumber.
Millwright	Hull, Que.	" 15	65	Fell through trap door of conveyor onto log pile when bolt gave way.
Millwright	"	" 15	59	
Day watchman	Thorold, Ont.	" 19	60	Struck by train.
Wiper in finishing room	Sturgeon Falls, Ont.	" 22	18	Backed into gear of rewinder.
Chief electrician	St. John, N.B.	" 24	39	Electrocuted; contact with live wire in engine room.
Labourer	Port Alfred, Que.	" 29	31	Hit on head by plank.
Machine tender	Ocean Falls, B.C.	Aug. 12	33	Explosion of paper machine dryer; scalds and abrasions. Died Aug. 16.
Labourer	Thorold, Ont.	" 20	36	Unloading sulphur from barge, fell into open hatch.
Teamster	Three Rivers, Que.	" 21	23	While returning from work his horse ran away.
Labourer	Smooth Rock Falls, Ont.	" 24	30	Buried under falling pile of wood.
Labourer	Sudbury, Ont.	Sept. 8	19	Cut thigh; infection.
Labourer	Bathurst, N.B.	" 21	17	Installing sky-light in roof of paper machine room; lost balance and fell 50 feet.
Printing and publishing:				
Workman	Toronto, Ont.	" 16	17	Struck by descending elevator.
Saw and planing mills:				
Night watchman	New Westminster, B.C.	July 24	69	Crushed by falling door.
Labourer	Driftpile, Alta.	Aug. 5	54	Fell on a saw, cutting head.
Saw filer	Maria, Que.	" 7	.....	Struck by flying lumber.
Sawmill employee	Victoria, B.C.	" 9	45	Run over by lumber carrier.
Tail sawyer	New Westminster, B.C.	" 17	38	Legs crushed between timber and roller of machine.
Sawyer	Hardy Bay, Ont.	" 23	30	Struck by flying bolt.
Millwright's helper	Barnet, B.C.	" 25	31	Derrick collapsed.
Labourer	Baker Lake, N.B.	Sept. 2	.....	Lumber rebounded from saw, striking victim.
Oiler	Sydney, B.C.	" 7	19	Scalded when water heater blew out.
Saw operator	Tracadie, N.B.	" 14	62	Cut by flying blade which broke loose from saw.
Mill hand	St. Simeon, Que.	" 20	26	Clothing caught in engine belt, throwing him to ground.
Engineer	Ignace, Ont.	" 24	31	Head struck by crowbar.
Wood products:				
Part proprietor	Montreal, Que.	Aug. 25	43	Hand scraped in planer. Shock.
Labourer	Owen Sound, Ont.	" 27	22	Cut ankle; infection.
Iron, Steel and Products:				
Labourer	Hamilton, Ont.	July 20	45	Struck on head by swinging crane.
Welder	Oshawa, Ont.	" 29	22	Explosion when acetylene torch flame touched gasoline tank.
Rigger	Oshawa, Ont.	" 29	28	
Steel forger	Toronto, Ont.	Aug. 26	40	Burnt while lighting forge with gasoline. Died Sept. 11.
Signal man on hoist	Sault Ste Marie, Ont.	" 29	45	Caught between wire cable and hoist, when latter backed too far.
Sales agent	Father Point, Que.	" 30	29	In wreck of automobile while on business trip.
Labourer	Hamilton, Ont.	Sept. 11	56	Was jammed against subway wall by coupé which swerved after hitting stone.
Welder	Calgary, Alta.	" 27	27	Testing tank which exploded.
Non-metallic mineral products:				
Labourer	Delson Jct., Que.	Aug. 19	72	Struck by train.
Labourer with brick company	Toronto, Ont.	" 30	.....	Bronchial pneumonia caused by lime.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1926—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—				
Continued—				
Chemicals:				
Employee of explosive factory	James Island, B.C.	Aug. 3	40	Slipped and was drawn into machinery.
Worker (girl)	Toronto, Ont.	" 11	17	Fell down elevator shaft.
Labourer	Montreal, Que.	Sept. 16	35	Lowered drop light into empty drum which exploded.
CONSTRUCTION—				
Buildings and structures:				
Labourer	Montreal, Que.	July 2	22	While repairing roof fell to ground.
Labourer	Montreal, Que.	" 14	.....	Fell from hoist owing to premature starting of same.
Labourer	Rawdon, Que.	" 19	.....	Fell from building.
Carpenter	Leamington, Ont.	" 19	.....	Sliver in hand; infection.
Foreman carpenter	Vancouver, B.C.	" 22	53	Struck by descending hoist.
Carpenter	Vancouver, B.C.	" 26	36	Fell from scaffold; shock.
Labourer	Quebec, Que.	" 29	65	Crushed by falling of heavy case.
Bricklayer	Stratford, Ont.	" 29	38	Sliver in hand.
Steeple painter	Drummondville, Que.	" 30	60	Fell from steeple.
Roofer	Dutton, Ont.	" 30	.....	Skull fractured.
Labourer	Kapuskasing, Ont.	Aug. 2	.....	Head crushed by car.
Labourer	Near Calgary, Alta.	" 2	43	Electrocuted while wiring barn.
Derrick man	Toronto, Ont.	" 5	.....	Struck by stone.
Labourer	Jordan, Ont.	" 14	.....	Fell through floor.
Labourer	East Templeton, Que.	" 14	19	Fell off building structure; died Aug. 19.
Carpenter	Thetford Mines, Que.	" 17	55	Fell through floor while demolishing building.
Labourer	Saint-Alexis, Que.	" 18	22	Crushed under cave-in of sand.
Labourer	Toronto, Ont. Died	" 18	42	While stone was being hoisted cable snapped and stone fell on foot of victim.
Painter	Vancouver, B.C.	" 19	24	Scaffold gave way, throwing him down 60 ft.
Roofer	Quebec, Que.	" 19	35	Fell from roof.
Painter	Toronto, Ont.	" 20	45	Sliver entered thumb; infection.
Carpenter	Near Brandon, Man.	" 21	24	Scaffold broke; victim's spine injured. Died Aug. 26.
Contractor's labourer	Prince Albert, Sask.	" 21	21	Stepped off scaffolding, falling 20 feet.
Asbestos worker	Montreal East, Que.	" 28	30	Burned to death in explosion of gasoline.
Carpenter	Quebec, Que.	" 28	40	Fell down elevator shaft when scaffolding broke.
Labourer	Montreal, Que.	" 31	.....	Fell down elevator shaft.
Steel worker	Toronto, Ont.	Sept. 3	33	Struck by falling steel beam.
Labourer	Fort Erie, Ont.	" 9	20	Struck on head by bucket.
Plumber	Montreal, Que.	" 9	46	Walked out and leaned on railing of balcony, which collapsed, throwing him to ground.
Sheet metal worker	Scarboro, Ont.	" 10	45	Fell off roof.
Labourer	Kapuskasing, Ont.	" 15	.....	Head crushed by car.
Labourer	Port Arthur, Ont.	" 15	.....	Drowned.
Painter	Newcastle, N.B.	" 23	54	Thrown to ground when rope supporting ladder broke.
Hoist engineer	Toronto, Ont.	" 28	30	Operating winch on derrick when staging gave way.
Carter for building contractor	Quebec, Que.	" 28	60	When horse ran away, man fell under wheels.
Shipbuilding:				
Ass't superintendent	Kingston, Ont.	July 25	.....	Fell overboard towing in stranded boat; drowned.
Bridge and highway:				
Bridge worker	Spuzzum, B.C.	" 6	42	Struck on head by sling.
Labourer on highway	Near Rosseau, Ont.	" 8	.....	Premature explosion.
Labourer	Smithers, B.C.	" 9	.....	Lost balance and fell from bridge; drowned.
Truck driver on Provincial highway construction	Snelgrove, Ont.	Aug. 13	26	Lost balance and fell under wheels of truck.
Teamster on road work	Near Palmerston, Ont.	" 17	63	Slightly deaf, run over by train.
Road repairer	Rivière Beaudette, Que.	" 26	50	Struck by automobile.
Bridge worker	Montreal, Que.	" 28	21	Fell from plank into current; drowned.
Labourer on highway repair	Sherbrooke, Que.	Sept. 1	.....	Crushed by load of gravel.
Miscellaneous:				
Caisson worker	Toronto, Ont.	July 2	26	Overcome by air pressure in sewer excavation.
Labourer	Hamilton, Ont.	" 2	.....	Electrocuted.
Canal foreman	Welland, Ont.	" 5	.....	Drowned when punt capsized.
Labourer	Chelsea, Que.	" 7	19	Struck on head by rock, following explosion; died Sept. 22.
Labourer	Port Colborne, Ont.	" 8	36	Fell from a gangplank; drowned.
Caisson worker	Toronto, Ont.	" 10	32	Overcome by air pressure in sewer excavation.
Labourer on canal excavation	Welland, Ont.	" 12	50	Struck by drag-line bucket.
Clearing man in mill for construction of power dam	Near Maniwaki, Que.	" 13	.....	Fell on circular saw.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1926—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—*Continued*—				
Labourer on sewer excavation	York Tp., Ont.	July 13	.....	Injured in cave-in.
Labourer	Welland, Ont.	" 22	.....	Crushed by falling timber while loading a wagon
Motor car pilot	Fort Francis, Ont.	" 24	.....	Ribs broken.
Drill runner on sewer excavation	N. Toronto, Ont.	Aug. 7	20	Using electric drill which became entangled in his clothing; died of shock.
Labourer	Granby, Que.	" 12	46	Explosion of dynamite while a well was being dug.
Contractor	Goderich, Ont.	" 18	62	Unloading timbers; cut binding wire and was crushed by load.
Labourer	Chelsea, Que.	" 23	28	While drilling holes, boat upset; drowned.
Labourer	Kenora, Ont.	Sept. 16	29	Slipped, falling on stick of dynamite.
Labourer on construction of dam	St. Narcisse, Que.	" 21	56	Struck on head by beam.
Labourer	St. Catharines, Ont.	Sept. 25	27	Tripped over wood washed into tunnel by rain, falling against high voltage line. Electrocuted.
Labourer	Farmer's Rapids, Que.	" 27	20	Sleeve caught in wheel of derrick engine, dragging him around wheel.
TRANSPORTATION AND PUBLIC UTILITIES— *Steam Railways:*				
Flagman	Bedford Siding, N.S.	July 5	57	Struck by train.
Station Agent	Highgate, Ont.	" 7	35	Struck by train.
Telegrapher	Rennie, Man.	" 8	25	Struck by train.
Fireman	Near Carmel, Que.	" 9	32	Leaning out of engine, was struck by freight car on siding.
Conductor	St. Telesphore, Que.	" 14	38	Pinned against wall by shunting engine which derailed.
Railway shop employee	Transcona, Man.	" 16	22	Crushed by crane.
Section foreman	Niagara-on-the-Lake, Ont.	" 16	68	Cut head; infection.
Brakeman	Lafleche, Sask.	" 19	38	Fell from top of car.
Brakeman	Souris, P.E.I.	" 19	over 21	Slipped when coupling cars; died July 27.
Yard foreman	Montreal, Que.	" 20	47	Caught under tender following derailment.
Conductor	Glenorchy, Ont.	" 24	.....	Train struck motor car.
Lineman	Summerville, Ont.	" 25	49	Contact with high voltage wires; electrocuted.
Railway employee	St. Hubert, Que.	" 27	55	Struck by train; crossing track.
Machinist's helper	Capreol, Ont.	" 29	48	Crushed while coupling.
Machinist	Charlottetown, P.E.I.	Aug. 4	68	Crushed while moving a tender.
Fireman	Galt, Ont.	" 5	43	Cut palm of hand; tetanus.
Coal chute labourer	Hornepayne, Ont.	" 9	.....	Struck on head.
Track labourer	Port Credit, Ont.	" 9	25	Heat prostration.
Sectionman	Minataree, Ont.	" 13	47	Hand car struck by train in rock cut during fog.
Sectionman	" "	" 13	49	
Sectionman	" "	" 13	43	
Sectionman	" "	" 13	42	
Railway employee	Near Humphrey's, N.B.	" 15	33	Run over by train.
Road master	St. John, N.B.	" 18	49	Thrown from car; injury to spine.
Sectionman	Gleichen, Alta.	" 18	55	Hand car struck by train.
Brakeman	Port Arthur, Ont.	" 19	58	Fell from pilot of locomotive.
Section foreman	Montreal, Que.	" 20	57	Struck by train.
Sectionman	Bowser, B.C.	" 25	70	Struck by falling tree.
Labourer repairing railway bridge	Ville Lasalle, Que.	" 28	57	Run over by train.
Switch tender	Montreal, Que.	" 29	49	Run over by engine.
Crossing man	New Glasgow, N.S.	" 30	35	Trying to board train; fell under cars.
Brakeman	Fitzpatrick, Que.	" 30	27	Foot caught in frog; run over.
Brakeman	Mirror, Alta.	" 31	35	Fell from box car, striking head.
Section foreman	Yoho, B.C.	Sept. 1	45	Burned in section house fire.
Brakeman	Foleyet, Ont.	" 5	24	Run over by train.
Trainman	Jessica, B.C.	" 5	.....	Derailment of freight train, crashing into canyon.
Trainman	"	" 5	.....	
Trainman	"	" 5	.....	
Trainman	"	" 5	.....	
Agent	Sedley, Sask.	" 6	35	Fell getting off train.
Sectionman	Near Thorndale, Ont.	" 7	65	Snatching pick from track, was struck by express.
Ground man	Maniwaki, Que.	" 7	25	Struck by hand car.
Bridgeman	Field, B.C.	" 9	39	Crushed in collapse of round house being dismantled.
Yard man	Fort William, Ont.	" 10	.....	Run over by train.
Labourer	Franz, Ont.	" 12	49	Fell off train.
Sectionman	Montreal, Que.	" 15	45	Struck by train while at work in tunnel.
Labourer	Couchon Lake, Ont.	" 17	.....	Drowned.
Engineer	Near Kent Bridge, Ont.	" 18	50	Collision of freight trains in fog.
Fireman	" "	" 18	30	
Fireman	" "	" 18	44	
Brakeman	" "	" 18	47	
Carpenter in railway shop	Toronto, Ont.	Sept. 23	43	Foot crushed by heavy timber, causing tetanus; fatal Oct. 3.
Brakeman of work car	Near Bathurst, N.B.	" 28	.....	Car derailed by collision with auto.
Switchman	Jasper, Alta.	" 30	36	Killed while switching.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1926—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—*Continued*—				
Street and Electric Railways:				
Labourer	Brantford, Ont.	July 21	.....	Heat prostration.
Lineman	Lambton, Ont.	" 24	.....	While repairing switch, touched trolley wire; electrocuted.
Trackman	Cornwall, Ont.	Aug. 21	45	While shunting freight cars was caught between cars.
Track labourer	Montreal, Que.	Sept. 27	30	Struck by tram while repairing road bed.
Water Transportation:				
Boatman	Sainte Famille, Que.	July 1	28	Drowned when boat capsized in current.
Longshoreman	Vancouver, B.C.	" 12	45	To avoid rolling log stepped back and fell overboard, striking fender log.
Longshoreman	Vancouver, B.C.	" 14	37	Fell through hatch while uncovering it.
Longshoreman	Quebec, Que.	" 15	.....	Struck by sling and thrown into river; drowned.
Cook (female)	Lake St. Louis, Que.	" 15	18	Drowned when tug boat was rammed by grain boat.
Captain	"	" 15	.....	
Engineer	"	" 15	.....	
Second Engineer	"	" 15	.....	
Deckhand	"	" 15	.....	
Deckhand	"	" 15	.....	
Stevedore	Montreal, Que.	" 16	32	Struck by load of timber slung from crane.
Second officer	Vancouver, B.C.	" 16	25	Fell through open hatch of vessel when hold was being fumigated.
Wheelsman	Montreal, Que.	" 17	35	Caught in hawser and drawn onto winch; mangled
Seaman	Montreal, Que.	" 28	35	Jumped to dock from deck, missed footing; drowned.
Longshoreman	Vancouver, B.C.	" 28	35	Crushed by logs falling from deck.
Ship's carpenter sailing from Sydney, N.S.	Atlantic Ocean	About Aug. 1	—	Repairing between decks, fell into hold.
Fireman	Port Dalhousie, Ont.	" 2	45	Fainted owing to work in engine room; fell from gangplank and was drowned.
Captain of Government tug	Port Burwell, Ont.	" 7	50	Fell off gangplank; drowned.
Packer	Snake Falls, Ont.	Aug. 7	.....	Boat overturned in current; drowned.
Second engineer	Montreal, Que.	" 10	.....	Fell overboard; drowned.
Bargeman	Quebec, Que.	" 14	.....	Fell overboard; drowned.
Bridge tender	Quebec, Que.	" 19	52	Caught in gears and thrown to ground.
Cook on steamship	Sault River, Ont.	Aug. 22	25	Drowned.
Labourer on scow	False Creek, B.C.	" 28	30	Fell from scow; drowned.
Longshoreman	Montreal, Que.	Sept. 18	32	Fell from a gangway and cut head; died of meningitis.
Fireman on tug	Port Dalhousie, Ont.	" 21	.....	Fell from beam crossing lock; drowned. Reported carelessness.
Seaman	Lunenburg, N.S.	" 23	20	Drowned when he fell from a dory.
Stevedore	Guysboro, N.S.	" 26	.....	Stanchion on side of steamer broke, man thrown into water; drowned.
Captain of schooner	Amherst, N.S.	" 28	.....	Flung to dock by breaking of guy lines during loading of freight.
Local Transportation:				
Mail carrier	Hamilton, Ont.	July 12	50	Thrown from wagon when horse ran away; fractured skull.
Stableman	Brantford, Ont.	" 17	73	Horse stepped on leg; infection.
Truck driver	Montreal, Que.	" 19	34	Collision of two motor trucks.
Truck driver	Vernon, B.C.	" 26	35	Crushed beneath truck which overturned when trailer slid over bank.
Truck helper	Winnipeg, Man.	Aug. 3	56	Coupling trailers when coupling slipped, crushing him.
Teamster	Hamilton, Ont.	" 20	56	Rupture.
Truck driver	Port Colborne, Ont.	" 24	23	Truck collided with car and overturned.
Truck driver	Montreal, Que.	Sept. 4	43	When repairing truck did not turn off engine; caught in shaft.
Truck driver	Winnipeg, Man.	" 8	26	Crushed between truck and wall.
Taxi driver	Near Bathurst, N.B.	" 28	.....	Auto struck by train, derailing it.
Storage:				
Grain buyer	Tilston, Man.	July 31	28	Car struck by train.
Telegraphs and Telephones:				
Lineman	Beaverton, Ont.	Aug. 23	.....	Struck by lightning.
Lineman	Gonor, Man.	" 25	42	Gasoline car struck dog and was hurled from track
Climber	"	" 25	29	
Cableman	Niagara Falls, Ont.	" 31	26	Touched live wire and fell from pole.
Electricity and Gas:				
Lineman	Hamilton, Ont.	July 1	.....	Stunned by contact with live wire; fell into box of hot lime.
Electrician	Montreal, Que.	" 6	29	While painting post touched wire; was electrocuted and fell to ground.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1926—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—*Continued*—				
Electricity and Gas—Con.				
Lineman	Ridgetown, Ont.	" 8	30	Electrocuted by high tension wire on pole.
Lineman	Ridgeway, Ont.	" 8	.....	Electrocuted.
Superintendent of electric company	Cannington, Ont.	" 9	35	Electrocuted while installing transformer.
Painter with Hydro Commission	Queenston, Ont.	" 12	33	Fell from scaffold.
Lineman	Ottawa, Ont.	" 15	30	Slipped on pole and came in contact with high voltage wire.
Wireman	Gatineau Point, Que.	Aug. 7	22	Electrocuted when repairing transmission wire.
Engineer's assistant	St. Méthode River, Que.	" 10	.....	Drowned in river when boat capsized.
City lineman	Moose Jaw, Sask.	" 16	45	Electrocuted.
Employee of power company	Ottawa, Ont.	" 17	35	Collapse of stop logs at dam; drowned.
Employee on transmission line	Stoneham, Que.	" 21	23	Victim putting out a fire; some gasoline exploded, burning him.
Labourer	Hébertville, Que.	" 30	25	Fell off tractor and was crushed by machine in tow.
Lineman with electric commission	Fergus, Ont.	Sept. 10	24	Struck by train.
Ass't Supt. with Municipal Commission	Elmira, Ont.	" 18	30	Electrocuted while repairing hydro line.
Employee of power plant	Sherbrooke, Que.	" 23	24	Wielded defective sheet of metal roofing above head while throwing it to ground, touching a high voltage wire; victim electrocuted.
Lineman	St. Justine de Newton, Que.	" 27	33	Lost balance and fell from pole.
Express:				
Express employee	Montreal, Que.	" 9	35	Attempting to board train, fell beneath wheels.
TRADE—				
Retail:				
Warehouseman	Kochechene River, Ont.	July 14	20	Going from camp to warehouse, canoe upset; drowned.
Coal dealer	Quebec, Que.	" 22	62	Struck by train while going to unload car of coal.
Pedlar	Near Ottawa, Ont.	Aug. 2	.....	Sedan struck by train.
Storekeeper	Hudson, Ont.	" 11	.....	Explosion of case of dynamite.
Furniture dealer	Athens, Ont.	" 12	65	Fell, striking back while repairing his store.
Truck driver for general store	Thistletown, Ont.	" 25	62	Run over by motor car whose engine he had left running while on an incline.
Grocery driver	Lachine, Que.	" 31	71	Wagon struck by train.
Employee of dairy company	Toronto, Ont.	Sept. 6	35	Kicked by horse.
Yardman	Winnipeg, Man.	" 16	41	Electrocuted by electric coal loader.
Manager of dairy	Winnipeg, Man.	" 21	46	Trampled in runaway.
SERVICE—				
Public administration:				
Powder man with govt. dept.	Humphrey, Ont.	July 7	45	Explosion.

Forest ranger	" "	" 13	.....	
Blacksmith fighting forest fire	Salmo, B.C.	" 15	35	Crushed by burning tree.
Civic labourer	Quebec, Que.	" 23	66	Slipped and fell, struck by street car.
Fire fighter	Pass Creek, B.C.	" 31	53	Fighting forest fire, struck by burning tree.
Pilot officer on forestry patrol	Hudson Bay Rly., Man.	Aug. 19	24	Crash of air-plane.
Penitentiary guard	Portsmouth, Ont.	" 28	.....	Struck on head by convict.
Boy in municipal gravel pit	Sherbrooke, Que.	" 28	14	Caught by slide of boulders.
Customs Officer	Borden, P.E.I.	Sept. 2	50	Struck by auto when proceeding to his work.
Driver of fire wagon	Vancouver, B.C.	" 20	36	Wagon skidded on wet pavement, and overturned, throwing out victim.
Recreational:				
Employee of midway show	Brandon, Man.	July 3	41	Crushed between cars during switching.
Employee of fireworks company	Toronto, Ont.	Aug. 30	30	Victim setting off fireworks at Exhibition, mortar exploded.
Midway employee	Toronto, Ont.	Sept. 12	19	Crushed while repairing amusement device.
Personal and domestic:				
Caretaker	Guelph, Ont.	Aug. 2	52	Fell from a window ledge.
School janitor	Vancouver, B.C.	" 19	.....	Electrocuted while cleaning out furnace.
Caretaker	Montreal, Que.	Sept. 25	28	Gas poisoning from defective heater.
UNCLASSIFIED—				
Labourer	Union Point, Man.	Aug. 6	21	Unloading timber onto a flat car. Load, jarred by passing train, fell on him.

THIRD SUPPLEMENTARY LIST OF FATAL ACCIDENTS OCCURRING IN 1925.

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—				
Local Transportation:				
Teamster	Dewey, B.C.	Sept. 30	28	Driving load of lumber under beam; caught between load and beam. Died July 19, 1926.

SUPPLEMENTARY LIST OF FATAL ACCIDENTS OCCURRING IN THE FIRST HALF OF 1926.

AGRICULTURE—				
Farmer	Monkland, Ont.	Jan. 20	60	Sleigh struck by train.
Farmer	Moosomin, Sask.	June 5	.....	While driving team presumably took a fit and fell under machine.
LOGGING—				
River driver	Restigouche Co., N.B.	May 25	17	Fell from horse into river; drowned.
Pipe fitter	Port Clements, B.C.	June 12	66	Returning from work; boat swamped; drowned.
Chokerman	Ocean Falls, B.C.	" 19	.....	Struck by falling tree.
MINING, NON-FERROUS SMELTING AND QUARRYING:				
Metalliferous mining:				
Miner	Schumacher, Ont.	Feb. 4	40	Silicosis.
Miner	Cadwallader Creek, B.C.	June 21	43	Struck by bucket falling down shaft.
MANUFACTURING—				
Textiles:				
Female mill worker	Iroquois, Ont.	May 11	17	Struck by train while on way home to dinner.
Saw and planing mills:				
Labourer	Fraser Mills, B.C.	June 2	23	Sliver pierced finger while handling lumber; septico-pyaemia, fatal June 17.
Non-metallic mineral products:				
Helper with oil co.	Toronto, Ont.	Apr. 28	54	Crushed leg; infection.
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam Railways:				
Patrolman	Near Boston Bar, B.C.	Apr. 5	47	Cutting off tree which had fallen across track; fell off trunk; died May 11.
Yardman	St. John, N.B.	" 9	35	Engine collision, causing septic pneumonia.
Sectionman	Renwick, Ont.	Feb. 18	.....	Frozen toe.
Water Transportation:				
Captain of ferry	Chatham, N.B.	June 3	59	Crushed between couplings while on way to work.
Sailor	Montreal, Que.	" 26	22	Jumped to dock from deck and missed footing; drowned.
SERVICE—				
Public and Municipal:				
Labourer	Glengarry Co.	June 28	.....	Fell off wagon on head.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Sailor Engaged in Nova Scotia may be paid Compensation in Quebec

An assistant steward employed by Canadian Government Merchant Marine, Limited, on board the steamship *Canadian Sapper,* sustained injuries while going on shore on duty while the vessel lay in Montreal harbour. The *Canadian Sapper* was moored to the *Canadian Mariner,* another vessel owned by the same company, and in going ashore it was necessary for the employee to cross the *Mariner.* In doing so he fell into the hold and sustained serious injuries, 40 per cent incapacity being admitted by the company to have resulted. He brought action against the company under the Workmen's Compensation Act of Quebec to recover an indemnity for his injuries. The defendant company opposed the claim for the following reasons: that the plaintiff was guilty of inexcusable fault because there were two ways, both safer than the one he took, to cross the *Canadian Mariner;* because the act he was engaged in when he fell was not one in the course of his employment, and did not bring his claim within the scope of the Workmen's Compensation Act of this province; and because he was engaged at the time under a contract made, not in the province of Quebec, but in New Brunswick, where defendant claims plaintiff was domiciled and had his home.

In regard to the last reason the evidence showed that the plaintiff first entered the service of the defendant at Montreal under an engagement made at that place, on a ship registered at and plying to Montreal; that he had an unbroken record of service on the defendant's ships from 1922 to the date of the accident (August, 1924); and that on each contract the "residence" of the company was given as being Montreal, each of the company's ships moreover being registered there. The court therefore held that there were good reasons for presuming that the relations of the employer and employed in this case were well understood to be governed by the laws of the province of Quebec. "Moreover," the judgment stated, "if it is the law of the place where the accident happens which applies, as has sometimes been held, then the plaintiff would be entitled to invoke the law of this province, on that score also."

As to the company's allegation that the accident did not happen in the course of employment, it was found that the plaintiff was going ashore to execute orders for the chief officer and the chief steward, and that he was therefore acting within the scope of his duties. The plea of inexcusable negligence on the employee's part was likewise found by the court to be without foundation. Judgment was therefore given for the plaintiff.

—(Quebec—Pheeny versus the Canadian Government Merchant Marine, Limited.)

Gasoline Boat a "Steamer" under Canada Shipping Act

The Canada Shipping Act, Revised Statutes of Canada, 1906, chapter 113, section 96, provides that sailing ships registered in Canada over 100 tons, and steamships registered in Canada, which ply on any Canadian waters, must carry certificated masters. By an amendment to the Act (Statutes of 1912, chapter 51) exceptions to this rule were made in regard to pleasure yachts, steamships under five tons, barges, fishing craft, and also in regard to sailing ships of 100 tons or less which are engaged in coastwise trade, are propelled by auxiliary power other than steam, and are employed partly in fishing and partly in the carriage of freight.

Action was brought in the British Columbia District of the Exchequer Court of Canada in Admiralty, the plaintiff being the master, but without a certificate, of a gas boat of the registered gross tonnage of 21.02 tons, used chiefly in towing barges. The action was for wages claimed to be due to the master and also for wages due to his wife as cook. The question arose whether or not it was necessary for a ship of this kind, not being a sailing ship or a steamship, to have a master who possesses a valid certificate under section 96. The court found that such vessels are not excluded by the general definition of "steamer" in section 72 (*c*) of the Act, which declares that, "unless the context otherwise requires," "'steamship' or 'steamer' includes any ship propelled totally or in part by steam or motive power other than sail or oars."

There being nothing in the context to exclude this definition from applying to this vessel the court decided that she should have had a certificated master. The plaintiff had not a certificate, but his services were accepted by the owner notwithstanding this disqualification, and there was no evidence that he was negligent in the performance of his duties. Judgment was given for the plaintiff, but his wife's claim was dismissed.

—(British Columbia Admiralty District—Jansen et ux versus the "Tex.")

Limit of Rights to Union Benefit

The LABOUR GAZETTE, July, 1926 (page 734), contained a note on the Manitoba case, *Theobald versus Winnipeg Musicians' Association,* in which it was held by the trial court that a member of the union may not by his will designate any particular person, not being a relative, as a beneficiary of the donation fund of the union. The plaintiff appealed against this decision, which however was confirmed by the Court of Appeal.

It will be recalled that in this case a member of the Winnipeg Musicians' Association died, leaving a will by which he gave to a friend, the plaintiff, "any moneys which I may own or inherit now or after my death, such as insurance from any association, etc.," and appointed her his executor. The plaintiff was neither a dependent nor in any way related to the deceased. She sought to recover $1,000 from the association under its by-law number 85, which provides for a donation being made by the association of a sum of $1,000 to "a designated beneficiary or to the legal representative of a deceased member of the association."

The association was incorporated under the Charitable Associations Act of Manitoba, which was amended in 1924 so as to enable the association to provide benefits, not only to the widows and orphans of deceased members, as formerly, but also to their relations and dependents. The court found that the claimant, not being within the classes mentioned in the Act, could not validly be designated by a member as a beneficiary of the donation fund.

Another point involved in this case was the validity of the by-law number 85 of the association which reads as follows:—

> Upon the death of a member who has been for at least one year a member of the association, and who has been in good standing for three months previous to his death, the proceeds of an assessment of $2 on each member of the association, not exceeding in amount the sum of $1,000, will be donated to a designated beneficiary or to the legal representative of such deceased member, any indebtedness to the association from the deceased member having first been deducted from the amount payable.

The trial court held this by-law to be *ultra vires* of the association, and this judgment was confirmed by the Court of Appeal, on the ground that the by-law purports to go beyond the classes named in the Act (widows, orphans, relations and dependents), and to authorize the payment of benefits to the legal representative of the deceased member or to any one whom the deceased member may have chosen to designate as beneficiary.

—(Manitoba—Theobald versus Winnipeg Musicians' Association.)

Statements made before Workmen's Compensation Board are Privileged like Statements made in Court

A draughtsman formerly employed on the Canadian National Railways at Toronto made a claim to the Workmen's Compensation Board of Ontario for a condition of disease of the eye known as iritis, which the claimant alleged was caused by an injury received in May, 1924, while he was working on the Railways. The Workmen's Compensation Board rejected the claim on the ground that the disease from which the plaintiff suffered might have been produced by venereal disease, and that there was evidence that the plaintiff had admitted to a doctor, the defendant in the present case, that he had suffered from such a disease during the war period. The plaintiff had been a member of the Canadian army, and was discharged in 1918 owing to illness and physical unfitness. By the terms of an order in council it was provided that in case any returned soldier should make a claim to the Workmen's Compensation Board against his employer and the employer should be directed to make compensation, the Dominion Government, through the Department of Soldiers' Civil Re-establishment, would reimburse the employer in any amount that the latter might be called upon to pay to the injured employee. After the claim was filed, the defendant was instructed by the Assistant Chief Claims Agent of the Canadian National Railways at Toronto, to take charge of the medical aspect of the case and to make the necessary investigations and prepare the evidence from a medical standpoint.

The plaintiff's alleged admission that he had contracted the disease in question was stated to have been made to the defendant doctor while being treated by him some time before the claim was submitted to the Workmen's Compensation Board. Subsequently the doctor (the defendant) made use of this alleged information to the detriment of the plaintiff. The plaintiff brought action in the Supreme Court of Ontario for damages for libel and slander against the doctor, who was medical director of the Canadian National Railways.

In giving judgment the Court discredited the doctor's recollection as to what took place when the plaintiff consulted him, the doctor not appearing to have understood what was told him by the plaintiff, whose medical record in the army showed no trace of such a disease having been contracted by him. The plaintiff brought the action against the doctor, because the defendant had made communications to various parties regarding the plaintiff's

condition. In regard to the statements to this effect made by the defendant to the Workmen's Compensation Board, the court found that such statements were clearly privileged, the Board being in its nature a judicial body, and the statements made to such a body enjoying the same privilege as if made in court. The same privilege attached to letters written by the defendant to the claims-agent of the Canadian National Railways. In regard to the communications made by the defendant to other parties the court found that these were entirely unnecessary. While there was nothing in the evidence to show that there was any malice in the mind of the defendant against the plaintiff, yet there appeared to be malice as recognized at law. "The defendant appears to have been under the impression that it was his duty to do everything possible to defeat the plaintiff's claim and to maintain his own opinion that the iritis was not caused by the injury as alleged by the plaintiff. In order to establish his contention he communicated to other persons information which he claimed to have acquired as the private physician of the plaintiff some three or four years previously. I do not know whether the code of ethics of the medical profession would recognize such conduct as proper, but it certainly does appear extraordinary that a physician to whom a patient discloses his physical ailments should afterwards use the information so acquired to the injury of the patient, merely because the interests of his present employers so require."

Judgment was given to the plaintiff for $700 ($500 for libel and $200 for slander) with costs.

An appeal against this decision was entered by the defendant.

—(Ontario—Halls versus Mitchell)

Mechanics' Lien Attaches to Land on which Improvements are made

A construction firm carried out improvements on certain lands, filling in a depression and constructing a culvert. Not obtaining payment for the work they brought action against the owner of the lands under the Mechanics' and Wage Earners' Lien Act (Revised Statutes of Ontario, 1914, Chapter 140). The owner was a woman who did not reside on the lands, which were managed by her son, to whom she paid occasional visits. It was contended by the defendant that there was no agreement or direct dealing between her and the contractors, that the work had not been done at her request or for her direct benefit, and that the contractors having made their agreement with her son could look only to him for payment. The County Court of Wentworth declared that the plaintiffs were entitled to a lien for $13,382 on the lands, and on appeal being taken by the owner the Appellate Division dismissed the appeal. The evidence of the mother and son, to the effect that the mother was not aware of the work being done, was discredited by the court, which found that the work had been done with her knowledge and consent and for her benefit. The mother was thus brought within the definition of "owner," in section 2 of the Act, namely—

> Any person, body corporate or politic, including a municipal corporation and a railway company, having any estate or interest in the land upon or in respect of which the work or service is done, or materials are placed or furnished, at whose request and (i) upon whose credit or (ii) on whose behalf or (iii) with whose privity and consent or (iv) for whose direct benefit work or service is performed or materials are placed or furnished, and all persons claiming under him or them whose rights are acquired after the work or service in respect of which the lien is claimed is commenced or the materials furnished have been commenced to be furnished.

The lien was declared to be attached to the land whether the contractors looked originally to the plaintiff or her son for payment.

—(Ontario—Cope & Sons, Limited, versus Armstrong.)

Mechanics' Lien on lands of Incorporated Company

A firm of general contractors made an agreement with the president and secretary of a country club, being an incorporated company, for the construction of a club house, to be completed within two months. Considerable excavation and other work had been done when the company became insolvent. The contractors claimed a lien under the Mechanics and Wage Earners' Lien Act, 1923, on the lands held by the company. The County Court, which tried the case, dismissed the plaintiffs' claim on the ground that there had been no formal agreement between the parties, but, on appeal in the Second Divisional Court the judgment of the trial court was reversed and the claim was allowed, the evidence being held to show that an express agreement had been made. By the Mechanics and Wage Earners' Lien Act, Section 2 (c) the term "owner" extends to a body corporate, like the defendants, upon whose credit, or on whose behalf, or with whose privity and consent, or for whose direct benefit, work or service is performed or materials are placed or furnished.

—(Ontario—Eyre & Son versus Buffalo and Fort Erie Country Club, Limited.)

Negligence in Failing to Safeguard Explosives

An employee of the Montreal Light, Heat and Power Company, while working in a ditch, struck the detonator of a dynamite cartridge with his pick, causing an explosion which resulted in destroying the sight of one of his eyes and in reducing the power of vision of the other eye by three-fourths. In an action for compensation under the Workmen's Compensation Act the Superior Court at Montreal allowed the injured workman the sum of $5,532.50, finding inexcusable negligence on the part of the defendant company, whose foreman had not taken due precaution in issuing detonators and cartridges. The "highly dangerous operation" of blasting, the court stated, required to be safeguarded by very strict regulations, which had not been observed in this case.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] DECEMBER, 1926 [NUMBER 12

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

EMPLOYMENT in Canada at the beginning of November continued to show an improvement over the level recorded on the corresponding date in 1925, but a greater seasonal contraction from the figures of the preceding month is noted this year. This statement is based on returns received by the Dominion Bureau of Statistics from 5,896 employers with a minimum of fifteen employees, in all industries other than agriculture and fishing. The payroll of these employers declined from 864,749 persons on October 1 to 845,278 at the beginning of November. The employment index number (based on the staffs employed by the reporting firms in January, 1920, as 100) stood at 102.8 on November 1, as compared with 105.2 in the preceding month, and with 97.1, 93.0, 98.8, 95.8 and 90.2 on November 1, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada indicated a decrease of 25 per cent in the average daily placements in October as compared with September, due to curtailment in farming operations, counteracted in part by gains in logging. An increase of over 6 per cent was shown when comparison is made with the average daily placements in October, 1925. Increased placement activity this year was noted in farming but manufacturing, transportation, construction and maintenance also contributed to the improvement in the employment offices' business. At the beginning of November the percentage of unemployment among members of local trade unions stood at 2.6 as compared with percentages of 3.3 at the beginning of October and 5.1 at the beginning of November, 1925. The percentage for November is based on returns received by the Department of Labour from 1,541 local trade unions with a total membership of 151,130 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.01 at the beginning of November, as compared with $10.93 for October; $11.23 for November, 1925; $10.46 for November, 1924; $10.69 for November, 1923; $10.29 for November, 1922; $11.08 for November, 1921; $15.32 for November, 1920; $16.92 for June, 1920 (the peak); $13.65 for November, 1918; and $7.96 for November, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, advanced to 151.5 for November, as compared with 151.1 for October; 161.2 for November, 1925; 157.7 for November, 1924; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.4 for November, 1920; 256.7 for May, 1920 (the peak); and 207.4 for November, 1918.

The time loss caused by industrial disputes in November was less than in October, 1926, and also less than in November, 1925. Eight disputes were in progress at some time during the month, involving 902 employees and resulting in the loss of 8,320 working days. Corresponding figures for October were as follows:—nine disputes, 2,138 workpeople and 26,425 working days; and for November, 1925, eleven strikes, 3,925 workpeople and 38,187 working days.

Industrial Disputes Investigation Act, 1907

During November the Department received an interim report from the Board of Conciliation and Investigation appointed in connection with a dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and certain of their employees, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board appointed in connection with a dispute between the Canadian National Railways and certain employees on the Montreal Wharf, was completed, and another Board was appointed to deal with a dispute between the Canadian Pacific Railway Company and its clerks, freight handlers, etc. In the case of the dispute between the railway companies and their conductors, trainmen and yardmen which was the subject of the report printed in the November issue, further discussions were

held between the parties concerned and a compromise was reached early in December. Particulars of the recent proceedings under the Act are given on page 1188.

Combines Investigation Act, 1923

The LABOUR GAZETTE for October (pp. 945-7) contained a summary of an interim report by the Registrar of the Combines Investigation Act on the Proprietary Articles Trade Association, an organization of manufacturers and wholesale and retail druggists designed to fix and maintain minimum resale prices on proprietary medicines and toilet articles. The conclusion reached by the Registrar in his report was "that the evidence presented in this report is sufficient to show that the Proprietary Articles Trade Association has operated and is likely to operate to the detriment of or against the interest of the public, and that therefore it is a combine within the meaning of the Combines Investigation Act."

Following the publication of this report, officers of the Proprietary Articles Trade Association requested an opportunity to present a statement regarding the operations of the Association. Accordingly, the Minister of Labour agreed to defer action on the report pending the receipt of this statement, which was received on November 1.

The statement of the officers of the Association emphasized the difference between proprietary or branded articles and general commodities, and pointed out that the P.A.T.A. was concerned only with the former. They submitted that, as the owner's trade marks are valuable to him "and injury done to any of these brands by methods of selling is a real injury to the property rights of the manufacturer, he has a right, as an individual, or in combination with other manufacturers having similar proprietary rights to take the necessary steps to protect them." Reference also was made in the statement to the alleged "danger to the public which might ensue when the price-cutters, having wiped out all possible competitors, obtain the monopoly of the distributing business. It is that competition," the statement continued, "which is resorted to for the purpose of destroying competition and of eliminating a competitor and of introducing monopoly, which is the 'unfair competition' that this Association is fighting."

Appeal was made by the Association, in the same statement, for a new hearing (by a commissioner or commissioners appointed under the Combines Investigation Act) on the ground that prior to the issuance of the Registrar's interim report they did not have the full opportunity which is contemplated by the Combines Investigation Act to present their side of the case. This request also was granted by the Minister of Labour, who announced, on November 5, that he would arrange for the appointment of a commissioner. In making this announcement, Mr. Heenan said: "I am satisfied that the report of the Registrar was made only after full consideration of both sides of the case. The druggists' organization express doubt on this point. I hesitate to incur further delay, but rather than take any course which could be considered as in any way unfair to the trade, I would give them the benefit of the doubt. Accordingly, in order to provide the P.A.T.A. with the fullest opportunity for the formal presentation of their case, I have decided to arrange for the appointment of a commissioner for this purpose and for the completion of the inquiry."

Labour Department loses two members of staff

The Department of Labour sustained two serious losses by the death of Mr. Edouard Vincelette on November 20 and of Mr. Samuel T. Bastedo on December 2. The late Mr. Vincelette had been chief translator for the past seventeen years, and among his other duties supervised the production of the French edition of the LABOUR GAZETTE. He was formerly engaged in journalistic work in the Province of Quebec and also for a time in the New England States. At the time of his appointment to the staff of the Department of Labour he was on the editorial staff of *Le Canada* (Montreal). His high literary attainments and genial disposition made him a highly valued and respected member of the public service, and his death deprives the Department of a particularly efficient member.

The late Mr. Bastedo was superintendent of Dominion Government Annuities since their establishment under the Government Annuities Act of 1908. In 1880 he was appointed private secretary to Sir Oliver Mowat, then premier and attorney-general of Ontario, and held this position for sixteen years. Later he held the position of Deputy Minister of Fisheries for Ontario for ten years. On the recommendation of the Dominion Government he was appointed by the British Government to represent Canada on the Joint International Commission to investigate fishing conditions on the boundary between the United States and Canada. On the termination of the work of that commission Mr.

Bastedo was appointed superintendent of Government Annuities, discharging the duties of this position with great efficiency until his death.

First order under Women's Minimum Wage Act of Quebec

The text of the first order issued by the Women's Minimum Wage Board of the Province of Quebec is given on page 1195 of this issue. It governs employment in laundries, dyeworks and dry cleaning establishments in the City and Island of Montreal and within a radius of 10 miles beyond the Island. The minimum weekly wage fixed for experienced workers is $12, with corresponding lower rates for inexperienced and juvenile workers. As was to be expected from the somewhat lower cost of living in the province of Quebec, the minimum wage rate is rather less than the minimum wage of this class of labour in Toronto, or in the western provinces with the exception of Manitoba. In Manitoba the minimum wage for laundry workers is $12 for Winnipeg and St. Boniface and $11 in the rest of the province. In Ontario the rates vary from $12.50 for Toronto, to $8 in sparsely populated districts, intermediate rates of wages being fixed for the other divisions on the basis of population.

The new order of the laundry industry in Quebec resembles the orders of the Boards in other provinces in its form and provisions. The learning period for girls under 18 years of age is divided into three periods of 6 months each, while inexperienced adults are required to complete two 6-month periods before they are entitled to receive the full minimum for experienced adults. In order to prevent the employment of a disproportionate number of young and inexperienced girls it is provided that not more than 35 per cent of the entire staff are to be in the "inexperienced" classes. The Quebec order makes no provision as to the number of hours in the working day to which the minimum wage rates are to apply, except that overtime rates are to be paid for "work in excess of the regular recognized working period of the establishment." The Ontario Board, in December, 1923, fixed the normal working time for the laundry industry at 50 hours in the week, the minimum wage rate being payable for not less than 44 or for more than 50 hours (LABOUR GAZETTE, January, 1924, page 37). In Alberta female workers may not be regularly employed for more than 9 hours in any one day or 48 hours in any one week, but longer hours may be worked by special permit from the Board.

Validity of B.C. Male Minimum Wage Order is upheld

The validity of the first order under the Male Minimum Wage Act of British Columbia, which had been challenged by the British Columbia Lumbermen's Association, was upheld in a judgment of the Court of Appeals at Victoria on December 2. The judgment dealt with an appeal against the conviction of Robertson and Hackett Sawmills, Limited, who were fined $10, in a test case in the Vancouver Police Court, for paying its employees at a rate less than 40 cents an hour, the minimum wage fixed by the Board of Adjustment for the lumber industry in the first order issued under the Act. The magistrate's decision, recognizing the validity of the order, was subsequently upheld by Chief Justice Hunter in the Supreme Court Chambers. Counsel for the appellant company contended that it was incumbent on the Board, before making any order, to conduct a systematic inquiry into all industry. The Chief Justice held that this was not a sound construction of the Act, which intended that the Board should hold inquiries and made orders from time to time, otherwise the act would be unworkable; and it was the duty of the court to make legislation workable.

Further particulars of this case will be given in a future issue among the "Recent Legal Decisions." The text of the order in question which became effective on November 1, was given in the LABOUR GAZETTE for October, page 948.

Proposed extension of C.N.R. co-operative management plan

A proposal is under consideration for the extension to the maintenance-of-way employees of the co-operative shop management plan which was introduced in the shops of the Canadian National Railways last year. Reference has been made in several previous issues of the LABOUR GAZETTE to this co-operative plan (September, 1925, page 858 etc.). Several months ago the management of the Canadian National Railways were approached by officers of the Maintenance-of-Way organization, suggesting that a co-operative plan might be introduced in this department similar to that now in operation in the Mechanical Department. It was decided that if the Maintenance-of-Way organization could secure the services of Captain O. S. Beyer, consulting engineer of the American Federation of Labour, a survey might be made of this department for the purpose of ascertaining whether the plan could be adopted or not.

Arrangements were made subsequently with Captain Beyer, and the enquiry is now under way. The union management co-operative plan which is in force in the Mechanical Department was organized through the assistance of Captain Beyer. Mr. A. J. Thomas, of the staff of the Canadian National Railways, is associated with Captain Beyer in the present enquiry.

Union support for joint management on railways

President Bert M. Jewell, of the Railway Employees' Department of the American Federation of Labour, in a recent report on Union-Management Co-operation, states that the remarkable growth of the movement, especially in the railway industry, shows the extent to which labour is giving support to the new principles. The "Baltimore and Ohio" experiment was begun at the Glenwood, Ohio, shops less than four years ago with 300 men, and it is estimated that at the present time about 50,000 shopmen in the United States and Canada are working under the joint management plan. Among the advantages recorded of union-management co-operation is a notable decline in grievances, it being estimated that the minor grievances on the Baltimore and Ohio and on the Canadian National systems have been reduced 50 per cent, and the appeal cases which are not adjusted locally have decreased 75 per cent. Moreover, thousands of practical suggestions have been made by employees during the year. The Railway Employees' Department of the American Federation of Labour, in order further to facilitate union-management co-operation, has retained an expert in mechanics and engineering with knowledge of railway management combined with an understanding of the labour movement and an "appreciation of the human problem of industry."

In conclusion Mr. Jewell makes the following statement:

"Union-management co-operation is not a panacea of all our labour ills. It is only a simple step forward. We will experience setbacks and disappointments. We expect them. Impatience with results, skepticism and fear will be long in eradication. Ten years, nay twenty years, will be a short time in which to create a sounder, healthier, and lasting attitude on the part of management toward our legitimate unions and of our unions toward management. I firmly believe that the crossroads have been reached and passed so that we may now count with confidence on progressive improvement in the constructive relationship between railroad workers and managers. Speaking for the federated shopmen of our American railroads, I assure you we are determined to carry on. We stand ready and willing to co-operate with railroad managements at all times along sound lines."

Mining developments in Nova Scotia

The *Canadian Mining Journal*, in its issue of November 19, notes that 597,616 tons of coal were produced in the Nova Scotia mines by the British Empire Steel Corporation. This amount, the largest monthly total in ten years, was produced from a reduced number of collieries, and was made possible by greater concentration of mining and by better organization and by improved equipment and faculties for handling and transporting coal. It is anticipated that the year's production will amount to about 5,300,000 tons, notwithstanding that production did not begin on a large scale until May.

At the same time the company has been carrying on development work that will ensure still greater production in the future. One colliery after another has been changed from the bord and pillar to the longwall system of mining. In this connection it will be recalled that the Royal Commission on the Coal Mining Industry in Nova Scotia, in their report which was published as a supplement to the LABOUR GAZETTE, January, 1926, noted an improvement in the Sydney mines unit, and anticipated that "when the longwall system of working the seams becomes more general the property will attain even a higher standard of efficiency." Commenting on the attitude of the miners towards these changes the *Journal* says:—

"Miners have been more or less opposing the system. This is natural and a common, although not a reasonable course to take. They think the system will lower their wages and they proceed to oppose it. In this they are very much mistaken, for it has already been demonstrated that just as good wages can be earned under the longwall as in the bord and pillar system. Besides this, work will be easier, as machinery can be introduced which will lesson labour and natural forces will be so used as to also reduce the amount of laborious work now done. Loading coal in a conveyor six inches above the floor is a much easier task than loading it into a high mine car ten or twelve feet long. The mining engineers of every country are striving to eliminate this part of the miner's work, which is by far the hardest. In longwall mining it is possible to do this and when done will make mining much easier."

Reference to the adoption of improved mining methods in Nova Scotia was made in the LABOUR GAZETTE, July, 1926, page 632.

"Lord Campbell's Act" and accident compensation

The British "Fatal Accidents Act" of 1846 is frequently mentioned in actions by dependants for the recovery of damages in connection with fatal accidents. One of these cases is outlined among the "Legal Decisions Affecting Labour" in the present issue. "Lord Campbell's Act" marked a definite stage in the progress of modern principles of compensation. Before 1846, if an accident proved fatal, the right of action for compensation died with the victim. The Fatal Accidents Act extended the right of action to certain dependants of the deceased if they could prove actual financial loss resulting from the death. The dependants were limited by the act to "the wife, husband, parent and child of the deceased person." The Fatal Accidents Act has been incorporated into Canadian provincial law (e.g. Revised Statutes of Ontario 1914, Chapter 151). The Ontario Act was amended in 1911 by the enlargement of the dependent class and in several other directions.

Progress in First Aid training

The annual report of the American Red Cross for 1926 shows a marked increase in first aid training in public services and industry as well as among school teachers and students. In many high schools first aid is now included in the regular curriculum, and special university courses have been arranged for training the teachers. The Boy Scout and Girl Guide movements have furthered this branch of Red Cross activities. First aid now forms a part of the training course for policemen and firemen in many cities, and the Red Cross has complied with requests from municipal and other authorities and prepared a cloth emblem of suitable design to be worn by qualified officers when on duty. Work within the public utilities groups has shown an exceptional growth during the past year, particular mention being made of the first aid groups among the employees of the Bell Telephone and Western Electric Companies. Many of the leading railroads have now special first aid teams or squads trained for emergency service. This is in addition to the regular instruction given to all employees (Accounts of the contests in the Canadian National and Canadian Pacific Railways were given in the last issue of the LABOUR GAZETTE and in previous issues). Interest in the work has extended also to oil companies, electric light and power companies. Among the industries, first aid has been particularly active during 1926, many of the larger firms having devoted much time to training groups of leaders so as to carry on the instruction throughout the year under medical supervision. First aid contests were conducted as usual in several industrial groups. Red Cross Borglum medals being awarded to the members of winning teams.

Prevailing types of industrial diseases

Various additions to the schedules of "industrial diseases" under the provincial workmen's compensation acts have been noted in the LABOUR GAZETTE from time to time, and a general account of this feature of compensation legislation was given in the issue for March, 1920. The provincial schedules were based originally on the schedule of six industrial diseases forming part of the British Workmen's Compensation Act of 1906. These diseases were anthrax; lead poisoning; mercury poisoning; phosphorus poisoning; arsenic poisoning; and miners' ankylostomiasis. Additions to the British schedule have been made frequently and the schedule now includes thirty industrial diseases, covering a wide range of occupations. The annual statistics of the administration of the British Act show, however, that four main groups account for the bulk of the cases, namely miners' nystagmus (an affection of the eye); beat hand, knee, elbow and wrist; lead poisoning; and dermatitis. Thus, in the last available return, that for 1924, 92.5 per cent of the total number of cases of industrial diseases were derived from the mining industry; 2.7 per cent were cases of lead poisoning; 4.2 per cent were cases of dermatitis caused by dust or liquid, including cancerous ulceration of the skin, and 0.6 per cent, or 108 cases (25 of which were cases of anthrax) were distributed among the remaining industries. The disease known as beat hand, knee, elbow and wrist is a condition of inflammation of the tendons or tendon pads (bursae) of these parts of the body, which become swollen as the result of constant friction. In regard to dermatitis Sir Kenneth W. Goadby, specialist medical referee of the Home Office states: "It is not infrequently caused by washing up plates and dishes with the use of strong soda water, and therefore it is a risk to every domestic servant, every worker in a laundry, every baker, and every worker in a chemical factory of any description; in fact there is no agreement among medical men at the present time as what may or may not cause dermatitis in a susceptible person, and I must confess that I am somewhat alarmed at the possibility

of the development of dermatitis as an industrial compensable disease."

First orders of South African Wage Board

The establishment early this year of a Wage Board in the Union of South Africa, under legislation enacted in 1925, was noted in the LABOUR GAZETTE, April, 1926, page 309. The first reports and recommendations of the Board appear in a special edition of the Social and Industrial Review, lately issued by the Union Department of Labour. They deal with the sweets, biscuits, confectionery, baking and clothing (other than bespoke tailoring) industries. Special difficulties confronted the Board in connection with these occupations. "The existence of a very wide gap between the wages of skilled and unskilled workers such as exists in South Africa, is probably unique in countries where there is State wage regulation, and this fact is one which must be kept constantly in mind. Then, too, customary rates of pay for skilled workers in the same industry often vary greatly from district to district in South Africa. In those areas where the industries which have been investigated by the Board are most vigorous, the divergence in skilled rates is not great. It is, however, very great between large coastal and inland towns and small towns." Pending further investigation of the causes of the discrepancy between district wage standards the Board decided tentatively to accept the differences as justified.

The Wage Act, it is held, did not contemplate any distinction in wages, hours or conditions based on the colour or race of the employee. The scale of wages recommended are therefore to be paid without regard to race or colour. The Board only distinguishes between work for which little or no training is required and work requiring skill, initiative, and exercise of discretion. The orders made provision for the payment of special rates for apprentices and for juveniles, male and female. To obviate the policy pursued by some employers of dismissing employees when they reach a certain stage, and in their own interest to induce them to look for suitable workers at the higher rates of pay in the different scales, a ratio is proposed of juveniles to adults as well as a ratio of apprentices and assistants to skilled workers. The rates for juveniles under 17 years of age are 10 per cent below the rates for those over that age. Adult females without experience may contract on the juvenile scale, subject to approval by the inspector under the Act. No juveniles under 14 years of age are provided for by the Board. As no apprenticeship committees exist in the industries now dealt with, provision is made for apprentices and their training, and certain provisions of the Apprenticeship Act which are applicable are incorporated in the recommendation. The hours of work for which the wage rates apply conform with the provisions of the Factories Act with regard to working hours.

As to the probable effect of the orders the Board allows that there are some individual firms which, with their present methods of management, may have a hard struggle to survive. But they point out that there can be no vested right to be entitled to continue to run an establishment inefficiently at the expense of its employees. The rates laid down have been arrived at on the expectation, for which the Board's investigation gave ample grounds, that generally the employees give and will continue to give good service. A certain time is given in each industry for adjustment to the new scales, with the proviso that certain minimum wages are to be brought into operation at once.

The Board does not consider that any increase in the price of the goods produced in the industries concerned need occur to the consumer as a result of the new scales. They assume that the management and distribution charges and profits together will meet any increase in wages under the Board's recommendation and still remain at a reasonable level. They state that "if, however, manufacturers feel compelled to raise their prices to merchants, there is generally more than ample in the merchant's charges for distribution to meet such a rise without passing it on to the consumer. An investigation into prices on a wider scale than the Board has been able to undertake, and a wide measure of publicity of the results obtained, may be expected to gain for the consumer lower prices than at present prevail, with the ultimate benefit to the merchant, which is usually implied in quick returns."

Federal or State Jurisdiction in Australia

A referendum was held in Australia recently on two amendments to the constitution designed to transfer from the State to the Commonwealth authority jurisdiction in certain matters affecting industry and commerce. The first proposal was to delete the phrase in the constitution limiting federal jurisdiction in industrial disputes; to give the Commonwealth authority over all corporations, trusts and combines; and to bring State jurisdiction over industry within the scope of federal legislation. The second proposed amendment was to give wide powers to the federal government in the event of any disruption of essential services, including the power to legislate for the pro-

tection of the public interest in case of a probable or actual interruption of postal, telephone, telegraph or other services. Both these proposals were vetoed by decisive majorities. On behalf of the amendments it was urged that the establishment of one supreme authority would remove a cause of frequent dissentions caused by overlapping of existing jurisdictions, and, as regards the second proposal, that the public was often the chief sufferer in industrial disputes. Organized labour opposed both amendments on the ground that the first would have given the central authority too drastic powers over labour and industry, and that the second would have endowed the federal government with authority which might bring the full power of the Commonwealth to bear against the employees. The referendum on these proposed constitutional amendments was the first occasion on which the recent law as to compulsory voting took effect.

Women's criticism of proposed British Factory Legislation

The LABOUR GAZETTE for September contained a brief outline of the bill introduced at the last session of the British Parliament to amend and consolidate factory legislation. This bill will reach its second reading next year, the Government intending that the intervening period should be used for consideration and criticism of the proposals. Public opinion in Great Britain commends the bill in some of its main features such as the simplification in administration under a single authority, the safety provisions dealing with risks from accident and fire, the new requirements as to lighting and temperature, and other improvements in working conditions. On the other hand adverse criticism of the bill appears to centre round the clauses which deal with employment, particularly with respect to the working hours of women and children. These opinions are expressed in a letter to the London *Times*, signed by women prominent in social work. Factory hours for these employees, they point out, have not been amended since 1901, and indeed, on some points, not since 1847. "We had anticipated reform which would bring out-of-date legislation into line with the practice of the great majority of employers, and limit hours which would not be tolerated by any well-organized body of men. . . . Overtime," they continue, "is at present illegal for women and young persons in the textile trades, and only possible for young persons elsewhere in such rare instances as to be almost negligible. Under this bill it is made general. In certain non-textile trades 30 days' overtime in the year, extended to 50 in the case of perishable trades is permitted for women under the Act of 1901. In the new bill, overtime may be worked for 100 days in the textile as well as the non-textile trades, and not only by women but by young persons of 14 years of age; while in trades liable to periodic or sudden rushes of work, overtime on 50 more days may be added for women and young persons over 16. The nine-hour day of the 1924 bill is superseded by a ten-hour day; this may rise, for women and all young persons, to 11 hours on 100 days in the year; and for women and young persons of 16 in certain cases to 11 hours on 150 days in the year. The establishment of a 48-hour week by clause 66 is gravely modified by clause 67. One other point. The two day shifts of eight hours, introduced as an experiment with special safeguards for a term of years and omitted from the bill of 1924, reappear in that of 1926. Thus the 1926 bill represents for a large number of women and young persons only a meagre advance on the provisions of the 1901 Act, while it introduces two new and dangerous principles; the legalizing of overtime for all young persons, and in all kinds of factory employment."

The bill of 1924, mentioned in the letter, was introduced in May of that year during the regime of the Labour Government, but was never enacted.

The Montreal City Council, by a unanimous vote, has condemned the "one man" street car as old fashioned and unfit for the needs of the travelling public, and has refused the company any further opportunity of testing its utility. The question of the suitability of the one man car for public service is now under discussion in Toronto.

The management of the Canadian National Railways has placed a room in the Station building at Truro, N.S., at the disposal of the retired railwaymen in the district for the purposes of a social and mutual benefit club. The members have named their club the Emmerson Club, out of respect to the memory of the late Honourable Henry R. Emmerson, who as Minister of Railways sponsored the bill giving legal status to the railwaymen's Provident Fund.

The provincial government of Nova Scotia has appointed Dr. W. J. Egan a Commissioner to inquire into charges preferred against the Workmen's Compensation Board by the district executive of the United Mine Workers of America. The charges are to the effect that the representatives of the coal operators attempted to prevent the filing of claims by injured workmen, and that such claims, when filed, were not fully investigated.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at November 30th was reported by the Superintendents of the Employment Service of Canada to be as follows:—

The fishery industry in the Province of Nova Scotia was reporting good catches. Logging was active, although activity was somewhat impeded until the arrival of the snow. Manufacturing in seasonal lines was reported as good, while other lines, including the iron and steel industry, were reported as fair. The coal mining industry continued to be active, with most collieries working steadily, in some cases overtime; practically all coal miners appeared to be employed. Construction work was being wound up for the season. Retail trade showed an improvement owing to the holiday buying. Reports on transportation showed fair activity.

The fishing industry in the Province of New Brunswick was fair. The value of the potato crop in this province is estimated at $10,000,000.00, which is one-third in excess of the value of the 1925 crop. The lumber cut for this year is expected to be normal. Logging crews, which have been recruited in considerable numbers, will be further increased on the arrival of the snow. Some little difficulty has been experienced in some districts in securing sufficient lumber workers. The manufacturing industries affected by the holiday trade were busier than usual, while other concerns were normal. Except for small jobs, building and construction appeared to be about finished for the season. With the opening of winter port activities at St. John toward the close of the month, an additional avenue of employment was available in that district.

From the Province of Quebec hundreds of placements in the logging industry were reported. From Sherbrooke reports indicated that the asbestos mines were busy. Manufacturing industries throughout the Province were stated to be experiencing a period of prosperity, with the exception of the leather trades in Quebec City and the boot and shoe and metal industries in the City of Montreal. Although practically all building tradesmen in Montreal seemed to be employed, the building and construction industries throughout the Province were curtailing operations at the close of November. As customary immediately preceding its close, navigation was active. Trade was seasonally busy. Conditions generally in the Province of Quebec appeared to be quite satisfactory.

Only nominal demands for farm hands for winter work were being received at the employment offices throughout the Province of Ontario. In this same Province the logging industry was active; earlier shortages of workers, however, seemed to have been overcome by the numbers of applicants applying. Highway and extra gang workers having been practically stopped, the construction industry showed activity only in the building line, and here also operations were decreasing. The metal mining industry in Northern Ontario continued to be busy, but no additional employees were being taken on. Manufacturing continued to be satisfactory, but no great number of workers were being hired; anticipations of business for the new year evidenced optimism. Orders for female domestic workers continued to reflect the downward trend of preceding months. In Ontario conditions generally might be regarded as rather satisfactory, and unemployment at the beginning of the winter would seem to be considerably less than was the case in 1925.

In the Prairie Provinces the usual condition of affairs which obtains regularly after the close of the harvest was noticeable, namely, that with the substantial decrease in out-of-door activity applicants in relation to orders for their services gradually increase in number.

From Manitoba it was reported that a good number of winter farm orders were being received and filled. The construction industry was quiet. In the logging group, although not a great deal of this work is being carried on in Manitoba, a large number of placements were being made, composed almost wholly of transfers from Winnipeg to Northwestern Ontario. Women domestic workers were just about sufficiently numerous to satisfy corresponding vacancies. The customary quietness in employment activity, which is a regular phenomenon of the winter season, was in evidence.

Only orders for winter work were being registered by the agricultural industry in the employment offices in the Province of Saskatchewan, and plenty of applicants to care for these orders were available. The construction industry was quiet. The logging camps, having been pretty well filled, very few orders for workers were coming in. There was not much demand for general labour for jobs of short duration. There were fair demands for women domestics, but plenty of applicants were secured.

In Alberta, except for a few workers required for grain hauling, the only demands for farm workers were for winter men, and with the gradual increase in applicants, a sufficient number were available to satisfy the vacancies.

The building and construction industry was gradually suffering curtailment. Some orders for logging workers were being received and more were expected; however, more than enough applicants were registered. The coal mining industry seemed to be fairly busy. Generally speaking, unplaced applicants were increasing in number, but conditions for the time of year were not unfavourable.

The logging industry in the Province of British Columbia showed fair activity, but only occasional demands for additional workers were being received. The coal mining industry on Vancouver Island was expecting improved business. The metal mining industry, although continuing normal activity, was not taking on additional workers in any considerable numbers. The construction industry continued to be fair, while manufacturing was rather active. Although applicants registered at the offices were increasing, unemployment did not seem to be as severe as at the beginning of winter during some years past.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics Except where Noted)

		1926			1925		
		November	October	September	November	October	September

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending November 27, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

EMPLOYERS' REPORTS

There was a seasonal falling off in employment at the beginning of November, 19,471 persons being released from the staffs of the 5,896 firms making returns. These firms employed 845,278 workers on the date under review. Although this decline was somewhat larger than that recorded on the same date last year, the situation continued to be better than in any month of the years 1921 to 1925 inclusive. The index number stood at 102.8 on November 1, as compared with 105.2 in the preceding month and with 97.1, 93.0, 98.8, 95.8 and 90.2 on the corresponding dates in 1925, 1924, 1923, 1922 and 1921, respectively.

Firms in all provinces reported reduced activity, the recessions in the Maritime Provinces and Quebec being most marked. In the Maritime Provinces, there were heavy seasonal losses on highway and railway construction and in lumber mills, while shipping, mining and trade were busier. In Quebec, the largest reductions were in construction, but manufacturing as a whole was also slacker. Logging and trade, however, registered marked improvement. In Ontario, manufacturing (especially of lumber and food products), construction and transportation showed seasonal contractions, but there were important gains in logging and trade. In the Prairie Provinces, the greatest decreases were in construction, transportation and services; on the other hand, considerable improvement was noted in logging, mining and trade. In British Columbia, lumber mills, fish canneries and construction recorded the most extensive decreases, while logging, mining and trade showed gains.

Employment showed a falling off in Montreal, Quebec, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver, while in Toronto the trend continued favourable. In Montreal, the trade, food, textile, tobacco and communication industries showed heightened activity, but there was a more pronounced shrinkage in construction and transportation. In Quebec, the small decline recorded took place mainly in manufacturing and communication. In Toronto, further improvement was reported, trade and manufacturing, especially of iron and steel and electrical appliances, showing the largest increases, while construction was slacker. In Ottawa, employment recorded a general but moderate falling off, in which manufacturing, construction and some other industries shared. In Hamilton, manufacturing and construction registered curtailment, but trade was more active. In Windsor and the Other Border Cities, automobile plants released employees, as did also building construction. In Winnipeg, construction reported the greatest decline, but there were also losses in other industries except trade, which showed improvement. In Vancouver, the contraction recorded took place mainly in manufacturing, transportation and construction. On the other hand, trade reported an advance.

An analysis of the returns by industries shows that the curtailment in manufactures was less than on November 1, 1925; the most extensive losses were in lumber mills and fruit and vegetable canneries, in which they were not as pronounced as at the beginning of November last year. Fish-preserving and iron and steel plants were also slacker, while improvement was shown in leather, electrical apparatus and non-ferrous metal works. There were further large additions to forces in logging. Mining and trade also showed advances, while in communication, transportation, services and construction, seasonal contractions were indicated, those in the last named being especially pronounced.

An article elsewhere in this issue gives in some detail the employment situation at the beginning of November.

TRADE UNION REPORTS

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment at the end of October, as indicated by returns received from 1,541 labour organizations with 151,130 members, was in lesser volume than in the previous month; the percentage of idleness on October 31 standing at 2.6, as compared with an unemployment percentage of 3.3 at the close of September. The situation was also more favourable than in October last year when 5.1 per cent of the members were out of work. The most substantial improvement over the preceding month was that of 3.5 per cent in Quebec, the greater part of which was due to increased employment afforded in the iron and steel group, while the changes in the remaining provinces were small, New Brunswick,

Manitoba and Alberta registering slightly greater activity and the remaining provinces minor reductions. In the manufacturing industries reports tabulated from 422 unions with a combined membership of 40,144 persons showed that 3.7 per cent of the members were idle, as compared with 6.8 per cent in September. The improvement registered among railway carmen in Quebec was mainly responsible for the better situation in this division although contributing gains were also reported among glass workers, metal polishers, hat and cap makers, textile workers, printing tradesmen, bakers and confectioners, and cigar makers. Partly counteracting reductions occurred in the garment trades in Quebec and among pulp and paper makers in the same province. The situation in the manufacturing industries was more favourable than in September last year, when 9.0 per cent of the members were idle, the determining factor being the improved conditions in the garment trades this year as compared with last. In the Nova Scotia coal mining areas there was a nominal change only when compared with September; while in Alberta no unemployment was registered as compared with a small percentage of idleness in September. British Columbia coal miners and Nova Scotia quarry workers continued to be fully employed. Reports tabulated from 166 unions of building and construction workers, with an aggregate membership of 14,390 persons, showed an unemployment percentage of 7.8, as compared with percentages of 5.5 in September and 11.4 in October last year. In comparison with September all tradesmen in the group with the exception of electrical workers were less active, the most noteworthy declines being among bridge and structural iron workers, tile layers, lathers and roofers, granite and stone cutters, and bricklayers, masons and plasterers. In comparison with October last year the trend of employment was upward among steam shovel and dredgemen, bricklayers, masons and plasterers, carpenters and joiners, granite and stone cutters and hod carriers and building labourers. Among plumbers and steamfitters there was but a nominal change and in the remaining trades there were reductions in employment. The situation in the transportation industry, as indicated by returns received from 634 unions with 57,066 members, remained on practically the same level in October as in the previous month; the decline in employment of 1 per cent in the navigation division being slightly more than offset by the gains in the steam railway division and among street and electric railway employees. As compared with October last year unchanged conditions prevailed among navigation workers, while improvement was reported in the steam railway division and among street and electric railway employees. Retail shop clerks were fully engaged during October. Hotel and restaurant employees and stationary engineers and firemen reported a somewhat higher percentage of idleness than in September, but theatre and stage employees and barbers were afforded slightly more work. A considerably better situation was registered in the lumbering and logging division but among fishermen there was a moderate decline in employment.

EMPLOYMENT OFFICE REPORTS

During the month of October, 1926, the offices of the Employment Service of Canada referred 41,994 workers to positions and effected a total of 40,453 placements. Of these the placements in regular employment were 29,153 of which 25,663 were of men and 3,490 of women. The placements in casual work numbered 11,300. Employers notified the Service of 44,120 vacancies, of which 33,884 were for men and 10,236 for women. Applications for work were received at the offices from 38,905 men and 11,933 women, a total of 50,838. A marked decline is noted in the volume of business transacted when the above figures are compared with those of the preceding month, but an increase is shown in the records when compared with those of October last year, the reports for September 1926 showing 64,106 vacancies offered, 60,692 applications made and 52,150 placements effected, while in October 1925 there were recorded 42,230 vacancies, 50,212 applications for work and 39,379 placements in regular and casual employment. A report in detail of the work of the offices for the month of October 1926 will be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES

Some figures indicating the recent movements of trade and industry are given in the table on page 1183. The Dominion Bureau of Statistics, Canada reported that production of pig iron in Canada during October totalled 70,124 long tons, an increase of 9 per cent over September figures which in turn were 9 per cent higher than in August. In 1925, the October production at 74,013 tons was the highest output recorded for the year. In the month under review production included 46,119 tons basic iron, 23,051 tons of foundry iron and 924 tons of malleable iron. All of the malleable iron, 4,483 tons of the basic iron and

22,746 tons of the foundry iron were intended for sale, the balance being produced for further use by the makers. For the ten months ending October, the cumulative production of pig iron totalled 631,187 tons as compared with 446,973 tons made during the corresponding period a year ago. This year's output included 417,922 tons of basic iron, 172,303 tons of foundry iron and 40,962 tons of malleable iron as against a production during the first ten months last year of 344,809 tons of basic, 74,420 tons of foundry and 27,744 tons of malleable.

Furnaces charges during October included 123,329 long tons of imported iron ore, 78,684 short tons of coke and 36,554 short tons of limestone. For the ten months' period the furnace charges totalled 1,111,763 long tons of ore, 697,649 short tons of coke and 338,973 short tons of limestone. On October 31 there were 6 furnaces in blast, the same as at the end of September. Active furnaces had a capacity of 2,375 long tons per day or about 47 per cent of the total capacity of all blast furnaces in Canada; there were 2 furnaces in blast at each of the following points: Sydney N.S., Hamilton and Sault Ste. Marie, Ontario.

Production of ferro-alloys rose to 3,559 tons in October, an increase of 15 per cent over the 3,083 tons in the previous month; most of the output was ferro-manganese but there was also a small production of ferro-silicon.

Production of steel ingots and castings in Canada during October amounted to 65,542 long tons, marking a gain of 8 per cent over the output of 58,837 tons reported for September. Production of steel ingots advanced to 61,415 tons from 57,164 tons in the previous month and the output of steel castings also was higher at 2,127 tons as compared with 1,673 tons in September.

For the first ten months of the year, the cumulative production of steel ingots and castings in Canada totalled 664,084 tons; this was an increase of 8 per cent over the output of 617,317 tons shown for corresponding period of 1925. This year's output included 635,124 tons of steel ingots and 28,960 tons of steel castings while in 1925 the corresponding figures were 601,661 tons of steel ingots and 15,476 tons of steel castings. Of the total output for 1926 only 4 per cent was intended for sale, the balance being made for further use by the producers.

Pig iron prices moved to higher levels during October. At Toronto No. 1 foundry was quoted at $25.30 as compared with $24.80 in September and No. 2 foundry at $24.80 as against $24.30 in the previous month. At Montreal, No. 1 foundry was $27.70 and No. 2 foundry $27.20 as compared with $27.20 and $26.70 respectively in September. The Bureau's index number for iron and its products (1913 prices=100) rose from 144.3 in September to 145.1 in October.

Coal Production.—Full statistics of coal production during October are not yet available. The output of coal from Canadian mines during September was 5 per cent more than the production for the preceding month, and 11 per cent greater than the average for September in the past five years. The figures were 1,406,675 tons in September as against 1,340,164 tons in August, and an average of 1,261,904 tons during the five preceding years. All the coal-producing provinces showed a gain in production over the preceding month, and the outputs of Nova Scotia, Saskatchewan and Alberta were greater than the average for the month in the five preceding years. Men employed in the coal mines of Canada during September numbered 27,131, of whom 20,954 worked underground and 6,177 on surface, as compared with a total of 25,497 in August, of whom 19,538 worked underground and 5,959 on surface. Production per man was 51.8 tons in September, as against 52.4 tons per man in August. During September the production per man-day was the same as in August, being 2.4 tons. The tonnage lost was largely due to "lack of orders."

EXTERNAL TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in October, 1926, the merchandise entered for consumption amounted to $88,127,214, as compared with $80,799,757 in October, 1925. The domestic merchandise exported amounted to $130,279,870 in October, 1926, as compared with $92,224,610 in September, 1926, and $143,548,112 in October, 1925.

The chief imports in October, 1926, were: non-metallic minerals and products, $15,366,994, and fibres, textiles and textile products, $15,326,510.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $58,866,417; and wood, wood products and paper, $26,421,856.

In the seven months ending October, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $265,615,947, and wood, wood products and paper, at $169,463,587.

BUILDING PERMITS

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in 63 cities in Canada during the month of October, 1926, amounted to $14,614,543, as

compared with $11,036,359 in September, 1926, and $11,312,644 in October, 1925, being an increase of 32.4 per cent in the first and of 29.2 per cent in the second comparison.

The *MacLean Building Review* estimates the total value of the contracts awarded in Canada in November, 1926, at $34,972,800, as compared with $43,384,600 in October and $46,972,800 in November, 1925. Of the contemplated new construction in Canada during November, 1926, $14,849,400 was for residential building; $10,653,600 for business building; $38,299,500 for industrial building, and $4,554,900 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). The construction contracts awarded in Canada during November, 1926, were classified as follows: —industrial building, $16,302,000; residential building, $10,427,700; business building, $4,921,300 and engineering work, $3,321,800. The apportionment of contracts awarded in Canada by provinces during the first eleven months of 1926 was:—Quebec, $147,478,800; Ontario, $135,479,500; Prairie Provinces, $42,972,700; British Columbia, $25,262,900 and the Maritime Provinces, $8,028,900.

Strikes and Lockouts

The time loss due to industrial disputes was less in November than in October, 1926, and also less than during November, 1925. There were in existence during the month 8 disputes, involving 902 employees, and resulting in a time loss of 8,320 working days, as compared with 9 disputes in October, involving 2,138 workpeople, and resulting in a time loss of 26,425 working days. In November, 1925, there were recorded 11 strikes, involving 3,925 workpeople, and resulting in a time loss of 38,187 working days. One of the strikes and lockouts commencing prior to November terminated during the month, and the one strike recorded as commencing during November terminated during the month. At the end of the month, therefore, there were on record six strikes and lockouts affecting 162 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices advanced slightly during the month, due mainly to seasonal increases in the prices of dairy products and eggs. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was $11.01 at the beginning of November, as compared $10.93 for October; $11.23 for November, 1925; $10.46 for November, 1924; $10.69 for November, 1923; $10.29 for November, 1922; $11.08 for November, 1921; $15.32 for November, 1920; $16.92 for June, 1920 (the peak); $13.65 for November, 1918; and $7.96 for November, 1914. Eggs showed a substantial seasonal advance, while there were less important advances in the prices of milk, butter, cheese, beans and potatoes. Slight declines occurred in the prices of sirloin steak, beef roast, veal, mutton, fresh and salt pork, bacon, lard and evaporated apples. Including the cost of fuel and rent with that of foods the total budget averaged $21.24 at the beginning of November, as compared with $21.14 for October; $21.51 for November, 1925; $20.81 for November, 1924; $21.19 for November, 1923; $20.89 for November, 1922; $21.60 for November, 1921; $26.13 for November, 1920; $26.92 for July, 1920 (the peak); $21.61 for November, 1918; and $14.36 for November, 1914. In fuel bituminous coal was slightly higher. No changes occurred in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced slightly being 151.5 for November, as compared with 151.1 for October; 161.2 for November, 1925; 157.7 for November, 1924; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.4 for November, 1920; 256.7 for May, 1920 (the peak); and 207.4 for November, 1918. In the grouping according to chief component materials three of the eight main groups advanced, four declined and one remained stationary. The Vegetables and their Products group advanced, lower levels for grains, rubber, flour and milled products being more than counterbalanced by higher levels for potatoes, sugar, fruits, hay and straw. Seasonal increases in the prices of butter and eggs more than offset declines in the prices of live stock and meats, causing a slight advance in the Animals and their Products group. The Iron and its Products group rose, because of higher prices for pig iron and steel billets. The groups which declined were: The Fibres, Textiles and Textile Products group, due to lower prices for cotton, silk and wool; the Non-Ferrous Metals and their Products group, due to declines in the prices of copper, lead, tin, spelter and solder; the Non-Metallic Minerals and their Products group, due to lower levels for gasoline; and the Chemicals and Allied Products Group. The Wood and Wood Products group was unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF NOVEMBER, 1926

DURING the month of November an interim report was received from the Board of Conciliation and Investigation appointed to inquire into certain matters in dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and certain of their employees being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Other Proceedings under the Act

During November other proceedings under the Act took place, as follows:—

The Board established to deal with a dispute between the Canadian National Railways and certain of its employees on the Montreal wharf, being checkers, coopers and porters, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, was completed by the appointment by the Minister of Mr. Henry Holgate, Montreal, as chairman in the absence of a joint recommendation from the other two members of the Board, Messrs. U. E. Gillen, Toronto, nominated by the employer, and J. T. Foster, Montreal, nominated by the employees.

A Board was established to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees on Eastern and Western Lines, being clerks, freight handlers, station employees, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was constituted as follows: Messrs. J. B. Coyne, K.C., and David Campbell, K.C., both of Winnipeg, members nominated by the company and the employees respectively; and Mr. D. R. C. MacLean, barrister, Winnipeg, chairman, appointed by the Minister in the absence of a joint recommendation from the foregoing members.

The July issue of the LABOUR GAZETTE (p. 643) contained the text of the report of the Board of Conciliation and Investigation which dealt with a dispute between the Canadian National Railways (Montreal and Southern Counties Railway) and certain of its employees being conductors, trainmen and motormen, members of the Brotherhood of Railroad Trainmen. The report, which was signed by Mr. Bernard Rose, K.C., chairman, and Mr. Albert McGovern, nominee of the employees, recommended an increase of pay to the employees concerned. Mr. Arthur Gaboury, the company's nominee, submitted a minority report. While the employees signified their acceptance of the findings of the Board, the employing company advised the Department that it could not see its way clear to accepting the recommendations contained in the majority report. The Hon. Mr. Heenan, Minister of Labour, however, took the matter up with the railway officials and urged upon them the desirability of the acceptance by the company of the Board's findings. As a result of the Minister's mediation, negotiations were resumed, and advice was received during November that an agreement between the parties concerned had been executed and that the rates of pay recommended by the Board had been put into effect as from September 1, 1926.

In the November number of the LABOUR GAZETTE (p. 1058) there appeared the text of the report of the Board of Conciliation and Investigation which dealt with a wages dispute between the Canadian Pacific Railway Company and the Canadian National Railways and certain employees of the said railways, being conductors, trainmen and yardmen, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen; also of a minority report presented by the Board member appointed on behalf of the employees. The report of the Board, which was signed by the chairman and the employers' representative, was adverse to the men's claim for increased wages. The Board's findings were rejected by the employees, who, by an overwhelming vote, authorized their executive to call a strike unless a satisfactory settlement was otherwise secured. The Hon. Mr. Heenan, Minister of Labour, as well as the Hon. Mr. Dunning, Minister of Railways and Canals, conferred with the disputing parties, urging upon them the importance of exploring every possible avenue looking to an amicable adjustment of the difficulty. Direct negotiations between the parties to the dispute were resumed, and early in December a compromise was reached involving varying percentages of increases to the classes of employees concerned.

Interim Report of Board in dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and their checkers and coopers.

The Minister of Labour received on November 17 an interim report of the Board of Conciliation and Investigation to which had been referred for adjustment various matters in dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and certain of their employees being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was constituted as follows: Mr. Farquhar Robertson, Montreal, chairman, appointed on the joint recommendation of the other two members, Sir William Stavert, Montreal, appointed by the Minister in the absence of a recommendation from the employers, and Mr. J. T. Foster, Montreal, nominee of the employees. Two hundred and twenty-five employees were stated to be directly affected by the dispute, which related to the employees' demand for increased wages and changed working conditions. The report was accompanied by a letter written on behalf of the employers concerned, stating that the shipping interests undertook to meet their employees in or about the month of March, 1927, to discuss terms of employment for the ensuing year, to which arrangement, the report stated, the employees were agreeable. The text of the report is given below.

Interim Report of Board

CONCILIATION BOARD HELD UNDER THE PROVISIONS OF THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.

IN THE MATTER OF the Checkers, members of Lodge 1237, Brotherhood of Railway and Steamship Clerks, Freight Handlers, and Express and Station Employees and the Employing Steamship Lines.

To the Honourable,
The Minister of Labour,
Ottawa, Canada.

The board, Farquhar Robertson, Chairman; Sir William Stavert, representing employers, John T. Foster, representing employees, having been appointed to inquire into the matter as above set forth, beg leave to report:—

That your board held its first session to receive evidence of the parties at issue on Friday, November 12, 1926, at 2.30 p.m., at 36 Board of Trade Building, Montreal.

Your board begs leave to enclose herewith a certified copy of the evidence and exhibits taken at this session, which are to a particular degree self-explanatory.

Your board also desires to report that the situation as it presently exists is as follows:

The shipping interests have agreed to address a letter to your board, confirming the telegram of Thomas Robb, Manager and Secretary of the Shipping Federation, sent to the Department on October 18, which states that the shipping interests will be pleased to meet their employees in or about the month of March, and discuss terms of employment for the ensuing year. The representatives of the employees appearing before your board agreed to this arrangement.

There still remains the question of a wage agreement being negotiated for the checkers of the port of St. John, many of whom hold common positions in the two ports, and are regulated by navigation activities in the respective ports. As there is some question in the minds of your board as to its jurisdiction so far as a wage agreement in the port of St. John is concerned, and in view of the conciliatory attitude, we recommend that the men upon proceeding to St. John negotiate immediately for terms for the winter season in that port.

It is now arranged that, should any difficulty arise as to the negotiation of terms or employment in the Port of St. John in the near future, either your board or the Department itself shall be notified. So far as the Montreal situation is concerned, we are content that both the employers and the employees are satisfied to allow their case in this particular to rest until the month of March, when negotiations will be undertaken without the assistance of your board.

We would therefore recommend that your board stand adjourned from this date, pending the outcome of negotiations at St. John. In the event of these negotiations being satisfactory, we assume that the responsibilities of the board shall be terminated.

All of which is respectively submitted.

The above report is hereby certified to be correct.

(Signed) FARQUHAR ROBERTSON, *Chairman.*
(Signed) W. E. STAVERT, *Representing Employers.*
(Signed) J. T. FOSTER, *Representing Employees.*

Dated at Montreal, this fifteenth day of November, in the year of Our Lord, one thousand, nine hundred and twenty-six.

THE ROBERT REFORD CO. LIMITED
Steamship Agents

MONTREAL, November 15, 1926.

FARQUHAR ROBERTSON, ESQ.,
Chairman, Board of Concilitiation,
City.

DEAR SIR,

Re Matter of Checkers, Port of Montreal

As per arrangement made by the Committee representing the "Shipping Interests" of the Port of Montreal, we undertake that the "Shipping Interests" will meet the checkers in their employ to discuss the rate of wages for the St. Lawrence season of 1927 in the month of March next or at such later date as may be mutually arranged before the opening of the St. Lawrence season of navigation 1927.

Yours truly,

On behalf of the Shipping Interests,
(Sgd.) WILLIAM I. GEAR.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

REPORTS have been received of two cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2.

This Board was established towards the end of 1925 for the purpose of adjusting disputes arising between the management of the Railways and the clerks and certain other office and station employees. The classes of employees coming under the Board are those given in the schedule of rules governing these classes which is contained in the existing agreement between the Railways and the Canadian Brotherhood of Railway Employees. Board of Adjustment No. 2 is composed of the following members:—

Representing the railways—Messrs. H. Morton, Moncton, N.B., J. F. Aitchison, Toronto, Ont., George Turvey, Toronto, Ont., W. A. Kirkpatrick, Saskatoon, Sask.

Representing the employees—Messrs. A. R. Mosher, Ottawa, Ont.; M. M. McLean, Ottawa, Ont; N. L. Preston, Winnipeg, Man.; and C. H. Minchin, Calgary, Alta.

An outline of earlier cases dealt with by the Board was given in the November issue of this GAZETTE and in previous issues.

Case No. 19.—Operating Department—Central Region.

When the work of time-keeping was consolidated in the General Superintendent's Office at Quebec the staff was made up of men drafted from other duties in that office and from the superintendents' offices, along with men specially hired for the new work. The men transferred from the superintendents' offices were experienced time-keepers and posters for enginemen and trainmen's time. They carried with them their full seniority, but they were given the option of continuing to exercise this right in their respective seniority groups if they did not care to transfer it to the new position. In April, 1926, about after two years of this arrangement, certain work was discontinued in the general superintendent's office, and the time keeping staff was reduced. Two of the men laid off were not permitted by the general superintendent to exercise seniority in regard to other positions on his staff, but were advised to return to the respective superintendents' offices from which they had come. Accordingly they returned to their original offices, displacing regularly assigned employees in these offices. Protests were immediately made by the employees in the two offices that the two men just returned from the general superintendent's office had no such seniority rights, and the matter was handled as a grievance in the manner prescribed by the schedule.

It was the opinion of the Board that when the two men were transferred from the superintendents' offices to that of the General Superintendent they carried their seniority with them. However as a doubt existed whether or not employees so transferred retained seniority rights and rank in their former offices in the event of their positions being abolished in the general superintendent's office, and in view of peculiar circumstances in the case, the Board decided that the existing status of the two employees involved should not be changed.

Case No. 20.—Stores Department—Atlantic Region.

The chief clerk in the office of the storekeeper at Moncton shops was pensioned off as from August 1, 1926, and several applications were received for the position. One of the applicants from the office of the general storekeeper contended that this appointment was irregular, and that, in accordance with the terms of the schedule for clerks and other classes of employees, the senior qualified applicant should have been awarded the position. They also claimed that there had been certain other irregularities in connection with the appointment. The company claimed, on the other hand, that the rules had been followed, stating further that the clerks in the storekeeper's office were permitted to bid in on positions in the general storekeeper's office.

The Board upheld the employees' contention, ruling that the senior qualified applicant in the local store's seniority group at Moncton should be awarded the position of chief clerk.

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1926

THE number of strikes and lockouts in existence during November was 8, as compared with 9 in October. The time loss for the month was less than during November, 1925, being 8,320 working days as compared with 38,187 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
Nov. 1926	8	902	8,320
Oct. 1926	9	2,138	26,425
Nov. 1925	11	3,925	38,187

The Record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Seven disputes, involving 862 workpeople were carried over from October, and one dispute commenced during November. One of the strikes commencing prior to November terminated during the month, and the strike commencing during November also terminated during the month. At the end of the month, therefore, there were on record six strikes and lockouts as follows:—Boot factory employees, Toronto, Ont.; fur workers, Winnipeg, Man.; hat and cap makers, Montreal, P.Q.; ladies' clothing workers, Toronto, Ont.; men's clothing workers, Montreal, P.Q.; and men's clothing workers, Toronto, Ont.

A dispute has been reported to the Department as having occurred at Cochrane, Ont., and vicinity, involving the employees of several logging companies employing about 600 men for some weeks during October, a number of men in different camps being idle for a few days at various times. Full particulars have not been received, but it appears that a number were on strike for an average of 10 days. They demanded an increase of 25c. per cord, making the price $2.50 per single cord. It has been reported that the men secured advances of 25 cents per cord and from $50 per month to $65 with a reduction in rates for board, and on the other hand that they returned to work under previous conditions. A dispute has been reported in the press involving about 30 or 40 men in a coal mine at Minto, N.B., about November 20. It is reported that they demanded a higher rate per box, but returned to work within a short time without securing it. No further particulars have yet been secured. A dispute involving a number of shingle mill employees at Port Moody, B.C., against a reduction in wages has been reported in the press. The report is that the men were soon replaced, but no further information has yet been received.

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Information is available as to three such disputes, namely: Moulders at Galt, Ont., August 2, 1922; cigarmakers at Montreal, March 24, 1925; men's clothing workers at St. Hyacinthe, P.Q. (formerly of Montreal), March 19, 1926. There is also to be included in this list a dispute involving metal polishers at Sackville, N.B., who became involved in a dispute for recognition of union along with the stove moulders' union in March, 1921, when the establishment in which they had been employed re-opened after being closed down for a time. The employer concerned reported at the time that the employees involved had been replaced. In connection with the dispute involving men's clothing workers at Montreal, March 19, 1926, as stated in the LABOUR GAZETTE for September, page 860, some alleged picketers were arrested in August at St. Hyacinthe, P.Q., charged with assault and other offences. One of the firms affected by the above strike had transferred its operations to that locality. It has been reported that the arrested men were released in November, the charge being dropped for lack of evidence. The strike of upholsterers at Montreal, June 27, 1925, and the dispute involving bookbinders and pressmen at Montreal, March 9, 1926, an alleged lockout, which have been carried in this list have been declared off from the middle of November.

The strike which commenced during November was against the discharge of an employee. Of the two strikes which terminated during the month one was in favour of the employer and one was a compromise.

The following paragraphs give particulars in regard to certain disputes, in addition to information given in the tabular statement.

LUMBER WORKERS, PORT ARTHUR, ONTARIO, AND VICINITY—This dispute, beginning in September for increased wages and improved working conditions, terminated early in November, work being resumed on November 8. The strikers had demanded an increase in the monthly rate from $40 per month with board, to $60 with board; piece rates: $5 per double cord, $3 per single cord, 16 cents per tie. There was also a proposal for an eight-hour day instead of one of 10-hours. A large proportion of the strikers secured a minimum rate of $50 per month and the piece rates demanded, but did not secure the eight-hour day.

FUR WORKERS, WINNIPEG, MAN.—This dispute, beginning in September for shorter hours and recognition of union, was substantially over by the end of October, but a small number of men, who had all been employed in one shop, were still on strike during the early part of November, their employer refusing to make a settlement. It was also reported that two or three others had joined in the strike, raising the number on strike from ten to twelve. As reported in the November issue of the LABOUR GAZETTE some of the employers had signed an agreement with the union, but it is understood that the larger shops refused to recognize the union, but agreed to the same wages, hours and working conditions as in the union shops,—which, in fact, it is reported the majority of them had been observing before the strike, except that there was considerable overtime work. Some of the strikers and employees who had become involved in disorderly conduct toward the end of October were tried in the police court in November, and one of them was found guilty of assault and fined $20 and costs. Some were acquitted and others were to be tried later. By November 17 it was reported that employment conditions were no longer affected, but that the union had refused to call off the strike.

MEN'S CLOTHING WORKERS, MONTREAL, P.Q.—In connection with this dispute, which commenced July 28, 1926, for union wages and working conditions in non-union shops, a case was taken up in the courts involving two pickets charged with assault in August.

COAL MINERS, NEW WATERFORD, N.S.—This dispute involved forty boys who struck against the discharge of an employee. The places of the strikers were filled by men from other parts of the mine, and they returned to work the next day.

STRIKES AND LOCKOUTS DURING NOVEMBER, 1926.

Industry, Occupation and Locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to November, 1926.			
LOGGING—			
Lumber workers, Port Arthur, Ont., and vicinity.	700	4,200	Commenced Sept. 16, 1926, for increased wages and improved working conditions. Terminated Nov. 8, 1926.
MANUFACTURING—			
Boots and shoes (other than rubber and felt):			
*Boot factory employees, Toronto, Ont.	4	104	Commenced Jan. 13, 1926, against changes in working conditions alleged to be in violation of agreement. Unterminated.
Leather, fur and products:			
*Fur Workers, Winnipeg, Man...	12	180	Commenced Sept. 25, 1926, for shorter hours and recognition of union. Unterminated.
Clothing (including knitted goods):			
*Hat and cap makers, Montreal, P.Q.	1	26	Commenced Mar. 4, 1926, against violation of agreement. Unterminated.
*Ladies' clothing workers, Toronto, Ont.	10	260	Alleged lockout, commenced June 30, 1926, against enforcement of non-union conditions. Unterminated.
Men's clothing workers, Montreal, P.Q.	80	2,080	Commenced July 28, 1926, for union wages and working conditions in non-union shops. Unterminated.
Men's clothing workers, Toronto, Ont.	55	1,430	Commenced Sept. 25, 1926, for recognition of union. Unterminated.
(b) Strikes and lockouts commencing during November, 1926.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, New Waterford, N.S.	40	40	Commenced Nov. 3, 1926, against discharge of employee. Terminated Nov. 4, 1926.

*Reports indicate that the strikers had been replaced but there were still a number of employees out and on the strike or lockout benefit list of the union.

THE COAL MINING INDUSTRY DISPUTE IN GREAT BRITAIN

THE dispute involving about 1,000,000 coal miners in Great Britain in a cessation of work from May 1, 1926, and the sympathetic strike of about 1,500,000 other workers from May 3 to May 12, usually referred to as the "general strike," were dealt with in the issues of the LABOUR GAZETTE for April, p. 393, May, p. 475, and June, p. 581. After the termination of the general strike, proposals for settling the coal mining dispute made from time to time were rejected by the parties to it and the dispute continued until the end of November, when most of the miners had returned to work without a general settlement.

As previously stated in the LABOUR GAZETTE the proposals of the mine operators in terminating the agreement in July, 1925, were for lower wages than those provided under the agreement in force since June, 1924, and were rejected by the miners. To avoid a coal mining stoppage and a general strike the government provided for a subsidy to cover the loss of the mine operators under existing wages and working conditions until May 1, 1926. In the meantime a Royal Commission investigated the industry and made certain recommendations, the principal being against any further subsidy, in favour of a reorganization of the industry, and for a lower wage scale until the results of the reorganization should have been experienced. The miners and the mine operators did not reach an agreement on this basis so that the cessation of mining on May 1, termed a "lockout" by the miners' resulted. The Commission had stated that either lower wages or longer hours were necessary for the economic carrying on of the industry, but that owing to a world surplus of coal at low prices it was not advisable to have longer hours instead of lower wages. A statute of 1919 had provided for seven hours per day as the maximum working hours underground.

A memorandum by Sir Herbert Samuel, Chairman of the Royal Commission, dealing with methods which might be agreed upon to carry out the recommendations of the Committee and containing provisions to meet some of the objections of the miners, was delivered to the officials of the Trades Union Congress just before the calling off of the general strike, and it was apparently upon the expectation that this would form the basis for negotiations to end the coal dispute that the general strike was called off. One important feature of this memorandum was its proposal that the miners should suffer no reduction in wages until reorganization of the industry had been undertaken and that the wages of the lower paid miners should not be adversely affected. The miners immediately refused to accept the terms of this memorandum as a basis, and on May 15 the Prime Minister made proposals providing for reorganizing the industry, undertaking to provide for such legislation as might be necessary to give effect to the measures agreed upon, including the establishment of a Joint Board with an independent chairman to draw up a national agreement as to principles as to wages and working conditions with district negotiations as to actual rates, hours, etc., the independent chairman to decide in the event of any disagreement as to wages. This proposal was rejected by both the miners and the mine operators.

Further negotiations being unsuccessful, on June 15 the Prime Minister announced that the government would introduce legislation suspending for a period the existing law restricting work in the mines to seven hours per day in order to make possible any agreement to end the dispute on the basis of a longer working day, and to facilitate such amalgamation, reorganization, etc., as might become desired by the parties concerned.

The two bills for this purpose were assented to on July 7 and August 4, respectively. The latter bill also included provisions for a levy on royalties to be used in the provision of washing and drying accommodation, prohibited the entry into the industry of any person over the age of eighteen not hitherto a miner, except with the consent of the Minister of Labour and empowered mining companies to establish profit sharing schemes notwithstanding any contrary provisions in their existing rules of incorporation, etc. It was also announced that the government was to make regulations to carry out certain recommendations of the Commission for improving the industry. The operators announced the terms under which they would give employment to miners who would return to work, in most cases including for three months the wages prior to the stoppage with an eight-hour day instead of seven. Very few men, however, returned to work under these terms.

In July the representatives of several Christian churches, including the Church of England, addressed to the Prime Minister a proposal for carrying out the recommendations of the Commission, which they believed, after consultation with some of the miners' leaders, might be acceptable as representing

an advance upon anything the miners had previously been willing to agree to. This proposal included a resumption of work at wages and hours as before the stoppage; financial assistance from the government for a limited period of negotiations not to exceed four months; a national agreement; the members of the Royal Commission to be reappointed to deal with various points; and a joint board with an independent chairman to decide all issues not agreed upon. The Prime Minister pointed out that a further subsidy was not in accordance with the Commission's report and stated that he would not consent to any financial assistance by way of a subsidy to wages. The proposals from the representatives of the churches were by a delegate conference of the miners' organization referred to the district councils with a recommendation that they be accepted. The districts, however, rejected them. A later delegate conference authorized the executive to re-open negotiations, any settlement to be subject to approval by the district councils and to be national in character. In a meeting with the operators on August 19, no settlement was reached, the operators insisting upon lower wages or longer hours, district agreements instead of a national agreement, and holding that governmental assistance was highly undesirable. A meeting of the miners with members of the government proved to be unsuccessful, and at the end of August one of the district councils asked the miners' executive for permission to make a district settlement. The operators then had offered substantially the 1925 wage scale with seven and one-half hours per day. Early in September the miners' representatives informed the government that they were prepared to negotiate a settlement, including a reduction in labour costs. The mine operators' organization then informed the government that it was not now authorized to negotiate a general settlement, and when the government objected to this policy, it was referred to the district associations, by whom it was reaffirmed, the latter holding out for district settlements. About the middle of September the government proposed that work should be resumed, a National Arbitration Tribunal to decide any differences not settled in district negotiations. The miners objected to this proposal, and on September 22 offered to negotiate on the basis of a return to work at the 1921 wage scale temporarily, an independent tribunal to decide on the terms of a national wages agreement and deal with the application of the Commission's report. On October 6 the government repeated its offer of September 17, stating it would be open for only a few days, and on October 7 the delegate conference of the miners' organization passed resolutions including proposals to call out the maintenance men, to request other unions to refuse to handle imported coal, to request a levy on trade union members by a special congress, and to urge all miners to continue the dispute and induce those who had returned to work to leave it. These resolutions were referred to the district councils and were approved. Some of the councils voted on the question whether they should offer to negotiate district settlements. The miners' leaders took steps to have the union of engineers, firemen, etc., call out the maintenance men and to have the other unions refuse to handle coal, and to secure funds through the Trades Union Congress by a compulsory levy on union members. These proposals were refused, except that the Trades Union Congress decided upon a voluntary levy of 1d. per member per day. It was reported that miners were returning to work, in some districts in large numbers, under separate agreements. The officials of the Trades Union Congress met members of the government on October 26, and following this the miners accepted the principle of district agreements, and the government acted as mediator between the miners and the operators, the latter refusing to meet the miners except in district negotiations. On November 11 the government submitted a proposal which, if accepted by the miners, it was prepared to enforce by legislation if the operators would not agree to it. This proposal included the negotiation of district agreements to be in conformity with certain standards which included a district board with independent chairman, adjustment of wage bonus according to the net proceeds of the industry in the district on the same principles as before the dispute, wage rates to be temporarily on the same scale as before the dispute except in certain districts, a national arbitral authority to be set up for six months by legislation, to which appeals from districts could be made in respect to the violation of certain principles in order to secure uniformity in all districts. The miners' executive referred this proposal to the district councils with a recommendation that it be approved, but these rejected it. Following this there was a widespread and steady return to work by the miners, settlements being made by districts, and in some cases by pit negotiations, the miners apparently preferring no general settlement to that proposed.

MINIMUM WAGES FOR WOMEN IN QUEBEC

Board issues First Order, governing Laundries, Dye Works, etc., in Montreal and District.

THE Women's Minimum Wage Board of Quebec issued during November the first order under the Minimum Wage Act of 1919, governing the laundry industry in the Montreal district. The Act was amended in 1925 to permit the renumeration of the members of the Board, and in 1926 it was further amended by the enlargement of the number of commissioners under the Act from three to four. The Board was appointed accordingly in July, 1925. Mr. Gustave Francq, the Chairman, had been the chairman of the Quebec provincial executive of the Trade and Labour Congress of Canada. He acted as technical adviser to the delegate representing the workers of Canada at the Seventh International Labour Conference, Geneva, 1925. Mr. Brunet is one of the leaders of the National Catholic Union, and Messrs. Griffin and Richard are employers in industries employing large numbers of female workers.

The Board's methods of procedure were outlined in the LABOUR GAZETTE, January, 1926, page 4. Questionnaires were sent out to women's organizations and labour unions throughout the province in order to ascertain the amount of the weekly budget of a working woman in the various parts of the province, the budget including the cost of board and lodging, clothing, and sundries. The working women were invited to assist in collecting this information, which served as a basis in determining the minimum wage needed to meet the requirements of the employees' weekly budget. The text of the order follows:—

Order No. 1—Governing Female Employees in Laundries, Dye Works and Dry Cleaning Establishments, in the City and Island of Montreal and a radius of 10 miles around and beyond the Island.

1. *Minimum:* No wage shall be less per week for the regular recognized working period of the establishment than is set forth in the following table—

Experienced Workers	Inexperienced Workers	Apprentices
$12 00	Over 18 years 6 months at $10.00 6 " 11.00	Under 18 years 6 months at $ 9.00 6 " 10.00 6 " 11.00

No worker, who begins as a young girl shall, after reaching the age of 18 years, receive less than the wages prescribed for an inexperienced worker over 18 years. If she has been employed in the industry for a year or more before reaching the age of 18 years, she shall be considered an experienced worker upon reaching the age of 18 years and receive not less than the minimum wage of experienced workers.

2. *Maximum of Inexperienced Workers:* Not more than 35 per cent of the total of female employees in any establishment shall be either inexperienced adults or apprentices under 18 years of age.

3. *Overtime:* Any female employee doing work in excess of the regular recognized working period of the establishment shall be paid for same at not less than the regular rates.

4. *Lost Time:* Auy female employee losing time during the regular recognized working period of the establishment will be paid proportionately for the actual number of hours worked.

5. *Deductions for Absence:* No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned proportionately to the regular recognized working period of the establishment.

6. *Waiting:* An employee required to wait on the premises shall be paid for the time thus spent.

7. *Permits:* The Board may issue permits for lower wages on behalf of aged, or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problems which this Order may concern.

8. *Penalties:* Any violation of this Order is punishable by fine. (See Section 12 of the Act).

9. *Posting:* Each establishment shall keep copy of this Order posted in a conspicuous place.

10. This Order is subject to annual revision by the Board.

11. This Order shall come into force and be effective on March 1st, 1927.

GUS. FRANCQ. *Chairman.*
OMER BRUNET.
J. C. GRIFFIN.
EUGENE RICHARD.

Dated at Montreal, this 11th day of November, 1926.

Minimum Wages for Female Employees in Massachusetts

The report of the Minimum Wage Commission of Massachusetts has been received by the Department. The duties of the Commission under the Minimum Wage law of the State comprise investigating the wages of women employees; establishing wage boards to recommend minimum rates of wages; entering wage decrees based on the recommendations of the boards; inspecting to determine compliance with the decrees, and publishing the results of its findings.

Investigations were held during the year into the wages of women employed in the manufacture of shoe cut stock. Nearly three-fourths of these women were found to be earning less than $13 a week, the majority being on a piece-rate basis. A similar inquiry was in progress in connection with employment in electrical machinery and supplies.

Four wage boards were at work during the year. The Bread and Bakery products wage board adopted a cost of living budget of $13 for a self-supporting woman in this occupation and recommended a minimum rate to correspond.

The Wage Board for the millinery trades estimated the cost of living for a self-supporting woman in the occupation as $13.90. Owing to conditions in the retail branch of the industry in particular, the board recommended that the minimum rate be established at $13 a week for the present. The board made the further suggestion that the rate be increased or decreased in the future in accordance with changes in the cost of living. To obtain this rate, an employee of ordinary ability must be at least 19 years of age and have been employed in the industry at least four seasons of sixteen weeks each, and have had at least two spring and two fall seasons' experience; or in the case of employees whose work is not of seasonal character, at least two years. Lesser rates are fixed in accordance with the experience of the employee.

The Stationery goods and Envelopes Wage Board estimated the cost of living as $13.75 and recommended a minimum rate to correspond. The board also recommended special minimum rates ranging from $9 to $12 according to age and experience.

Minimum Wage decrees have been established in Massachusetts (up to February 1, 1926) governing female employment in the following classes of work. The minimum rates for experienced employees, or in some occupations for those of "ordinary ability" are as follows:—

	Weekly
Men's clothing and raincoat occupation	$15.00
Corset occupation	13.00
Knit goods (other than standard lines of hosiery and underwear, but including knit athletic goods)	13.75
Office and other building cleaners' occupation	15.40
Women's clothing factories (cloak, suit, skirt, dress and waist shops)	14.00
Paper box occupation (including set-up, corrugated and folding boxes)	13.50
Retail stores	14.00
Men's furnishings factories (manufacturers of men's and boys' shirts, overalls and other workingmen's garments, men's neckwear and other furnishings, and men's women's and children's garters and suspenders.	13.75
Muslin underwear, petticoat, apron, kimono, house dress, women's neckwear and children's clothing factories	13.75
Laundry	13.50
Brush industry	13.92
Druggists' preparations	13 20
Canning and preserving and minor lines of confectionery occupation	13.00
Bread and bakery products	13.00
Millinery occupation	13.00
Stationery goods and envelopes	13.75
Candy occupation	13 00

ANNUAL REPORT OF BRITISH MINISTRY OF LABOUR

THE second annual report on the work of the Ministry of Labour of Great Britain, recently published, describes the varied activities of the Department during 1925. Its work is in eight main divisions, as follows:—

1. *Industrial Relations (Conciliation and Arbitration).*—The functions of the Ministry under this head are (*a*) The administration of the Industrial Courts Act, 1919, and the Conciliation Act, 1896, the powers and duties of the Board of Trade under the latter Act having been transferred to the Minister of Labour under the New Ministries and Secretaries Act, 1916; (*b*) rendering assistance in the establishment of joint bodies such as Conciliation Boards, under section 4 of the Conciliation Act, 1896, and Joint Industrial Councils, on the lines recommended by the Whitley Committee on the Relations between employers and employed; (*c*) co-ordination of the administration of the Fair Wages Resolution of the House of Commons; (*d*) miscellaneous.

During 1925, 257 disputes were settled with the assistance of the Ministry.

2. *Employment.*—This division includes (1) the work of the employment exchanges, through which 1,279,292 workpeople were placed in employment in 1925. The total number of registrations in 1925 in Great Britain (including re-registration of the same persons) was 12,728,238, as compared with

11,262,887 in 1924, 8,774,644 in 1923, and 8,819,523 in 1922. Of the registrations in 1925, 8,815,666 were men, 2,953,214 women and 960,358 juveniles (under 18 years of age); the corresponding figures for 1924 were 7,526,355 men, 2,823,405 women, and 913,127 juveniles. The trade groups in which the largest number of registrations of men were recorded during the last four years were: engineering; building; transport; general labourers; shipbuilding; mining and quarrying; metal manufacture; cotton. The above is the order in which these various groups were affected in 1922; the order did not greatly differ in the other years, except that mining and quarrying rose to the second place in 1924 and to the first place in 1925. The corresponding groups for *women* were cotton; domestic service; dress; miscellaneous textiles; commercial; food, tobacco, drink, etc.; woollen; paper, printing, etc.; engineering; transport; pottery, glass, etc. In each year the greatest number of registrations was in the cotton trade; next in magnitude comes domestic service, followed by dress in 1922, 1923, and 1924, and by woollen in 1925.

(2) The King's National Roll, or the national scheme for the employment of disabled ex-service men.

(3) Juvenile section, including vocational guidance and employment service; training of unemployed; oversea employment, unemployment relief, etc.

3. *Unemployment Insurance.*—The report refers to the changes introduced by the Unemployment Insurance Act, 1925, and to changes in the Unemployment Insurance Acts consequential on the Widows', Orphans, and Old Age Contributory Pensions Act, 1925. These Acts are administered by the Department. The percentage unemployed among insured workpeople, which in December, 1924, was 10.6, had risen by the following February to 11.1 and although it dropped slightly in the three succeeding months, it had reached 11.6 by June and 11.9 by August; thereafter it commenced to drop until by December it had become 10.1. This percentage represents well over one million persons. The debt of the Unemployment Fund, which at the end of December, 1924, was £5,410,000, was £7,595,000 at the end of December, 1925.

4. *Trade Boards.*—The Trade Boards Acts of 1909 and 1918 are administered by the Minister of Labour. The report describes the trades to which these Acts apply, and the constitution of the trade boards and district trade committees. During 1925 minimum wage rates were established for fourteen trades. The work of this branch involved numerous inspections and enforcements, as well as special inquiries.

5. *Labour Statistics.*—Information is regularly collected and statistics are compiled and published, with regard to employment and unemployment, wages and hours of labour, changes in working-class cost of living, strikes and lockouts, organizations of employers and workpeople, and other labour matters. Information is also obtained and presented as to the development of the labour situation in countries oversea. In addition, special investigations are made from time to time on subjects of current interest, and on particular questions with regard to which information is required by the government or by government departments.

6. *International Labour Division.*—This division is concerned with the subject of the Recommendations and Draft Conventions of the International Labour Organization.

7. *Training of the Unemployed.*—In regard to the work of this branch the report says:—"There are a large number of young men on the registers of the Employment Exchanges who, owing to the war and the subsequent industrial depression, have had little or no opportunity of learning a skilled trade or of obtaining regular employment even in a semi-skilled trade or unskilled trade, with the result that they have had no practical experience in the use of tools, and have never acquired the habits and discipline which come from regular work. In consequence these men find it very difficult to obtain any employment other than on purely unskilled work of a casual nature. In the belief that even a short course of training would greatly improve the general employability of this class of men the Ministry of Labour decided, as an experimental measure, in the autumn of 1925, to give a six months' course of training to a limited number of such men. For this purpose four training centres have been established two of which are non-residential, at Birmingham and Wallsend-on-Tyne, and two residential, at Claydon, near Ipswich, and at Weeting Park, near Brandon, Suffolk. Each of the two urban centres has capacity for 400 trainees at one time, while the rural centres have, or will have, capacity for 200 men in each."

8. *Temporary Functions arising out of the War.*—These functions include a scheme for the industrial training and placing of former soldiers.

The report also gives an account of the proceedings of the Central Committee on Women's Training and Employment.

IMPERIAL CONFERENCE AND STATE-AIDED EMPIRE SETTLEMENT

THE subject of oversea settlement, including training and social insurance, was among the subjects which received special consideration at the Imperial Conference held in London last month. A special sub-committee was formed to study the question and draft a report. The chairman of the committee was the Earl of Clarendon, under-secretary of State for Dominion Affairs, who is also chairman of the Oversea Settlement Committee. Canada was represented on the sub-committee by the Honourable Vincent Massey; Mr. F. C. Blair, assistant deputy minister, Department of Immigration, and Mr. J. Bruce Walker, Director of European Emigration.

The subject of assisted migration had been considered at the Imperial Economic Conference held at London in October and November, 1923. That conference defined the objects of the policy of Empire settlement as "a redistribution of the white population of the Empire in the best interests of the Empire as a whole." This definition was accepted by the sub-committee of the recent conference as the starting point of their inquiry. They recognized the importance of "speeding up" the redistribution of population, but opposed any suggestion of mass movements, believing that a sound policy must be based upon scientific and carefully considered schemes.

It may be recalled that the British Parliament in 1922 enacted the Empire Settlement Act. The results directly obtained by this legislation during the first three years were found to be disappointing, but a substantial increase had set in during the present year. The chairman of the committee reported that he and the vice-chairman of the Oversea Settlement Committee had spent three months in Canada, where they found great possibilities for overseas settlement.

The general policy of the conference was expressed in the following resolution:—

> The Conference is of opinion that the problem of oversea settlement, which is that of a redistribution of the white population of the Empire in the best interests of the whole British Commonwealth, is one of paramount importance, especially as between Great Britain on the one hand and Canada, Australia and New Zealand on the other. The Conference notes with satisfaction that the desired redistribution of population is being accelerated by the policy which has been consistently pursued since its acceptance by the Resolution of the Conference of Prime Ministers in 1921. It endorses the view expressed at that Conference that the policy should be a permanent one. It recognizes that it would be impracticable, owing to financial, economic and political considerations, to promote mass movements of population, but it is satisfied that by continuous adherence to the present policy, it should be possible steadily to increase the flow of population to those parts of the British Commonwealth where it is most needed for development and general security and where it will find the greatest opportunities.

The committee recognized that while the bulk of the population of Great Britain was urban in character the settlement of the Dominions, particularly Canada, Australia, New Zealand and Southern Rhodesia, must be chiefly based upon their need for agricultural development. Such development, in the view of the committee, is materially dependent upon the growth of the co-operative spirit in the formation of associations for rural credit, marketing of produce, etc. They found that considerable progress had been made in this direction, but commended to the Dominion Governments the desirability of further stimulating co-operative effort among producers.

In the course of the inquiry the committee reviewed the migration arrangements already in effect in the Dominions. In Canada, it was noted, the immigration authorities had decided to establish in Great Britain a Canadian Medical Service, under which medical examination of prospective settlers is to be carefully systematized and conducted free of charge. The Canadian Assisted Passage Agreement, which came into operation on January 1, 1926, is to be renewed. Under this agreement, men and their dependents proceeding to take up agricultural work and women household workers are granted passages at a reduced rate varying according to the final destination in Canada, with free passages for children up to 17 years of age. The agreement has been attended with most satisfactory results. The number of assisted migrants who proceeded to Canada during 1925 was 8,803, and during the first nine months of 1926 the number was 18,943.

In Canada, the Department of Immigration and Colonization undertake all arrangements for the reception and after care of assisted migrants. In addition, certain welfare work is undertaken by recognized private organizations. For instance, juvenile migration is in the hands of Juvenile Migration Societies, which are subject to the direction, and the children themselves, to the supervision of the Department of Immigration. There are also special schemes for boys arranged with the Ontario Government and the Government of the Province of Alberta. All house-

hold workers must proceed under the auspices either of the Department of Immigration or of a recognized voluntary organization which has assumed responsibility for their welfare.

The committee were specially favourable to family migration. In Canada the 3,000 Families Scheme is proving so conspicuously successful that it has been decided to enter into a further scheme for the settlement of suitable families on Crown Lands and on privately owned lands in Canada.

The migration of juveniles was among the special recommendations of the committee, who drew particular attention to the scheme arranged by the Oversea Settlement Committee with the government of Ontario under which a training farm (the Vimy Ridge Farm) has been provided for training and placing of immigrant boys from Great Britain.

The committee recommend further efforts to increase the migration of women, particularly of those adapted for household work.

In regard to land settlement the committee note with approval a proposed experimental scheme in Canada for the settlement of families upon undeveloped Crown lands. Such a scheme would receive support from the government of Great Britain, which would be willing to make advances to the settlers for stock, equipment and housing. It is hoped further that the co-operation of private owners of unoccupied lands will be secured in support of such a scheme.

The committee in their report dwelt on the importance of special training, and noted with approval the existing arrangements for the extensive training of prospective settlers. Canada and Australia, it was reported, were willing to provide instructors and equipment for such undertakings.

The committee recommended that special efforts should be made to improve the amenities of rural life, to increase marketing facilities, and to standardize social insurance schemes throughout the British Empire.

Piece Work in the Russian Soviet Republics

The recent course of wages in the Union of Soviet Socialist Republics (Russia) is described by W. Schmidt, People's Commissar for Labour, in a contribution to *International Press Correspondence* for October 7, quoted in the *Nation* (New York) of November 10, in part as follows:—

"If we regard the months of April to June of the economic year 1922-1923 as representing 100, the average real wage in the whole of industry rose to 124 in the corresponding months of the economic year 1923-1924, to 145 in April to June in the economic year 1924-1925, and to 167 in the corresponding months of the economic year 1925-1926, and, therefore, rose altogether by 67 per cent during this period. This advance was achieved through a general increase of wages, on the one hand, and, on the other, by the introduction of piece-work for the skilled workers and of supplementary premiums for the labourers. In view of the high piece-work wages the increase of wages for skilled workers has exceeded the increase in the pay of the labourers.

"The growth of the wages of the skilled workers is adequately guaranteed by the system of piece rates, and will still be in the future, as the output of labour increases in consequence of the fresh equipment of industry and the introduction of rational methods of organizing work. This possibility, however, does not exist for unskilled and semi-skilled labourers working at so much per hour, and it is, therefore, necessary to bring their earnings more into accord with those of the skilled workers. This was, and still remains, a task of the labour movement.

"A number of measures were adapted to this end: increase of wages for those in receipt of the lowest rates of pay under the collective contracts, increase of salaries of the lowest categories of employees, together with the execution of the standardization of the salaries of civil servants, subsidizing of the local budgets for the purpose of increasing the pay of the low grades, etc. These steps did not previously suffice to produce satisfactory results, and it is only now that the consolidated general economic situation affords the possibility of putting through a number of measures in this direction in order to increase the wages of the low-paid workers. But even these measures must be effected without causing a strain to our currency and without entailing other undesirable economic consequences.

"It is therefore, necessary, in accordance with the resolution of the Council of People's Commissariats, dated September 21, that we pay close attention during the year 1926-1927 to the increasing of the wages, especially of the low-paid groups of workers in industry, transport, post, and telegraph services, in consonance with their financial possibilities."

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Apprentice Training at Hamilton, Ont.

APPRENTICESHIP in Canada is not dead. In fact, a revival of the practice is taking place in all parts of the Dominion. The old form of indentured apprenticeship, under which the master accepted full responsibility for the training and education of his apprentices, is being replaced by new systems under which industry, as represented by organized labour and employers' associations, and the state, as represented by vocational schools, are co-operating in their efforts to provide a sound general education and thorough trade training to all young people entering industrial occupations. Under this new plan, the employer is relieved of responsibility for that part of the training which can best be done in schools, while the schools do not attempt to duplicate or replace the training and experience which can best be given on the job. The apprentice receives a more thorough training than is possible when schools and industry work independently, and the cost of training is greatly reduced.

Some idea of the methods adopted in providing this new type of training can be gained from the following abbreviated description of the work being done in Hamilton, Ontario.

The apprentices attending the Hamilton Technical Institute may be classified under two headings:—

I. Trade apprentices (those apprenticed to the trade) (*a*) Building apprentices:—(i) Bricklayers, (ii) Carpenters; (*b*) Printing apprentices.

II. Industrial apprentices (those apprenticed to industrial firms).

At present there are seventy trade apprentices in attendance consisting of: 34 printing apprentices, 20 bricklaying apprentices, 16 carpenter apprentices.

The industrial apprentices number 105, as follows:—17 tool-makers, 18 machinists, 33 electrical, 6 moulders, 10 drafting, 12 pattern-makers, 3 pipe-fitters, 1 die-sinker, 3 surveying, 1 cabinet-maker, 1 chemist.

Training and Attendance

I. *Trade Apprentices.*

(*a*) (1) Bricklayers.—These apprentices attend two evenings a week, two hours per evening, and study bricklaying, drafting and mathematics. (2) Carpenters.—These apprentices attend two evenings a week, two hours per evening. One evening is devoted to carpentry work and the other to drafting.

(*b*) Printers.—These apprentices attend at least two-half-days and six evenings per month and study the "Lessons in Printing" as prepared by the Educational Department of the International Typographical Union.

II. *Industrial Apprentices.*

(*a*) Those attending one-half day (4 hours) and one evening (2 hours) per week study the following subjects:—shop practice, shop mathematics, drafting and English. The electrical apprentices study electricity in addition to the above.

(*b*) Those attending two evenings per week (2 hours per evening) study drafting one evening and mathematics the other evening. With the exception of English, the apprentices receive individual instruction in all their subjects. Little or no class work is attempted. To make this possible, the groups are kept small, 14 to 18 students being considered a satisfactory group. The courses consist of lesson sheets which enable the apprentice to make as rapid progress as his ability and application permits without hindrance from slower or newly enrolled class-mates.

Organizations Controlling Apprenticeship

I. *Trade Apprentices*: (*a*) 1. Bricklayers, 2. Carpenter; (*b*) Printers.

In each of these trades, apprenticeship is controlled by a committee consisting of representatives appointed by the employers and by the union, two from each.

II. *Industrial Apprentices*—in the larger firms, the employment manager usually has charge of apprentices. In the smaller firms, it is generally the works manager.

Relationship to the Technical Institute

1. (*a*) *Building Apprentices*: 1. Bricklayers, 2. Carpenter.

An agreement is entered into between the Union and Employers on the one hand and the Institute on the other, for example:—

Bricklayers' Agreement:

We, the undersigned Building Contractors, in agreement with the Bricklayers Union (Local No. 1), hereby signify our approval of the conditions relating to the course of instruction for apprentices in Bricklaying as herein set forth, said course to be conducted at the Hamilton Technical Institute.

1. The fixing of the time for classes, the planning of the course of instruction, the conducting of examinations and all other matters of a general nature shall be entrusted to a committee of five, two to be appointed by the Contractors, two by the Bricklayers

Union and the fifth to be the Principal of the Technical Institute.

2. Apprentices are to attend classes at the Technical Institute two evenings per week, two hours per evening, during ten months in the year (September 1st to June 30th).

3. The Contractors agree to pay each apprentice for one half the time he is in attendance at said classes, the rate of pay to be the same as the said apprentice receives during the day.

4. The Contractors undertake to provide for the compulsory attendance of apprentices at said classes when making out indenture papers after this date.

5. The Bricklayers Union undertakes to promote the attendance of all bricklaying apprentices at said classes.

6. No fee will be charged by the Technical Institute for attendance at said classes.

7. The Technical Institute undertakes to forward to the masters of said apprentices, a weekly report on the attendance of apprentices, and a report every two months on conduct, application and progress.

Dated at Hamilton, Ont., June 26, 1924.

(*b*) *Printing Apprentices.*—An agreement is entered into between the Union and the School, as follows:—

1. *Printing Agreement:*

1. The study group shall be known as the Printing Trades Extension Class."

2. The purpose of the class is for the education of apprentices and journeymen engaged in the printing business in Hamilton and adjacent territory and to the end that higher types of craftsmen may be available in the printing trade.

3. The class shall meet on such days and nights as specified by the principal of the school, such periods being allotted so as to enable the scholars to complete their lessons as specified in the course.

4. This class shall be composed entirely of registered apprentices or journaymen who wish to take the course, unless such condition is waived by the Union upon application of the school authorities.

5. Non-registered apprentices may be drawn from any plant or parts of plants and are to be given the same privileges with respect to attendance at this class as registered apprentices, so long as they are seriously interested in the art of printing.

6. The Apprentice Committee of Hamilton Typographical Union shall act in any advisory capacity in selecting non-registered apprentices for the class to the end that the best available talent be brought into the trade.

7. Registered apprentices and members of Hamilton Typographical Union are granted enrolment priority.

8. The International Typographical Union Lessons in Printing, as prepared by its Educational Department, shall serve as the text for the Printing Trades Extension Class. This shall not debar such other books and reference materi ' as may be deemed desirable by the instructor in teaching the subject.

9. It is agreed that each student is required to individually work out the tests accompanying these lessons and as evidence thereof, the instructor will keep a file of the exercises and answers to questions, to be submitted to the Apprentice Committee of Hamilton Typographical Union from time to time, as explained in Section 10.

10. The class instructor must file all test answers of students so as to be available if such students later enter the trade and desire recognition by the International Typographical Union as to their educational qualifications.

11. Report cards shall be furnished monthly to the following:—(1) Foreman or proprietor; (2) Parent or guardian; (3) Local Union Apprentice Committee, covering attendance and progress, with such suggestions regarding the students' deficiencies as may seem helpful.

12. It is agreed that in consideration of the exclusive use of the I.T.U. Lessons in Printing that these lesson papers will be supplied by the International Typographical Union to the Hamilton Technical Institute for use of students in the Printing Trades Extension Class at a discount of 40 per cent from regular rates, viz., $15 for each set of lesson papers if paid in full in advance. It is understood that the Apprentice Committee of Hamilton Typographical Union will be responsible for the collection of these fees.

13. All apprentices failing to subscribe for the International Typographical Union Lessons in Printing through the Hamilton Technical Institute will be required by the Union to subscribe to the course in the regular way and at regular rates. Payment will be made through the regular channels of the Union.

14. The instructor shall be a man of highest character, a practical printer of at least five years' composing room experience in the printing trade and shall meet the educational requirement of the Ontario Department of Education. He shall be a member of Hamilton Typographical Union, No. 129.

II. *Industrial Apprentices.*—An agreement is entered into between the firm and the school. The following agreement is typical:

Conditions under which Canadian Westinghouse Apprentices are to attend the Technical Institute.

1. All apprentices taken on after this date to have an educational standard, equivalent to High School Entrance.

2. All apprentices to attend classes at the Technical Institute four hours per week during the day (forenoon or afternoon of one day, as may be arranged) and evening classes two hours per week (one evening).

3. All apprentices to be paid the regular rate of pay for the time in attendance at day school. Pay to be deducted in case of absence from school on the same basis as deductions are made for absence from work.

4. The Technical Institute to submit a weekly absentee report to the Canadian Westinghouse Company, Limited.

5. All apprentices to be required to write on an examination every six months (end of June and end of December), said examination to be set jointly by the Canadian Westinghouse Company Limited and the Technical Institute.

6. The results of examination specified in No. 5 will be taken into consideration in fixing rates of pay.

7. Evening Classes.—The Canadian Westinghouse Company Limited will pay the registration fees for the evening classes at which regular attendance is required and non-attendance without reasonable excuse or permission will be considered cause for dismissal.

8. The schedule of work will be prepared jointly by the Principal of the Technical Institute and a representative of the Canadian Westinghouse Company Limited.

The above agreements in no case impose any legal obligations on the parties concerned. In each case it is simply a statement of the understanding arrived at between the school and the firm or union. Two fundamental principles are involved in each agreement:—

1. The firm or union accepts the responsibility of apprentice attendance.

2. The Technical Institute undertakes to teach the apprentices a course of study acceptable to the firm or union.

Apprenticeship in the Building Trades at Toronto

The increasing interest in apprenticeship, which has been apparent for the past few years in the building industry at Toronto, has resulted in definite steps towards the organization of a comprehensive and effective system of trade training.

A tentative plan of organization has been approved by the employers who have engaged a competent man on a part-time basis to survey the field and commence operations with a view to developing the necessary co-operation between groups, and creating personal interest on the part of every employer who may be expected to participate in the scheme. Organized labour is interested in the new plan and the educational authorities welcome this opportunity of linking school work with training on the job. There appears to be no reason why the plan should not be successful. Its development will result in co-operative effort on the part of employers, organized labour and educators in the task of supplying future skilled workers for the building trades.

The plan as outlined provides for a provincial apprenticeship council, local apprenticeship committees, provincial and local secretaries or supervisors, and indenture forms requiring four or more years of service, thorough trade training and a fixed scale of wages. It is proposed that applicants for apprenticeship shall be between the ages of 16 and 20 inclusive, that all apprentices shall attend specially organized classes in the local technical schools or other places during approximately twelve weeks of each of the first two years of apprenticeship, and that time in classes shall be paid for, at fixed rates, by the Provincial Council. Funds for this and other purposes are to be collected by the Council from employers, on a stated basis.

The Construction Apprenticeship Council of Ontario is to be representative of all the interests which may contribute to the proper development of an apprenticeship system in the Province of Ontario. The proposed Council will consist of:—

(*a*) Two representatives from the Association of Canadian Building and Construction Industries.

(*b*) Two representatives from the Building Trades Congress.

(*c*) One representative from the Ontario Architects Association.

(*d*) One representative from the Engineering Institute of Canada.

(*e*) Two representatives from the Department of Technical Education of the Province of Ontario.

Its functions will be to appoint the necessary officers for carrying on the work, to promote and organize local apprenticeship committees, to receive and disburse the funds, to make rules and regulations, to determine the number of apprentices for each trade, to grant diplomas, and to act as a final court of appeal in all disputes pertaining to questions of policy.

The Local Joint Trade Apprenticeship Committee will be composed of:—

(*a*) Two representatives of employers, appointed by the Builders Exchange, where there is such an organization.

(*b*) Two representatives of employees, appointed by the Building Trades District Council, or Trade Organization where there are such organizations.

(*c*) One independent, either architect or engineer, appointed by the Construction Apprenticeship Council of Ontario.

In localities where there is no organized body of employers or employees, the Construction Apprenticeship Council of Ontario will appoint representatives to constitute a Local Apprenticeship Committee to carry out the objects of the apprenticeship system in the construction trades in such locality.

The functions of the Local Committee are to appoint a chairman and secretary, to receive and register applications, to select and place apprentices, to supervise training, to co-operate with technical schools, to examine apprentices, to transfer apprentices when necessary, to cancel indentures with the approval of the Provincial Council, to settle disputes not involving policy, to keep records of apprentices, to arrange credits for previous trade experience or vocational training, and to secure attendance vouchers for each apprentice during his periods in technical school classes.

Apprenticeship—Its Status and its Possibilities

The following paragraphs are taken from an article by Dorothy Sells, Ph.D., appearing in *Industrial Management* of July, 1926:—

Apprenticeship on the Railways

For two outstanding reasons railways have been leaders in developing private apprentice training schemes. In the first place more highly skilled work is still required on railways than in most other industries. In addition, because of their extensive nature and the location of shops in small towns which are usually inaccessible to technical schools of any kind, it is incumbent upon the railways themselves to train those employees who need a high degree of skill. As is usually the case among skilled workers, the labour turnover among railway employees is relatively low, so that they have been able to keep a large number of their own graduate apprentices.

Beginning about 1899, embryo schemes for apprenticeship were begun, but it was not until 1905 that a full-fledged plan came into being. Between that time and 1913, twenty-five railways established apprenticeship schools of one kind or another, and to-day many roads like the Chesapeake and Ohio, which do not have self-contained training equipment, advise their men to make use of one of the more comprehensive and sound railway correspondence courses, or in some instances offer correspondence courses of their own. Still, it is asserted by competent authorities that the apprenticeship movement on American railways is just beginning to function properly with the readjustment of the old system of apprenticeship to meet modern conditions.

The Grand Trunk Railway of Canada

One of the railroads to do pioneer work in the training field was the Grand Trunk Railway, now a part of the Canadian National System. At present apprentice schemes are maintained at six main stations and in addition three travelling instructors are employed to visit seven other stations weekly, where they give instruction to apprentices. A special apprentice examiner tests all apprentices every six months for rate increases and reports directly to the supervisor of apprentices. Reports of the boy's progress are sent to parents quarterly.

Applicants for admission to the apprentice course must be between 16 and 21 years of age and must write a letter of application in order to give an indication of proficiency in writing and spelling. A medical examination and one in simple arithmetic are also required. Courses are offered in preparing for the following trades:—

Motive Power Department — Machinists, boiler-makers, electricians, tinsmiths, pipefitters, blacksmiths, pattern-makers, molders, toolmakers, air-brake mechanics and millwrights.

Car Department—Freight car builders, coach body builders, carpenters, wood machinists, tinsmiths, plumbers, brass finishers, painters, blacksmiths, machinists, cabinet makers, steamfitters and electricians.

Shop instruction is supplemented by text book study and class-room work for two hours each week in mechanical drawing, sketching, mathematics, practical mechanics, and blueprint reading.

On the completion of the five-year course a certificate is awarded, and many of the boys remain permanently with the road. Indeed, it is stated that the company rarely is obliged to go outside its own shops to fill a vacancy, and some of the highest positions are now filled by graduate apprentices.

Printing Apprenticeship

Although introduction of machinery has gained considerable headway in the printing industry within the last few years, it remains one of those trades requiring skilled workers in sufficiently large numbers to render adequate training a pressing necessity. Moreover, it was the first industry in which organized labour evinced an active concern about apprenticeship.

An interesting phase of industrial training in the printing industry is that carried on by the National and the local Typothetae in various industrial centres. This progressive organization of employers early realized the importance of building up a supply of young skilled workers in the trade. To this end the Typothetae has instituted apprentice schools of its own in some cities and has co-operated in establishing educational facilities in other places with such agencies as the Y.M.C.A., the public schools, etc.

The Foundry Industry

With every increase in the use of machinery, the foundry industry becomes more important and the need for thorough, well-trained workers becomes more imperative. Especially is there need of young men to enter molding work. While no great difficulty is found in recruiting young men for the cleaner,

lighter trade of pattern making, molding, with its heat, dirt, and dingyness does not attract boys of fourteen years. As a result, there is great scarcity of molders at the same time that the need for them is increased. This situation is being widely recognized by employers to-day, and steps are being taken to acquaint young persons with the interests and possibilities in foundry work. Yet the extent of apprenticeship in the trade is still far too limited.

The foundry industry to-day is very highly specialized, one firm often making only one kind of product. The type of training best suited to workers, therefore, depends largely upon the type of establishment and upon the kind of foundry work, whether iron, steel or brass.

The Challenge to Vocational Education

President Edwin A. Lee, of the American Vocational Association, describes the purposes of vocational education as follows:

The challenge to vocational education as it relates to craftsmanship is in terms of enlisting as teachers the highest type of worker to be obtained. It was at first assumed that any man who knew his trade adequately could teach it, an assumption which still has its adherents in the academic fold. The Smith-Hughes Act recognized the fallacy of this assumption in what is probably the most important section of the law, that in which it is specified that no state after a certain date may receive federal aid in a field for which it has not established an approved program of teacher training.

The challenge to vocational education as it relates to professional training is that we shall constantly evaluate our teacher training program in terms of the objectives we set up; that we shall continually scrutinize those objectives in the light of the purpose which we have set out to achieve; that we shall examine into the details of subject matter and practice we have incorporated in our programs in the attempt to discover whether or not in our desire to become professional we have not become abstractly theoretical, or on the other hand in our desire to remain practical we have not become narrowly mechanical; that we shall recognize that no matter how extensive the program we may set up there will always remain the problem of more and better organized upgrading of the vocational teacher after he has entered upon the actual job of trade training; and finally that there shall be in charge of our teacher-training programs men who see the problem of vocational education in its widest reaches, visioning its relationships to community life, to public education, to the entire social and economic structure, and translating that vision to those who are to bear the brunt of the toil as they carry on the work in the vocational schools and classes throughout the state.

The greatest potential power of vocational education lies in the co-operative relationships which we set up with industry. Problems such as creating under school conditions the atmosphere of the shop disappear when the trainee spends half his time in an actual factory under the spur of productive effort. The problem involved in making the transition from school life to work life a transition which shall be gradual and frictionless is solved easily and naturally under the conditions which obtain in a co-operative scheme of education. There is no community so small that it cannot carry on in some degree a program of vocational education if it will only take advantage of the opportunities for co-operative education which exist within its own boundaries or adjacent thereto.

The necessity for co-operation is not limited to the vocational life outside the school. There is just as great need for co-operative relationships within the school system itself. Vocational education was for a time considered as a thing apart, some states going so far as to set up separate boards for the administration of vocational education, which practice has been followed within cities. Administrators, high school principals and college professors, are more and more recognizing the part and place of vocational education in a total scheme of public education, and from recognition it is but a short step to positive support.

There is the challenge to face the truth, to adopt the methods and principles of scientific research. We offer courses, the purpose of which is to train plumbers. How many of those we have trained actually become plumbers? Of those who do enter the trade how many actually persist and become successful plumbers? What becomes of the others, and why did they not enter or succeed in the trade for which they were presumably trained? These and many other questions can be asked about every vocation for which we are giving training under public auspices and they can be answered if we are willing to make the protracted study of the facts which research requires. How much do we know of the trades for which we are giving training? The whole field of job analysis is

rich with research possibilities. Curriculum construction and evaluation presents untold opportunities for scientific investigation. To the extent that we accept the challenge of research, of diligent and protracted investigation of our work no matter where that research leads us nor how damaging its results to the beliefs we hold, will our program be built on foundations that are unassailable.

Engineering Education

American engineering colleges have been so outstripped by science and industry that they must revise their methods, according to the report of the Board of Investigation and Co-ordination of the Society for the Promotion of Engineering Education, of which Professor Charles Scott of Yale is Chairman. The report represented the results of a three-year fact-finding investigation just completed in the United States and in Europe at a cost of more than $200,000. More than half this expense was met by the Carnegie Corporation.

To remedy the situation the board urged that a program of sweeping changes be put into effect at once in all the engineering colleges of the country to link up with activities of the Society for the Promotion of Engineering Education, the great national engineering societies, the industries, the secondary schools and the non-engineering colleges.

The report condemned curricula that are "too soft," recommended that the normal length of the undergraduate curriculum should remain four academic years, including increased work in humanistic subjects, and appealed for the elimination of "gross waste in men and money imposed by the present system," in which the misfits were said to be unduly numerous.

"The development of greater social insight and a larger sense of social responsibility should be a definite objective of the engineering profession if it is to gain recognition for more than its technical proficiency," the report declared in recommending that general economics be included in all engineering curricula.

"Policies of admission to engineering colleges should have in view the positive attraction and selection of suitable personnel. A joint agency for co-operation with organizations of secondary schools and secondary school teachers should be created. Admission by certificate sould be accompanied by more selective methods, including a test of general intelligence, training and aptitude tests in specific subjects, and a physical and health examination to discover and provide for remedial defects and eliminate in advance those too seriously handicapped for the successful pursuit of a rigorous college program."

The report stressed the need for action in developing teaching personnel. A critical stituation is threatened, it said, because of increasing difficulty in enlisting able men for the highest posts in engineering education. "Efforts to broaden and enrich engineering education will be largely unavailing unless teaching service is able to enlist and hold able and inspiring men," the report continued. "The present agencies and programs of engineering education fail to supply an adequate recruitment for the line or operating direction of industry, as distinct from its export staff activities. The pressure for more extended provision for technical education and the demand for increased technical personnel should be met, for the present, by expansion of the facilities and programs of non-collegiate types of training."

Minimum Wages in Massachusetts

A minimum wage of $14.40 a week has been set by the Minimum Wage Commission for women of ordinary ability engaged in the manufacture of jewellery findings, silver novelties, optical goods, watches and clocks. For inexperienced workers the minimum is to be $12 a week. The decree which becomes effective January 1, 1927, provides that a woman shall be considered of ordinary ability who has reached the age of 20 years and has had six months' experience in the occupation. The investigation of the wages of women employed in the manufacture of jewellery and related lines, made by the Minimum Wage Commission preliminary to fixing a minimum wage, showed that 35 per cent of the women in the industry earned less than $14 a week, and 21 per cent earned $20 or over. Earnings by occupations showed a marked contrast for the workers engaged in different processes. Of the largest group, the packers, two-thirds received less than $14, and only 3 per cent earned $20 or over. A wage board to recommend a minimum rate of wages for women employed in the manufacture of toys, games and sporting goods was organized in October. An investigation made by the Minimum Wage Commission of the wages paid in this industry showed that 44 per cent of the women received less than $13 a week, and approximately 66 per cent less than $15, while not quite 15 per cent received $18 a week or over.

ALBERTA FEDERATION OF LABOUR

Summary of Proceedings of the Eleventh Convention held in Calgary

THE eleventh convention of the Alberta Federation of Labour was held in Calgary, November 22-24, nearly four years having elapsed since the previous meeting. There were 69 delegates present representing 44 affiliated bodies, including the district headquarters and locals of District 18, United Mine Workers of America. In addition there were present seventeen fraternal delegates, among whom were the Labour members of the Alberta Legislature, one Labour member of the House of Commons and a representative from the Trades and Labour Congress of Canada.

The financial report was referred to a special committee, which recommended that an honorarium of $500 be paid to the secretary treasurer for his services during the past four years; that grants be made also to the assistant secretary of the convention and to the convention stenographer; and that the "best efforts of the incoming executive and affiliated membership be put forward to increase the membership of the Federation."

At the opening session it was announced that the executive had declared vacant the office of president, and had appointed the vice-president to the chair, pending endorsation by the convention, the reason given for this action being that its incumbent, Frank Wheatley, had accepted a similar office in the Mine Workers' Union of Canada, a rival organization of the United Mine Workers of America, an affiliate of the Federation. The convention approved the decision of its executive in this regard, following which there was a motion that the former president be given the same privileges on the floor of the convention as that accorded to fraternal delegates. It was moved in amendment that the former president be given a voice only on the discussion on officers' reports. The amendment was adopted. Subsequently in the sessions the Federation re-defined its attitude toward dual organizations by rejecting a resolution which called upon the Trades and Labour Congress of Canada to amend its constitution so as to permit the affiliation by the Congress and its provincial federations of all groups of workers in the Dominion. (Had this resolution been adopted it would have recognized the Mine Workers' Union of Canada, largely composed of secessionists from the U.M.W., an organization, which, as previously mentioned, is an affiliate of the Federation). In addition the Federation decided to assist the United Mine Workers of America, District 18, in re-organizing the mine workers of Alberta.

Workmen's Compensation.—Featuring the deliberations of the convention was the adoption of proposed amendments to various social enactments of the Provincial Legislature. In this respect there were adopted a considerable number of proposed amendments to the Workmen's Compensation Act. The executive in its report recommended that while the ultimate aim is 100 per cent compensation, the immediate objective sought was an increase in the rate of compensation to 66⅔ per cent of earnings instead of the present percentage of 62½. In addition the executive recommended that the maximum of $1,140 compensation per year be struck out of the Act. The substance of both of these recommendations was embodied in a subsequent resolution, which called for 100 per cent compensation and a maximum compensation of $2,000 per annum. This proposal was adopted. Among the other suggested amendments which were adopted were; (1) that the Government be requested to provide for the cost of medical aid and hospital attendance being taken out of the accident fund; (2) that the Act shall be administered by three commissioners, one of whom shall be appointed on the recommendation of organized industrial labour; (3) that a disabled workman be paid compensation from the date of accident; (4) that in the event of failure on the part of the medical referee and the workman's doctor to reach a unanimous decision in determining fitness for employment a third doctor shall be appointed, subject to the approval of the injured workmen, and the majority report of these three medical men shall be conclusive; (5) that each commissioner may be removed at any time for just cause; (6) that the incoming executive secure the co-operation of the United Farmers in placing before farmers' organizations the advantage to be gained by having the farming industry included under the scope of the Act; (7) that the executive consider having provision made for compensation to be paid to workers meeting with accidents which do not come within the scope of the Act; (8) that provision be made to furnish any injured workman with any artificial appliance made necessary from the effects of an accident within the scope of the Act.

Factories Act.—Several amendments to the Factories Act* were also suggested. The executive in reporting on this subject recommended: (1) that efforts be continued to secure the establishment of the eight-hour day; (2) that the Act should be amended to apply to shops, bake-shops and offices in all localities with a population of 1,000 or more; (3) the elimination of the proviso exempting from the hours of labour provisions all repair shops, creameries, cheese factories, grain elevators and saw-mills, unless such are situated in a town having a population exceeding five thousand. The Committee on Officers' Reports, to which these recommendations were referred, concurred in all of them, but "believed that the population restrictions should be wiped out altogether, and the Act made province-wide in administration, and of benefit to every worker in the province affected by this statute." The convention adopted this general recommendation. Other amendments to this statute were submitted in the form of resolutions, one of which urged that the Act be changed so as to provide for an eight-hour day and forty-four hour week, instead of the present nine-hour day and fifty-four hour week. An amendment called for an eight-hour day and a forty-hour week, but this was defeated, and after considerable discussion the resolution was adopted. Among other proposed amendments, submitted to, and adopted by, the convention were: (1) that violators of the Act in respect to its safety provisions be given, in second offence cases, six months imprisonment without the option of a fine; (2) requesting the Provincial Legislature "to more rigidly enforce the provisions of this Act, calling particular attention to bake-shops;" (3) requesting the establishment of the eight-hour day for all employees in restaurants; (4) limiting the working day in the oil and gas drilling industry to eight hours; (5) providing for outside fire escapes on buildings over one storey; (6) urging the provision of matting in places where labour has to work continuously on concrete or brick floors.

Mines Act.—All resolutions submitted in regard to amendments to the Mines Act were referred to a special committee composed of all the U.M.W. delegates. This committee in its recommendations, which were adopted, demanded that the Provincial Government appoint a Commission "to make a public investigation into both the Hillcrest and McGillivray mine explosions,* both as to the conditions prevailing in the mines, previous to the explosion, and to as far as possible ascertain the causes;" and "that succeeding such investigation a conference shall be called consisting of mine owners, mine workers and representatives of the Department of Mines for the purpose of revising the Mines Act and bringing it into conformity with prevailing conditions." It was also decided that one member of the proposed commission be appointed upon the recommendation of the United Mine Workers of America, District 18, and that in the event of the government refusing to appoint such a commission, the entire subject be turned over to the incoming executive to be dealt with in the legislative program.

Minimum Wages.—The executive submitted a detailed report with reference to the Minimum Wage Act, and made certain recommendations, which were concurred in by the Committee on Officers' Reports to which the report was referred. These recommendations, which were adopted, in the main called for an increase of employees' rates in certain classes—manufacturing, laundries and the retail trade—and the committee in addition recommended the abolition of the population limit so as to make the Act province-wide in scope and applicable wherever workers are employed. (The Act now applies only to twelve cities in the province).

Other Legislation.—Other adopted recommendations concerning legislative matters included: (1) providing medical and hospital attention for all workers and their families; (2) urging the enactment of a new Mechanics' Lien Act "to protect the wages of all workers"; (3) urging certain amendments to the Steam Boilers' Act; (4) urging the enactment of the Barbers' License Law; (5) amending the Mothers' Pension Act to provide pensions to all mothers and dependent women over 50 years; (6) urging the continuance of efforts to secure Federal enactment of Old Age Pension legislation; (7) amending the Election Act to provide "for a full holiday with pay for all workers on polling day for any provincial election"; (8) endeavouring to have the fair wage clause as adopted by the provincial legislature inserted in all contracts involving public works; (9) A resolution, which requested "the Provincial Government to pass enabling legislation to bring the

*The provisions of the Factories Act of 1926 were outlined in the LABOUR GAZETTE, May, 1926, page 446.

*The appointment of a committee to investigate the explosion at the Hillcrest mine was noted in the last issue, page 1084.

Federal Industrial Disputes Investigation Act within the scope of the law in this province in line with the policy adopted by the Trades and Labour Congress of Canada," was referred to the incoming executive.

Resolutions.—Among the resolutions adopted by the convention were:—(1) Requesting the Workmen's Compensation Board to appoint an inspector to inspect and enforce safety regulations in building construction;

(2) condemning "the sentences passed from time to time on workers active in industrial disputes and appealing to the Provincial Government to take such steps as will bring about the immediate release of those who may be in prison as a result of activities in such disputes";

(3) opposing the immigration policy of the Dominion Government and requesting the Trades and Labour Congress of Canada to submit the resolution to the International Federation of Trade Unions with a view to having it published in all periodicals of affiliated sections, so that the I.F.T.U. "be kept informed of actual conditions as to employment in Canada";

(4) in favour of amending the school curriculum to provide for "more information being given to students on the co-operative movement as opposed to the competitive system";

(5) in favour of enacting legislation legalizing peaceful picketing;

(6) advocating the enactment by the Dominion Government of an unemployment insurance project, with the application, in the meantime, of measures such as unemployment relief work at trade union rates or adequate sustenance;

(7) in favour of amending the Health Act to prohibit the sale of food "in the same room where drugs and chemicals are being sold";

(8) in favour of legislation prohibiting the employment of white girls by orientals;

(9) in favour of amending the Liquor Act so as to place a severer penalty upon minors or interdicted persons for entering any licensed beer room;

(10) protesting to the Provincial Government against the continuance of leasing out prisoners to work for farmers and other employers;

(11) condemning the practice of Sunday employment unless in useful public service or for the preservation of life and property;

(12) requesting the Trades and Labour Congress of Canada "to endeavour to secure legislation making provision for a saving wage of at least $2,500 per annum for all Canadian workmen";

(13) urging the promotion of a vigorous campaign in support of the co-operative movement with the appointment of a committee from the convention for this purpose;

(14) urging the abolition of the contract system in the mining industry and the substitution of a flat rate of pay;

(15) favouring the taking over by the Provincial Government of the control of land and townsite rights adjacent to mining plants;

(16) demanding the immediate nationalization of the mining industry;

(17) demanding the enactment of legislation to compel all employers to give their workers two weeks' holidays with full pay each year;

(18) urging the establishing of minimum wages and maximum hours of employment for employees in hospitals;

(19) urging the enactment of legislation which would recognize training schools for nurses in the same way that all other forms of education are recognized in the province;

(20) urging that those desiring to teach music should be required to obtain by the passing of examinations a certificate of competency;

(21) urging that the Provincial Government increase the grant to patients in isolation hospitals to $1 per day.

The election of officers resulted as follows: President, F. J. White, Calgary; secretary-treasurer, E. E. Roper, Edmonton; Delegate to Trades and Labour Congress, J. J. McCormack with J. E. Gordon as alternate.

The Harmon Foundation of New York city has made a gift of $50,000 towards the organization of a pension fund for nurses. The *Survey* (New York), in an account of the plan, estimates that there are 100,000 graduate nurses in the United States, of whom 10,000 are salaried employees of boards of health, factories or tubercular associations. The pension plan will be based on regular payments to a fund by both the nurses and the patients, so that at 60 years of age she may retire with a pension of $1,100 or $1,200 a year.

NOTES ON LABOUR UNION ACTIVITIES

International Typographical Union

THE International Typographical Union held its seventy-first convention at Colorado Springs, Col., on September 13-17, 1926, with 308 delegates present, representing practically every section of the United States and Canada. In his address, President Lynch made a plea for solidarity among the membership and pointed out the danger that lurked in too much politics within the organization. He reviewed the reconstruction campaign carried on by the executive council since November 1, 1924, the cost of which in most cases had been financed on a fifty-fifty basis, by the local union and the central organization. He explained that the plan underlying the general movement of reconstruction and reorganization was mapped out to cover as many years as might be necessary to obtain the desired results. The president called attention to the new addition to the Union Printers' Home, which was completed and in full commission. Reference was made to the bureau of education, from which more than 8,000 apprentices were taking lessons. The receipts from these lessons practically covered the cost of maintaining the bureau. Dwelling upon newspaper consolidations, many of which have taken place recently, the president declared that they are a development of the greatest concern to the membership, owing to the employment problems created by such mergers. He advocated a plan whereby the cost of administering the pension and mortuary funds would be borne by those funds instead of the present practice of burdening the general fund with that expense. Other topics discussed by the president were: (1) The publicity campaign; (2) The label bureau; (3) Scale negotiations; (4) Closer affiliation with other printing trades; (5) Deliberations and accomplishments of the American Federation of Labour.

The report of First Vice-president Brown, who is in charge of the bureau of arbitration, enumerated the activities and accomplishments of that department. The purpose of the bureau was, he said, to supply, on request of local unions, efficient representatives to prepare and present local arbitration cases. Another topic dwelt upon by the first vice-president was the work of state typographical conferences, which in his opinion was a distinct asset to the International Typographical Union.

Second Vice-president Hewson drew attention to the many newspapers and numerous commercial plants that still adhere to the so-called open-shop policy, and also to schools which he stated "were fostered by anti-union interests for the purpose of doubling the number of men for the number of jobs and would develop into a barrier that will in the future be difficult to surmount."

Third Vice-president Smith, who represents the mailers on the executive board, drew attention to the remarkable fact that all the increases secured by the mailers' locals during the twelve-month period covered by his report had been received through conciliation. He dwelt upon the increased usage of new devices in the trade, and to the skill displayed by the members of the mailers' organization in the operation of automatic mailing machines.

The report of Secretary-Treasurer Hays showed a total cash balance of $5,066,532.76, made up as follows: General fund, $1,313,308.72; Mortuary fund, $2,500,635.23; Old Age Pension fund, $1,252,588.81. For the twelve months ended May 31, 1926, there were 895 deaths on which the mortuary benefits paid aggregated $395,909.22, an average of $442.35. The average continuous membership of the 895 deceased members for whom benefits were paid was 29.8 years. Since the establishment of the Old Age Pension Fund and up to May 31, 1926, applications filed for pensions numbered 5,631. Of this number 361 were handled during the past fiscal year, 325 were approved; 22 were disapproved, and 14 were withdrawn. There were 2,461 members on the pension roll on May 31, 1926, of which number 71 were women. During the fiscal year 236 pensioners died. For the time these members were on the list they drew pensions totalling $476,167, an average of $2,017.65 for each.

The report of the executive council contained a draft of the new arbitration agreement adopted by the American Newspaper Publishers' Association, and also contained the text of the amended agreement with the German Typographia, which became effective on June 1, 1926, and by which the office of fourth vice-president of the International Typographical Union was abolished. This agreement was subsequently ratified by the convention.

During the convention, one day was taken up by the delegates inspecting the Union Printers' Home, on which occasion the International Typographical Union was the recipient of a bronze statue symbolizing the "Make-Up Man" presented by Captain de

Rohan on behalf of J. David Stern, editor and publisher of Camden, N.J.

A letter from William Green, president of the American Federation of Labour, was read, in which he assured the International Typographical Union of the hearty co-operation and support of the American Federation of Labour in the adoption and execution of trade union policies and plans.

Mailers' Union, No. 6, of New York City, sponsored a resolution which was endorsed by the Mailers' Trade District Union, asking that they be allowed to sever their relationship with the International Typographical Union for the purpose of forming an International Mailers' Union and that they be given their share of the monies in the general fund, pension fund and mortuary fund, and an amount in money equal to their equity in the Union Printers' Home and in Typographical Terrace, the headquarters of the International Typographical Union in Indianapolis, Indiana. The Committee on Laws, to which this proposition was submitted, recommended against its adoption, giving as their reason that there were already enough international unions functioning at the present time in the printing industry. The recommendation was concurred in by the convention.

The Committee on Arbitration, to which the new arbitration agreement between the International Union and the American Newspaper Publishers' Association was referred, recommended the acceptance of the executive council's report on the subject and approved the council's recommendation that if approved by the convention the agreement be referred back to the council with instructions to propose and insist upon further amendments setting forth the procedure to be followed in the event of local publishers and the local unions failing to agree on matters that are subject to arbitration; and that if such an amendment is secured, the completed agreement to be submitted to the referendum. The convention concurred in the recommendation.

Some of the constitutional amendments adopted by the convention were as follows: (1) That the officers of the Union shall take office on September 1, following the election, instead of November 1, as heretofore; (2) That the board of electors shall be composed of the International board of auditors and that one representative for each candidate for president, secretary-treasurer, first vice-president and second vice-president shall be permitted to be present and scrutinize the tabulation of returns and the count of the votes.

Among the resolutions adopted by the convention were the following:

Recommending that a special commission investigate the operation of the pension system and the revenue paid into the pension fund and report their findings to the convention of 1927.

Instructing the delegates to the convention of the American Federation of Labour to request that body to assist in securing just and reasonable postal rates for the printing and publishing industry;

Instructing the secretary-treasurer to wire the Canadian Trades and Labour Congress, urging it to give especial attention to the enactment of legislation in Canada protecting the union label;

Condemning the acts of members of this and other labour organizations co-operating with interests engaged in a constant effort to break down beneficial legislation obtained after years of effort.

The convention selected Indianapolis, Indiana, as the convention city for 1927.

The officers elected were: President, Charles P. Howard; First vice-president, S. R. Brown; Second vice-president, Austin Hewson; Third vice-president, C. N. Smith; secretary-treasurer, J. W. Hays.

Brotherhood of Railroad Signalmen of America

The third biennial and eighteenth regular convention of the Brotherhood of Railroad Signalmen of America was held at the Pennsylvania Hotel, New York City, on September 13-18, with 138 delegates present. Grand President D. W. Helt in his address reviewed the development of the organization, more particularly since 1917, and gave a detailed account of the activities and accomplishments of the Brotherhood since its last convention. He drew attention to the great need of education for the membership, and outlined the steps taken to further the educational program. The attention of the delegates was directed to the efforts put forth by grand lodge on behalf of the Canadian membership, which resulted in approximately 200 members being affiliated with the Trades and Labour Congress of Canada. In concluding his address, President Helt said "I believe the greatest menace to the Brotherhood of Railroad Signalmen of America, at the present time, is that greatest of all frauds, the company union."

Mr. L. W. Givan, one of the four vice-presidents to present reports, recommended: (1) That all moneys received by vice-presidents in the performance of their duty be forwarded to the grand secretary-treasurer, who will afterwards refund the money to the locals entitled to receive it; (2) That provision be made that grand lodge may remove from office any general chairman or general committeeman who fails to perform his duty. These recommendations were subsequently adopted.

The report of Secretary-Treasurer Austin showed that twenty-five death claims and two disability claims had been paid from March 1, 1923 to July 15, 1926. In referring to the building fund, which was for the purpose of purchasing a home or headquarters for the organization, the secretary-treasurer stated that little response was made by the locals to the request sent out and recommended that further action be taken by this convention. This matter was subsequently referred to the policy committee with instructions to make an investigation and take such action as they deemed proper.

Some of the constitutional amendments were as follows:—(1) That officers of local lodges serve for two years; (2) That the brotherhood convene in regular convention the second Monday in September, biennially, in the city where grand lodge headquarters are located; (3) That grand lodge officers, when on duty away from headquarters report their expenses and activities. (4) That all monies collected for grand lodge be forwarded to the grand secretary-treasurer not later than the first of each month; (5) That the whole jurisdiction be divided into twelve districts, with a vice-president elected from each, Canada to comprise one district.

Among the resolutions adopted were: (1) That signalmen employed by contractors on construction work be brought into the organization; (2) That the organization's policy be to change existing agreements to permit of one assistant maintainer to each three maintainers on any seniority district; (3) That the proper grouping of the railroads into vice-presidents' districts be outlined by the policy committee; (4) That the brotherhood establish a policy of patronizing labour banks, so far as possible, and that the grand secretary-treasurer be instructed to make the necessary transfer of funds; (5) That the policy committee begin action for the enactment of a law providing for a maximum of sixteen hours on duty in any twenty-four hour period.

The chief officers elected were: Grand president, D. W. Helt, 4750-54 North Kimball avenue, Chicago, Ill.; Grand Secretary-Treasurer, T. A. Austin, 4750-54 North Kimball Ave., Chicago, Ill.

International Brotherhood of Pulp, Sulphite and Paper Mill Workers

The twelfth convention of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers was held at Montreal, on October 5-8, 1926, with about forty delegates present.

President-secretary John P. Burke, reviewed the activities of the organization since its formation in 1906 at Burlington, Vermont. He referred to the many changes during that period, not only as to wages, hours and working conditions, but in the mechanical processes that had all but revolutionized the pulp and paper industry. The president stated that if the results of conferences held during 1925 and 1926 were summarized, they would show that wages had been increased, agreements improved and many other changes made for the betterment of the trade. In closing his address President Burke made the following specific recommendations, which were subsequently concurred in by the convention, or referred to the Executive board: (1) That ways and means be devised for continuing the branch office in Canada and that a vigorous organization campaign be undertaken in Canada and Newfoundland; (2) That an organizer be sent to Newfoundland immediately upon the close of the convention; (3) That the date of the biennial convention be changed so as not to conflict with the convention of the American Federation of Labour; (4) That the constitution and laws be amended so that the wage conference and convention be held at the same time; (5) That the incoming executive board urge all local unions to affiliate with their respective central labour unions and state federations of labour; (6) That wherever possible district meetings of local branches of the union, with branches of the Paper Makers' Union and allied organizations be held for the purpose of discussing district problems.

Vice-president Launer gave a detailed report of the conditions that confronted the organization at Kenora and Fort William, Ontario, and concluded with the following summary and recommendations:—

"Every indication points to the fact that Canada will soon be the great paper producing section on this continent. This means that if we are to continue to grow, the paper

mills of Canada must be organized. It is the duty of this convention to give careful consideration to this important fact, and if possible devise means whereby this great work can be accomplished. * * * * * * * * * * It might be good business to consider the moving of our international headquarters into Canada as a means of allaying the prejudice that exists against international unions. It might be good business to enquire why thousands of Canadian workers have formed Canadian national labour unions. It would be good business to seriously consider what we are to do in reference to certain international unions proselyting our membership after we secure union wages and conditions and work under union agreements, and which do nothing toward organizing the unorganized in the industry."

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, in addressing the delegates, referred to the wonderful growth of the pulp and paper industry, which was becoming one of the most fundamental in the Dominion of Canada. He informed the convention that organized labour was looking to the efforts of their organization to make the great paper industry a benefit to the country as a whole. In speaking of some of the problems peculiar to the Province of Quebec, President Moore is reported as stating, in part, as follows:—"In this Province we find that the workers are divided along religious lines. Canada recognizes two official languages, English and French. And it has been the French speaking part of the Catholic Church which has fostered the formation of the national and Catholic union. But, notwithstanding all the efforts they have made, I am proud to say that the international trades union and the Trades and Labour Congress of Canada have had at all times more French speaking members of the Catholic church than this so-called national and Catholic union. It is necessary for me to emphasize that we have not opposed this movement on the ground of language or religion, because the international trade union movement does not recognize any division on these lines. We respect each man's individual belief in the matter of religion and do not consider it a part of our movement to interfere with it. We also respect the official language of a country. The national and Catholic union movement is disintegrating of its own force. I believe that we shall have less and less opposition from the Catholic union as time goes on.

W. R. Smith, president of the International Brotherhood of Paper Makers, in addressing the convention, stated that "Nowhere in the world is any industry in the stage of development that the paper and pulp industry is in the Dominion. * * * * * * * * * When I say to you that there is coming into the Dominion in 1926 and 1927 twenty some odd of the largest, most modern paper machines that have ever been constructed you will have some idea of the development of the industry in Canada."

Two amendments to the constitution are as follows: (1) That the books of local unions shall be audited every three months; (2) That the fiscal year of the organization shall be the same as the calendar year.

Among the resolutions adopted were the following:—

Recommending that a paid vice-president be elected at this convention to work in Canada only;

Authorizing the sending of $100 to the miners in England; Instructing the executive board to send out another appeal to the locals to replenish the Canadian branch office and organizing fund.

The officers elected were: President, secretary, John P. Burke, Fort Edward, N.Y.; First vice-president, Maurice Labelle, Ottawa, Can.; Second vice-president, H. W. Sullivan, Worcester, Mass.; Third vice-president, S. E. Launer, Green Bay, Wis.; Fourth vice-president, J. W. Taylor, Topsham, Me.; Fifth vice-president, Alex. Gibson, Port Arthur, Ont.; Sixth vice-president, William Cutliff, Millinocket, Me.

Journeymen Stone Cutters Association of North America

The sixteenth convention of the Journeymen Stone Cutters Association of North America was held in Montreal, Canada, September 13 to 24, 1926. International president, M. W. Mitchell, in his address, gave a detailed review of conditions throughout the jurisdiction during the past three years and enumerated the many instances which required investigation and adjustment. He also outlined the situation prior to the injunction applied for by the International Cut Stone Contractors and Quarrymen's Association in the Bedford-Bloomington district.

In secretary-treasurer Blasey's report a review was made of the proceedings of the last convention held in Cleveland, Ohio, in which a number of changes had been made in the laws and regulations in order to eliminate, as far as possible, features which the International Cut Stone Contractors and Quarrymen's

Association claimed were objectionable, and which were preventing a national agreement being signed between themselves and the international union. A proviso was adopted by the convention that "in the event of there being no settlement with the employers, those laws thus amended or repealed were to be restored to the constitution." Several months having elapsed after the convention without any settlement, the executive board of the international union met and adopted the following resolution, a copy of which was forwarded by the general secretary to the secretary of every local union:

"That on and after August 1, 1924, the members of the Journeymen Stone Cutters' Association of North America be requested to refrain from finishing all work-dressing, altering, finishing, carving, or fitting on the building site—which had been started—planed, turned, cut, or semi-finished—by men working in opposition to our association."

Following the issuance of this order (according to the report), "twenty-four of the quarriers and cut stone contractors in the Bedford-Bloomington district not employing any of our members applied to the Federal Court for the District of Indiana for an injunction and for damages exceeding $5,000 for each of the twenty-four complainants." The preliminary hearing of the injunction came up before Judge Anderson at Indianapolis on October 24, 1924, and resulted in the employers being denied the injunction. A motion for an appeal from the decision of Judge Anderson was promptly made and the hearing of the appeal came up on April 30, 1925, in the United States Circuit Court of Appeals for the seventh circuit in the city of Chicago. The Circuit Court sustained the decision of Judge Anderson in denying the preliminary injunction and upheld the right of union labour to suspend operations on work started by men working in opposition to the union. After the decision in the Circuit Court of Appeals, the employers appealed to the United States Supreme Court, and the case is now standing.

Some of the constitutional amendments which were adopted by the convention were as follows: (1) Reducing the number of executive board members from nine to five. (2) Reducing the number of districts comprising the association, from nine to five. (3) Increasing the salary of the president and secretary-treasurer from $350 per month to $5,000 per year and allowing each their railroad fare and $8 per day for expenses while in the performance of their duties. (4) Doubling the initiation fee.

Among the resolutions adopted were: (1) Instructing the representatives to the Building Trades Department of the American Federation of Labour to demand the suspension of all locals of the Granite Cutters' International Association from the Building Trades Councils in the various cities under the control of the Building Trades Department; and instructing the representatives at the coming convention of the American Federation of Labour to request the suspension of the Granite Cutters' International Association from the American Federation of Labour; (2) Authorizing the general secretary to send a circular or letter to the different locals in regard to the question of financial aid to the British miners, and allow them, to donate any amount they desired and send it to the general secretary, to be forwarded to the miners in Great Britain; (3) Instructing the officers and delegates to the Building Trades Department of the American Federation of Labour to make a vigorous protest against the action of the Bricklayers, Masons and Plasterers' International Union in preventing the Stone Cutters' Association from organizing the marble cutters; (4) Recommending that every effort be made to urge non-union planermen to join the local bodies; (5) Instructing the delegation to the coming convention of the American Federation of Labour to ask that the Legislative Committee of the A. F. of L. be requested to ask Congress to cause an investigation to be made into the alleged harmfulness of the so-called air tool.

The officers elected were: Pres., M. W. Mitchell, 324 American Central Life Bldg., Indianapolis, Ind.; Vice-pres., P. Cullen, 179 W. Washington St., Room 506, Chicago, Ill.; Gen. sec.-treas., Joseph Blasey, 324 American Central Life Bldg., Indianapolis, Ind.

Boston, Mass., was selected as the convention city in 1929.

Wood, Wire and Metal Lathers' International Union

The 15th convention of the Wood, Wire and Metal Lathers' International Union was held in Atlantic City on September 13-18, 1926, with ninety-four delegates in attendance.

President Bell drew attention to the fact that the union had succeeded in erecting its own office building at Cleveland, Ohio, which with the land cost approximately $162,000. Referring to strikes and lockouts, he stated that the international union was very fortunate in having had so little trouble during the past three years, and that their relations with employers were very friendly. Any

jurisdictional disputes which had arisen were satisfactorily adjusted by the National Board for Jurisdictional Awards.

According to the report of Secretary-Treasurer Yoder, $52,301.90 had been paid out on 289 funeral benefit claims, while there were 33 other claims on which no benefits were paid. The report showed that with one exception all local unions were working an eight-hour day for the first five days of the week, the majority of the locals reporting a four-hour workday on Saturday. The secretary-treasurer strongly urged the local union to establish a sick benefit fund.

First vice-president P. McSorley (former international president, who resigned from that position on being elected president of the Building Trades Department of the American Federation of Labour) reported that the union had done some very effective work in improving the conditions of the organization, as well as increasing its prestige with employers, other building trades organizations and the general public at large.

Matthew Woll, vice-president of the American Federation of Labour addressed the convention on the Union Life Insurance Company. He explained that in order to have this company democratically owned and controlled by the trade union movement, it was necessary that the number of shares, or the amount of stock, which any international or national union might hold be limited, and that therefore it was decided to allow these unions 800 shares, or an investment of $40,000; local unions 80 shares, or $4,000; and individuals 10 shares, or $500. At the conclusion of Mr. Woll's address the Secretary-Treasurer drew attention to the fact that no action had been taken on that portion of his report in which he recommended the investment in the Union Life Insurance Company of $10,000 in addition to the $2,000 already invested. Subsequently the convention concurred in this recommendation.

Some of the constitutional amendments adopted by the convention were as follows: that delegates to the international convention shall be strictly working journeymen; that the general president and first vice-president shall serve as delegates to conventions of all affiliated organizations; that in no case shall an apprenitice be enrolled as a member until he has worked at least two years at the trade; that no fine exceeding $100 shall be imposed upon a member by a local union unless approved by the executive council of the international union.

Among the resolutions adopted by the convention were the following:

Favouring group insurance, the policies to cover life, accident and health.

That all new apprentices shall be required to attend some school of architecture or institution of that nature for a period of two years while serving their apprenticeship.

Supporting the movement for the enactment of a national old age pension law and compensation for disabled workingmen and women.

Recommending that organized labour do all in its power to influence state legislatures to enact workingmen's compensation laws similar to that in force in the State of Ohio.

Recommending that death benefits be raised from $400 to $500.

The chief officers elected were: President, John Bell; First vice-president, W. J. McSorley; Secretary-treasurer, A. D. Yoder, Lathers Bldg., Detroit St. at 26th St., Cleveland, Ohio.

St. Louis, Missouri, was selected as the next convention city.

Journeymen Barbers' Federation of Ontario

The Journeymen Barbers' Federation of Ontario held its convention at Toronto, on November 1, with delegates present representing sixteen local unions from various parts of the Province.

President Leon Worthall, of Toronto, stated in his address that there were 2,000 journeymen barbers in the province, 1,400 master barbers, with half a million dollars invested, and that "it was time we had legislation to protect these men against the incompetent produce of the barber college and their unsanitary methods". Past President Halford, spoke of the necessity of a Barbers' licence law, and stated that some legislation along these lines had been secured about eleven years ago, but the law had never been enforced or carried out. The terrible condition in which some of the shops were conducted was the reason given by Mr. Halford for wanting legislation at this time.

Among the delegates present, were six representing Master Barbers' Associations in Ontario, who pledged the support of their organizations to carry out the programme of the Ontario Federation of Barbers. They also took preliminary steps to form a Canadian Master Barbers' Association and elected tem-

porary officers to carry out the work of organizing units of the association throughout the entire Dominion.

Some of the resolutions adopted by the convention were:—

Calling upon the Provincial Government to place under the Department of Education the various barber colleges, so as to compel them to properly teach barbering in all its various branches and that a prescribed curriculum of at least eighteen months' study be imposed before graduating new barbers.

Asking the Government to provide adequate legislation requiring that persons deciding to learn barbering shall possess a certain degree of education, at least equal to the public school standard of the province.

Requesting the Government to set a standard of sanitation for barber shops, with inspection.

Calling upon the master barbers to provide the necessary requirements in barber shops for the handling of the cutting and dressing of ladies' hair.

Recommending that the charges for service in barber shops throughout the province be made as near uniform as possible;

Requesting the Provincial Government to licence and register all barbers and barber shops, and provide rules and regulations.

The chief officers elected were: President, H. Gainey, Peterborough; First vice-president, Hamilton Henry, Windsor; Secretary-Treasurer, Albert Call, 235 St. Paul St., St. Catharines.

The next convention of the Federation will be held in Toronto, the first Monday in November, 1927.

Mineral Production in British Columbia in 1926

The Mines Department of British Columbia has issued an estimate of mineral production in the province in 1926, based on the production in the first ten months of the year. The minerals produced will probably value $67,292,400, which is $5,800,158 in excess of the value of last year's production. The outstanding feature of this year's production is the large increase in the quantity of silver and zinc produced. The increase in the zinc output is attributed chiefly to increased production of zinc ore, but also to improvements in ore dressing and in the metallurgical treatment of the concentrate. The increase in the silver production is due mainly to the increased output of lead, copper, and zinc ores with their concomitant silver content.

Though the silver and zinc outputs show increases of 42.4 and 42 per cent respectively, the value of the outputs show increases of only 28 and 29 per cent respectively, compared with the 1925 production, owing to deflation in the prices of the metals, and the total value of the mineral production has suffered accordingly. The output of lead shows an increase of 17.7 per cent in quantity but a decrease of 5.3 per cent in value. The output of copper, on the other hand, shows an increase of approximately 26 per cent and the value of the output an increase of nearly 30 per cent. The Allenby Copper Corporation is mainly responsible for this increase, though the old concerns have slightly increased their outputs.

Coal is the only mineral to show a decreased output, 2,328,522 long tons having been produced in 1925, as compared with a probable production in 1926 of 2,124,200 long tons. Fuel oil and hydro-electric energy, it is stated, have deeply cut into the coal mining industry. Owing chiefly to more stable labour conditions in the Crowsnest Pass the production of coke shows an increase of about 30 per cent.

There were 5,959 accidents reported to the Ontario Workmen's Compensation Board during the month of November, which brings the total for the 11 months of 1926 to 60,505, nearly 500 more than the total for the whole of 1925. The fatal cases during November numbered 54, making the total number of fatal cases reported this year to date 366, as compared with 317 during the same period of 1925. The total benefits awarded during November amounted to $531,267.19, $452,921.65 of this being for compensation, and $78,345.54 for medical aid. The total benefits awarded this year to date amount to $5,233,027.11, as against $5,059,124.65 during the corresponding period of 1925.

The Massachusetts Legislature recently amended the law requiring proper ventilation in factories as protection from dangerous vapours, gases, dust or fumes so that it should apply to all factories and workshops irrespective of the number or sex of the employees. Previously the law applied only to factories where five or more persons were employed and to workshops where five or more women or children were employed.

OCCUPATIONAL DISEASES

Reference Manual Published by the Department of Health of Ontario

THE Division of Industrial Hygiene of the Department of Health of Ontario has recently issued a valuable "rapid reference manual" on occupational diseases, intended for the use of the medical profession in the province. The book, a compact publication of only 62 pages, is based on a similar production of the New York Division of Industrial Hygiene, but the original material has been extended and adapted to the requirements of physicians who have to do with industrial workers in Ontario. It is a convenient pocket reference book, showing for any given occupation the hazard involved, which may be the clue to the symptoms of the patient in question. The chief use of the manual is thus to aid diagnosis. It is arranged for easy reference, and only presupposes knowledge of the patient's occupation. The index indicates the usual hazards of the occupation and the symptoms or diseases commonly resulting from them. Where the patient's symptoms suggest exposure to any given poison, reference to the suspected substance in the list of harmful substances will show whether it is a common feature of his occupation. The aim of the book is therefore to assist correct diagnosis by facilitating recognition of the connection between occupation and disease. The handbook contains much information on the subject of industrial diseases and the methods adopted in Canada and in other countries to counteract the risks of the occupations in which workers are exposed to special health risks.

Reporting of occupational diseases.—None of the provinces of Canada have any law requiring the reporting of occupational diseases. In Ontario, however, the Ontario Medical Association is considering the advisability of drawing the government's attention to the need of some such legislation.

In most other countries the attempt to prevent occupational diseases has led to legislation of one form or another requiring physicians, and occasionally employers, to report all such diseases to the central authority most immediately concerned. Thus in Great Britain physicians are required to report to the Factory Inspection Department of the Home Office: lead poisoning; phosphorus poisoning; arsenic poisoning; mercury poisoning; anthrax; ankylostomiasis; toxic jaundice (jaundice due to tetrachlorethane or nitro-amido derivatives of benzene or other poisonous substances); epitheliomatous ulceration due to tar, pitch, bitumen, mineral oil, or paraffin, or any compound, product, or residue of any of these substances; chrome ulceration, due to chromic acid or bichromate of potassium, sodium, or ammonium, or any preparation of these substances; carbon bisulphide poisoning; anilin poisoning; and chronic benzene poisoning.

In France lead poisoning and mercury poisoning must be reported to the Ministry of Labour by both physicians and health officers.

In the United States, seventeen of the states (Ohio, New York, Rhode Island, New Mexico, Maryland, Massachusetts, California, New Hampshire, Connecticut, Maine, New Jersey, Missouri, Pennsylvania, Illinois, Michigan, Minnesota and Wisconsin) require reporting by physicians of one or more occupational disease either to the Board of Health or to the Department of Labour, or to the Industrial Commission. The form of legislation varies: in some cases there is a special occupational disease reporting law, in some, the regulation is included in the general factory laws, or in special occupational disease laws governing specified trades, and in some it is included in the workmen's compensation acts.

Compensation of occupational diseases.—The principle that occupational diseases caused by industrial conditions should be compensated has become general during the past quarter century. It has now been almost universally adopted and workers are compensated either on the lines of accident insurance or on the lines of sickness insurance.

The nations which compensate on the lines of accident insurance are the following: England, France, Spain, Greece, Italy, Portugal, Serb-Croat Slovene Kingdom, United States (Federal Government and eleven states), Canada, Mexico, Ecuador, Argentina, Brazil, Japan.

The nations whose compensation is on the lines of sickness insurance are: Germany, Austria, Hungary, Luxemburg.

Some of the systems of compensation in other countries, as well as in Canada were outlined in the LABOUR GAZETTE, July, 1925, page 674. The British Schedule of occupational diseases was given in the issue for March, 1920, pages 304-306, but several diseases have been added since that time, including certain diseases resulting from the handling or use of tar, pitch, bitumen, mineral oil or paraffin; compressed air illness;

diseases connected with the manufacture of air-craft (i.e. poisoning by any substance used as, or in conjunction with a solvent for acetate of cellulose); cataract in glass-workers; writer's cramp (limited to 12 months).

The position in Canada was shown in a table in the LABOUR GAZETTE, July, 1925, page 675, and recent additions to the Act, particularly in Ontario, have since been noted.

Diagnosis of diseases.—In a general consideration of occupational diseases the manual advises physicians who deal with industrial patients to be on the watch for the occupational factor in these diseases. Where a physician is in touch with industrial workers exposed to common dangers in the same plant or process, it is often possible to diagnose diseases in their very early stages almost before they have declared themselves. For the purposes of prevention this is obviously of the utmost importance. In Ontario, the Division of Industrial Hygiene of the Provincial Department of Health co-operates with doctors in solving difficulties which have a bearing on diagnosis, and which cannot be carried out conveniently by the doctors alone.

Harmful substances and conditions.—The following classification is given of harmful substances and conditions:—

I. *Harmful substances.*—Dusts; gases, vapours and fumes; metals; infective materials.

II. *Harmful conditions.*—Excessive heat and moisture; excessive light; compressed air; confined air; confined positions (nerve and muscle strain and fatigue; the "occupation neuroses"); eye and ear strain; irritation of the skin.

Taking the foregoing as a basis, with some rearrangement, the following classification of special disease hazards is made in the manual, which both lists the various harmful substances and conditions and suggests the kinds of diseases to which they give rise.

The Special Disease Hazards of Occupation

I. METAL POISONING is derived from filings, dust and fumes of metals or their salts, which enter the system through inhalation or swallowing, being conveyed to the mouth often by unclean hands or food eaten in dusty workshops.

Poisonous or irritating metals include: antimony, arsenic, brass, bronze, copper, iron or steel, lead and solder, manganese, mercury, phosphorus, silver, tin, zinc, or compounds of any of these substances. Special attention should be given to disease of the bones due to mercury, chromic acid, etc.

II. DUSTS cause irritation of all the respiratory passages and of the eyes and skin. In some instances the metal dusts enter the mouth as well as the lungs and are swallowed and absorbed. Irritating dusts are of three classes.

(*a*) *Insoluble inorganic dusts* (irritating the respiratory passages): flint, silica, sand (*e.g.* sand blasts, sandpaper), carbon (*e.g.* coal, soot), brick dust, marble, granite. terra cotta, cement, asphalt, enamel, glass, quartz, lime (*e.g.* gypsum, plaster), meerschaum, phosphates (*e.g.* fertilizers), guano, emery, diamond dust, metal filings (*e.g.* head, brass, iron and steel, etc.) pumice, ashes.

(*b*) *Soluble inorganic dusts* (liable to be swallowed and absorbed); soluble arsenic, mercury, lead and silver compounds; metal filings of lead, brass and zinc.

(*c*) *Organic dusts and fibres* arising from handling of manufacture of wood, bone and shell; from fur, skins, hides and leather; feathers; brooms and straw; flour and grain; tobacco; jute, flax (linen), hemp, cotton, wool (worsted, etc.); felts and carpets; rags and paper; horsehair; street sweepings.

III. GASES, VAPOURS AND FUMES irritate the respiratory passages and eyes and may cause poison by absorption. The most important are: illuminating gas (oil gas), gases from coke and coal; coal gas; carbon dioxide (brewers' vats, bakers' ovens, aerated waters); chromic acid; mineral acids—sulphuric, hydrochloric, nitric, etc. (acid factory workers, engravers, etchers and lithographers); mercury cyanids; heated lead; ammonia, ammonium carbonate, ammonium chloride; tar and creosote (distillers); asphalt and petroleum products (naptha, benzine, gasoline—used in dry cleaning and otherwise); smoke (firemen, varnish makers, varnishers); arseniuretted hydrogen (copper refiners); ferro-silicon; amyl alcohol, wood alcohol; dinitrobenzol, nitro-glycerine, cordite; carbon disulphid; chlorine, chloride of lime, carbonyl chloride; phosgene (dyeing industry); formaldehyde; hydrofluoric acid; hydrocyanic acid; ammonium, sodium and potassium cyanides; pyridine; sulphur and sulphuretted hydrogen; aniline; dinitrobenzene and dinitrotoluene vapours.

IV. INJURIES TO NERVES AND MUSCLES are derived from occupational strain, fatigue, repeated blows and vibrations, excessive pressure, repeated muscular contractions and faulty positions (as in standing, sitting, leaning over benches, etc.) The so-called "Occupational Neuroses" are comprised under this

class. The principal effects of nerve or muscle strain are observed as: palsy, cramps (writer's, telegrapher's, typewriter's), sciatica, neuritis, neuralgia, tremors, vaso-motor disorders, gastric and intestinal disorders, general "nervousness" and insomnia; deformities of chest from cramped positions (as in tailors), curvature of spine, flat foot, etc.

V. INJURIES TO EYES AND EARS.—Excessive light causes eye strain to electric light men, X-ray workers, steel foundrymen, etc.; and excessive heat subjects puddlers, glass workers and others to optic neuritis, conjunctivitis, etc. Dusts of various kinds irritate the eyelids or injure the eyeball. The ear may be affected by excessive vibrations and loud noises, such as are met with by boiler makers, riveters, gunners, etc., resulting in permanent deafness.

VI. INJURIES TO THE SKIN are caused by acids, corrosive alkalies, lime, irritating dusts, tar, creosote and petroleum products, especially paraffin, dyes, etc. They give rise to eczema, fissures, ulcers, boils, epithelioma, etc.

VII. COMPRESSED AIR affects caisson men and divers. The former are subject to cramos, paralysis, serious lesions of the spinal cord, etc., sometimes proving fatal.

VIII. INFECTIVE MATERIALS.—Those who handle hides, rags, and wool may be exposed to infection by the anthrax bacillus. Hostlers and others who handle horses may be exposed to the glanders bacillus.

The handbook concludes with a tabulation of some of the diseases and of the more harmful substances, indicating the industries in which they are used, the manner in which they enter the body, and the diseases to which they give rise. No suggestion however is made as to treatment, for which doctors must rely on medical treatises.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Third International Congress for Life Saving and First Aid to the Injured

THE Third International Congress for Life-Saving and First Aid to the Injured was held at Amsterdam, September 7th to 11th, under the patronage of H.R.H. Prince Henry of the Netherlands. Mr. A. B. Muddiman, Canadian Trade Commissioner in Rotterdam, attended the Congress on behalf of the Government of Canada.

The First International Congress for Life-Saving was held at Frankfort-on-Main. The Second was held at Vienna in 1913 and an invitation was extended by the Dutch Government to hold the Third Congress in Amsterdam. This was delayed by the War and was not held until the present year.

Twenty-six different nations were represented by official delegates and moreover, six semi-official from other states were also present at this Congress. Actually thirty-two different nations took part, and 645 delegates were in attendance, of whom 85 were women.

About one hundred lectures dealing with the various aspects of the subjects of the Congress were given, one of particular interest to Canada being delivered by Major-General Guy Carleton Jones, late Director-General of the Canadian Army Medical Services. The Congress covered a very wide scope, ranging from simple first-aid competitions to highly technical lectures given by experts on various phases of life-saving and first-aid to the injured. Among the resolutions adopted at this Congress were the following:—

"That mining countries should enter into an exchange of their experiences in regard to the jurisdiction of life-saving at pits and fighting explosions in mines. It is recommended that the International Association for Life-Saving and First Aid to the Injured take the initial steps in this direction.

"That all rules and regulations relating to life-saving prevention of electric accidents should be uniform and hold good in all countries. For this reason, it would be advisable to form an international commission of experts, medical men, electrical engineers, etc.—analogous to the Geneva Red Cross Convention—and empowered to draw up such rules and regulations.

"The Congress recommends the governments of countries lying on the coasts to study the possibility of stimulating the life-saving services and of improvement of their work by organizing annually demonstrations of or competitions in life-saving on the coasts."

It was decided to hold the next Congress in London.

Characteristics of Silicosis

Dr. Edgar L. Collis, professor of preventive medicine in the Welsh National School of Medicine, in an article in the *Journal of Industrial Hygiene for November, discusses* the characteristics of dust phthisis, or pulmonary silicosis, with particular reference to its incidence in certain industries exposed to this risk. (Silicosis was added in 1926 to the list

of "industrial diseases" under the Ontario Workmen's Compensation Act.* The occupations enumerated as particularly exposed to silicosis are given as coal mining; tin, copper and lead mining; stone and quarry work; brick and tile making, and furnace and crucible pot making; brick and tile kiln and oven work; pottery and earthenware work; cutlery work (grinding, glazing and polishing). Statistics are given showing the mortality rates in these groups as compared with the general mortality rates, the figures being based on observation of conditions in England and Wales. The conclusions reached from these observations are as follows:—

1. Appeal to mortality records, and in particular to the most recent official statistics for England and Wales which have been specially prepared to bring out occupational risks, provides definite evidence that groups of workers exposed to a silica dust risk experience high mortalities from (*a*) bronchitis; (*b*) pneumonia; (*c*) phthisis; and (*d*) chronic nephritis. This combination in the mortality records of any occupational group is statistically diagnostic of the presence of a silica dust risk.

2. Mortality from phthisis in an occupation with a silica dust risk always exhibits its highest incidence late in life.

3. Silicotic tuberculosis appears to be less infectious than ordinary tuberculosis.

The new York State Department of Labour recently published a Special Bulletin (Bureau of Industrial Hygiene) on silicosis, being a résumé of the literature on the subject for the use of physicians. In the preface it is stated that in many cases silicosis has not hitherto been recognized, but has been erroneously entered as fibroid phthisis, pulmonary tuberculosis or bronchitis.

Health Study of Ten Industries in the United States

The United States Public Health Service (Treasury Department) has recently published a statistical analysis of health surveys of ten thousand male employees in ten industries (Public Health Bulletin, No. 162, June, 1926). It co-ordinates the results obtained from separate physical examinations made by the medical officers of the service during the past ten years into the health of the workers in these industries severally. In only a few places in the Bulletin was it found advisable to introduce statistics for women, the reasons for this omission being the absence of records for women (except in three industries), their comparatively small numbers, and the difficulty of comparing the group of women with that of men, due to different examiners, unlike age distribution, etc.

The industries surveyed were the pottery, post office, glass, gas, foundry, steel, chemical, cement, cigar and garment industries. One of the primary factors in determining the health of each industry is the proportion of its workers which belong to the newer and the older immigration groups of races. In the garment industry 1,832 out of 2,052 workers were classed as foreign-born Jews. Italians are mostly in the cement, cigar and chemical industries; Polish in the foundry, glass and chemical industries, with a considerable proportion in the foundries and post offices; Irish are found in the foundry, gas and post office groups; and coloured employees in foundries and post offices. American white and English show a good proportion in nearly every industry.

Another important factor in the inquiry was the average age of the workers in the different groups. Industrial workers, it is stated, are mostly between the ages of 20 and 45. The steel, garment and chemical groups have a low average age, while foundry, post office and pottery workers have a high average. The authors however attach little importance to these differences, as they are tied up with racial characteristics, skilled or unskilled nature of employment, and other features.

Some of the outstanding health features of each industry are mentioned below:—

Garment Industry.—The workers in the garment industry had a very low percentage with good nutrition and good appearance, and were poorer in general physique than workers in other industries. Part of the difference may have been due to a more severe examination in this industry, but certain measurements indicate a real difference. This industry was the only one showing a clear cut difference in regard to blood pressure. The high rates of digestive disorders seem specially important, because the increase in this condition shows a definite relation to length of service.

Post Office.—Poor vision was a characteristic of this group (Post Office and garment workers are subjected to severe eye strain). Letter separaters had the lowest vision of any of the groups studied, except the garment industry. Underweight was prevalent and there was a marked increase in bad heart conditions and flat feet, corresponding with length of service.

* Labour Gazette, May, 1926, page 450; June, page 574.

Chemical Industry.—The only conditions which stood out in this industry were heart defects, which showed an increase with length of service. The rates for flat feet and hernia were the highest in any industry, but as these rates did not show an increase with length of service, they could not be assumed to be inherent in occupation, especially as this group is largely made up of workers with short length of service.

Foundries.—High rates were found in this group for inflamed eyes, impaired hearing and bronchitis. There were also certain conditions with high rates which however showed no clear relation to the hazards in the industry. Heart conditions showed an increase with length of service in this industry. No particular occupation stood out as having high rates for any of the physical defects or diseases recorded.

The hazards of the foundry industry outside of those of the brass are considered to a certain extent to be those of the iron and steel industry, and include those diseases and defects resulting from heat, dust, and grinding processes; from gas poisoning; irritation of the eyes due to heat, dust, etc.; skin diseases; rheumatism, due to temperature variations; excessive heart disease, and boiler makers' deafness. A common industrial disease here was brass founder's ague among brass foundrymen.

Glass Industry.—In the glass industry the rates for impaired hearing and constipation were unusually high, and there was an increase with length of service for all digestive disorders and for nose and throat affections. In the occupational study the "dust" group stands out most markedly from the others. In this group the rates for inflamed eyes, for chronic conditions of the nose and throat, and for diseases of the skin, are well above the rates for the other occupational groups, while among the glass blowers the rate for defective teeth is particularly noticeable. Among the heat group the rate for enlarged tonsils is well above the other occupational groups. Eleven cases of cataract were observed in the glass industry, six of these among blowers.

In the glass industry the workers are exposed to a number of well-known and definite health hazards, principally dust in the mixing of the raw materials; intense light in the gathering of glass and loading of furnaces; high degrees of heat; also, in the past, fatiguing work in blowing large glass pieces.

Steel Industry.—There was in this group a comparatively low percentage of good vision in both eyes. In regard to a number of defects and diseases the rates for all lengths of service are relatively high in this industry, but the authors consider that this may be due to the more thorough examination of the workers in this industry. The hazards of this industry are largely those of foundries.

Pottery Industry.—The principal health hazards in the pottery industry are those due to dust in the grinding and mixing of clays, to moisture and dampness in the wet processes, to various degrees of heat from the kilns, and to breathing of carbon monoxide, and of most importance, to lead poisoning, especially when lead is used in the glaze. The diseases resulting from the health hazards in this industry are lead poisoning, respiratory conditions, and rheumatism due to changes in temperature which are said to overtax the kidneys and heart and tend to raise the blood pressure. Pneumonoconiosis and other respiratory diseases are mentioned as resulting from exposure to dust. Irritation of the eyes may also result from the scarring of the ware. In those processes where gilding is done, vapours of turpentine and oils may cause headache and indigestion. Varicose veins and ulcers are said to be not uncommon.

Cigar Industry.—A high percentage of digestive disorders was found in this industry. High rates were also recorded for respiratory and heart troubles. This industry showed the highest length of service of any of the groups examined. The main hazards of cigar making are those resulting from humidity, vegetable dust and nicotine.

Gas Industry.—High rates were found in this group for enlarged heart. The main hazard is carbon monoxide poisoning, especially the results of chronic poisoning.

Cement Industry.—This group showed an unusually high rate of defective hearing. The risks in this industry are exposure to heat in the drying process and to dust. Respiratory diseases and catarrhal affections are therefore common.

Safety Study of Shots in Coal Mines

Mr. G. St. J. Perrott, assistant chief explosives chemist of the United States Bureau of Mines, in the *Coal Age* of November 18, examines the conditions which cause blown-out shots in coal mines to ignite mixtures of air with gas or coal dust. Invaluable work is being conducted on these lines not only in the United States, but in Great Britain, France and Belgium.

One of the major hazards in coal mining, Mr. Perrott says, is the danger of igniting explosive mixtures of methane and air, or coal dust and air, or both, by the explosives used in blasting. It has long been recognized that certain explosives are more dangerous than others in this respect. Both in America and abroad, government testing stations have been established for officially passing on the suitability of explosives for use in coal mines. In the United States, the federal government has no power to inforce the use of the approved explosives but merely publishes from time to time, through the Bureau of Mines, a list of those explosives which, having passed certain established tests, are thereby believed suitable for use in coal mines. In spite of this lack of police power, the increase in the use of permissible explosives since the promulgation of the first list, in 1909, has been rapid. In 1912, only 8 per cent of the explosives used in coal mines were permissible; in 1925, this figure had increased to 25 per cent.

The investigations so far conducted by the United States Bureau of Mines, are stated by Mr. Perrott to warrant the following conclusions as applying to blown-out shots.

'1. That the method of loading and the kind and condition of stemming have an important effect on the relative safety as follows: (*a*) the introduction of an air space between the explosive and the stemming reduces the safety to a slight degree; (*b*) the conditions which furnish the greatest relative safety are loading the explosive tight in the borehole and the use either of a distinctly moist, inert material, such as damp fireclay or a finely-pulverized inert material such as rock dust; (*c*) the use of coal dust as stemming increases the danger of ignition of gas or dust by a blown-out shot.

2. An explosive gas mixture containing 7½ to 8 per cent of natural gas is the one most sensitive to ignition by the permissible explosives commonly used in coal mines in this country, but between 7 and 8½ per cent there is little practical difference in the sensitiveness of the mixture. On either side of these limits the sensitiveness decreases rapidly. With those gas mixtures most sensitive to ignition (7 to 8½ per cent of gas) a balanced explosive is most likely to cause ignition but an explosive which is underoxidized is more likely to cause ignition of gas mixtures near the lower limit of inflammability, which is the condition commonly met with in practice

3. Definite indications have been obtained that the rate of detonation is an important factor in the ignition mechanism and that the explosive having the higher rate of detonation may be expected to ignite a gas-and-air mixture more readily than one having a lower rate of detonation.

4. Photography of flames produced by explosives fired into air gives results which serve to divide the explosives into groups so far as safety is concerned. This taken in connection with the composition of the explosive and its rate of detonation, promises to throw light on the mechanism of ignition.

Belt Regulations in Victoria, Australia

The following regulations govern the use of belts or ropes for the transmission of power in factories in the State of Victoria, Australia:—

"Where in any factory belts or ropes are used for transmitting power (*a*) no such belt or rope when not transmitting power shall be allowed to rest on any revolving shaft; (*b*) no such belt or rope shall be joined or mended while the machinery is in motion unless such belt or rope is suspended on a suitable and efficient perch during the whole of the time occupied in such joining or mending; (*c*) no such belt or rope shall be placed by hand on any revolving pulley in the power transmission line between the primary motive power and the first driven pulley of any machine. Nothing in this paragraph shall prevent belts running on stepped or cone pulleys from being shifted by hand."

Industrial Safety Codes

The American Engineering Standards Committee is continuing the publication of safety codes for various industries. Reference was made in the August issue of the Labour Gazette (page 787) to the code for the Pulp and Paper Industry. Another recent code deals with the conditions required for safe gas fitting and gas appliance installation. These form part of a comprehensive group of sixty such codes which during the last seven years have engaged the attention, not only of the Committee, but of more than a hundred national organizations which have been officially co-operating in the development of this safety code program. More than a third of the group of sixty codes have now been completed and approved.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Canada and the Child Welfare Conventions

AN article entitled "Canada and the International Child Labour Conventions," by Miss Charlotte Whitton, Executive Secretary of the Canadian Council on Child Welfare, appeared in the August issue of *Social Welfare*, published by the Canadian Council on Child Welfare. This article has since been re-printed, including a tabular statement dealing with the action which would require to be taken by the provinces of Canada to permit of our acceptance of certain draft conventions and recommendations of the International Labour Conference affecting child labour. Copies of this reprint are available for distribution on application to the Canadian Council on Child Welfare, Plaza Building, Ottawa.

The draft convention and recommendations in question are as follows:—

Draft convention fixing the minimum age for admission of children to industrial employment;

Draft convention concerning the night work of young persons employed in industry;

Draft convention concerning the age of admission of children to employment in agriculture;

Recommendation concerning the night work of young persons in agriculture;

Recommendation concerning the protection of women and children against lead poisoning;

Draft convention concerning the employment of women before and after childbirth;

Recommendation concerning the protection, before and after childbirth, of women wage-earners in agriculture.

Apart from the foregoing, reference is made in the article to three draft conventions affecting seamen, as follows:—

Minimum age for the admission of young persons to employment as trimmers and stokers;

Medical examination of children and young persons employed at sea;

Minimum age for the admission of children to employment at sea.

The proposals contained in these three draft conventions are within federal legislative control and legislation has already been adopted putting them into effect. Notification of Canada's adherence to these draft conventions has also been sent to the League of Nations.

The author of the article expresses regret that in the record of ratifications Canada is included in the lower ranks of the League members. This is due, she explains, to the situation arising under the British North America Act in regard to matters which fall within provincial jurisdiction. This inferiority is, however, undeserved and misrepresents the real situation, since the laws of some of the Canadian provinces have standards as high as, or higher than, those set by some of the conventions. The Dominion Department of Justice, after examining the child labour conventions, decided that most of them are matters for provincial action. Some of the provinces have taken action on certain of these conventions, but no one province on all of them. The writer refers in terms of commendation to the efforts which have been made by the Dominion Department of Labour to bring these subjects to the attention of the provincial governments.

The Canadian Council on Child Welfare will include in its program for the coming year an endeavour to enlist the interest and support of Canadian citizens towards the acceptance by Canada of the conventions and recommendations affecting child labour and to those prohibiting the employment of women at night or in arduous employment. (LABOUR GAZETTE, November, 1926 (page 1082.)

The position of Canadian provincial legislation in relation to the various conventions and recommendations affecting women and children is described by the writer as follows:—

Draft Convention fixing the Minimum Age for Admission of Children to Industrial Employment.

Throughout the Dominion, the Factory Acts of all the provinces except New Brunswick partially meet the requirements of this Convention and sometimes exceed them. In New Brunswick no age limit is prescribed under the Factories Act, though in some measure this result is secured indirectly by the School Attendance Act. But as New Brunswick has not definitely forbidden by her Factory Act the employment in industry of children under 14 years of age, the Dominion cannot be said to have subscribed to the minimum standard set by the convention. In addition to the change required in the New Brunswick Factory Act, the labour legislation of some other provinces would need to be amended to cover the employment of children in mines and in certain seasonal occupations connected with the tinned fruit and fish industries. If this were done, it would be an easy matter for the Dominion Government to ratify, seeing that the standards of most provincial laws exceed the requirements of the convention. British Columbia has already made provision

for the general prohibition of child labour, simultaneously with the enactment of such legislation by other provinces.

Draft Convention concerning the Night Work of Young Persons Employed in Industry.

In the three Maritime Provinces (Nova Scotia, New Brunswick and Prince Edward Island), little legislation exists on this subject, but in the six other provinces the night employment of young children in industry is forbidden or regulated.

There are variations in the ages below which children may not be employed at night and in the definition of "night," but the spirit and purpose of the Convention is met and only uniformity of expression is required to permit of Dominion adherence. The absence of comprehensive legislation in the Maritime Provinces would appear to be due rather to lack of need for such laws than to opposition to the principles involved.

Draft Convention concerning the Age of Admission of Children to employment in Agriculture.

There is no legislation in Canada which specifically prohibits the employment of children under 14 years of age in agriculture, but the School Attendance Acts in the various provinces have practically the same effect. Certain amendments would be necessary, however, to bring the exemption clauses of all the provincial School Attendance Acts into line with the convention.

Recommendation concerning the Night Work of Young Persons in Agriculture.

No legislation exists in Canada which meets the requirements of the Recommendation, but the writer believes it to be beyond debate that the whole trend and spirit of the School Attendance Acts imply the protection of children and young persons of school age from night employment.

Recommendation concerning the Protection of Women and Children against Lead Poisoning.

There are no laws on this subject beyond the provisions of the Factory Acts of the several provinces which regulate employment in dangerous industrial processes. Dominion legislation exists to prohibit the use of white phosphorus in the manufacture of matches, but so drastic a measure could not be followed in relation to lead poisoning. It is pointed out, however, that at the Inter-Provincial Conference of 1923, the representatives of the several provinces supported the principle of the protection advocated by this Recommendation. Only legislative recognition of the acceptance of the principle would be necessary to permit Canada to adhere.

30907—4½

Draft Convention concerning the Employment of Women before and after Childbirth.

No action has as yet been taken by any province except British Columbia, where the Maternity Protection Act came into force on January 1, 1922. By the terms of this Act, the purpose of the convention is met, but not the requirements, in reference to the payment of benefits. The difficulty seems to be that there is no system of social insurance in force in British Columbia or any other province, to which the system of maternity benefits contemplated by the convention could be related. The writer suggests that a solution to this difficulty might be found if the example of Saskatchewan were to be followed. In that province, the Maternity Benefits Regulation makes a grant of approximately $25 on a certificate of the Medical Officer of Health for the maintenance of any mother in need of assistance in outlying districts. If provincial legislation were to prohibit the employment of the mother at this period, and to include a provision for the payment of a direct grant to all mothers in need of it, the ratification by Canada of the Maternity Convention would become possible.

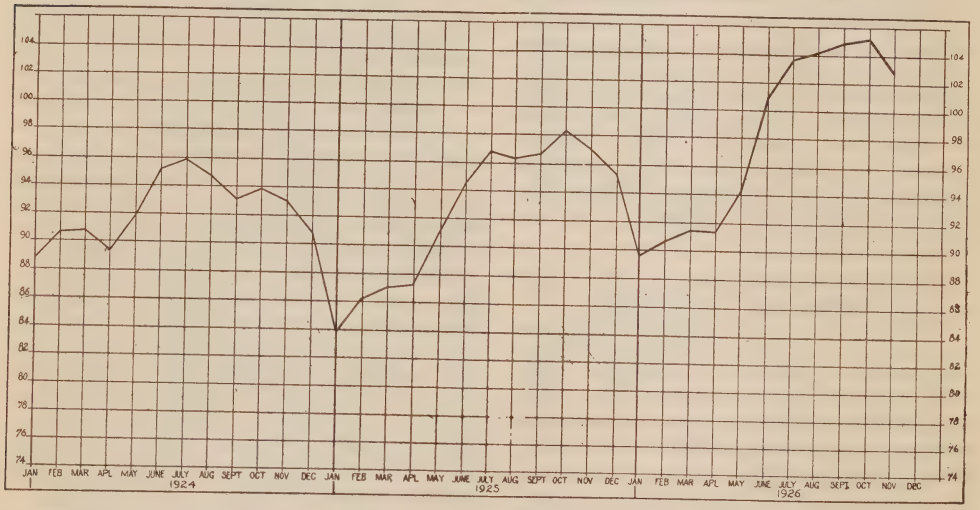
Recommendation concerning the Protection, before and after Childbirth, of Women Wage-Earners in Agriculture.

All the reasons which commend this measure for adoption in respect to women wage-earners in industrial occupations are thought to apply with equal or greater force to women workers in agriculture. Except at certain seasons and in specialized lines of farming, Canada has as yet but few women wage-earners in agriculture. This comparative freedom from the problems related to the employment of women in the heavy work of farm labour should be preserved. This can best be done by incorporating into Canadian Statutes, at a time when the problem is under control, such legislative safeguards as will prevent it from ever growing beyond control.

Appointment of Canadian Translator

Announcement is made of the appointment of Mr. J. E. A. Johnstone of Vancouver as translator in the International Labour Office (League of Nations), Geneva. The Minister of Labour of Canada received word some months ago from the Deputy Director of the International Labour Office that it was desired to secure the services of a Canadian for this appointment. Subsequently a competitive examination was held for the position through the Civil Service Commission at various points throughout Canada.

Mr. Johnstone is a graduate of the University of Toronto and of Oxford University and was for a time professor of Greek in the University of Oregon.



THE EMPLOYMENT SITUATION AT THE BEGINNING OF NOVEMBER, 1926, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

EMPLOYMENT at the beginning of November showed a seasonal contraction that exceeded the losses registered on November 1, 1925, but the situation continued to be more favourable than in any month of the years 1921-1925 owing to the important gains indicated almost continuously during 1926. Statistics were tabulated from 5,896 employers whose pay rolls declined from 864,749 persons on October 1 to 845,278 at the beginning of November. Reflecting this reduction of over 2 per cent, the index number decreased from 105.2 in the preceding month to 102.8 on November 1, as compared with 97.1, 93.0, 98.8, 95.8 and 90.2 on the corresponding date in 1925, 1924, 1923, 1922 and 1921, respectively.

Maritime Provinces.—Heavy seasonal losses were indicated on highway and railway construction and in lumber mills, while shipping, mining and trade were busier. A combined working force of 63,984 persons was employed by the 503 co-operating firms, who had 69,462 in the preceding month. Although this decrease involved more workers than that noted on November 1, 1925, the index number then was lower than on the date under review.

Quebec.—The largest reductions in Quebec were in construction, but manufacturing as a whole was also slacker. Logging and trade, however, registered marked improvement. Employment was in much greater volume than at the beginning of November last year,

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January 1920, as 100.

There were large seasonal increases in logging camps and retail stores while mining also showed improvement. Manufacturing, transportation and construction, on the other hand, recorded considerable curtailment, also of a seasonal nature.

Employment by Provinces

Firms in all provinces reported reduced activity, the recession in the Maritime Provinces and Quebec being most marked.

when the tendency was also downward. Statements for the date under review were compiled from 1,284 employers with 243,342 workers, or 5,096 fewer than on October 1.

Ontario.—Manufacturing, especially of lumber and food products, construction and transportation showed seasonal contractions, but there were important gains in logging and trade. According to data received from 2,704 firms, they reduced their pay-rolls from 350,956 employees in the preceding month to

346,526 on November 1. Rather smaller losses were indicated on the same date in 1925, when employment was in less volume.

Prairie Provinces.—The greatest reductions in the Prairie Provinces were in construction, transportation and services; on the other hand, considerable improvement was noted in logging, mining and trade. The working forces of the 762 employers making returns totalled 114,209 persons, as compared with 116,583 on October 1. The index number stood at 107.7, while at the beginning of November a year ago it was 99.1. Curtailment was also indicated on the corresponding date of previous years of the record.

British Columbia.—Further declines were registered in British Columbia, where 2,093 workers were released from the staffs of the 643 reporting firms, who employed 77,217. Lumber mills, fish canneries and construction recorded the most extensive decreases, while logging, mining and trade showed gains. Conditions were better than on November 1, 1925, when rather larger losses were noted.

Table I gives index numbers by economic areas.

Employment by Cities

Employment showed a falling off in Montreal, Quebec, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver, while in Toronto the trend continued favourable.

Montreal.—The trade, food, textile, tobacco, and communication industries showed heightened activity, but there was a more pronounced shrinkage in construction and transportation. The result was a reduction of 1,285 persons in the staffs of the 699 firms furnishing data,

NOTE.—Number employed by the reporting firms in January, 1920=100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing
1921							
Nov. 1	90·2	91·4	87·5	87·0	102·6	94·3	81·1
1922							
Nov. 1	95·8	91·7	92·7	94·9	105·0	100·2	87·7
1923							
Nov. 1	98·8	95·2	103·2	96·0	99·2	102·8	91·2
1924							
Jan. 1	88·7	86·3	90·5	86·1	94·3	90·9	80·1
Feb. 1	90·6	83·2	92·8	90·0	92·1	92·7	84·9
Mar. 1	90·7	82·4	93·5	89·8	89·6	97·1	86·0
April 1	89·3	84·6	91·5	87·6	87·0	99·6	86·5
May 1	91·8	88·1	94·1	89·8	89·4	102·9	87·7
June 1	95·2	90·0	99·9	92·1	94·1	103·4	88·4
July 1	95·9	90·6	100·6	91·4	99·1	105·8	87·7
Aug. 1	94·7	90·2	98·7	90·3	96·4	107·1	86·2

who had 117,281 employees on November 1. A slight gain was noted on the same date last year, when the situation was much less favourable.

Quebec.—There was a small decline in employment in Quebec, mainly in manufacturing and communication. Statements were compiled from 89 establishments with 9,114 workers. Larger losses were indicated at the beginning of November, 1925, and the index number then was lower.

Toronto.—Further improvement was reported in Toronto, where the 772 employers furnishing data enlarged their payrolls by 550 persons to 100,601 on the date under review. Trade and manufacturing, especially of iron and steel and electrical appliances, showed the greatest increases, while construction was slacker. Practically no change in the situation was recorded on November 1 last year; employment then was at a lower level.

Ottawa.—Employment in Ottawa showed a general, but moderate falling off, in which manufacturing, construction, and some other industries shared. One hundred and twenty-five firms reduced their staffs from 10,518 employees on October 1 to 10,277 at the beginning of November. The situation was much the same as that noted on the corresponding date a year ago.

Hamilton.—Manufacturing and construction registered curtailment in Hamilton, but trade was more active. A combined payroll of 29,876 workers was reported by the 199 co-operating employers, compared with 30,145 in the preceding month. This decline rather exceeded that indicated on November 1, 1925, when employment was in much smaller volume.

Windsor and the Other Border Cities.—Automobile plants in the Border Cities released employees, as did also building construction. Data were received from 82 firms employing 10,795 persons, as against 11,579 in their last report. Activity continued to be greater than on the corresponding date last year.

Winnipeg.—Following six months of uninterrupted gains, there was a decline of 268 workers in the forces of the 282 employers making returns, who had 28,838 on payroll.

Relative weight of employment by cities as at Nov. 1, 1926	13·9	11·	11·9	1·2	3·5	1·3	3·4	3·0

Construction reported the greatest curtailment, while there were also losses in other industries except trade, which showed improvement. The index number, at 103.7, was over 11 points higher than on November 1, 1925.

Vancouver.—A further contraction in employment was recorded in Vancouver, mainly in manufacturing, transportation and construction. Trade, however, reported an advance. The general reduction involved practically the same number of workers as that indicated at the beginning of November last year, when conditions were less favourable. Statistics were received from 226 firms

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920 = 100)

—	[1]Relative weight	Nov. 1 1926	Oct. 1 1926	Nov. 1 1925	Nov. 1 1924	Nov. 1 1923	Nov. 1 192[illegible]

[1]NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

whose staffs aggregated 25,323 persons as compared with 25,906 in the preceding month.

Index numbers by cities are given in Table II.

Manufacturing Industries

The curtailment in manufactures was much less than on November 1, 1925, and employment continued to be in greater volume than in any month of 1925, 1924, 1923, 1922 or 1921. The most extensive losses were in lumber mills and fruit and vegetable canneries, but in both of these divisions they were not so pronounced as at the beginning of November last year. Fish-preserving and iron and steel plants were also slacker, while improvement was shown in leather, electrical apparatus and non-ferrous metal works. Statements were received from 3,788 manufacturers whose staffs declined from 475,996 operatives on October 1 to 467,500 on the date under review.

Animal Products, Edible.—Fish-preserving plants continued to show seasonal losses in employment, while meat-preserving establishments were slightly busier. The level of employment was practically the same as on the corresponding date last year, although the reductions reported then were less extensive. Statements were received from 168 employers, with 15,198 workers, as compared with 15,868 in the preceding month. Practically all the loss took place in British Columbia.

Leather and Products.—There were further increases in employment in leather works, 193 of which enlarged their staffs by 213 persons to 17,823 at the beginning of November. Quebec and Ontario reported most of the change. The index number was six points higher than on November 1, 1925, when rather smaller increases were noted.

Lumber and Products.—According to data received from 718 manufacturers in this division, their staffs declined from 57,655 persons on October 1 to 52,295 at the beginning of November. The greatest decreases took place in Ontario, but there were decided contractions throughout the country. The level of employment continued to be higher than on the corresponding date last year; more pronounced recessions were then indicated.

Plant Products, Edible.—Fruit and vegetable canneries made large seasonal reductions in their staffs, while the sugar and syrup, starch and glucose and biscuit divisions of the edible plant product group showed an increase. A combined working force of 29,419 persons was reported by the 312 establishments making returns, as compared with 31,683 in the preceding month. The majority of the workers let out were from canneries in Ontario, but there were also losses in British Columbia. Somewhat greater curtailment was indicated on the corresponding date of 1925, when the index number was rather lower.

Pulp and Paper.—Continued but less pronounced losses were registered in pulp and paper factories, while printing and publishing establishments were somewhat busier. The result was a decline of 243 in the staffs of the 448 firms making returns, who had 56,782 employees on November 1. A considerable reduction was recorded in Quebec, while in Ontario the tendency was favourable. A similar curtailment was noted at the beginning of November a year ago, but the index number then was about nine points lower.

Rubber Products.—Employment in rubber factories showed a falling off, according to statistics tabulated from 32 manufacturers, with 12,147 employees, or 290 less than in the preceding month. The reduction was chiefly confined to Ontario. Considerably larger shrinkage was recorded on the corresponding date in 1925; the level of employment then, however, was slightly higher.

Textile Products.—Fluctuations in the different groups coming under this heading produced a net increase of 40 persons in the payrolls of the 508 co-operating establishments, which employed 72,706 workers. Cotton mills showed substantial improvement, while garment and personal furnishing, knitting and woollen factories were slacker. Employment gained in Quebec and lost in Ontario, the changes elsewhere being small. More extensive expansion was indicated at the beginning of November last year, when the index was over four points lower.

Tobacco, Distilled and Malt Liquors.—Employment in tobacco factories showed a comparatively small gain, which took place almost entirely in Quebec. Statements were compiled from 103 manufacturers of tobacco, distilled and malt liquors, whose payrolls aggregated 12,092 persons, as compared with 11,932 at the beginning of October. Despite the fact that reductions were noted on November 1, 1925, the index number then was rather higher than on the date under review.

Electrical Apparatus.—Continued marked gains were reported in electrical appliance factories, causing the index to maintain its favourable position as compared with other months of the record, which was begun in

1920. An aggregate working force of 10,818 persons was employed by the 37 plants making returns, as against 10,349 in their last report. The bulk of the gain was in Ontario. An upward tendency was also indicated at the beginning of November a year ago, although the increase was much smaller.

Iron and Steel Products.—A further, but much less pronounced contraction, was reported in iron and steel, chiefly in automobile and railway car shops. On the other hand, agricultural implement plants showed decided improvement, and steel shipyards were also busier. The working force of the 637 co-operating manufacturers included 124,155 operatives, or 652 less than in the preceding month. The Maritime Provinces, Quebec and Ontario reported most of the curtailment, while in the Prairie Provinces employment increased. The level of activity continued higher than on the corresponding date last year, when a downward trend was also in evidence.

Non-Ferrous Metal Products.—Smelters and refineries reported heightened activity and there was also improvement in silver, gold and platinum-using works, the greatest gains being in British Columbia and Quebec. Statements were received from 108 firms in this group, whose payrolls rose from 15,455 in the preceding month to 15,626 at the beginning of November. Employment was in much greater volume than on the corresponding date in 1925, when curtailment was noted.

Mineral Products.—Further seasonal reductions in personnel were registered in mineral product factories, 79 of which employed 9,809 workers, as compared with 9,974 on October 1. Most of the decrease was in Ontario. Larger losses were noted on November 1, 1925, but the index number then was a little higher.

Logging

Further large additions to forces were made in logging; 219 firms reported 21,981 employees, as against 18,208 in the preceding month. This gain, of which a large share was reported in Ontario, was not as marked as on the corresponding date a year ago, when operations in logging camps were on a greater scale.

Mining

Coal.—Further important gains were shown in coal mines in both Eastern and Western coal fields. According to statistics from 88 operators, they enlarged their working forces from 26,446 employees on October 1 to 27,049 at the beginning of November. This gain was rather smaller than that indicated on the corresponding date last year, when the index number was nearly six points lower.

Metallic Ores.—Another moderate advance in employment was noted in metallic ore mining, mainly in Ontario and British Columbia. The working force of the 47 co-operating mines aggregated 11,831, or 142 more than in the preceding month. The situation was more favourable than on the corresponding date in 1925, although somewhat greater improvement was then reported.

Non-Metallic Minerals, other than Coal.—Sixty-eight firms in this division employed 6,701 persons as compared with 6,871 at the beginning of October. Quarrying generally was seasonally dull. The declines registered on November 1, 1925, involved a much larger number of workers, and the index number then was over six points lower.

Communication

After seven months of uninterrupted expansion, the communication group showed a reduction, 244 persons having been released from the staffs of the 182 co-operating companies and branches, which employed 24,772 on November 1. Conditions were better than on the same date last year.

Transportation

Steam Railways.—Following constant expansion during the preceding six months, there was a falling off in employment in steam railway operation at the beginning of November, 2,093 persons having been released from the staffs of the 103 employers making returns, who had 79,995 workers. All provinces except Quebec and British Columbia shared in this contraction, which was most extensive in the Prairie Provinces and Ontario. Smaller losses were reported on November 1, 1925, but the index number then was lower.

Shipping and Stevedoring.—Employment in water transportation declined, improvement in the Maritime Provinces being offset by losses in Quebec, Ontario and British Columbia. The result was a reduction of 217 persons in the staffs of the 58 companies furnishing data, whose payrolls aggregated 15,917 on November 1. The index number was slightly lower than on the same date last year, when important gains were indicated.

Construction and Maintenance

Building.—Continued and more extensive curtailment of operations was indicated by the 336 building contractors making returns; they had 34,375 employees as compared with 37,938 at the beginning of October. There were recessions in all except the Maritime Provinces, those in Quebec and Ontario being most pronounced. Employment was in much greater volume than on the same date last year, although the decreases then indicated were considerably smaller.

Highway.—Work on road construction continued to diminish, the losses being greater than those which took place on November 1, 1925, when employment was in smaller volume. A combined working force of 17,654 men was reported by the 118 employers whose statements were received and who had 22,789 workers in the preceding month. The Maritime Provinces recorded the heaviest losses, but shrinkage was shown everywhere except in Ontario.

Railway.—Further seasonal reductions were noted on highway construction and maintenance, from which 4,646 persons were let out by the 36 co-operating employers. They had 41,535 persons on their payrolls at the beginning of November. These contractions were also widespread, the largest taking place in Quebec. The index number was about 16 points higher than on November 1, 1925; rather smaller decreases were then registered.

Services

There were further losses in the service group, mainly in summer hotels; 170 establishments had 14,630 employees, compared with 15,592 in their last report. Quebec and the Prairie Provinces reported the greatest declines. Employment was more active than on the same date a year ago, when the curtailment was more pronounced.

Trade

Employment in trade at the beginning of November showed the seventh consecutive increase recorded since the spring, according to statistics from 569 retail and wholesale houses, whose staffs rose from 60,204 on October 1 to 61,829 persons on November 1. The index number was higher on the latter date than in any other month since 1920. Most of the improvement was again registered in retail stores, those in Quebec, Ontario and the Prairie Provinces making the greatest gains.

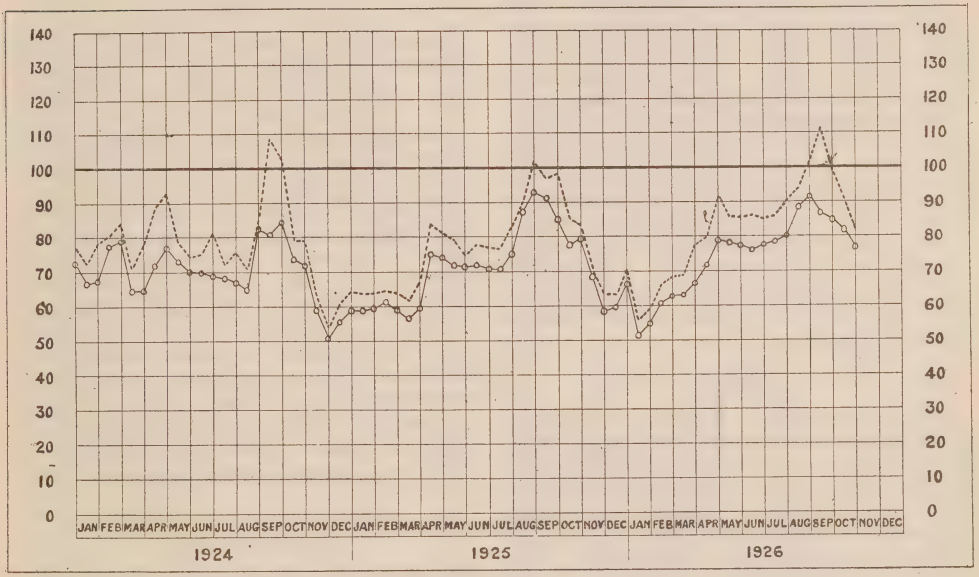
Tables I, II, and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns for November 1, 1926.

EMPLOYMENT OFFICE REPORTS FOR OCTOBER, 1926

DURING the month of October, 1926, the reports from the offices of the Employment Service of Canada showed a decrease of 25 per cent in the average daily placements from that of the preceding period, while an increase of over 6 per cent was registered when a comparison is made with the average daily placements effected during the corresponding month a year ago. The decrease in placements from September was due to curtailment in farming operations, counteracted in part by gains in logging. In comparison with last year, farming showed a favourable gain, while manufacturing, transportation, construction and railway maintenance also contributed their quota in the gains registered in the average daily placements effected, though in a lesser degree. These gains were offset in part by decreased placements in the logging industry.

The accompanying chart shows the trend of employment since 1924 as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noticed that the curves of vacancies and placements in relation to applications declined sharply throughout the period, being on a higher level during the first half of the month than that recorded during the same period last year, but falling to a slightly lower level during the latter half of the month, than that shown during the latter half of October, 1925. The ratio of vacancies to each 100 application was 90.5 and 82.0 during the first and second half of October, 1926, in contrast with ratios of 85.2 and 83.0 during the same periods in 1925. The ratios of placements to each 100 applications during the period under review were 81.8 and 76.8, as compared with 77.5 and 79.4 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications recorded during the first half of October was 2,192 daily, as compared with 2,231 daily during the preceding period, and with 1,924 daily during the corresponding period in 1925. Applications for work during the latter half of the month registered 1,720 daily, in contrast with 1,801 daily during the latter half of October a year ago.



Employers notified the Service of a daily average of 1,984 vacancies during the first half and 1,410 during the latter half of the month under review, as compared with a daily average of 1,640, and 1,495 vacancies during the month of October, 1925. Vacancies offered to the Service during the latter half of September, 1926, averaged 2,210 daily.

The Service effected a daily average of 1,792 placements during the first half of October, of which 1,325 were in regular employment and 467 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,889 daily, and with 1,491 daily during the first half of October, 1925. During the latter half of the month under review placements averaged 1,320 daily (918 regular and 402 casual), as compared with an average of 1,429 daily during the corresponding period last year.

During the month of October, 1926, the offices referred 41,994 persons to vacancies, and effected a total of 40,453 placements. Of these the placements in regular employment numbered 29,153, of which 25,663 were of men and 3,490 of women, while placements in casual work totalled 11,300. Opportunities for employment reported by employers numbered 33,884 for men and 10,236 for women, a total of 44,120. The number of applications for work was 50,838, of which 38,905 were from men and 11,933 from women.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926 (10 months)	265,139	92,011	357,150

NOVA SCOTIA

Opportunities for employment, as indicated by orders listed at employment offices in Nova

Scotia during October, were practically the same as in September, but over 14 per cent higher than in the corresponding month last year. Placements were over 19 per cent higher than in September, and nearly 9 per cent in excess of October, 1925. Increased placements in the services group were responsible for the gains in placements over the corresponding month of last year. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 82; logging, 60; construction and maintenance, 59; trade, 61; and services, 302, of which 205 were of household workers. During the month 185 men and 89 women were placed in regular employment.

NEW BRUNSWICK

Orders listed at New Brunswick offices during October called for nearly 9 per cent more workers than in September, but over 10 per cent less than in October last year. There was a gain in placements of over 6 per cent in comparison with September, but a decline of nearly 10 per cent from October, 1925. This decline was due to a reduction in placements in the manufacturing industries and services. Placements by industrial groups included: logging, 147; construction and maintenance, 83; and services, 517, of which 290 were of household workers. Regular employment was found for 258 men and 79 women during the month.

QUEBEC

There was a decline of over 4 per cent in the number of positions offered through offices in Quebec, during October, when compared with the preceding month, but no change in comparison with the corresponding month last year. Placements, however, were nearly 12 per cent higher than in September, and nearly 8 per cent in excess of October, 1925. The most noteworthy gains in placements over last year were in the manufacturing industries and construction and maintenance, offset in part by reductions in the services group. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 211; logging, 1,146; construction and maintenance, 1,026; trade, 95; and services, 514, of which 320 were of household workers. Placements in regular employment numbered 2,644 of men and 413 of women.

ONTARIO

Employment opportunities, as indicated by orders listed at offices in Ontario during October, were over 4 per cent less than in the preceding month, and over 6 per cent lower than during the corresponding month last year. There was a decline in placements of over 4 per cent in comparison with September, and of over 1 per cent when compared with October, 1925. Increased placements over last year were recorded in the manufacturing industries, transportation and services, but these gains were more than offset by reductions in all other industrial divisions except mining and communication. Placements by industrial groups included: manufacturing, 1,848; logging, 1,885; farming, 1,353; mining, 121; transportation, 753; construction and maintenance, 2,769; trade, 387; and services, 3,752, of which 2,394 were of household workers. During the month 7,630 men and 1,362 women were placed in regular employment.

MANITOBA

During the month of October positions offered through Manitoba offices declined over 28 per cent from the preceding month, but were 21 per cent higher than during the corresponding month last year. Placements were nearly 24 per cent less than in September, but 2 per cent higher than during October, 1925. Farming and construction and maintenance showed the most noteworthy gains in placements over last year, while logging was the only industrial group which showed a decline of importance. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 159; logging, 615; farming, 2,171; construction and maintenance, 466; trade, 386; and services, 2,332, of which, 1,765 were of household workers. Placements in regular employment numbered 2,489 of men and 536 of women.

SASKATCHEWAN

There was a decline of 75 per cent in the number of positions offered through employment offices in Saskatchewan during October, when compared with the preceding month, but an increase of nearly 11 per cent over the corresponding month last year. Placements were nearly 64 per cent lower than in September, but over 3 per cent higher than during October, 1925. All industrial groups except logging, transportation and trade showed increased placements over last year, and in these the declines were small. Placements by industrial divisions included: manufacturing, 127; logging, 460; farming, 2,446; construction and maintenance, 701; trade, 106; and services, 841, of which 499 were of household workers. During the month 3,706 men and 330 women were placed in regular employment.

* 256 placements effected by offices since closed.

ALBERTA

The demand for workers, as reflected by orders listed at offices in Alberta, during October, was slightly higher than in the preceding month and nearly 21 per cent in excess of the corresponding month last year. There was an increase in placements of more than 6 per cent over September, and of more than 13 per cent in comparison with October, 1925. The gains over last year were nearly all attributable to increased farm placements, other industrial groups showing small change. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 245; farming, 5,882; mining, 254; construction and maintenance, 847; trade, 171; and services, 844, of which 591 were of household workers. Regular employment was procured for 7,215 men and 392 women during the month.

BRITISH COLUMBIA

During October offices in British Columbia received orders for over 20 per cent less workers than in September, and nearly 4 per cent less than during October last year. Placements during October were nearly 33 per cent less than in the preceding month, and nearly 6 per cent lower than during the corresponding month last year. Construction and maintenance was the only group to show a noteworthy reduction in placements from last year. All other groups showed increases except logging, services and trade, and in these the declines were small. Placements by industrial divisions during the month included: manufacturing, 454; logging, 524; farming, 263; mining, 141; transportation, 417; construction and maintenance, 594; trade, 166; and services, 954, of which 604 were of household workers. Placements in regular employment numbered 1,536 of men and 289 of women.

Movement of Labour

During October, 1926, the offices of the Employment Service of Canada made 29,153 placements in regular employment, of which 19,848 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 3,182 were granted the Employment Service reduced transportation rate, 2,008 going to points within the same province as the despatching office and 1,174 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the Employment Service, who may desire to travel to distant employment for which no workers are available locally.

In Quebec there were 655 special transportation certificates granted, and of these, 328 were to persons travelling within the province, and 327 to other provinces. Provincially, the Quebec office despatched 287 bushmen to the logging districts around Quebec, and Montreal 34 bushmen and 7 sawmill labourers to employment within the Montreal zone. Northern Ontario logging camps received the majority of those going outside the province, Montreal sending 60 bushmen to camps in the vicinity of Sault Ste. Marie, and Hull 67 bushmen to North Bay and 198 bushmen to Sudbury. Montreal in addition transferred 2 steamfitters to Winnipeg.

The offices in Ontario issued 778 certificates, 764 of which were provincial and 14 interprovincial. All the transfers outside the province were for the Hull zone, 11 of which were railroad construction labourers travelling from Port Arthur, 2 were miners and 1 a railroad construction labourer sent from Sudbury. Of those transferred provincially, Toronto despatched 1 cook to Ottawa, 3 electricians and 3 bricklayers to Port Arthur, and 2 cooks to North Bay; Hamilton sent 1 machinist to Port Arthur, North Bay 2 teamsters to Timmins and 1 machinist to Cobalt, Fort William 1 cook to employment within its own zone, Cobalt 1 labourer to Timmins, and Windsor 3 iron workers to Hamilton. The remainder were 625 bushmen, 50 building construction labourers and 71 highway construction labourers for Northern Ontario points, the majority of whom received transportation from the Toronto, North Bay, Sudbury, Fort William and Port Arthur offices.

Manitoba offices issued certificates to 1,043 persons, 353 going to provincial points, and 690 to other provinces. The interprovincial transfers were all from Winnipeg, the majority of which were issued to persons going within the Port Arthur Zone, including 548 bushmen, 3 machinists, 1 shoe repairer, 2 carpenters, 1 blacksmith, 12 sawmill labourers and 6 hotel and household workers. In addition 1 butcher travelled to Fort William, 10 bricklayers to Regina, 1 bushman to Saskatoon and 98 farm hands and 7 female hotel workers to employment in various parts of Saskatchewan. Provincially, Winnipeg transferred 246 bushmen, 1 farm domestic, 1 institutional cook, 6 female hotel workers, 1 porter and 1 cook to Brandon, 78 bushmen, 2 waitresses, 6 farm labourers and 1 baker to Dauphin, and 6 farm labourers, 2 female hotel workers and 1 general to points in the Winnipeg zone and Dauphin shipped 1 bushman within its own zone.

In Saskatchewan 334 certificates for special transportation were granted, 208 of which were provincial and 126 interprovincial. Of the former, Regina sent 19 miners and 15 labourers to Weyburn, 1 elevator operator, 2 cooks and 1 farm hand to Moose Jaw, 5 coal miners to Estevan, 31 bushmen to Prince Albert, and 42 harvest hands to points in the Regina zone. From Moose Jaw 1 harvest worker went to employment in the North Battleford zone, 1 porter and 1 harvester to Regina, and 3 harvest hands, 3 teamsters, 1 cook, 1 waitress, 1 ploughman and 1 chambermaid to employment in the Moose Jaw zone. Prince Albert transferred 77 bushmen and 1 cook to points within its own zone and 1 harvester to Estevan. The interprovincial movement from Moose Jaw included 1 farm hand going to New Westminster, 33 harvest hands to points around Lethbridge, Calgary and Edmonton, and 1 domestic to Winnipeg. From Swift Current 83 harvest workers travelled to the Calgary zone, and from Regina 4 carpenters went to Lethbridge, 2 harvest hands to Calgary and 2 to Winnipeg.

The offices in Alberta granted reduced transportation to 192 persons, 179 of whom were going to points within the province, and 13 to other provinces. Of the latter, Calgary transported 2 loggers, 6 carpenters and 1 blacksmith at the reduced rate to Cranbrook, and Edmonton sent 3 farm hands to points within the North Battleford zone and 1 farm hand to Saskatoon. The provincial movement from Edmonton included 68 harvesters, 26 mine workers, 3 engineers, 5 carpenters, 7 farm hands, 2 firemen, 7 bushmen, 1 blacksmith, 23 general labourers and 7 hotel and household workers, travelling to points in the Edmonton zone, and 2 harvesters to the Calgary zone. From Calgary 5 harvest workers and 1 mechanic went to Drumheller, 1 gas engineer, 1 harvest hand and 1 cook to Edmonton, 3 harvest workers to Lethbridge, and 2 bushmen, 1 harvest hand, 1 housekeeper and 3 female hotel workers within the Calgary zone. In addition Calgary received 9 harvest workers from Medicine Hat.

British Columbia certificates numbered 180, of which 176 were provincial and 4 interprovincial. The interprovincial certificates were for farm workers, Vancouver sending 2 to the Edmonton zone, and 1 to Saskatoon, and New Westminster 1 farm domestic to Calgary. The Vancouver offices were responsible for the bulk of the business transacted provincially, and issued certificates to 43 mine workers, 2 cooks, 1 flunkey, 10 labourers, 7 teamsters and 2 carpenters going to the Penticton zone, 11 labourers, 4 cooks, 3 carpenters and 2 miners to Kamloops, 47 carpenters, and 5 bricklayers to Nelson, 3 carpenters, 2 bricklayers and 1 flunkey to Cranbrook, 1 farm labourer, 1 cook, 1 miner and 1 engineer to Prince George, and 3 miners, 1 plasterer's helper, 3 cooks and 1 carpenter to points within the Vancouver zone. Prince George transferred 3 bushmen to Prince Rupert, and 3 tie makers, 1 cook and 5 bushmen within its own zone, while from Nelson 1 farm hand and 1 miner and from Prince Rupert 1 miner and 6 bushmen went to employment within their respective zones.

Of the 3,182 workers who benefited by the Employment Service reduced transportation rate, 1,894 were carried by the Canadian National Railways, 1,262 by the Canadian Pacific Railway, 16 by the Temiskaming and Northern Ontario Railway, 8 by the Pacific Great Eastern Railway, and 2 by the Edmonton, Dunvegan and British Columbia railway.

BUILDING PERMITS ISSUED IN CANADA DURING OCTOBER, 1926

THE building permits issued by 63 cities during October were valued at $14,614,543, as compared with $11,036,359 in the preceding month and $11,312,644 in October, 1925. There was, therefore, an increase of $3,578,184 or 32.4 per cent in the first and of $3,301,899 or 29.2 per cent in the second comparison. The total for the month under review was higher than in October of any other year since the record was begun in 1920, while the index numbers of wholesale prices of building materials in 1926 have been lower than in any other year since 1920.

Some 50 cities furnished detailed statements showing that they had issued more than 1,300 permits for dwellings valued at approximately $6,500,000 and nearly 2,900 permits for other buildings estimated to cost almost $7,700,000. During September, the construction of about 1,200 dwellings and over 2,900 other buildings was authorized, at an estimated cost of nearly $5,400,000 and $5,600,000, respectively.

As compared with September, 1926, Quebec, Ontario and Alberta registered increases in the value of building authorized, that in the first named of $2,527,632 or 99.2 per cent being the largest. Nova Scotia recorded the most pronounced reduction, of $202,659 or 62.1 per cent.

Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and Alberta showed advances in the building permits issued as compared

with October, 1925, that in Ontario of $2,085,647 or 43.7 per cent being the greatest. In New Brunswick and British Columbia there were declines of 51.0 per cent and 32.2 per cent respectively.

Montreal and Toronto recorded increases in the value of the building authorized as compared with both September, 1926, and October, 1925. In Winnipeg and Vancouver there were losses in the former and increases in the latter comparison. Sydney, Quebec, Sherbrooke, Three Rivers, Chatham, Hamilton, Kingston, Niagara Falls, Ottawa, Owen Sound, Peterborough, Port Arthur, St. Catharines, Sarnia, Sault Ste. Marie, Welland, Woodstock, Brandon, Calgary, Edmonton, Lethbridge, Nanaimo, Point Grey and North Vancouver registered increases in both cases.

Cumulative Record for First Ten Months, 1926.—The following table shows the value of the building authorized by 63 cities during October and in the first ten months of each year since 1920. The January-October average index numbers of wholesale prices of building materials in those years are also given (1913=100).

Year	Value of Permits Issued		Average Indexes of Wholesale prices of building materials in first ten months
	In October	In first Ten months	
	$	$	
1926	14,614,543	134,862,844	149·5
1925	11,312,644	109,676,825	153·9
1924	13,089,588	109,906,921	160·6
1923	9,999,187	118,319,159	166·8
1922	10,737,525	127,515,975	162·0
1921	10,491,228	99,064,670	187·0
1920	10,401,041	106,547,319	215·5

The total for the elapsed months of 1926 was 23.0 per cent higher than in the January-October period in 1925; it was also 5.8 per cent greater than in 1922, the previous high level since the war, and 36.1 per cent above the total for the first ten months of 1921, when building was at its lowest level in the post-war period. The cost of building, as indicated by the index numbers of wholesale prices of building materials, this year has averaged lower than in any other year of the same period.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding various contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed.

Two contracts (Group "A") contained schedules of wage rates and hours based on the current standards of the district in these respects.

The remaining contracts (Group "A") awarded in connection with the works of construction, etc., contained the general fair wages clause, which is as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppression of the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Contracts containing schedules of wage rates, etc.—

Construction of a wooden freight shed on the Government Wharf at Cap de la Madeleine, P.Q. Name of contractor, Onésime Poliquin, Portneuf, P.Q. Date of contract, September 8, 1926. Amount of contract $8,900. A fair wage schedule inserted in the contract is as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	$ cts. per hour	
Foreman Carpenter	0 55	10
Carpenters	0 50	10
Blacksmiths	0 45	10
Blacksmith's helpers	0 35	10
Labourers (ordinary)	0 30	10
Driver (one horse and cart)	0 50	10
Driver (two horses and wagon)	0 70	10

30907—5

Supply and erection of a crane and equipment for the New Dry Dock at Esquimalt, B.C. Names of contractors, Colby Crane and Engineering, Limited, Vancouver, B.C. Date of contract, August 12, 1926. Amount of contract, $164,417.40. A fair wage schedule inserted in the contract is as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	$ cts. per day	
General Foreman	12 00	8
Foreman Erector	10 00	8
Erector	9 00	8
Rivet Heaters	9 00	8
Rivet Stickers	9 00	8
Rivetters	9 00	8
Machinists	5 60	8
Machinists Helpers	4 00	8
Painters	5 60	8
Steamfitters	6 40	8
Steamfitters' Helpers	4 00	8
Electricians	7 00	8
Electricians' Helpers	4 00	8
Carpenters	6 00	8
Carters with 1 horse and cart	7 00	8
Carters with 2 horses and wagon	9 00	8
Common labourers	0 45	8 to 10

Contracts containing general Fair Wages Clause.—

Dredging shoal area at Government wharf and channel at Section AB, shoal areas and channel at Section BC, at Rivière du Loup (en haut), P.Q. Names of Contractors, Les Chantiers Manseau, Sorel, P.Q. Date of contract, June 8, 1926. Amount of contract: Class "B" $0.34 per cubic yard for section AB and shoal area at Government wharf and $0.27½ per cubic yard for section BC., scow measure. Approximate expenditure, $66,000.

Dredging Inner Harbour; Turning Basin and Channel Entrance at Goderich, Ont. Name of Contractor, W. L. Forrest, Goderich, Ont. Date of contract, June 19, 1926. Amount of contract: Class "A" $3.17 per cubic yard, scow measure, $0.45 per cubic yard, scow measure. Approximate expenditure, $42,508.20.

Dredging channel at upper end of the harbour and shoal spots in the Entrance Harbour at Port Dover, Ont. Name of contractor, John E. Russell, Toronto, Ont. Date of contract, June 23, 1926. Amount of contract: Class "B" $0.90 per cubic yard, scow measure. Approximate expenditure, $9,000.

Dredging eastern channel and Entrance Harbour at Toronto, Ont. Names of contractors, Kilmer and Barber, Limited, Toronto, Ont. Date of contract, June 26, 1926. Amount of contract: Class "A" $4.50 per cubic yard, scow measure. Class "B," $0.58 per

cubic yard, scow measure. Approximate expenditure, $32,400.

Dredging St. John Harbour, N.S. Name of contractors, St. John Dry Dock and Shipbuilding Company, Limited, St. John, N.B. Date of contract, August 11, 1926. Amount of contract: Class "B," $0.57 per cubic yard, place measure. Approximate expenditure, $20,520.

Dredging vicinity of millsite at Midland, Ont. Name of contractors, Carson Construction Company, Limited, Toronto, Ont. Date of contract, August 12, 1926. Amount of contract: Class "B," $1.05 per cubic yard, place measure. Approximate expenditure, $9,300.

Dredging channel from Colliers wharf to Canning Factory's wharf and a turning basin at Port Milford, Ont. Name of contractor, Rob G. Weddell, Trenton, Ont. Date of contract, September 10, 1926. Amount of contract: Class "A" $10 per cubic yard, place measure. Class "B," $0.56 per cubic yard, place measure. Approximate expenditure, $8,400.

Dredging channel at Burlington, Ont. Name of contractors, The Randolph Macdonald Company, Limited, Toronto, Ont. Date of contract, September 14, 1926. Amount of contract: Class "B" $0.70 per cubic yard, place measure. Approximate expenditure, $8,400.

Dredging approaches at ferry dock at Prescott, Ont. Names of contractors, The Randolph Macdonald Company, Limited, Toronto, Ont. Date of contract, September 15, 1926. Amount of contract: Class "A," $5 per cubic yard, place measure. Class "B," $0.80 per cubic yard, place measure. Approximate expenditure, $8,480.

Dredging approach to the harbour at Cobourg, Ont. Names of contractors, Kilmer and Barber, Limited, Toronto, Ont. Date of contract, September 15, 1926. Amount of contract: Class "A" $4.75 per cubic yard, scow measure. Class "B," $0.70 per cubic yard, scow measure. Approximate Expenditure, $16,800.

Dredging areas between main channel in front of wharves and mooring basin at Lunenburg, N.S. Name of contractors, Acadia Contractors Limited, Halifax, N.S. Date of contract, September 15, 1926. Amount of contract: Class "B" $0.45 per cubic yard scow measure. Approximate expenditure, $18,070.

Dredging entrance channel to turning basin at Waupoos, Ont. Names of contractors, Frontenac Dredging Company, Limited, Toronto, Ont. Date of contract, September 16, 1926. Amount of contract "A," $5 per cubic yard, place measure; Class "B" $0.52 per cubic yard, place measure. Approximate expenditure, $5,720.

Dredging shoal adjacent to outer entrance of channel, widening and deepening turning basin at Port Stanley, Ont. Names of contractors, Frontenac Dredging Company, Limited, Toronto, Ont. Date of contract, September 18, 1926. Amount of contract: Class "B" $0.46 per cubic yard, scow measure. Approximate expenditure, $16,958.

Dredging at Collingwood, Ont. Names of contractors, the C. S. Boone Dredging and Construction Company, Limited, Toronto, Ont. Date of contract, September 21, 1926. Amount of contract: Class "B," $0.90 per cubic yard, place measure. Approximate expenditure, $22,580.

Dredging area in front of C.P.R. coal dock at Byng Inlet, Ont. Name of contractor, William Lawrence Forrest, Goderich, Ont. Date of contract, September 21, 1926. Amount of contract: Class "B," $0.80 per cubic yard, place measure. Approximate expenditure, $8,672.

Dredging channel along wharf frontage at Lunenburg, N.S. Names of contractors, Beacon Dredging Company, Limited, Halifax, N.S. Date of contract, September 23, 1926. Amount of contract: Class "B," $0.50 per cubic yard, scow measure, for areas E and F and $0.90 per cubic yard, place measure, for area G. Approximate expenditure, $19,775.

Dredging at Owen Sound, Ont. Name of contractors, The C. S. Boone Dredging and Construction Company, Limited, Toronto, Ont. Date of contract, September 24, 1926. Amount of contract: Class "B," $0.70 per cubic yard, place measure. Approximate expenditure, $16,100.

Reconstruction of the outer end of the East Pier at Port Burwell, Ont. Name of contractor, William Peter Roe Holdcroft, Kingston, Ont. Date of contract, August 9, 1926. Amount of contract, unit prices, approximate expenditure, $24,322.84.

Construction of a temporary pile protection breakwater at Port Arthur, Ont. Name of contractors, Thunder Bay Harbour Improvement Company, Limited, Port Arthur, Ont. Date of contract, October 1, 1926. Amount of contract, unit prices; approximate expenditure, $27,676.73.

Supply and installation of 2 motor generator sets, transformers and switchboards for Customs Examining Warehouse and General Post Office, Montreal, P.Q. Name of contractors, English Electric Company of Canada, Limited, Toronto, Ont. Date of contract, September 18, 1926. Amount of contract, $20,000.

Reconstruction of the North Breakwater at Miminigash Harbour, P.E.I. Name of contractor, H. J. Phillips of Charlottetown, P.E.I. Date of contract, September 25, 1926. Amount of contract, unit prices; approximate expenditure, $8,585.

Docking, Painting and repairing Dredge "P.W.D. No. 303" (Fruhling). Name of contractors, B.C. Marine Engineers and Shipbuilders, Limited, Vancouver, B.C. Date of contract, June 7, 1926. Amount of contract, $13,472.

Docking, cleaning, repairing, etc., Dredge "P.W.D. No. 306" (Mastodon). Name of contractors, Burrard Dry Dock Company, Limited, North Vancouver, B.C. Date of contract, July 30, 1926. Amount of contract, $12,845.

DEPARTMENT OF RAILWAYS AND CANALS

Deepening, by dredging, of such shallow portion of the Port Dalhousie Harbour as may be directed. Name of contractor, Johnston P. Porter, of the city of St. Catharines, Ont. Date of contract, November 19, 1926. Amount of contract, seventy-five cents per cubic yard: approximately, $11,250.

POST OFFICE DEPARTMENT

The following is a statement of payments made in November, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
	$ cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals	500 51
Making and repairing rubber stamps, daters, etc.	231 40
Making up and supplying letter carriers' uniforms, etc	12,271 73
Stamping pads, ink, etc	340 47
Letter boxes, etc	609 21
Bag fittings	26,775 48
Cotton duck for mail bags	28,893 17

UNION WAGES AND HOURS OF LABOUR IN THE UNITED STATES

THE United States Bureau of Labour Statistics compiles each year data as to rates of wages, hours of labour, etc., under the union scales for certain trades in the principal cities in the United States. The information secured is published in detail annually in special reports issued the following year; but summaries of the figures are given in the *Monthly Labour Review* published by the Bureau. The issues for September and November contain information as to the figures for May 15, 1926 with comparisons with previous years.

The Bureau publishes the hourly rate of pay for each trade in each city on May 15, as specified in the agreements between the unions and employers. The number of employees working under these agreements is also given, the hours per week and the weekly wages for a full week's work. It is stated that it has not been found practicable to secure from the unions or the employees themselves data as to actual or average weekly earnings.

It may be mentioned here that the Bureau also compiles and issues reports on wages and hours of labour in various industries in the United States, the data being taken from the pay rolls of employers by agents of the Bureau, and for these reports data as to actual weekly earnings are secured and also as to hours worked.

The Bureau analyses the data as to trade union scales, calculating index numbers of rates of wages per hour, full time hours per week and wages per week full time. The following table gives these index numbers for all trades and cities for previous years, the data going back to 1907.

INDEX NUMBERS OF UNION WAGE RATES AND HOURS OF LABOUR IN THE UNITED STATES AS OF MAY EACH YEAR, 1907 TO 1926

(1913=100·0)

Year	Index numbers of—		
	Rate of wages per hour	Full-time hours per week	Rate of wages per week full time
1907	89·7	102·6	91·5
1908	91·0	102·1	92·5
1909	91·9	101·9	93·3
1910	94·4	101·1	95·2
1911	96·0	100·7	96·5
1912	97·6	100·3	97·7
1913	100·0	100·0	100·0
1914	101·9	99·6	101·6
1915	102·8	99·4	102·3
1916	107·2	98·8	106·2
1917	114·1	98·4	112·4
1918	132·7	97·1	129·6
1919	154·5	94·7	147·8
1920	199·0	93·8	188·5
1921	205·3	93·9	193·3
1922	193·1	94·4	183·0
1923	210·6	94·3	198·6
1924	228·1	93·9	214·3
1925	237·9	93·0	222·3
1926	250·3	92·8	233·4

The data cover Bakers, Building Trades (41 trades), Chauffeurs and Teamsters and Drivers, Granite Cutters and Stonecutters, Laundry Workers, Linemen, Longshoremen, Printing Trades (book and job offices 10 trades; news offices, 8 trades), and Street Railway Employees. The number of employees included in the compilation was 824,313 in 66 cities. It will be observed that figures for railway employees, coal miners, iron and steel workers, etc., are not included.

The average rate per hour for all trades included in the calculation was found to be $1.148 in 1926 as compared with $1.091 in 1925, the 1926 average being 5.2 per cent above that for 1925, 119.3 per cent higher than 1917, 150.3 per cent higher than in 1913, 165.1 per cent higher than in 1910 and 179 per cent higher than in 1907.

All hourly rates have been converted to equivalent weekly rates and all weekly rates have been reduced to equivalent hourly rates. Taken collectively, weekly rates in 1926 were 5 per cent higher than in 1925, 107.6 per cent higher than in 1917 and 155.0 per cent higher than in 1907. Because of reductions in hours of labour, weekly rates have not increased to the same extent as hourly rates. In 1926 the regular hours of labour were 0.2 per cent lower than in 1925, 5.7 per cent lower than in 1917, 7.2 per cent lower than in 1913, 8.2 per cent lower than in 1910, and 9.5 per cent lower than in 1907.

A table is included for the first time showing index numbers of changes in the wages of the building trades since 1913.

INDEX NUMBERS OF UNION RATES OF WAGES PER HOUR IN THE BUILDING TRADES
(1913=100)

Year	Index numbers
1913	100

PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight; both the weekly family budget and the Dominion Bureau of Statistics index number of wholesale prices were, however, somewhat higher.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities advanced to $11.01 for the beginning of November, as compared with $10.93 for October; $11.23 for November, 1925; $10.46 for November, 1924; $10.69 for November, 1923; $10.29 for November, 1922; $11.08 for November, 1921; $15.32 for November, 1920; $16.92 for June, 1920 (the peak); $13.65 for November, 1918; and $7.96 for November, 1914. Eggs were again substantially higher, while less important advances occurred in the prices of milk, butter, cheese, potatoes and beans. The decline in the price of meats continued, beef, veal, mutton, fresh and salt pork, and bacon being somewhat lower than the prices prevailing in October. The prices of lard and evaporated apples also declined. Including the cost of fuel and rent with that of foods the total budget averaged $21.24 at the beginning of November, as compared with $21.14 for October; $21.51 for November, 1925; $20.81 for November, 1924; $21.19 for November, 1923; $20.89 for November, 1922; $21.60 for November, 1921; $26.13 for November, 1920; $26.92 for July, 1920 (the peak); $21.61 for November, 1918; and $14.36 for November, 1914. In fuel bituminous coal advanced slightly. No changes occurred in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, advanced slightly to 151.5 for November, as compared with 151.1 for October; 161.2 for November, 1925; 157.7 for November, 1924; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.4 for November, 1920; 256.7 for May, 1920 (the peak); and 207.4 for November, 1918. Thirty-four price quotations were higher, seventy-one were lower and one hundred and thirty-one were unchanged.

In the grouping according to chief component materials three of the eight main groups advanced, four declined, while one was unchanged. The Vegetables and their Products

group and the Animals and their Products group advanced; the former due to higher prices for potatoes, sugar, fruits, hay and straw, which more than offset declines in the prices of grains, rubber, flour and milled products; and the latter due to seasonal increases in the prices of butter and eggs, which more than offset declines in the prices of live stock and meats. The Iron and its Products group also showed a slight advance, because of higher prices for pig iron and steel billets. The groups which declined were: The Fibres, Textiles and Textile Products group, due to lower prices for cotton, silk and wool; the Non-Ferrous Metals and their Products group, because of declines in the prices of copper, lead, tin, spelter and solder; the Non-Metallic Minerals and their Products group, due to lower prices for gasoline; and the Chemicals and Allied Products group. The Wood and Wood Products group was unchanged.

In the grouping according to purpose consumers' goods remained unchanged, higher prices for butter, eggs, vegetables and fruit counterbalancing lower prices for coffee, meats, fish and bread stuffs. Producers' goods declined slightly, higher prices for materials for the fur industry, for the leather industry, for the metal working industries and for miscellaneous producers' materials being more than offset by declines in the prices of materials for the textile and clothing industries, for the chemical using industries, for the meat packing industries, and for the milling and other industries.

In the grouping according to origin raw or partly manufactured goods advanced, declines in the prices of grains, rubber, coffee, fish, cotton, wool and silk being more than offset by increases in the prices of vegetables, fruit, eggs, hay, straw and smelted products. Fully or chiefly manufactured goods declined due mainly to lower prices for flour and milled products, meats, lard, tallow, rolling mill products and some non-ferrous metals. Domestic farm products advanced. Articles of marine origin and articles of mineral origin declined, while articles of forest origin were unchanged.

The Canadian Bank of Commerce index of the wholesale prices of exports fell from 152.15 for October to 150.69 for November. That for imports was also slightly lower at 153.14 for November, as compared with 153.63 for October. The combined index of both exports and imports was down from 152.89 to 151.91.

30907—6

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of November of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossiblity of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adapted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-1915 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 71.5; 1925, 69.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924 and 1925, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics:—Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6; 1924, 156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows:—1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices were again generally lower, sirloin steak averaging 28.8 cents per pound in November, as compared with 29.5 cents in October; round steak 25.5 cents in November, as compared with 23.5 cents in October; shoulder roast 15.7 cents in November and 15.9 cents in October. Veal declined from an average of 19.9 cents per pound in October to 19.7 cents in November. Mutton was slightly lower at 29.2 cents per pound in the average. Both fresh and salt pork were lower, the former averaging 29.8 cents per pound, as compared with 30.8 cents in October, and the latter 27.9 cents per pound, as compared with 28.3 cents in October. Bacon was down from an average of 44.4 cents per pound in October to 43.5 cents in November. In fresh fish, cod steak, halibut and white fish advanced. Lard was lower in most localities, the average price being down from 24.5 cents per pound in October to 24 cents in November.

Eggs advanced substantially in most localities, fresh averaging 56.1 cents per dozen in November, as compared with 49.8 cents in October and 41.4 cents in September; and cooking averaging 48.2 cents in November, as compared with 44.3 cents in October and 37.1 cents in September. Milk was slightly higher, averaging 11.8 cents per quart. Higher prices were reported from New Glasgow, Halifax, Three Rivers, Sorel, Ottawa, Peterborough, Sudbury, Port Arthur, Fort William,

to 15c. more per gallon than the figures published (in bulk). k. New houses as high as $40.00 per month. m. For new tenants $30–$35 and $20–$25. n. Houses with conveniences not extensively occupied by workingmen but some at $35.00. p. Mining company houses $20, others $40–$60. r. Company houses $10–$20. Others $30–35. s. Delivered from mines.

(Continued from page 1242)

Regina, New Westminster and Vancouver. Butter averaged slightly higher, dairy at 38 cents per pound and creamery at 41.4 cents per pound. Prices in most localities advanced, except in British Columbia where declines occurred in several cities. Cheese was slightly higher in the average at 30.7 cents per pound, declines in some localities being offset by advances in others.

Bread was unchanged in the average at 7.6 cents per pound, the only change reported during the month being a slight increase at Calgary. Soda biscuits, flour and rolled oats were unchanged. Canned vegetables were steady. Beans advanced slightly, averaging 8 cents per pound, as compared with 7.8 cents in October. Onions continued to decline, being down from 5 cents per pound in October to 4.7 cents per pound in November. Lower prices were reported from most localities. Potatoes, which had averaged lower each month since August, advanced somewhat in November, being $1.92 per ninety pounds, as compared with $1.86 in October and $2.74 in August. Higher prices were reported from most localities in the Eastern provinces, while in the prairie provinces and in British Columbia prices were, for the most part, lower. Evaporated apples declined from an average of 20.4 cents per pound in October to 19.9 cents in November, Prunes, raisins and currants were unchanged. Anthracite coal averaged $16.82 per ton in November, as compared with $16.87 in October Bituminous coal advanced from $10.12 per ton in October to $10.41 in November. Higher prices were reported from Halifax, Truro, Sherbrooke, Montreal, Woodstock, Windsor, Sudbury, Port Arthur and Fort William. Coke was little changed at $13.42 per ton. No change occurred in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged $1.41 per bushel, as compared with $1.43½ in October. The high price for the month was $1.47⅛ per bushel reached on the 9th, and the low $1.33¼ per bushel reached on the 30th. Poor export demand, large stocks on hand and the prospects of competition from Australia and the Argentine were said to be factors contributing to lower prices. Among the coarse grains flax seed declined from $1.94 per bushel to $1.91 and yellow corn from 92 cents per bushel to 84 cents; while Western oats rose from 58 cents per bushel to 59⅔ cents; Ontario oats from 46¾ cents per bushel to 49⅓ cents; Ontario barley from 60⅔ cents per bushel to 62 cents; and rye from 87½ cents per bushel to 89 cents. Flour at Toronto declined from $8.21 per barrel to $8. Shorts were up from $30.85 per ton to $32. Malt advanced from $1.08 per bushel to $1.12. Raw sugar advanced from $4.08½ per hundred to $4.14⅔. Coffee declined from 26 cents per pound to 25 cents. Potatoes at Montreal advanced from $1.39 per bag in October to $1.65 in November, and at Toronto from $1.90 per bag in October to $1.95 in November. Prices, however, at St. John, N.B., were lower, being $2.25-$2.50 per barrel as compared with $3-$3.50 in October. Pepper advanced from 30 cents per pound to 36 cents. Bananas at Montreal were up from $3 per bunch to $4, and oranges from $7 per case to $7.25. Prices of cattle were lower, due, it was said, to the liberal supplies. Western cattle at Winnipeg were down from $5.93 per hundred pounds to $5.66, and choice steers at Toronto from $6.67 to $6.37. Hogs at Toronto declined from $12.35 per hundred pounds to $11.33, and choice sheep from $6.75 per hundred pounds to $6.31. In dressed meats beef, hind quarter, declined from 15 cents per pound to 14½ cents. Veal declined from 23 cents per pound to 22 cents; mutton from $11 per hundred pounds to $10; and hogs from $18.80 per hundred pounds to $17.81. Bacon was down from 35 cents per pound to 32 cents; smoked ham from 31-35 cents per pound to 29-33 cents; and mess pork from $36 per barrel to $33.50. Finest creamery butter at Montreal advanced from 35 cents per pound to 37 cents, and creamery prints at Toronto from 37 cents per pound to 39 cents. Lard was down from 17 cents per pound to 16½ cents. Eggs showed a seasonal advance, fresh at Montreal being up from 52-55 cents per dozen to 60-65 cents, and storage at Toronto from 39-40 cents per dozen to 42 cents. Raw cotton at New York continued to decline, averaging 12.9 cents per pound as compared with 13.2 cents in October. The low price for the month was 12.6 cents reached on the 6th, and the high 13.1 cents on the 17th. Flax fibre was down from 20-25 cents per pound to 18-22 cents. Raw silk at New York declined from $6.05 per pound to $5.85. Wool prices showed a decline, ranging from 1 cent to 2 cents per pound. Pig-iron at Montreal advanced slightly to $27.70 per ton. Steel billets rose from $28-$43 per ton to $29-$44. In non-ferrous metals copper fell from $16.15 per cwt. to $15.75; copper sheets from 21¾ cents per pound to 21½ cents; copper wire from 14.2 cents per pound to 13.8 cents; zinc from $8.92½ per cwt. to $8.85; lead from $8.15 per cwt. to $8; and solder from 41¾ cents per pound to 41 cents. The price of silver was slightly higher at 54½ cents per ounce, as compared with 54 cents in October. Gasoline declined from 26½ cents per gallon in October to 24½ cents in November.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures) base period 1867-77=100, was 131.0 in October, 2.3 per cent above the previous month's level. Foodstuffs declined 2.1 per cent, increases in price of vegetable food being more than offset by declines in animal food and sugar, coffee and tea. Materials rose 5.4 per cent, there being a rise of 17.1 per cent in minerals, with a decline of 4.7 per cent in textiles and a slight increase in sundries.

The Board of Trade index number on the base 1913=100, was 152.1 in October, an increase of 0.8 per cent. Foods rose 2.6 per cent with advances in all groups, and non-foods showed practically no change. There were advances in iron and steel and other metals and minerals, a marked decline in cotton and slight declines in other textiles and in miscellaneous articles.

Denmark

WHOLESALE PRICES.—The index number of the Department of Statistics, on the base 1913=100, was 178 in October, an increase of 9.9 per cent for the month. The principal change was an advance in fuel and lubricating oil from 179 to 284, or 58.6 per cent. There were advances also in vegetable foods, fodder, metals, and wood and paper, and declines in textiles and clothing and chemicals. Other groups showed no change.

France

WHOLESALE PRICES.—The index number of Statistique Générale, on the base July, 1914=100, was 767 in October, a decline of 4.6 per cent. Domestic goods showed no change and imports declined 11.4 per cent. Foods declined slightly and materials declined 6.6 per cent.

Spain

WHOLESALE PRICES.—The index number of the Director General of Statistics, on the base 1913=100, was 178 in September, a decline of two points for the month. Foods declined one point, with lower prices for vegetable foods and advances in animal foods and the miscellaneous food group. Industrial materials declined 3 points, with declines in metals and the chemical and miscellaneous group, and no change in textiles and leather or in construction materials.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base average prices in 1913=100, was 148 in October, an advance of two points for the month. Slight advances were shown by vegetable foods, animal foods, feed and forage, fuel and lubricating oils, iron and metals, and lumber. The groups fertilizer, pulp and paper, hides and leather and rubber goods showed no change, and the remaining groups—mortar, brick, cement and glass, textiles and chemicals showed slight declines.

India

WHOLESALE PRICES.—The index number of the Labour Office, Bombay, on the base July, 1914=100, was 149 in September, an advance of one point from the August level. Foods advanced three points, cereals and sugar and "other foods" rising while pulses declined. Non-foods rose one point, with advances in oil-seeds, textiles other than cotton, hides and skins, and the miscellaneous group, declines in cotton manufactures and metals and no change in raw cotton.

COST OF LIVING.—The index number of the Labour Office, Bombay, on the base July, 1914=100, showed no change in October. Foods advanced one point, clothing declined one point and fuel and lighting and house rent showed no change.

New Zealand

WHOLESALE PRICES.—The official index number of the Government Statistician, on the base 1909-13=1,000, was 1618 in September, a decline of 0.6 per cent for the month. There were declines in vegetable foods and animal products, advances in textiles, metals, non-metallic minerals and chemicals, and no change in wood and wood products.

COST OF LIVING.—The official index number on the base July, 1914=1,000 was 1634 in August as against 1631 (revised figure) in May. Food and clothing declined somewhat while rent, fuel and light and sundries advanced.

United States

WHOLESALE PRICES.—Bradstreet's index number of commodity prices, (showing the cost of a list of 106 commodities) was $12.7835 as of December 1, which marked a small frac-

tion of 1 per cent gain over the November 1 number. There were advances in only three of the groups, provisions, metals and building materials, no change in fruits, and slight declines in all the remaining groups.

Dun's index number (showing the cost per capita of a year's supply of commodities) was $187.746 as at December 1, showing a very slight decline as compared with the figure for November 1. There were advances in meats, dairy and garden products, "other food," metals, and miscellaneous. These were a little more than offset by the declines in breadstuffs and in clothing.

The *Annalist* weekly index number of wholesale commodity prices, on the base 1913=100, was 148.1 in November, as compared with 147.4 in October, the most noticeable changes were a rise of 7.1 per cent in fuels and a decline of 2.2 per cent in textile products. The figures are averages of weekly index numbers. The *Annalist* weekly index number of wholesale food prices, on the base average of 1890-1899=100 was 199.617 at the middle of November, compared with 201.213 at the middle of October.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life, of the cost of living in Massachusetts, on the base 1913=100, was 161.8 in October, showing an increase over the September level, 161.3, of about 0.3 per cent. Except for shelter, which was unchanged, all elements showed slight increases.

RECENT LEGAL DECISIONS AFFECTING LABOUR

"Check-off" under terms of agreement is upheld

The Supreme Court of Nova Scotia, in a decision rendered during November, sustained the judgment of the Pictou County Court in the matter of the fees collected from the members of the One Big Union by the Acadia Coal Company on behalf of the United Mine Workers of America. The One Big Union of Stellarton had obtained an injunction restricting the Company from making a deduction from the wages of its members by means of the "check-off." A protest against the injunction was made by the district officers of the Mine Workers, who contended that in accordance with the signed agreement between their union and the Company all the employees were members of the Mine Workers' Union and were therefore liable to a deduction from their wages for union dues. The Acadia Company, in order to protect itself, continued to deduct dues from the One Big Union men, but kept the money in the bank until the courts could give a decision in the case. The case was first tried in the Pictou County Courts and the United Mine Workers' contention was sustained. The One Big Union appealed to the Supreme Court of Nova Scotia and while the case was under consideration dues were still being deducted and kept aside by the Company.

The Supreme Court sustained the decision of the lower court and disallowed the appeal.

By this decision $15,000 held by the Acadia Company reverted to the United Mine Workers. Fifty per cent of this amount goes to the International Union as per capita account; thirty per cent to the district executive exchequer and twenty per cent to the Stellarton United Mine Workers' local treasury.

Damages under Fatal Accidents Act not Affected by Provision for Dependants by Stranger

An employee of a dairy company in Ontario was killed by a motor car under circumstances entitling his dependants, a widow and infant child, to compensation under the Workmen's Compensation Act of the Province. The widow's claim having been allowed, the Board proceeded under section 9 of the Act to take action against the owner of the motor car. Section 9 deals with accidents in which a workman is injured under such circumstances as entitle him or his dependants to an action against some person other than his employer. It provides as follows:—

(2) If an action is brought and less is recovered and collected than the amount of the compensation to which the workman or his dependants are entitled under this Part the difference between the amount recovered and collected and the amount of such compensation shall be payable as compensation to such workman or his dependants.

(3) If the workman or his dependants elect to claim compensation under this Part the employer, if he is individually liable to pay it, and the Board if the compensation is payable out of the accident fund, shall be subrogated to the rights of the workman or his dependants, and may maintain an action in his or their names against the person against whom the action lies, and any sum recovered from him by the Board shall form part of the accident fund.

In accordance with subsection (3) the Board in this case was "subrogated to the rights of the workman or his dependents," and began an action against the defendant. The defendant failed to appear, and judgment was signed against him for damages. The widow's election to claim compensation under the act was made on June 19, 1925. On July 22, 1925, the defendant's father, desiring to help in supporting and educating the in-

fant child and to make provision for a substantial benefit to accrue to her upon attaining the age of 21 years, entered into a bond for $5,000 with the widow and the brother of the deceased workman as trustees, the condition being that the obligor should pay to the trustees the sum of $365 annually during the child's infancy, and should pay to the child herself $4,000 on her coming of age. The question arose whether the provision voluntarily made by the defendant's father could be given consideration in assessing the amount of damages under the Fatal Accidents Act, Revised Statutes of Ontario, 1914, chapter 151 (The latter act, which corresponds to the Fatal Accidents Act of Great Britain, 1846, known as "Lord Campbell's Act" was amended in 1911, by a provision that future insurance premiums should not be taken into account in assessing damages). On this point the judgment said that the defendant could not benefit from his father's kindness to the widow and child. The assessment must be what it would have been if it had been made immediately after the workman's death. It was not the death, but the goodwill of the defendant's father that gave the widow and child the rights they acquired under the bond. Judgment was given in favour of the plaintiffs for $4,500.

Characteristics of Inexcusable Fault in Connection with Accidents

A workman employed by the Canadian National Railways in the Province of Quebec was proceeding along the railway track with other workmen in a hand car when the car was struck by a train, causing him serious injuries. He brought action against the employer for compensation to the amount of $7,060, alleging inexcusable negligence on the part of the railways, as the foreman should have been aware of the approach of the train. The Superior Court, in giving judgment, pointed out that while the Privy Council had never defined "inexcusable fault," that courts of Quebec, while formulating no definition, had laid down three rules to govern the determination of culpability: (1) the act complained of, whether one of omission or commission, must be shown to be voluntary; (2) the resulting danger must be shown to be apparent; (3) the fault must be shown to be without adequate excuse. "One of the characteristics of inexcusable fault," the judgment proceeded, "is knowledge of the risk, accompanied by culpable and intentional negligence and carelessness regarding the safety of the workmen, and that it should have the character of wilfulness and an element of malice." In the present case there was no evidence of malice or wilfulness on the foreman's part in exposing his men to a danger which he himself shared, but a mistake has been made by him through ignorance of the immediate danger. The plaintiff however was judged to have received injuries which resulted in disability amounting to 30 per cent of his earning power, and was awarded $1,553.60 in compensation.

Lien for Materials Furnished is Independent of Registration

A lumber company in Saskatchewan which had supplied materials for the building of an hotel, brought action against the owner to enforce a mechanics' lien. The trial court allowed the claim, with interest on the amount due at 8 per cent per annum. The owner appealed, and the Court of Appeal confirmed the judgment of the lower court, but reduced the rate of interest from 8 to 5 per cent. The owner alleged that the claim for the lien was defective as it had not been regularly registered, citing section 23 of the Act as follows:—

"Every lien, a claim for which is not duly registered under the provisions of this Act, shall cease to exist at the expiration of the time hereinbefore limited for the registration thereof, unless in the meantime an action is commenced to realize the claim or in which the claim may be realized under the provisions of this Act. . . . . .

"Provided however that claims may be registered and actions commenced after the time hereinbefore limited for so doing, and that the failure to register such claim or to commence such action within the times mentioned in this and secton 22 shall not defeat such lien except as against intervening parties becoming entitled to a lien or charge upon such land whose claim with respect to said land is registered prior to the registration of such lien or as against an owner in respect to payments made in good faith to a contractor after the expiration of said period of thirty days and before any claim or lien is registered or notice thereof given to the owner."

Interpreting this section in its application to the case the Appeal Court said:—"This lien, as between the materialman and the owner to whom the materials were furnished, does not depend for its validity upon registration. Registration is only necessary for the purpose of preserving the priority of the lien claimant. If a person, without notice of the existence of a lien, acquired an interest in land against which there is an unregistered lien and registers his title to such interest, such person would have priority over the lienholder to the extent of that interest. But where there is no intervening party, the lien is as valid without registration as with it."

"Fair Wage Clause" Upheld in New York

The Contractors' Association of New York recently took exception to a new form of contract used by the Board of Transportation in inviting tenders for certain contracts for public work. The contractors challenged the constitutionality of the section of the State law providing for the payment of "the prevailing rate of wages" on public works, and asked for an injunction restraining the Board from making use of the new form of contract containing this clause. The judge of the State Supreme Court who was appealed to, in refusing the injunction, held that the insertion into the contract of the prevailing rate of wages provision was "not only proper but mandatory." He ruled that the board's method of determining the prevailing rate by taking the standard wage within the boundaries of New York City to be "a working rule designed to secure an intelligent application of the statute." He held also that the arbitration clauses of the contract constituted a legitimate way of expediting the work and saving delays. The judge further pointed out that the New York Court of Appeals had disposed of the argument that the statute was too indefinite to be retained as a definition of public policy when the same point was raised against the emergency rent laws on the grounds that what constituted a "reasonable rent" was too uncertain. It was more difficult to determine such rentals than prevailing wages, he said.

According to the Justice, the 1905 amendment to the State constitution was intended to set at rest all doubt as to the right of the legislature to "regulate and fix" wages and hours on public works. Wages had not been fixed, he stated, because they fluctuated, but it was the duty of public officers to determine the prevailing rate from time to time and regulate wages accordingly.

No Recovery Under Lump Sum Contract on Failure to Perform

The owner of a house contracted with a firm of plumbers to furnish and install a furnace to heat the house, but found that the furnace when installed failed to heat several of the rooms. He refused to pay for the work and the plumbers sued for the price of the furnace and installation. The trial judge dismissed the action, holding that as the plaintiffs had not fulfilled their contract they could not recover on it.

On appeal being taken in the Saskatchewan Court of Appeal the trial judgment was affirmed. Counsel for the plaintiffs contended that even if they could not recover the full contract price, they were entiled to the price, less whatever sum might be necessary to make the furnace effective. In support of this contention the decision in the case *H. Dakin and Company versus Lee* (1916) was cited as having established the following principles: "Where a builder has supplied work and labour for the erection or repair of a house under a lump sum contract, but has departed from the terms of the contract, he is entitled to recover for his services, unless (1) the work that he has done has been of no benefit to the owner; (2) the work he has done is entirely different from the work which he has contracted to do; or (3) he has abandoned the work and left it unfinished."

After reviewing various decisions in similar cases the Court laid down the following rule as applicable in the present case:—"Where a plaintiff has supplied work and labour and materials for the erection, improvement or repair of a house under a lump sum contract, but has not complied in all respects with the terms of the contract, the first question to determine is, can it be said that the plaintiff has substantially performed the contract? That is, has he performed, though it may be in a defective manner, every term which goes to the essence of the contract? If not, he cannot recover, either on the contract or on a *quantum meruit*, unless there is evidence from which it can reasonably be inferred that the defendant accepted the uncompleted work and impliedly agreed to pay for it; or unless the plaintiff's failure to complete was due to the wrongul act or default of the defendant. If it can be said that the plaintiff has substantially performed his contract, although defectively, he is entitled to maintain an action upon it and to recover the contract price, less such sums as may be required to complete the work in exact accordance with the contract."

Applying this rule the court found that the plaintiffs had not performed the essential terms of their contract, the heating of the house not having been effected. It was understood that the defendant was willing to pay as soon as the contract should be performed.

Employer not a Builder not Liable for Compensation in Building Industry

The Sisters of Charity of the Montreal General Hospital (Grey Nuns) undertook in 1925 the construction of an extension to their asylum at Valleyfield and were acting as their own contractors. An employee on this work who

was operating a barrow loaded with building materials lost his balance and fell down from a height of 45 feet, sustaining injuries which caused his death. The father of the deceased claimed that this son was his sole support and asked for damages to the amount of $3,050. The Court decided that the community was not engaged in the building industry and that it did not come under the Workmen's Compensation Act. Further, as the action taken could not be changed to a common law action, he non-suited the plaintiff with costs. (A similar case was reported in the LABOUR GAZETTE, June, 1926, in which the owner, who was supervising construction for himself, but was not engaged in building as a business, was held not to be subject to the provisions of the Workmen's Compensation Act).

—*(Quebec-Boyer versus The Sisters of Charity of the General Hospital of Montreal).*

Constitutional Amendments in Nova Scotia

Certain questions were submitted to the Nova Scotia Supreme Court on October 23, 1926, under the Constitutional Questions Act, to determine the tenure of office of members of the Legislative Council and the powers of the Lieutenant Governor in Council to increase the number of members of the council and to dismiss such members, with a view to bringing about the abolition of the Legislative Council.*

The questions submitted were as follows:—

1. Has the Lieutenant-Governor of Nova Scotia acting by and with the advice of the Executive Council of Nova Scotia, power or authority to appoint in the name of the Crown by instrument under the Great Seal of the Province so many members of the Legislative Council of Nova Scotia that the total number of the members of such Council holding their offces or places as such members would (*a*) exceed 21; (*b*) exceed the total number of the members of said council who held their offices or places as such members at the Union mentioned in section 88 of the British North America Act?

2. Is the membership of the Legislative Council of Nova Scotia limited in numbers?

3. Is the tenure of office of members of the said Council appointed thereto prior to May 7, 1925, during pleasure or during good behaviour or for life?

4. If such tenure is during pleasure is it during the pleasure of His Majesty the King, or during the pleasure of His Majesty represented in that behalf by the Lieutenant-Governor of Nova Scotia acting by and with the advice of the Executive Council of Nova Scotia.

These questions were discussed at length by the supreme Court judges, the answers being to the following effect:—

Question 1. Harris, C. J., and Chisholm, J., answer both (a) and (b) in the affirmative Mellish and Carroll, J. J., answer (a) in the negative and as to (b) that the number of appointments may be increased to 21 but not to exceed that number.

Question 2. Harris, C. J., and Chisholm, J., answer that the number at present constituting a full council is 21, but the number can be increased at any time by appointments by the Lieutenant-Governor. Mellish, J., answers that the number is limited to 21. Carroll, J., agrees that the number is limited to 21 but says that the *Legislature* has power and authority to make any change it desires.

Question 3, Harris, C. J., Chisholm and Carroll, J. J., answer that the tenure of office of a legislative councillor is during pleasure. Mellish, J., answers that all legislative councillors hold office for life but any 7 may be dismissed at the pleasure of the Crown on the advice of His Majesty's Imperial Council.

Question 4. Harris, C. J., and Chisholm, J., answer.—During the pleasure of His Majesty represented in that behalf by the Lieutenant-Governor of Nova Scotia acting by and with the advice of the Executive Council of Nova Scotia. Mellish and Carroll, J. J., answer that the power of dismissal is vested in His Majesty acting by and with the advice of His Imperial Council.

E.B.

* An Act affecting the constitution and powers of the upper house was enacted by the Nova Scotia Legislature in 1925 (LABOUR GAZETTE, August, 1925, page 776), amending the act "of the Constitution, Powers and Privileges of the House." The amending act provided that "every member of the Council hereafter appointed shall hold his seat in the Council for the term of ten years from the date of his appointment, provided that where any such member attains the age of seventy-five years his seat in the Council shall thereupon become vacant." The act further provided that public bills other than money bills and bills dealing with the constitution, powers and privileges of the House, may become law without the concurrence of the council in three successive sessions. As originally introduced the bill would have enabled the lower house to abolish the Council without the concurrence of the upper house by passing the bill at three consecutive sessions of the Assembly.
